DR. REIN, in a supplement to Petermann's *Mittheilungen*, describes the Naka dandó, or "Road between the Hills," which joins the two capitals of Japan, Kioto and Tókió. Near the Biwa Lake this road branches off from the Tókaidó or "Eastern Sea road," and although difficult to travel in winter, when its passes are covered with snow, it possesses peculiar attractions during the summer. No other road, Dr. Rein tells us, equals it in scenery, or affords a better opportunity of becoming acquainted with the landscape features of Japan. No restrictions whatever are at present placed upon the movements of travellers, whose reception on the part of the native population is all that could be desired.

THE Tanganyika portion of the Algerian Missionary Society's expedition, about which nothing has been heard for some months, has settled down at Uvira at the northern end of the lake, probably with a view to more easy communication with the detachment on the Victoria Nyanza.

THE International African Association have

just published the second instalment of the "Journal et Notes de Voyage" of the first Belgian Expedition in East Central Africa, giving an account of the journey from Tabora to Lake Tanganyika. M. Cambier's last letter is dated September 24, in which he announces that he had definitely settled down for a time at Karema, on the eastern shore of the lake, to make arrangements for the establishment of the first station. M. Cambier's report is accompanied by a sketch-map of the route followed by the expedition from the east coast to the lake, and also by some curious anthropological notes drawn up by Dr. Dutrieux, who has recently returned to Belgium.

In a letter written from Ugogo, Mr. Carter, who is in charge of the Indian elephants presented by the King of the Belgians to the second expedition, attributes the death of the second elephant, "Nadderbux," not to climatic influences, but to the fact that he was not in a sound condition when he left Bombay. With regard to the question of utilising African elephants, Mr. Carter says it will be of little or no use to attempt to train young ones, as they would not be fit for carrying loads before they were twenty years old; and he further adds that no Bombay *mahout* would trust himself within a mile of a wild elephant. If, however, anything is to be attempted with the African animal, Mr. Carter recommends that it should be done at once, as it will soon become scarce. He mentions incidentally that want of good water is one of the great difficulties he has to contend with, that at Ugogo being almost bad enough to kill the elephants.

MR. GEORGE PARKER, of the China Inland Mission, recently left Chungking, in the Szechuen province, on a journey northwards, across a little-known mountainous region, to Tsinchow, in Kansu, in which remote place a missionary station was founded a short time back. Mr. J. H. Riley, another member of the station at Chungking, has lately returned from a two months' journey in the Szechuen province. He brought back with him a man of the Lolo tribe, and is beginning to learn their language, a feat which we believe no European has hitherto attempted.

SOME members of the South American Missionary Society have recently explored some of the previously unexamined affluents of the River Purus, the great tributary of the Amazons.

MR. A. HAY ANDERSON has published through Messrs. Wm. Blackwood and Sons some notes of a journey to the auriferous quartz regions of Southern India.

PROF. NORDENSKIÖLD, in writing to a friend, announces his intention of holding at Stockholm in the summer an exhibition of the valuable and interesting specimens which he is bringing home with him. Ethnography, botany, zoology, and geology will all be represented.

RECENT news from Panama states that the technical commission is now regularly and systematically engaged in completing the detailed surveys for a tide-level canal through the isthmus. In order to finish the work more rapidly, the line of survey has been divided into five sections, and one or more of the engineers of the party assigned to each of them.

AT the end of last October we drew attention to Dr. A. H. Hassall's *San Remo and the Western Riviera*, and now we have before us another little book, dealing with nearly the same region, entitled *Winter Havens in the Sunny South*, by Rosa Baughan (Bazaar office). The former dealt with its subject chiefly from a climatic and medical point of view, while the latter does not pretend to be more than a complete handbook to the Riviera, including within its scope the new station, Allassio. From the

nature of its contents it will, we think, answer this purpose very well, for it affords a good deal of useful information with regard to local accommodation and attractions. The author certainly makes us wish that we could personally test the accuracy of her statements, especially at a season when the Registrar-General has such a gloomy tale to tell of the effect of London fogs on the human frame.

SCIENCE NOTES.

Tunstall's Ornithologia Britannica. (The Willughby Society.) Edited by Alfred Newton, M.A., F.R.S., &c.—The Willughby Society was formed at a meeting of ornithologists in May 1879, as an association for reprinting certain ornithological works interesting for their utility and rarity. Copies of the works reproduced are issued only to subscribers. The subscription is £1, and the secretary Mr. F. D. Godman, of 10 Chandos Street, Cavendish Square, W. Two works are already in hand for issue to subscribers in the year 1880 besides the present one, and numerous others are under consideration for future reproduction. The present work is executed by means of photo-lithography. Marmaduke Tunstall, of Wycliffe, in Yorkshire, who was born in 1743 and died in 1790, was a correspondent of Linnaeus. He was elected a Fellow of the Royal Society in the year in which he brought out his *Ornithologia*, being proposed by the Hon. Daines Barrington, whose curious observations and experiments on the singing of birds have unfortunately not been repeated in modern times. He was seconded by Pennant. His collection of birds formed the basis of the present museum of Newcastle-on-Tyne, where many of his stuffed birds still exist. His collection cost him many thousands of pounds, and many of his specimens were figured by Brown and Bewick. The execution of the reproduction of the work, which is dated 1771, seems to leave nothing to be desired.

Hail in the Caucasus.—Prof. Abich has at last brought out his long-promised paper (*Ueber krystallinischen Hagel in unteren Kaukasus in seinen Beziehungen zu der Physik des Bodens. Von Hermann Abich. Vienna: Holder*). On the extraordinary hailstones of the summer of 1869 in the neighbourhood of Tiflis. These phenomena were very remarkable; four times within three months was that special district visited by hailstones which were characterised, not only by the great size of the stones, but by their exhibiting distinctly crystalline excrescences, closely resembling the well-known crystals of calc spar from the Hartz mines. Of two of these storms Prof. Abich was himself a witness; in fact he was caught by one of them when riding, and only succeeded in sheltering his head behind a small tree. He gives a sketch of this storm, which shows that the hailcloud proper was distinctly separated from the ordinary thundercloud which preceded it, by a clear interval through which a distant view could be seen, while the hail on one side and the rain on the other shut out the rest of the landscape. The most remarkable fact about all these storms is that they never penetrated far into the wooded parts of the country, but expended their fury on the cleared spaces, such as vineyards, &c., which are specially selected so as to obtain the maximum possible benefit from sunshine. Prof. Abich also shows that the geological character of the country has an apparent influence on its liability to hail visitation. Other instances of exceptional falls which are on record are next noticed, especially those described by Padre Sanna Solaro, S.J., in the *Annuaire Soc. Mété. de France*, vol. xi., 1863, with his experiments on the artificial production of hailstones by freezing water in thin indiarubber balls; and also Louis Dufour's experiments given in Kämtz, *Reper-*

torium für Meteorologie, vol. ii., p. 410, and *Bull. Soc. Vaudoise des Sciences Naturelles*, vol. vi., 1860. Abich holds to Dove's explanation of the production of the successive layers of ice in the stones by the hypothesis of the storm being a whirlwind, with axis horizontal, so that the stones revolve in a vertical circle, and are swept round and round through atmospheric strata of very different temperatures, till they grow so heavy that they fall.

The Californian Cave-Bear.—The skull of a bear, discovered beneath several inches of cave earth and stalagmite in a cavern in the carboniferous limestone of California, has been studied by Prof. E. D. Cope, who finds that it represents a new species of Gervais's genus *Arctotherium*, to which he applies the name *A. simum*. This Californian cave-bear is, therefore, entirely different from the cave-bear of this country, as likewise from any existing species. Dr. Cope has also recently described several new species of fossil mammalia from the Miocene beds of Oregon.

AN extraordinary prize of 3,000 frs. has been awarded by the French Academy of Sciences to Mr. Crookes, F.R.S., in recognition of his recent discoveries in Molecular Physics and Radiant Matter.

PHILOLOGY NOTES.

THE *Assalāyana Suttam* (Chemnitz: Schmeitzner) is a Pāli sutta edited and translated by Prof. Pischel, of Kiel. It is the third sutta in the Brāhmana Vagga, in the second part of the Majjhima Nikāya—that is to say, it is the ninety-third sutta in that Nikāya, and not the third, as is supposed by the editor. It describes how the Brahmins, irritated by the promulgation of Gautama's doctrine of the equality of the castes, persuade Assalāyana, a young and distinguished scholar, to undertake to overthrow the Buddha's arguments. He reluctantly consents, and, being defeated in the argument, becomes a disciple of the Blessed One. The reasons which the Buddha adduces in support of his doctrine are very clear and simple, and much the same as are advanced to-day by opponents of the caste system. One of these reasons is, curiously enough, a comparison between the division into castes, which the Brahmins upheld, and the contrary state of things existing among the Yonas and Kambojas—that is, among the inhabitants of what is to-day Afghanistan. There it is said, "A master may become a slave and a slave a master." The Yonas in this passage must be the Bactrian Greeks, and the date at which the sutta assumed its present form cannot, therefore, be older than the third century B.C. The brochure is an interesting and valuable addition to our small collection of properly edited Pāli texts.

Det philologisk-historiske Samfunds Minde-skrift. (Copenhagen.) This is the Memorial volume of the Copenhagen Philological-Historical Society, published on the twenty-fifth anniversary of its foundation. J. L. Heiberg, "On the Terminology of the Greek Mathematicians," explains many of the terms used by Eutocius, Pappus, and Proclus which are insufficiently noticed in the Lexicons. Kr. Nyrop, in "The Combination t + r in Provençal Phonetics," shows that the sound of t (d) underwent a modification into ð, and is now represented by the sound i in many Provençal words, e.g., *patre*, *paire*. The sound ð, he thinks, must have existed in Provençal as well as in Old French. Sophus Bugge, in his "Contributions to the History of the Northern Ballads," compares the ballads *Marsk Stig* and *Holofernes* with other similar traditions. Jean Pio has a very interesting article on "The Old-Greek Prepositions as used in Modern Greek," with

full illustrations from the Byzantine and Modern-Greek authors. The colloquial variations are very striking. Emil Gigas writes on "Adaptations by Modern Poets of the *Amphitruo* of Plautus." The peculiar standpoints of this comedy and its great popularity are shown, with a criticism of the many versions in different languages, including those of Pandolfo Collenuccio, Francisco de Villalobos, Camoens, Molière, Dryden, and others. M. C. Gertz contributes Critical Notes on the *Suasoriae* of M. Annaeus Seneca. J. N. Madvig has some Miscellaneous Short Notes on Greek Translations of Roman Official Documents, and Conjectural Emendations of the Text of Homer: among these, in book iii., line 42, of the *Iliad*, for ὀρέσθων he proposes to read some word like ὀρέσθων (!). Some Passages in Cicero's *Brutus* are rectified. Ludv. V. A. Wimmer has contributions to Old-Norse Philology; and Vilh. Thomsen a Critical Investigation of the words *andare*, *andar*, *anar*, *aller*—he rejects previous derivations, and traces them all from the Latin *ambulare*.

The Legend of Gautama, by Bishop Bigandet (Trübner), is a reprint of the second edition (published in Rangoon) of Bishop Bigandet's well-known translation of a Burmese Life of Gautama. That second edition has long ago been out of print, and copies of it are very difficult to obtain in the European market. Messrs. Trübner and Co. may be congratulated on having secured the Bishop's permission to re-issue this rare book in the "Oriental Series," to which it will form a useful addition. The second edition just referred to is here reprinted very exactly, the misprints and incorrect transliterations being also carefully reproduced; and the only addition being an "Advertisement to the third edition," which contains a curiously perverted estimate of the value of the work. The writer of the Advertisement thinks it to be "a complete exposition of the great system of Buddhism"—firstly, because it consists, not only of the life or legend of Gautama, from which it derives its title, but also of a translation of a short Siamese work on Nirvāna, of a short Burmese treatise on the Buddhist mendicants, and an abstract of a few of the shorter Jātaka stories; and, secondly, because "a knowledge of that system can only be arrived at by the study of the religious books of Burmah." Who would venture thus to maintain that a translation of some modern Life of Christ, with a few pages in an appendix devoted to Christian monasticism, and a few more pages to the doctrine of salvation by faith and to the lives of the saints, could constitute a "complete exposition" of Christianity? In Burmah, too, Buddhism has no doubt been preserved much more purely than in China; but the Burmese Buddhism is entirely derived from, and was entirely dependent for its earlier literature upon, Siam and Ceylon, the Buddhism in these three countries being practically identical. Bishop Bigandet's book is neither a complete exposition of Buddhism nor is it drawn from the only source from which a true knowledge of Buddhism can be derived. But it may fairly be said to be the most authoritative and most complete work we at present possess on modern Burmese Buddhism. The few notices in Forbes's *Burmah* and in other books of a similar kind are both meagre and inaccurate; and the observations of Bastian, though in many respects more critical and trustworthy, are rendered almost useless by their utter want of arrangement and method. It is true, also, that, in the absence of better materials, Bishop Bigandet's work has been extensively used as evidence of earlier Buddhism; but as the authentic records of the Buddhist Scriptures are gradually made accessible, its value in this respect—never very great—will fade away into nothingness. It is, perhaps, a pity that, in reprinting a work which

has been constantly referred to in books on Buddhism, the paging of the edition generally so referred to—the second—has not been followed, or at least noted; and the new edition would have gained very much in usefulness if an index of proper names had been added. The present edition, like the old one, has no index whatever. In spite of all its defects, the first European edition of a very interesting and readable Life of Gautama should form a part of the library of every student of Buddhism.

MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, Feb. 5.)

THE Rev. J. Fuller Russell in the Chair.—The Rev. H. M. Scarth sent an interesting paper "On an Inscribed Votive Tablet found at Binchester (the ancient Vinovium)." The tablet was erected to Aesculapius and Salus, and is dedicated by a certain physician. The chief interest of the inscription consists in its being a further testimony to the fact that the Roman troops in Britain were supplied with medical officers, and it further leads to the presumption that the *ala* of the Vettones, or body of Spanish cavalry from the province of Salamanca, were stationed at Vinovium. The inscription is as follows:—

(AÆ3) CVLAPIO.
(ET) SALVTI.
(PRO) SALV. TEALAE VET.
(TONVM.) C. R. M. AVRE.
(L. CRVSS) OCOMAS. ME.
(V. S) L. M.

Mr. Scarth gave several other instances of Roman monuments erected either by, or in commemoration of, medical officers, connected with the army in this country. As examples of the different ranks held by Roman military physicians he instanced the titles: "Medici alarum," "medici cohortum," "medici legionum," "medicus duplicarius tirremis." The duties of the *Praefectus Castrorum*, according to Vegetius, extended over the sick soldiers and those physicians who had the care of them. Several inscriptions to soldiers of the Vettonian *ala* were described.—Mr. C. E. Keyser read a careful and lengthy paper "on the recently discovered mural paintings at Patcham, near Brighton," in the course of which a new theory was produced in explanation of "Low Side Windows." Among the remarkable features of the very interesting paintings in question were the thirty coats of whitewash with which they had been covered, and from beneath which they had been apparently satisfactorily disinterred.—Mr. J. G. Waller spoke at some length upon the definite laws which regulated paintings in churches, which laws were established as early as in the fifth century, and developed up to the time of the Reformation. With regard to the subject of the Last Judgment, as represented at Patcham, the same general features occur in all such representations, but it was extremely difficult to say when the laws for this special subject were laid down. Mr. J. Neale and Mr. J. T. Micklethwaite spoke as to the means that had been employed to preserve the Patcham paintings.—Among the antiquities exhibited was an embroidered pulpit-cloth, formed of the orphreys and other portions of two copes from Woolchurch, Dorset, sent by Mr. E. A. Griffiths.—Mr. Hartshorne exhibited a photograph of a sepulchral slab of a lady, lately found in Bangor Cathedral. The costume is of the middle of the fourteenth century, and she holds a *par precum*, or set of beads, arranged in sevens, and with fine circular brooches in immediate connexion with them. Two pockets are shown in the front of the lady's long gown, which is fastened with innumerable buttons down to the feet.—Mr. H. S. Harland sent a rubbing of the tympanum of the south door of Everton Church, Notts, a sculpture of the same character as that at Moccas, Herefordshire.—The Rev. G. T. Harvey exhibited a leaden disc found at Oundle.—Several other antiquities were exhibited.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 12.)
EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—
Mr. C. Trice Martin read a paper upon a roll of accounts of Sir John Daunce, of sums of money spent by him in pursuance of the orders of King Henry VIII. from 1522 to 1527. The items of expenditure included the visits of the Emperor Charles V. and King Christian II. of Denmark to England, a campaign of the Duke of Suffolk in France, and other points of historical interest, which were illustrated by extracts from the State papers in the Public Record Office and elsewhere.

ROYAL ASIATIC SOCIETY.—(Monday, Feb. 16.)

SIR H. C. RAWLINSON, K.C.B., President, in the Chair.—Prof. F. Max Müller read a paper "On Sanskrit Texts discovered in Japan," in which he showed that the hope so long entertained by the late Prof. H. A. Wilson and by other scholars had been at length realised by the discovery in Japan of certain MSS. containing a glossary of Chinese words, with their equivalents in Sanskrit, together with the transliteration of the Sanskrit words in Japanese. The Sanskrit is written in an alphabet very nearly the same as the old Nepalese.—Mr. J. W. Redhouse read a paper "On the Identification of the 'False Dawn' of the Muslims with the 'Zodiacal Light' of the Europeans," in confirmation of his previous paper.

FINE ART.

ARCHAEOLOGICAL NOTES ON A TOUR IN SOUTHERN ITALY (Concluded).

V.

CAMPANIA.

IN ancient Campania the chief archaeological novelties at the present time are the excavations in the necropolis of Il Bosco d'Acerra, the ancient Suessula, conducted by Baron Spinelli, and the discoveries made in that of Vico Equense, between Castellammare and Sorrento.

The excavations at Suessula, which have been in progress for the last three years, are interesting as having been very skilfully carried out, with much care, regularity, and scientific method—a rare circumstance in Italian excavations. Then, too, they have revealed many new facts. They have not yet been systematically dealt with in print; but I was enabled to make a careful study of the collection which they have furnished, and which Baron Spinelli sent, *en bloc*, to the archaeological exhibition held at Caserta on the occasion of the provincial agricultural show. This exhibition had just closed when I arrived at Naples; but I was indebted to the courtesy of its two learned organisers, Prof. Giulio Minervini, of Naples, and the Abbate Janelli, of Capua, for seeing its doors re-opened for me before the objects composing it were packed up.

The collection from the necropolis of Suessula enables us to follow, by means of its ceramic remains, the successive phases of the civilisation of a small Campanian city between the seventh and second centuries B.C.

In the oldest tombs only vases of blackish clay occur, allied to the earliest potteries of Etruria and Latium. These vases were a novelty for the scholars of Naples; but professional *scavatori* say, now that attention has been called to them, "We have met with them everywhere, and hitherto we threw them away as rubbish because they had no commercial value." At all events, there is now a tendency to assume throughout the whole of Italy the existence of an earlier native manufacture of potteries of blackish clay, the gradual improvement in which produced the *bucchero nero* in Etruria, and perhaps in Latium as well, and the first attempts at which have just been studied in the most remarkable manner by Prof. Helbig in the *terramare* of Emilia. This ceramic ware is almost identical in every case. Still, we may now distinguish by peculiar characteristics six

different local types to the south of the valley of the Po:—

(1) The *Etruscan* type, which occurs in the earliest burial-places of Chiusi, especially in those of Poggio-Renzo.

(2) The *Latial* type, now so well known by the brilliant researches of Signor Michele de Rossi. And here two successive epochs may be distinguished—the first characterised by the presence of cinerary urns in the shape of *tuguria*, and by those vases the outer surface of which presents square *alveoli*, as if the decorator had roughly imitated the appearance of basket-work; the second, in which these two characteristic forms disappear, and in which the strictly Latial potteries, which then in some cases bear incised geometrical decorations, begin to be associated with pieces of *bucchero nero*, perhaps imported from the Etruscans, and with little vases, painted in a very archaic style, of Greek origin. The tombs recently discovered at Rome, on the Esquiline, and over which the wall of Servius Tullius was built, belong to this second epoch.

(3) The *Picentine* type of the neighbourhood of Asculum, Firmum, and Hatria, richly represented in the municipal museum of Ascoli Piceno, in the palaeo-ethnographical museum annexed to the Kircherian Museum in the buildings of the Collegio Romano, and in the Fol Museum at Geneva.

(4) The *Sabine* type, made known to us by the recent discoveries at Amiternum and Corfinium.

(5) The *Campanian* type, brought to light by the excavations at Suessula.

(6) The *Bruttian* type, the first specimen of which, on my return from my tour, I presented to the Louvre. It was dug up in the heart of the wildest mountains of Calabria, at Casalnuovo, between Gerace and Gioja.

At Suessula, as in the old necropolises of Latium, after originally appearing alone, the blackish pottery occurs in conjunction with painted vases of Greek manufacture, with geometrical decorations, and with those which present the first examples of animal painting, traced in reddish colour. Next comes the epoch of vases in the Asiatic-Lyidian style, with belts of animals, real or grotesque; and afterward that of vases with black figures. Among the latter some seem to have been imported from Greece, and others have the perfectly characteristic *cachet* of the Chalcidian ware of Cumae.

Vases with red figures succeed. Here the main interest of the collection consists in those which were undoubtedly brought in the course of trade from Greece proper, and especially from Athens. Thus we recognise here (for the first time in Italy) the presence of a large and exquisite Athenian *lekythos*, with a white ground, the painting being a representation of two women. It is accompanied by the inscription, in three lines, in the centre:—

ΑΙΘΙΟΝΙΕΥΣ

ΚΑΛΟΞ

ΑΛΚΙΜΑ+ος

No less undeniably Attic by its manufacture and inscriptions is a large and admirable *skyphos* with red figures in a severe style. On one side all the characters are shown with their names affixed, ΑΛΕΞΑΝΔΡΟΣ leading HEAENE, who is urged on by ΑΠΟΔΙΤΕ and ΗΙΘΟΞ; the Trojan hero, the son of Priam, is assisted by ΑΙΝΕΑΖ, according to the narrative in the *Cypriaca*. On the other side, in presence of ΗΠΙΑΜΟΞ, who is seated, Menelaus (the only figure whose name is not appended) is pursuing, with drawn sword, HEAENE, who is taking refuge, under the protection of ΑΠΟΔΙΤΕ, with ΚΡΙΣΤΕΥΣ and his daughter ΚΡΙΣΤΕΙΣ. Under one of the handles is traced with the brush the signature of the ceramic painter MACRON, ΜΑΚΡΟΝ ΕΡΠΑΞΕΝ, which is here met with for the first time. On

the other handle is traced a *graffito* the signature of the potter Hieron, ΗΙΕΡΟΝ ΕΠΟΙΕΞΕΝ, already known on thirteen other vases, one of which—a noticeable circumstance—likewise reproduces the scene of the rape of Helen.

Nothing can be more instructive than a comparison of these two vases, and of some similar examples as clearly of Athenian importation, with the vases in the styles of Nola and Capua found in the same tombs. Their contrast forms a complete refutation of Gustav Kramer and Otto Jahn's theory. Products so different in style and execution cannot proceed from the same source, and on seeing them side by side one only becomes more and more thoroughly convinced of the reality of the existence of local Greek potteries in Campania.

After the fine vases with red figures, the excavations at Suessula present us with those of the decadence—in the decoration of which white plays an important part—very similar to those of Capua. We are likewise struck by the large number of figures of Samnite warriors, with their helmets loaded with singular plumes, as they appear in the mural paintings, commonly called Greek, but really Lucanian, of a tomb at Paestum, which have been transferred to the Naples Museum, and in those of underground tombs of the Samnite epoch recently opened at Santa-Maria di Capuavetere. Finally, these painted vases of the decadence are succeeded by Etrusco-Campanian potteries with reliefs and a uniform brilliant black glaze.

But tombs of these later epochs are still rare in the part as yet explored of the necropolis of Suessula. The portions hitherto excavated are generally of a pretty early date. And it must be noted as a somewhat uncommon circumstance that so far no trace has been discovered of the superposition of tombs of different ages. Suessula was never anything but a very small town, and its burial-place was not so limited as to render it necessary to use the same spot twice over. We may remark, however, how, as time went on, modifications were introduced in the mode of burial. In the oldest tombs—those containing the vases of blackish ware—the body is directly buried in the soil, and protected only by a few large flat stones arranged so as to cover it. Next, we find the Greek mode adopted of interring the remains in a kind of sarcophagus of the shape of a parallelogram, formed originally of slabs of tufa, and afterwards of tiles. Finally, at the time of the decadence, there is a return to the system of direct interment in a simple trench dug in the ground.

Unlike those of Il Bosco d'Acerra, the excavations of Vico Equense were carried on without any supervision and by untrained *scavatori* for purely speculative purposes.

My friend, Prof. Barnabei, has related in these columns the accidental circumstances which brought about this discovery of a part of the tombs of the ancient Osco-Campanian Taurania, which seems to have been succeeded by Aequana, mentioned by Silius Italicus. The latter would appear, from its modern name of Vico Equense, which is certainly derived from Vicus Aequanensis, to have been only a simple vicus.

It does not appear from Prof. Barnabei's account that he had an opportunity of seeing any of the objects discovered, and as a matter of fact they were immediately dispersed. However, I was enabled to examine a considerable number of painted vases from Vico Equense at Naples, in the possession of the dealers Barone and Scognamiglio, and at Rome, in that of Signor Alessandro Castellani. As a rule, they are exceptionally beautiful. Among the vases with red figures, there are some which show the glaze of Nola in its most exquisite quality; others are precisely similar to those previously found at Sorrento. Among thos

with black figures, there are a considerable number belonging to that singularly delicate type, with a white ground, examples of which have already been discovered at different spots in Etruria and Campania, and the place of manufacture of which is still unknown.

I shall not speak here of the latest discoveries of vases made in the tombs of Santa-Maria di Capuavetere, i.e., of the ancient Capua, by Signori Doria and Gallozzi. Doubtless there are marvellous specimens among them which deserve a protracted study, but they do not add materially to our knowledge of the objects which mark the necropolis of this great city.

I devoted two days to examining—first in the Caserta exhibition, and secondly in the Museo Campano at Capua—the rich and curious series of antiquities discovered in Il Fondo Patturelli, at the spot called “Le Curti,” close to Santa-Maria di Capuavetere, at about sixty yards’ distance from the walls of ancient Capua. M. Fernique in France; Prof. Giulio Minervini, Father Garrucci, and, before all, Signor Mancini and Dr. von Duhn in Italy, as well as Herr Beloch in Germany, have already treated at length of these antiquities, and yet the subject is far from exhausted, and there is still fresh light to be thrown upon it.

The excavations of Il Fondo Patturelli have resulted in the discovery of the remains of a temple of the Osco-Campanian epoch, the arrangement of which very closely resembled that of the temple of Jupiter in the Forum of Pompeii and that of the temple of Jupiter Victor on the Palatine. This sanctuary was dedicated to an old Italic goddess, represented in 150 votive statues of tufa, very roughly executed, which have been found all about it. The goddess in question is always represented in a sitting posture, in most cases holding in her arms one or more children in swaddling clothes; sometimes she holds as many as twelve at once. In one instance the child is nude; in another it is being suckled by the goddess, which goes to refute Dr. von Duhn’s singular view recognising in them dead men in their shrouds instead of infants in swaddling clothes. Several of the statues bear Latin inscriptions on their base mentioning vows made by matrons. They possess, therefore, beyond a doubt the character of *ex-votos pro prole suscepta*, as expressed in a Capuan inscription of the Imperial epoch dedicated to Venus Genetrix; and the number of children held by the goddess in her arms must correspond to the number which the dedicating matron had really borne, and whose birth she attributed to the intervention of the divinity. In some of the tufa statues the goddess, instead of holding the children, bears in her hand a fruit or a pig; once, in a figure of exceptional size, she has a pomegranate in one hand and the *foetus* of a quadruped still wrapped in its caul in the other. A mural painting, discovered in 1878 in a Capuan tomb dating from the Samnite period, represents the same divinity seated on a throne, holding a pomegranate and a dove, while a small human figure standing before her is offering a libation. We have here, then, a *Kourotrophos*, a goddess who presided over reproduction and fertility, animal and vegetable, and who, by an association of ideas which recurs in the case of all the chthonian goddesses of paganism, could assume in certain cases characteristics connected with death, and so might be represented in places of burial. But in spite of all that Dr. von Duhn has urged, the latter side of her nature was always purely secondary, and purely subordinate to her aspect as the goddess of generation.

Several Oscan inscriptions, engraved on terra-cotta, have been found among the fragments of the temple, and contain dedications to three different divinities who were worshipped there contemporaneously: *Jovei Flagiui*, i.e., a Jupiter Flagius; *Diviai Damuse*, a goddess whose

name, in its Latin form, would be Jovia Damusa; and thirdly, *Vesoliai deviai*. The two goddesses, Jovia Damusa and Vesolia, are afterward translated by Juno Lucina and Venus Genetrix in the Latin inscriptions of Capua of the end of the Republic and the period of the Empire. The first and more important of the two is simply a form of the mysterious Bona Dea, for her name of Damusa is certainly to be connected with a passage in Festus: “*Damium sacrificium quod fiebat in operto in honorem Bonae Deae . . . ; dea quoque ipsa Damia et sacerdos ejus damiatrix appellabatur.*” Again, the name of Vesolia is a variant of those of Vesuna and Feronia, all being radically identical.

Did Jupiter Flagius figure in this temple as the husband of Jovia Damusa? I very much doubt it. He played an altogether secondary and unimportant part; he is mentioned in none of the *ex-votos*, and even the terra-cotta plaque, on which the dedication to him is engraved, bears in relief symbols of the female divinity, the flower and the sow. This is thoroughly in accordance with the common character of all these ancient Pelasgic goddesses of generation and the soil, to whose class belongs the Bona Dea. They are in their nature mothers without being wives, and if male gods are sometimes associated with them it is as children only. Such is the situation of the child Jupiter associated with Fortuna Primigenia in the famous cult of Praeneste; and I believe that that of Jupiter Flagius must have been the same in association with Jovia Damusa in the religion of Capua. Let the reader now turn to Gerhard’s admirable study on the religion of Praeneste, according to the terra-cottas and votive sculptures found in that city. He will see how Fortuna Primigenia was resolved into a feminine duality, similar to that of the *Fortunae Antiates*, into a pair of goddesses, placed on a footing of almost absolute equality, although one was the mother and the other the daughter—a pair which, completed by the presence of the child Jupiter, closely reproduced the mystic Eleusinian group of Demeter, Kora, and Iakchos. The mention of Jovia Damusa, Vesolia, and Jupiter Flagius as worshipped together in the temple of the goddess mother at Capua suggests a precisely similar group of divinities.

Close to the ruins of the temple and its votive statues of tufa, Il Fondo Patturelli contained one of the most extensive hoards of terra-cottas ever yet met with. Pillaged for many years by unsystematic excavations, it has provided all the museums of Europe with a large number of specimens, which have reached them without any very precise indication as to their place of origin. And in spite of these years of plunder, when scientific excavations were at last undertaken, it was yet sufficiently extensive to furnish the Museo Campano with about 30,000 pieces, damaged and entire.

This is the votive *stips* of the temple, as it was formed by the offerings of the faithful who came to implore the help of the goddess. The same types are repeated to infinity, and among the most numerous the following classes may be distinguished:—

(1) *Ex-votos* represented in cases of disease, and consisting of representations of members of the human body, of large dimensions—heads of men, women, and children, often of a very strongly marked type; arms, hands, legs, feet, breasts, stomachs, sexual organs, &c. In all the churches of the South of Italy similar objects are still hung up in great quantities in the chapels of the various saints, only they are of wax instead of terra-cotta. After some time has elapsed, to prevent an embarrassing accumulation, they are melted down and made into tapers, which are burnt on the altar. In the ancient temples, where these *ex-votos* were of terra-cotta, it was likewise found necessary to

remove them periodically and bury them in trenches close to the sanctuary, which would otherwise have been speedily choked up with them.

(2) Legs, with the foot, of various animals—the horse, ass, ox, sheep, goat, pig; in one instance of the camel, of nearly the same size and intended for the same purpose. It appears that one of the two goddesses worshipped in the temple, Jovia Damusa or Vesolia, enjoyed great popular renown as curing cattle of a tendency to kick.

(3) Statuettes of divinities. The commonest is naturally that of the great goddess mother of the temple, Jovia Damusa, sometimes standing, sometimes seated, with considerable variations in her attire and attributes, but always suckling a child—one only in these *figurines*, doubtless the little Jupiter Flagius. A large number of others present a nude or half-draped Venus, standing or sitting on a swan; this is the Venus with which Vesolia was identified. I may mention also a Cupid which is reproduced hundreds of times, and likewise certain genii which may likewise naturally have belonged to the train of the two goddesses. Finally, among the number may be remarked the images of some other divinities, especially of Diana, who was the object of a special cult at Capua.

(4) *Figurines* of children wrapped in swaddling clothes or nude, engaged in various games. This may be, especially in the second case, the divine child who was the offspring of the goddess mother; but in the first it seems to me that we should rather recognise *ex-votos pro prole suscepta*, and a representation of the child granted by the protecting grace of the goddess.

(5) Votive statuettes representing simple draped female forms in various attitudes. They all betray an echo, weakened by a series of successive imitations, of the exquisite *genre* statuettes created in the age of the successors of Alexander by the *koroplastai* of Boeotia and Attica. Many even seem to be moulded on Apulian and Sicilian terra-cottas, which are themselves moulded on Athenian and Tana-græan terra-cottas.

(6) *Figurines* of animals, among which may be specially noticed the cow, the goat, the pig, the dove, which were among the symbols of the goddess mother, of the Italic Bona Dea as of the Greek Demeter.

(7) Flowers and fruits. Among the latter the commonest are the pomegranate and the apple.

All these terra-cottas are, as a rule, very rudely executed, and not of much account from the artistic point of view. The great majority have been simply pressed into the mould, and not touched up afterwards with the chisel. They present great variations in style, but the archaism of some of the pieces can scarcely be anything but imitative. In the *stips* of the temple of Jovia Damusa at Capua may also be remarked, as in the similar hoard discovered thirteen years ago beside the temple of Demeter at Tegea in Arcadia, many of these *figurines* which were not even moulded, but only shaped in a rough-and-ready way by pressing the soft clay between the fingers. These products of a branch of popular trade which it was sought to bring within the reach of the humblest purses affect, by their coarse and rudimentary character, the appearance of works of remote antiquity. But this appearance must be mistrusted, for a great number of absolutely certain facts prove that they were turned out in every period.

The hoard of terra-cottas of Il Fondo Patturelli was perhaps not entirely and exclusively formed by the *stips votiva* of the temple. It seems that we have here likewise the refuse of a building erected in the close neighbourhood of the sanctuary for the purpose of making a profit out of the devotion of those who visited it and of furnishing them with their *ex-votos*. I

shall not argue in this sense from the presence of images of divinities which were not those of the temple; for the practice of dedicating to a god the representation of another god, long unrecognised by archaeologists and first brought to light by Letronne, is now one of the best established facts regarding the religious customs of antiquity. But there is no other possible explanation of the considerable number of moulds and fragments of moulds found with this hoard, or, above all, of the immense quantity of antefixes which it contained. There was enough to provide for the roofing of a large number of buildings. The majority are ornamented with a masque of a gorgon's head, sometimes very archaic in appearance, sometimes in a perfect style, for in these objects too we meet with the very same variations of style as in the rest of the hoard. Another type of antefix, which is constantly recurring, always in a style that is really ancient or that imitates the antique, bears an image in bas-relief of a kind of Amazon or goddess, clad in a short tunic, wearing small boots, with her quiver on her shoulder, sitting sideways on a horse, and holding her bow. Beneath her horse there is always a goose. I am inclined to recognise here an archaic representation of Diana Tifatina, whose far-famed temple was situated close to Capua, and appears to have been for the populations of this part of Campania at once a religious and a political centre, as the temple of Diana Aventina was for the Latins. Hitherto, only one very late type of this goddess was known—that in a mural painting of the third century of the Christian era, preserved at the Museo Campano, and discovered a few years ago at Sant' Angelo in Formis, precisely on the site of the neighbouring temple of Mount Tifata.

At Pompeii, the excavations undertaken on the centenary of the destruction of the city led to the discovery of a very curious mural painting, concerning which I am surprised that more has not yet been said. It is by no means elaborate in point of execution, and, in the corner of one of the offices of a house, it occupies a space above a little altar of the Lares, forming a pendant to another painting, in which may be seen, as always in such cases, the two consecrated serpents and two Lares *pocillatores*. Above a large serpent, which figures here as a genius, and accompanied by several birds, we find a representation of Bacchus in a very novel form. The body and garments of the god are replaced by a large bunch of grapes of the colour of amber, from which issue the human feet of the figure; its arms, one of which holds the *thyrsus* and the other a *cantharus*, the wine in which he is pouring on the ground; and his head, youthful and crowned with vine branches. We already knew by works of ancient sculpture a Dionysos Ampelopōgōn; here we have for the first time a Dionysos-Staphylos, a Bacchus Racemus and not merely Racemifer. This figure of the god is as large as a mountain represented beside him, the drawing of which deserves particular attention. It seems to me, in fact, impossible to doubt that we have in this painting the earliest ancient representation yet discovered of Vesuvius as it existed before the eruption of the year 79. It brings before us exactly, and feature for feature, the aspect that must have been presented by the volcano, then extinct, when seen from Pompeii and the valley of the Sarnus, before the present cone was formed, and when, in place of this cone and of the Atrio del Cavallo, there was only the *plateau* described by Strabo. For the observer placed at Pompeii or at Stabiae, this *plateau* formed a promontory, half-way up the escarped crest of La Somma, by which it was commanded; and this is what may be observed most distinctly in the painting. The latter is therefore a document of very great value for the physical history of

Vesuvius, and it most strikingly confirms the theory accepted by most geologists, and supported with great ability by the engineer, Signor Ruggiero, in the fine volume published officially at Naples on the occasion of the centenary of Pompeii. This theory, vainly attacked by Herr Beloch in his recent work on Campania, is that the cone now in a state of activity was formed subsequently to the year 79 A.D. The vineyards on the flanks of Vesuvius were famous in antiquity, as in our own days; it is not therefore surprising that this mountain should have been introduced in a picture of Bacchus, especially at Pompeii. It will likewise be remarked that, in the painting, the wine which the god is dropping from his *cantharus* is a golden wine, like the *Lacryma Christi* at the present day.

FRANÇOIS LENORMANT.

REPRODUCTIONS OF DRAWINGS FROM FOREIGN COLLECTIONS IN THE BRITISH MUSEUM.

MR. G. W. REID, Keeper of the British Museum Print-room, is affording immense service to art students by the vast collection he is gradually accumulating of reproductions from the original drawings, studies, &c., in other large collections. The study of the drawings of a master for the purpose of gaining a more intimate knowledge of his thoughts and modes of expression may almost be called a modern science, for it has only been rendered possible to the majority of students by the perfection to which photography has of late years attained. It is by this means that it has been found possible to extend the comparative method of examination which has been applied with such startling results in other branches of knowledge into the department of art history, so that now critics are not content with merely comparing the finished works of a master, or those of one master with those of another, but they seek to trace out, as it were, the origin of such works, watching the growth of an idea in an artist's mind until it gradually shapes itself into settled form. Some such process of development is perceptible in the drawings of many masters, particularly of those who were accustomed to jot down their ideas as they happened first to occur to them. Leonardo da Vinci was a notable example of this. In the Print-room of the Museum there are no fewer than three drawings of the Virgin and Child with a Lamb, evidently intended as studies for the Oesvelt picture, for which the Museum possesses also other slight studies. Now, these same figures of Virgin, Child, and Lamb, or, as is sometimes the case, with a cat (evidently introduced as a makeshift for a lamb), occur in other collections. For instance, in the Uffizi Gallery there is a drawing in which the animal is a cat, and the Virgin is standing up in a somewhat ungainly attitude. This is entirely altered in a study in the Academy at Venice, where the Virgin is seated with St. Anna, as well as the Child on her lap. Here the lamb is introduced, and the cat disappears. Again, at the Uffizi, is a careful study for the head only of the Virgin, with hair parted plainly on the forehead, and the same treatment is seen in a drawing in the Louvre. In the Milan collection the Virgin's head is completely altered, and is even more beautiful than in the finished composition. All these various first thoughts, as we may call them, for a great work may now be compared by the English art student without travelling farther than to Great Russell Street; and it is easy to see how much may be gained by the great facility thus afforded for research in a direction that has hitherto been but slightly explored.

Nor while gaining examples from other collections does the British Museum neglect to add facsimiles of its own drawings to the general stock. The authorities have recently granted

permission to MM. Goupil to reproduce, by their well-known and excellent process, all the more important works preserved in the Print-room.

MARY M. HEATON.

EXHIBITIONS.

By the exertions of Mr. G. W. Anson and Mr. Osborne there was opened in New Bond Street, on Monday, a considerable exhibition of paintings, drawings, and sculpture, either executed by members of the dramatic profession or representative of past or living members of it. It is difficult to judge such an exhibition, however interesting it may be, by the standards one usually applies to the work of professional artists exhibited in public galleries, or even to that of the much-favoured amateurs, who are never better pleased than when they may persuade themselves that they are professionals. Happily, however, some drawings and pictures in the Dramatic Gallery are of better than amateur rank. Mr. Forbes Robertson sends a very pretty picture of Miss Ellen Terry in *propria persona*, a work which displays not only excellent observation of the model, but a well-trained talent in dealing with artistic material. The picture is at once a good likeness and an attractive and tasteful piece of painting. Mr. Frederick Vokes, thus far chiefly known to the public by distinguished achievements in the pantomime, is seen to be a thoroughly skilful water-colour artist, able to render the charm and subtlety, the light and colour, of the Mediterranean landscape. Mr. E. Sothorn, a son of the comedian, betrays a fashionable interest in the "still life" of fine objects of art; and Mr. Kendal contributes distinctly clever and quite artistic sketches of two of his brethren. He sends a sketch of the late Mr. Compton as Touchstone, which, it appears, was taken at odd moments snatched night after night from the business or the scanty leisure of the theatre. He contributes, likewise, an harmonious brown sketch, very broadly and firmly done, of his friend, Mr. Hare, in the character of Lord Kildare in *A Quiet Rubber*. The attitude of that pleasing comedian is well seized. Miss Genevieve Ward contributes more than one design—one, at least, a marvellously adroit copy of a popular master. Mr. Joseph Jefferson sends two or more sketches in oil, distinguished by freedom and elegance. They represent trees in landscape. The late Charles Mathews is well represented, especially by the tender and glowing little picture—precise without coldness—lent by Mr. Barrett. Miss Hatherly sends a good likeness of her sister, Miss Amy Hatherly, well and firmly sketched, and agreeable to look upon. Mr. Percy Roselle sends an elaborate and graceful portrait, in black and white, of his sister, Miss Amy Roselle. Mr. Neville sends landscapes certain to be remarked, and a portrait of himself as Charles Surface, which strikes one as not so good. Mr. Arthur Lewis has an excellent likeness of that famous actress, Miss Kate Terry. Among the works contributed by purely professional artists, who appear in this gallery only in virtue of their choice of subject having led them to dramatic portraits, one should name Mr. Brodie, the sculptor, of Edinburgh, a racy and gifted man, who sends a charming portrait of the gentle head of Mr. Joseph Jefferson. Mr. Archer, too, portrays Mr. H. Irving as Charles the First. The canvas is enormous and the pose graceful. Many portraits of the actors of a past generation deck the walls, and succeed in interesting us. There is Sharp's group of players engaged in the representation of *King John*, as it was played some seventy years ago, this group including portraits of a now very old lady, the Dowager Lady Essex—the Miss Stephens of that day—and of

one of the Kembles and of Miss O'Neil. Elsewhere, scattered about the gallery, there are interesting portraits of Liston, Mathews, "Gentleman" Jones, and many another player of past generations. Had the portraits of dead actors been classed together, so that they might be viewed consecutively, there would have been some gain to the ease with which they would have been appreciated; but it is said that the arrangement of the pictures was almost at the last moment disturbed by the arrival of unexpected contributions. The exhibition—though it does not reach an exceedingly high artistic level—is worth a visit, especially by the lovers of dramatic art and those who are concerned in the personal history and in the varied accomplishments of players. There has always been a curiosity to know the concerns of players and their private pursuits, and this will be increased now that the player has become so fashionable a member of society.

SOME months ago the *Graphic* commissioned several of our leading artists to paint an ideal head of beauty. The result is now on view to the public in twelve paintings in oil-colours of a dozen more or less pretty women. It would seem but natural to expect that of all people in the world the artist should be the most likely person to know in what true beauty really consists; and we have no doubt that the public will visit this exhibition, held in Grafton Street, Bond Street, more to learn and admire than to criticise. If so, the disappointment will be great, for, instead of finding a row of superbly handsome women, in magnificent toilets, gazing haughtily out of their frames at the less fortunate, because plainer, part of female humanity, they will find there—with two or three exceptions—merely several pretty and spiritless faces, no definite costume, and a preponderance of the complacent expression of the self-content of comfort, with the utter absence of ambition, or anything of the kind, which is such an apparent failing in most modern portraiture. From Sir Frederick Leighton the public has almost a right to expect something beautiful, for he is one of the few artists who has a high sense of female beauty; disappointment may indeed be felt at the painting here by him, which seems to be an attempt, and a feeble one, to reproduce the style of Early-Italian painting, when the tones were timid instead of clear and luminous. Mr. Leslie sends one of his usual young faces, pretty, with a frank expression in the eyes; Mr. Tissot, the face he always paints in his pictures, only this time it is given on a larger scale than usual; the flesh tints are very cold, and the background, with its flowers, is flaring, and very crude in colour. By Mr. A. Hopkins is an old-fashioned-looking damsel, with the eyes cast down—which looks like a weak echo of a reading Magdalene, and can be called ideal only in that it has no semblance whatever of reality. Mr. Perugini sends a smooth little study of a head, apparently painted from nature. Mr. Long's beauty is a large Oriental woman in costume, in no way attractive in appearance. Mr. Story has a brunette in a frilled white cap, and Mr. P. Morris a veiled, blue-eyed, pink-cheeked lady. Mr. Marcus Stone sends a pretty picture of a pleasant-looking lady in a large black hat with a red bow underneath; the face is in shadow, but not at all dark, the bright sunshine of the garden behind being reflected on it. Mr. Alma-Tadema alone sends a finished picture; his beauty is a fair-haired lady in a light dress seen against a gold curtain, against which also is a plain and rather coarse-looking head in bronze; the *tout ensemble* of this little work is very charming, and the whole aspect very harmonious. Mr. Dicksee sends a serious face with a sad but pleasant look about it; this has too much the appearance of being a portrait, although, as such, it is good, and its background of some

flowering shrub is pleasing; but it is not quite in keeping with the subject given. Mr. Calderon's painting is of a really pretty woman with a dreamy and at the same time smiling expression of the violet eyes, and with a soft rosy complexion. We are rather tired of seeing on the walls of exhibitions year after year the shoulders of pretty women clothed in this nondescript sort of garment, as also of seeing so perpetually the very blue eyes and uniformly rosy cheeks which are considered such indispensable attributes of beauty; but in Mr. Calderon's work the colour of the eyes and the complexion is skilfully treated and the result is satisfactory. The smooth, shadowless, simple appearance of many of these heads is no doubt to be accounted for by the fact that they are to come out during the ensuing months of the year in the form of engravings, and, as such, doubtless those which are most commonplace and smooth will come out the best. In the corner of the room where all these beauties sit and gaze vacantly is one of Mr. Millais' demure little maidens, yclept "Cherry Ripe," seated on a shady bank, and looking laughingly up with her great brown eyes from under her large mob-cap. The warm colour of the hair and eyes is charmingly given; the brown shadows of the flesh, however, spoil the effect of the whole. Round the walls of the gallery hang the original designs for the illustrations to the *Graphic*, among which are many by Messrs. Small, Green, Macbeth, Herkomer, Wigram, A. Hopkins, and others, which it is a real pleasure to see, and which alone would well repay a visit to this exhibition.

OBITUARY.

DR. ALFRED WOLTMANN.

DR. ALFRED WOLTMANN, Professor of Art History at the University of Strassburg, died on the 6th inst. at Mentone. He was born at Charlottenburg in May 1841, being the grandson of the well-known historian, Karl Ludwig Woltmann. After completing his studies at the University of Berlin under the direction of Waagen, he devoted himself to comprehensive researches on Holbein's life and works. As early as in 1866 he published the first volume of *Holbein und seine Zeit*, and established himself in the following year as *Privat-docent* at the University of Berlin. In 1868, when his *Holbein* was completed, he was appointed Professor of Art History at the Karlsruhe Polytechnicum, and six years later at the University of Prague. His *Holbein* having given rise to some very severe criticisms, he published a second edition between the years 1874 and 1876, wherein he mostly adopted the opinions of his opponents, especially with regard to the high position which is due to Holbein the elder in art history. To this great forerunner of the Renaissance in Germany, Woltmann devoted in the revised edition some hundred very instructive pages. Beside this standard work, which will perhaps for ever connect the name of the Holbeins with that of Woltmann, he has also published, during the last few years, numerous contributions to the *Zeitschrift* and other periodicals. Among his other more comprehensive works we may mention a book on German Art and the Reformation (1867). In 1870 he compiled a catalogue of Prince Fürstenberg's collection of pictures and plaster-casts at Donaueschingen. In 1872 he published a series of lectures on the History of Berlin Architecture. In the same year appeared the fifth volume of Schnaase's History of the Fine Arts in its second edition, of which he was joint-editor. During his stay at Prague, Woltmann devoted himself to the study of Bohemian art. His lecture on German art at Prague, delivered at

that town in 1877, caused a great sensation among the Czechs, and even political demonstrations. As he repeatedly defended German art by detecting falsifications in Czech literature, his position at Prague became more and more critical. In 1878 he was appointed professor at the Strassburg University. Beside the History of German Art in Alsace (1876), he published lately a popular work on Netherlandish and German Art during Four Centuries. He had also commenced a most valuable History of Painting, of which the first volume, dealing with the Middle Ages, was only completed last year; while he edited, with Prof. Janitschek, the *Repertorium für Kunstwissenschaft*. Woltmann's last review which he contributed to this periodical (vol. iii., p. 2, 1880), published some days ago, concluded as follows:—"The present generation of German art historians is well aware of the struggles and labours which they have to undergo to secure to the science of art a proper position among the other sciences and to counteract the opinion that art criticism may be left in the hands of *dilettanti*." To restore his failing health Woltmann passed the winter at Bordighera, whence he lately moved to Mentone with but little hope of recovery.

J. P. RICHTER.

ART SALES.

MESSRS. CHRISTIE'S sale last Saturday of the pictures belonging to Mr. Pinto and those of the late Mr. Lionel Lawson resulted in the realisation of adequate prices, but it offered few particulars of special interest. *The Mask* by Boucher, from the Novar collection, was one of the most noticeable works belonging to Mr. Lionel Lawson. It sold for about one hundred and fifty guineas—some thirty or forty guineas more than it fetched in the Novar sale.

LAST week Messrs. Sotheby, Wilkinson and Hodge sold a collection of china—blue and white and other Oriental china—Oriental objects of *virtù*, original etchings, and one or two paintings, all from the estate of Mr. James Abbot McNeil Whistler. We note the prices of the objects of chief interest:—A pair of bronze candlesticks, chased with scrolls, and on high rosewood stands, realised £9 (Howell); a handsome Japanese screen of several folds, with panels of silk, £13; a pair of dwarf screens, painted with landscapes and figures on gold grounds, £4 4s.; a pair of remarkable Japanese bronze candlesticks, pierced stems, and a stork with enamelled wings, £4 15s. (these were very bold and free); eighteen Japanese picture-books, sketches of landscape and figures and loose drawings, £3 7s. 6d.; a large brown earthenware cistern or bath, somewhat ornamented with birds and flowers, £5 5s.; a Japanese china cabinet, fitted with ebony drawers and lac panels, painted with figures, and on a stand, £10 10s. After these there followed Mr. Whistler's own productions. About a hundred copper-plates of etchings, mostly erased, sold for £6 15s. (Fine Art Society); one little plate, in perfect condition apparently, was sold separately for £5 10s.; about forty slight crayon sketches, chiefly of the figure, some black and white, and others variously coloured, went for £19 10s.; two framed etchings, being a river view and a sketch of a girl, realised £7 10s.; three etchings, framed—*A Forge*, *Battersea Bridge*, and a *Lady and Dog*, exhibited at the Grosvenor Gallery—fetched £20 10s. (Flower); a framed crayon sketch, said to be Mdle. Sarah Bernhardt, perhaps erroneously, went for £5 5s.; another crayon sketch of a lady seated, exhibited at the Grosvenor, fetched £3 7s. 6d., while yet another crayon sketch of a nude female figure with drapery behind the shoulders fetched £4 (James). Lastly, there came two pictures which have been the subject of much remark. One of these was the large oil portrait

of Miss Connie Gilchrist, of the Gaiety Theatre—an immature figure, fragile and light, with legs tripping forward in a skipping-rope dance. Though apparently slight in execution, the work may be considered both a good likeness and attractive as a work of art. It has certainly pleasant qualities of colour and expression, and the gesture of the model is adroitly caught. This large example of Mr. Whistler's art sold for £50. It was followed by a less pleasing instance of his skill—a satirical painting of a gentleman, styled "The Creditor." This extensive, but extremely sketchy, work sold for £12 12s. With this lot there came to a conclusion a sale which had excited some curiosity.

NOTES ON ART AND ARCHAEOLOGY.

SIR JOHN GILBERT's most important contribution to the forthcoming spring Exhibition of the Water-Colour Society will be *The Battle of the Standard*, a subject giving full scope for the display of the high pictorial qualities of dramatic action and composition of our English Rubens.

WE understand that M. Dalou has been summoned to Paris by the French Government to undertake an important monumental work, and that, in consequence, he is about to resign his professorship of sculpture at South Kensington. We are sorry to lose him, but happy to think that he leaves us under such pleasant auspices. The question, however, immediately arises, who is to succeed to the appointment? We trust that due consideration will be given to this matter, and that the selection will be made, if possible, from among the ranks of English sculptors. Since M. Dalou first settled in this country, native sculpture has taken a great start, and we have now among us, in the new generation, several men in every way fitted to continue the labours of the eminent Frenchman who is leaving us. We have hitherto been, perhaps, a little too generous in welcoming foreign sculptors among us. An idea has got about in society that the work of any emigrant Pole or Neapolitan or Greek must be better than the work of a born Englishman; and those who watch with interest the present revival of English sculpture are often annoyed to see a public commission given to a foreigner, the execution of which would have been a benefit to native art. We hope that the authorities at South Kensington will take care this time to have a professor of sculpture who is one of ourselves.

SUBSCRIPTIONS have been in course of collection for some time, both in Sweden and Finland, for a memorial statue of the poet Johan Ludvig Runeberg. The greater part of the estimated cost—60,000 Finnish marks—has been already received, and the undertaking may now be considered as secured. Its execution is to be entrusted to the poet's son, Walter Runeberg, who has acquired a reputation as a talented sculptor. He is at present resident in Paris, and has fitted up a studio there with a special view to this work. He has already completed a life-size cast of the statue, and expects to have the latter ready for erection in the course of next year.

THE Polish artist, J. Matejko, is engaged on a colossal painting which is to be exhibited in 1883 at Vienna, on the occasion of the two-hundredth anniversary of the deliverance of that city from the Turks. It represents an episode in the final struggle—the moment, namely, when the heroic King of Poland, John Sobieski, has succeeded in penetrating to the tent of the Grand Vizier.

THE museum formed out of the *débris* so long in course of collection at the "Garde Meuble" is now open to the public. We gave an account

of this curious exhibition some time ago, and need only add that the tapestries and ancient furnishings of all kinds, which form the principal features of this exhibition, will be renewed from time to time, the immense stores of these articles preserved in the "Garde Meuble" being too great for them to be shown at once. Artists may obtain permission to work in an "atelier" placed at their disposal.

THE Louvre has recently acquired two important modern paintings, namely, the celebrated *Baigneuse*, by Ingres, one of that painter's most characteristic and admired works, and the portrait of the Comtesse de Barck, by Henri Bagnault, a work which attracted much notice at the Salon of 1869. A new Salle has also been opened in the Louvre for modern sculpture. It contains several of the works of the great Burgundian sculptor Rude.

THE exhibition of the Cercle de l'Union Artistique is now open in the Place Vendôme. Most of its members contribute this year, and the exhibition is said to be a brilliant one. The catalogue includes such names as Meissonier, Gérôme, Detaille, Th. Rousseau, C. Duran, Bonnat, and de Neuville among painters, and Bartholdi and Saint-Marceaux among sculptors.

THE Fine-Art Exhibition opened on February 1 in Algiers is said to be quite a success, though, of course, it has none of the pretensions of the monster exhibitions to which the world has now grown accustomed. It only occupies five Salles in a small building constructed for the purpose, but in these are most tastefully displayed the paintings, sculptures, ceramics, mosaics, &c., sent by the various nations which have contributed to this interesting little exhibition.

A NEW catalogue of the Louvre has just been printed and submitted for the approbation of the Minister of Fine Arts. This catalogue, it is stated, has taken not less than ten years in preparation. A short biography is given of every artist, together with a critical and historical study of his works. The artists' names are to be found after the fashion of ledgers in alphabetically arranged leaves, no reference being necessary to the number on the picture. We hope to notice this catalogue more fully when it is given to the public.

AT a recent meeting of the Academy of Inscriptions M. Delaunay read a note on the origin and signification of the emblem of the fish in Christian symbolism. The fish was regarded as a symbol of Christ long before the famous acrostic, $\text{I}\chi\theta\varsigma$ — $\text{I}\eta\varsigma\text{us}\text{ X}\rho\iota\sigma\text{tos}\ \Theta\epsilon\omicron\upsilon\ \text{T}\eta\varsigma\ \Sigma\omega\tau\eta\rho$, was thought of. M. Delaunay suggests that the origin of this symbolism is to be sought for in the religious traditions of the eastern Semitic peoples. Berosus speaks of the Chaldaean myth of the fish-god Oannes; he probably recurs in the cuneiform texts under the name of Hea. He is represented on a considerable number of Assyrian monuments. His function in the religion of the Chaldaeans is that of a heavenly mediator, an intermediary between gods and men. He thereby resembles the Logos, the great mediator of the Judaeo-Alexandrian philosophy, which is itself so similar to the Christian "Word." M. Delaunay considers that this explains why the emblem of the fish was regarded as peculiarly fitted to symbolise the Logos or Christ.

AN appreciative article on Sir William Boxall, R.A., full of pleasant stories of artists who have passed away, is contributed by Lord Coleridge to the current number of the *Fortnightly Review*. In the same number, also, we have a thoughtful article by Mr. W. H. Pater on "The Beginnings of Greek Sculpture." Mr. Pater regards the history of Greek art as

beginning in a real "age of gold"—that is to say, with

"men who had already discovered the flexibility of silver and the ductility of gold, the capacity of both for infinite delicacy of handling, and enjoying, with complete freshness, a sense of beauty and fitness in their work."

According to his view, indeed, the heroic age of Greek art "is the age of the hero as a smith."

THE *Portfolio* has no new interest this month, except a somewhat long account by Mr. William Walker of the artist and drawing master, J. D. Harding, who, as the writer says, has been somewhat lost sight of in this bustling generation. The example given of Mr. Harding's art is not, however, prepossessing. The contemporary artist noticed is Mr. George Reid, R.S.A., who is represented by a very ordinary etching by C. O. Murray. The other articles of the number are a continuation of Mr. Clark's "Cambridge," and of Mr. Hamerton's "Notes on Aesthetics."

THE first volume of an important work on the history of costume entitled *Histoire générale du Costume civil, religieux, et militaire*, by the French painter R. Jacquemin, has just been published by Ch. Delagrave, Paris. The entire work will be in four volumes, carrying the history of costume down to the present century; but the present volume merely deals with its history from the fourth to the twelfth century. It is illustrated by chromo-lithography in the same way as the magnificent German work, *Trachten, Kunstwerke und Gerüthschaften*, before noticed, and, like that, is coming out in numbers; but it has a more limited range of subject, being confined solely to costume. Much of general historical interest is, however, to be found in it.

THE STAGE.

THE week has seen changes at two or three London theatres, but it cannot be said that at all the new programme is an improvement on that which was previously presented. At the Olympic Mr. J. S. Clarke, the American low comedian, has appeared, and he will continue there probably till about Easter. He brings with him a modern melodrama that his successful performance in it seems to have developed into a farcical comedy, and likewise the old and well-tried comedy of Colman's, *The Heir at Law*, in which Mr. Compton was so great, and in which Mr. Clarke is so popular. Dr. Pangloss is a character who, in the hands of a conspicuous actor, can well be made the chief of the *dramatis personae*, and the unctuous Dr. Pangloss of Mr. Clarke is as much the hero of the comedy as was the dry and sententious Dr. Pangloss of Mr. Compton. But he is less artistic: more a creature of successful grimace, and less entertaining to the less "barren" spectators. But Mr. Clarke is absolutely popular, and the whole "business" of the piece is at his fingers' ends. The difference, after all, between Mr. Compton, with whom the character is with old playgoers associated, and Mr. Clarke, who is accepted by the new generation, is that which is almost inevitable between a high comedian and an able comic actor.

The Streets of London, with Mr. Warner in the character of Badger, has been revived at the Princess's. The piece is of Mr. Boucicault's manufacture, and belongs to a period in his career at which he appears to have abandoned literature and devoted himself to the question how best to put together popular stage plays. We should have thought, after the amount of congratulation that has been in the air with respect to the improvement of the English theatre, that the taste for such a sensational drama as *The Streets of London* had departed

from the West-end; for *The Streets of London* has not that apology for gross realism which might be urged in favour of *Drink*. Mr. Warner plays Badger very much to the satisfaction of the audience, and there is nothing in his performance so repulsive as there necessarily is in the piece which we owe to the imagination of Zola.

THE pantomimes will shortly be withdrawn; the final verdict pronounced upon them—which is often a quite different one from that which is delivered immediately after Boxing-night—is that that at the Gaiety has been the best. The Gaiety in *Gulliver* has given a piece far more brightly written than are most pantomimes nowadays. The scenery and stage effects have been better than it is usually within the aim of the Gaiety to provide; while the speciality of the theatre, in providing for our fashionable young men a company in whom they may reasonably be interested, appears to have been duly remembered. Miss Farren and Miss Coote, Miss Gilchrist and Miss Wadman are a cluster of stars. Nor, unlike one or two of the performances at the bigger houses, has the pantomime allowed itself dull moments—not to say dull half-hours. All has been of a kind to meet the approval of the habitual Gaiety playgoer, while at the larger houses—in the "Lane" or at the "Garden"—he would inevitably have been weary. Nor should we altogether have blamed him if he had.

MUSIC.

ON Saturday, February 7, *Lohengrin* was given for the first time by the Carl Rosa company, and the English version by John P. Jackson deserves special notice. The German text is closely followed, but the translator has reproduced, with marvellous success, the spirit as well as the letter of the poem. The importance of the words in a Wagner opera is sufficiently well known, and this excellent version contributed greatly to the enjoyment of the work. Herr Schott achieved a great success as Rienzi, especially as regarded his acting, but a still greater as *Lohengrin*. His fine figure, his excellent acting and singing, combined to make him really seem for the time one of the pure and irreproachable knights who guard the Holy Grail on Mount Salvat. Miss Gaylord gave a pure and intelligent rendering of the part of Elsa. The cruel Ortrud and the weak-minded Frederick were well sustained by Miss J. Yorke and Mr. Ludvig. Mr. Crotty was a tuneful and dignified herald. One word of praise must be accorded to Mr. G. H. Betjemann for the very perfect stage arrangements; and to chorus, band, and conductor (Signor Bandegger) for the excellent manner in which they fulfilled the very arduous duty allotted to them. The work was well received, and this performance of *Lohengrin* must be considered an event of great importance in the history of English opera.

A CROWDED house assembled last Monday to welcome Herr Joachim, who made his first appearance this season at the Monday Popular Concerts. The eminent violinist met, as usual, with a hearty reception. The Quartets were Beethoven in E flat, op. 74, and Haydn in E flat, op. 64, No. 2. Herr Joachim gave as solo Bach's Prelude and Fugue in G minor for violin alone from the 1st suite, and played for an encore a movement from the 5th suite. Mdlle. Janotha played in her best style, and for the second time this season, Chopin's beautiful and difficult Polonaise in F sharp minor, op. 44. Mr. Frank Boyle was the vocalist. An interesting novelty is announced for next Monday—Dvorak's Sextet in A major, op. 48.

GRIMM (JACOB), TEUTONIC MYTHOL-
OGY. Translated from the Fourth Edition by J. S. STALLERBASS. In
3 vols. Vol. I., demy 8vo, cloth, 15s.

"The author's main aim in this work is to demonstrate the substantial identity of the ancient religious systems of all the Teutonic nations. . . History, legend, tradition, tale, and song are all pressed into his service, and compelled to yield their quota of evidence."—*Sootsman*.

"So nearly complete, and so nearly exhaustive, that Grimm's successors can hardly hope to discover anything new in the field he has cultivated. . . The work deserves nothing but praise, and the translation is most conscientious and written in excellent English."—*Examiner*.

HEWETSON (H.B.), THE INFLUENCE of
JOY upon the WORKMAN and his WORK. Illustrated by Autotype
Facsimiles of Drawings by William Blake and others. 4to, cloth, 5s.
[Next week.]

EDUCATIONAL.

PLAUTUS. The Captivi of Plautus.

Edited, with Notes, by E. A. SONNENSCHNEIN, M.A., together with a Critical Apparatus (a Collation of the Vatican and British Museum MSS.), and an Appendix, consisting of Notes and Emendations to the whole of Plautus, discovered in the handwriting of Richard Bentley, in his copy now in the British Museum, with a facsimile. Demy 8vo, cloth, 6s.

SCHOOL EDITION, containing Text, Notes, and Critical Apparatus only. Demy 8vo, cloth, 3s. 6d.

"It would be difficult to mention any English edition of the Plays from which so much may be learnt as to the language and syntax of Plautus as this. . . The 'Captivi' has, besides, a peculiar advantage for school purposes in its moral propriety."—*Academy*.

INDUSTRIAL GEOGRAPHY of GREAT
BRITAIN and IRELAND. By G. PHILLIPS KEVAN, F.G.S., F.R.S.

16mo, limp cloth, 1s.

"The idea is well conceived and the plan is admirably executed. We should like to see this Primer become a standard text-book in all schools."—*Capital and Labour*.

PRANTL (Prof.) ELEMENTARY TEXT-
BOOK of BOTANY, for Schools. Edited by S. H. VINEY, D.Sc.,
M.A., Fellow and Lecturer of Christ's College, Cambridge. With 275
Woodcuts. Demy 8vo, cloth, 6s.

[In a few weeks.]

Crown 8vo, cloth, price 2s., post-free.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars
and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds;
Glaciers; the Telephone. By W. J. MILLAR, C.E., Secretary to the Institu-
tion of Engineers and Shipbuilders, in Scotland; Author of "Principles of
Mechanics," &c.

"We can confidently recommend Mr. Millar's volume to the attention
both of teachers in search of an elementary text-book, and to private
students, as well as to the general reader. It unites the utmost lucidity
with strict scientific accuracy, and deals with ascertained facts rather than
with vague theories."—*Greenock Daily Telegraph*.

"This work consists of chapters from several sciences—astronomy, elec-
tricity, heat, light, &c. They cover a good deal of ground, and include
objects as wide apart as whirlwinds and spectrum analysis, glaciers and
the telephone."—*Liverpool & Mersey*.

Published at 21, Castle-street, Holborn.

ANNOUNCEMENT.

HOW to WORK with the MICROSCOPE.

By LIONEL S. BEALE, F.R.S.

The Fifth Edition, much enlarged, with 100 Plates, price 21s., ready
October 20th.

HARRISON, Pall Mall.

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK

ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the
Autotype and Sawyer's Collotype Processes. Employed by the Trustees of
the British Museum, Palaeographical, Numismatical, Royal Geographical,
and other learned Societies.

trations are—

1st. The absolutely facsimile nature of the result.

2nd. Its Cheapness for Small Editions of 250, 500, &c.

3rd. The Prints being direct on the Paper there is an absence of all
cockling and that disagreeable effect inherent to all Mounted Prints.

* * For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11,
Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY,
recently destroyed by collapse and fire. The stock of copies of Drawings by
the Great Masters, or reproductions of the chef-d'œuvre of the Art
Galleries of Europe, and the Examples of the works of Modern Artists, is in
process of replacement.

Now ready, price One Guinea.

"THE FIED PIPER of HAMELIN." Illustrated by Jane E. Cook.

Second Edition (1880). Published with the kind permission of Mr.
Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and
fancifully illustrated Mr. Browning's charming poem."
Academy, January 8th.—"The artist has not neglected the oppor-
tunity of portraying beauty and a character that is curiously comic. She
has entered thoroughly into the spirit of the story told so brightly by Mr.
Browning, and has brought invention to bear upon her work."
Standard, December 17th, 1879.—"There is life and vigour in all
the characters."

In preparation.

A NEW EDITION of TURNER'S "LIBER STUDIUM." Facsimiled
from Rare Prints in the best "states" lent by the Rev. Stopford Brooke,
M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery,

rooms from 6s. 6d. per day.

NATIONAL SOCIETY'S NEW PUBLICATIONS.

A NEW SERIES OF MANUALS ON TEACHING.

Price 8d. each.

This Series, which will be ready shortly, will embrace the subjects of Schedule IV. (New Code), viz. :—

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. English Literature. 2. Languages (including Latin, French, and German). 3. Mechanics. 4. Animal Physiology. | <ol style="list-style-type: none"> 5. Physical Geography. 6. Botany. 7 & 8. Domestic Economy (Two Branches, in sep. vols.). 9. The Training of Pupil Teachers. |
|---|--|

These Manuals have been written by men distinguished as much for their general attainments as for their special knowledge of the subjects they have treated. Being also men of wide experience, either as teachers or examiners, they have been able carefully to adapt these books to the wants of teachers and the capacities of the pupils.

The chief aim of these Manuals is to show how the different subjects of Schedule IV. may be taught to children; they are not intended to supersede the use of Text-Books on these subjects. They will, nevertheless, be found to contain much information, and such as is not always found in the ordinary Text-Book.

The Teacher's Manuals of the Science and Art of Teaching.

INCLUDING TWO SERIES OF INDEPENDENT MANUALS.

The First Series, which relates to the SCIENCE of Teaching, consists of—

1. The Cultivation of the Senses. Price 8d.
2. The Cultivation of the Memory. Price 6d.
3. On the Use of Words. Price 8d.
4. On Discipline. Price 8d.
5. On Class Teaching. Price 6d.

The Second Series, which relates to the ART of Teaching, consists of—

1. How to Teach Grammar. Price 8d.
2. Arithmetic, and How to Teach it. Price 8d.
3. How to Teach Geography. Price 6d.
4. How to Teach History. Price 8d.
5. How to Teach Reading and Writing. Price 8d.
6. How to Teach by Means of Apparatus. Price 8d.

Both Series of Manuals can now be had complete in One Handsome Volume, 8vo, 568 pp., with Copious Index, 5s. 6d.

ALSO,

LINES FROM THE POETS. With Notes.

For Use in Elementary and Secondary Schools. Adapted to the Requirements of the New Code, and the First Four of them also to the Oxford and Cambridge Local Examinations.

This Series of Poetry Books is intended, not only for use in School, but also for Home use and for Private Study. The Notes are simple, and at the same time sufficiently exhaustive to secure an intelligent knowledge of the subject. It is hoped these books will considerably lighten the teacher's work of explanation, and thus commend themselves for use, not only in Elementary Schools, but also in Schools of a somewhat higher class.

THE FOLLOWING ARE NOW READY:—

- | | |
|--|---|
| <ol style="list-style-type: none"> 1. Scott's Lady of the Lake (Canto I.). 369 lines, 2d. 2. Goldsmith's Traveller. 438 lines, price 2d. 3. Goldsmith's Deserted Village. 430 lines, price 2d. 4. Byron's Siege of Corinth. 1,080 lines, price 4d. | <ol style="list-style-type: none"> 5. A Selection from Shakespeare's King John. 393 lines, price 2d. 6. A Selection from Shakespeare's Merchant of Venice. 853 lines, price 3d. |
|--|---|

Other Selections from Classic English Authors will shortly be published.

N.B.—1. In addition to the Notes, each Book contains a Life of the Author, an Argument of the Poem, and a Set of Exercises in Grammar and Composition. 2. Pupil Teachers will find these Books very useful in preparing for their Examinations. They are also well suited to the requirements for English Literature (Schedule IV.). 3. *They may also be used as a Set of Poetical Reading Books.*

JUST PUBLISHED.

THE PUPIL TEACHER'S COURSE OF MATHEMATICS.

By a late Fellow and Senior Mathematical Lecturer; Examiner for the Oxford and Cambridge Board, the Cambridge Syndicate, &c.

Part I.—EUCLID. Books I. and II.

With Notes, Examples, and Explanations. Price 1s. 6d.

This is the First Part of a Course of Mathematics especially written for Pupil Teachers, whose course includes Two Books of Euclid, Algebra to the end of Quadratic Equations, and the Mensuration of Plane Surfaces. The best editions of Euclid comprehend several books, and are therefore unnecessarily bulky and expensive for Pupil Teachers; moreover, the notes and explanations in them are scanty, and for the most part adapted to a more advanced class of students, and the examples are not graduated sufficiently. The Author, who has seen many thousands of mathematical papers worked by Pupil Teachers and Public School boys, has endeavoured in his notes and hints to guard against the common difficulties and errors; and it is hoped that not only Pupil Teachers, but also all others who are commencing the study of Geometry, will find this little book useful.

Part II.—ALGEBRA. Price 1s. 6d.

The Second Part contains all the Rules of Algebra which Pupil Teachers are required to study, with numerous examples and explanations. Great care has been taken to give the proof of each rule in as clear and simple a form as possible; and the illustrations and examples have been selected so as to meet every case of difficulty which boys experience. Though specially written for Pupil Teachers, it is hoped that this little book may be useful to all other beginners.

NATIONAL SOCIETY'S DEPOSITORY, SANCTUARY, WESTMINSTER, S.W.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL, ALBERT EMBANKMENT, LONDON, S.E.—The Winter Session commences on October 1, and the Summer on May 1. Students can enter at either Session. SPECIALITIES for INVALIDS.

CAUTION—BEWARE OF IMITATIONS.

SOLE ADDRESS—

11, LITTLE STANHOPE STREET
MAYFAIR, W.

PAINLESS DENTISTRY.

MR. G. H. JONES,

Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name."

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HASSALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

TARAXACUM and PODOPHYLLIN.—A

Safe combination for Derangement of the Liver, particularly when arising from slight congestion. It gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PERRIN, Esq., Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on
MOEDER'S HIRE SYSTEM.
The original, best, and most liberal.

No extra charge for time given.

Illustrated Priced Catalogue, with full particulars of terms, post-free
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862.

F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,

and without which none is genuine.

Sold Wholesale by the Proprietors, Worcester;
Gosse & Blackwell, London; and Export Oilmen generally.
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."

Wordsworth's Chemical Food of Health.

Prepared from the choicest Peruvian Leaf. The New

WILKIE COLLINS'S NEW NOVEL. Now ready, 3 vols., crown 8vo, at every Library.

JEZEBEL'S DAUGHTER.
BY WILKIE COLLINS.

OUIDA'S NEW NOVEL. 3 vols., crown 8vo, at every Library.

MOTHS. By Ouida.

"The story told in this book is the story of Vere's martyrdom, of her incessant struggles to keep herself pure and uncontaminated amid the vice and corruption which encircle her, of her sufferings in this course, and of the triumph which finally, though not altogether sustained, she achieves. Vere is a truly grand character, grand both in conception and in delineation. . . . In respect of literary quality and dramatic power, the book is not inferior to any the author has produced for some time, which is saying a great deal in its favour."—*Scotsman*.

NEW NOVEL by the AUTHORS of "THE GOLDEN BUTTERFLY." Now ready, 3 vols., crown 8vo, at every Library.

THE SEAMY SIDE. By Walter Besant and JAMES RICE.

NEW NOVEL by HENRY JAMES, JUN. Second Edition. 2 vols., crown 8vo, at every Library.

CONFIDENCE. By Henry James, Jun.

"Full of the finest touches of one of the most delicate and brilliant of modern writers."—*Daily News*.

JUSTIN MCCARTHY'S NEW NOVEL. Second Edition. 3 vols., crown 8vo, at every Library.

DONNA QUIXOTE. By Justin McCarthy,
Author of "Dear Lady Diadain," &c.

"Donna Quixote" is full of entertainment and droll suggestion. Donna Quixote, with her high unselfish aims and noble single-hearted loyalty, holds the story up to a high moral level; but the comic episodes are so abundant, and so true to life, that laughter accompanies the pages all but uninterruptedly."—*Daily News*.

Mrs. LINTON'S NEW NOVEL. 3 vols., crown 8vo, at every Library.

UNDER WHICH LORD? By E. Lynn
LINTON, Author of "Patricia Kemball," &c.

"Mrs. Linton has executed with remarkable skill and boldness a difficult task, and has written a book so strange, so powerful, and so unconventional, that we have to go back to the early days of George Sand to find a work of the same character. . . . So well written a novel, or so profound a study of human nature, is not easy to find. . . . The book exercises a complete fascination over the reader. . . . So keen is the feeling aroused, that it is scarcely possible to rest till the end of the story is reached. . . . If Mrs. Linton has many novels like this in her wallet, she is likely to take a foremost rank in fiction."—*Sunday Times*.

Now Ready, the Twentieth Annual Edition, for 1880, enlarged, price 60s., elegantly bound.

THE COUNTY FAMILIES of the UNITED KINGDOM: a Royal Manual of the Titled and Untitled Aristocracy of Great Britain and Ireland. By EDWARD WALFORD, M.A.

Now ready, in one thick volume of 1,200 pages, crown 8vo, half-roxburgh, 12s. 6d.

THE READER'S HANDBOOK of
Allusions, References, Plots, and Stories. By the Rev. Dr. BREWER.

"Dr. Brewer has produced a wonderfully comprehensive dictionary of references to matters which are always cropping up in conversation and in every-day life, and writers generally will have reason to feel grateful to the author for a most handy volume, supplementing in a hundred ways their own knowledge or ignorance, as the case may be. . . . It is something more than a mere dictionary of quotations, though a most useful companion to any work of that kind, being a dictionary of most of the allusions, references, plots, stories, and characters which occur in the classical poems, plays, novels, romances, &c., not only of our own country, but of most nations, ancient and modern."—*Times*.

CHARLES GIBBON'S NEW NOVEL. 3 vols., crown 8vo, at every Library.

QUEEN of the MEADOW. By Charles GIBBON, Author of "Robin Gray," &c.

"Queen of the Meadow" is a delightful pastoral, a sort of prose idyl. . . . The materials for the story are of the simplest, yet out of them is woven a web of honest misunderstanding which keeps the attention of the reader riveted, and stirs the best feelings of his or her nature. . . . Each character is a careful study. . . . It is attractively written, full of descriptions and scenes which will be enjoyed by those who long for summer and a breath of country air. Not many novelists nowadays can or do produce writing of this kind. . . . In some respects it is the best Mr. Gibbon has done; in all respects it will make the reader wish for more."—*Scotsman*.

ROUGH WAYS MADE SMOOTH:
Familiar Essays on Scientific Subjects. By RICHARD A. PROCTOR.

"Mr. Proctor is indefatigable in catering for the popular appetite for all that is most novel and striking in the advances of science. He has also the art of putting forth in a fairly accurate and lucid form the facts and theories which mark the latest points of progress in the various paths of physical investigation. . . . We cannot doubt that good service is done towards the spread of knowledge among the unprofessional students of nature, and a wholesome interest in the labours of our more advanced pioneers kept up among the general public by means of popular essays such as those in the volume before us."—*Saturday Review*.

2 vols., large 4to, profusely illustrated, half-morocco, £2 16s.

ROWLANDSON the CARICATURIST. A
Selection from his Works, with Anecdotal Descriptions of his Famous Caricatures, and a Sketch of his Life, Times, and Contemporaries. With nearly 400 Illustrations, mostly in facsimile of the originals. By JOSEPH GREGO.

"Mr. Grego's excellent account of the works of Thomas Rowlandson . . . illustrated with some 400 spirited, accurate, and clever transcripts from his designs. . . . The thanks of all who care for what is original and personal in art are due to Mr. Grego for the pains he has been at, and the time he has expended, in the preparation of this very pleasant, very careful, and adequate memorial."—*Pall Mall Gazette*.

Demy 8vo, cloth extra, 16s.

INDIA, PAST and PRESENT; with Minor

Essays on Cognate Subjects. By SHOSHEE CHUNDER DUTT, Râi Bâhâdoor, Author of "A Vision of Sumeru and other Poems," "Bengalians," "Historical Studies and Recreations," &c.

THE HIBBERT LECTURE, 1886.

A COURSE OF FOUR LECTURES on "THE INFLUENCE OF
THE INSTITUTIONS, THOUGHT, and CULTURE OF ROME ON CHRISTIANITY,
and the DEVELOPMENT OF THE CATHOLIC CHURCH," will be delivered
in the French Language, by Monsieur ERNEST RENAN, at ST. GEORGE'S
HALL, LANGHAM PLACE, at 5 o'clock in the afternoon, on the following
days: viz.—TUESDAY, 6th APRIL; FRIDAY, 9th APRIL; TUESDAY,
13th APRIL; WEDNESDAY, 14th APRIL.

Admission to the Course of Lectures will be by Ticket, without payment.
Persons desirous of attending the Lectures are requested to send their
names and addresses to Messrs. WILLIAMS & NORWORTHY, 14, Henrietta-street,
Covent-garden, W.C., not later than 30th March, and as soon as possible
after that date Tickets will be issued to as many persons as the Hall will
accommodate.

**THE IRISH ARCHAEOLOGICAL and
CELTIC SOCIETY.**

[For the Publication of Materials for the History of Ireland.]

Now ready. Parts I and II, pp. 900, 4to.

A CONTEMPORARY HISTORY OF AFFAIRS IN IRELAND, from A.D.
1641 to 1652, now for the first time published. With Original Documents,
hitherto unpublished. Illustrated with Portraits and Facsimiles. Edited by
J. T. GILBERT, F.R.S.

*A very small number of copies has been printed, and solely for
Subscribers.

For Prospectus apply, by letter, to the HON. SECRETARY of the Society,
Villa Nova, Blackrock, Dublin; or to B. QUARREY, 15, Piccadilly, London.

**ROYAL INSTITUTION OF GREAT
BRITAIN, Albemarle-street, W.**

GEORGE SAINTSBURY, Esq., will, THIS DAY (Saturday), FEBRUARY
28, at 3 o'clock, begin a COURSE OF FOUR LECTURES on "DRYDEN and
his PERIOD." Subscription to this Course, Half-a-Guinea; to all the
Courses in the Season, Two Guineas.

AUTHORS, CLERGYMEN, SCHOOL-
MASTERS, and others, desirous of publishing
their WORKS are invited to address Messrs. MORON, SAUNDERS, & CO.,
Publishers, 22, Henrietta-street, Covent-garden, London.

AUTOTYPE.

**PERMANENT PHOTOGRAPHIC BOOK
ILLUSTRATIONS.**

The AUTOTYPE COMPANY are producers of Book Illustrations by the
Autotype and Sawney's Collotype Processes. Employed by the Trustees of
the British Museum, Palaeographical, Numismatical, Royal Geographical,
and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings,
Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations
are:—

1st. The absolutely facsimile nature of the result.
2nd. Its Cheapness for Small Editions of 250, 500, &c.
3rd. The Prints being direct on the Paper there is an absence of all
cockling and that disagreeable effect inherent in all Mounted Prints.

*For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11,
Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY,
recently destroyed by collapse and fire. The stock of copies of Drawings by
the Great Masters, of reproductions of the chief-d'œuvre of the Art
Galleries of Europe, and the Examples of the works of Modern Artists, is in
process of replacement.

Now ready, price One Guinea.]

"THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook.
Second Edition (1880). Published with the kind permission of Mr.
Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and
fancifully illustrated Mr. Browning's charming poem."

Academy, January 4th.—"The artist has not neglected the opportunity
of portraying beauty and a character that is curiously comic. She
has entered thoroughly into the spirit of the story told so brightly by Mr.
Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all
the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIUM." Facsimiled
from rare Prints in the best "states" but by the Rev. Stophard Brooke,
M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery,

**NEW AND IMPORTANT ETCHING
By M. RAJON.**

M. RAJON is at present completing for
the Scottish Royal Association for the Promotion of the Fine
Arts an important Etching, about 18 inches by 12—an interior with nine
figures—after the picture of "The Legend," by the late G. PAUL CHALMERS,
R.S.A., now in the National Gallery of Scotland.

The following are the different States open for subscription:—

10 Artist's Proofs	20 Guineas. All subscribed.
100 Proofs before Letters	6 Guineas.
200 Lettered Proofs	2 Guineas.
Prints	1 Guinea.

For each Guinea the Subscriber will also have one chance in the Distribu-
tion of Paintings to be made by the Association in July next.

Subscriptions should be intimated without delay to H. W. CORNILLON,
Secretary and Treasurer to the Association, 130, George-street, Edinburgh.
These prices will be doubled after 31st July, 1886.

W. S. SONNENSCHN & ALLEN.

GRIMM (JACOB), TEUTONIC MYTHOL-
OGY. Translated from the Fourth Edition by J. S. STALLERMASS. In
2 vols. Vol. I., demy 8vo, cloth, 15s.

"The author's main aim in this work is to demonstrate the substantial
identity of the ancient religious systems of all the Teutonic nations. . . .
History, legend, tradition, tale, and song are all pressed into his service,
and compelled to yield their quota of evidence."—*Spectator*.

"So nearly complete, and so nearly exhaustive, that Grimm's successors
can hardly hope to discover anything new in the field he has cultivated.
The work deserves nothing but praise, and the translation is most
conscientious and written in excellent English."—*Examiner*.

HEWETSON (H.B.), THE INFLUENCE OF
JOY upon the WORKMAN and his WORK. Illustrated by Autotype
Facsimiles of Drawings by William Blake and others. 4to, cloth, 5s.
[Next week.]

EDUCATIONAL.

PLAUTUS. The Captivi of Plautus.

Edited, with Notes, by E. A. SONNENSCHN, M.A., together with a
Critical Apparatus (a Collation of the Vatican and British Museum
MSS.), and an Appendix, consisting of Notes and Emendations to the
whole of Plautus, discovered in the handwriting of Richard Bentley,
in his copy now in the British Museum, with a facsimile. Demy 8vo,
cloth, 6s.

SCHOOL EDITION, containing Text, Notes, and Critical Apparatus
only. Demy 8vo, cloth, 3s. 6d.

"It would be difficult to mention any English edition of the Plays from
which so much may be learnt as to the language and syntax of Plautus as
this. . . . The 'Captivi' has, besides, a peculiar advantage for school
purposes in its moral propriety."—*Academy*.

**INDUSTRIAL GEOGRAPHY OF GREAT
BRITAIN and IRELAND.** By G. PHILLIPS BEVAN, F.G.S., F.R.S.
16mo, limp cloth, 1s.

"The idea is well conceived and the plan is admirably executed.
We should like to see this Primer become a standard text-book in all
schools."—*Capital and Labour*.

LORD BEACONSFIELD: his Life,
Character, and Works. By GEORGE BRANDES. A Critical
Study. Translated by Mrs. GEORGE STURGE. Demy
8vo, 10s. 6d.

FROM THE "TIMES."

"A study of a living statesman by a judicious foreigner
must always be instructive. In some respects a foreigner can
do for contemporaries what the historian does for posterity.
Most Englishmen, whether Whig or Tory, will turn with no
little interest to the pages of Herr Brandes to see the impres-
sion made on an acute and critical German by one of the
most remarkable personalities in modern European politics.
We have no space to examine in detail the manner in which
Herr Brandes has executed his task. It was manifestly
congenial to him, and he has not a few qualifications for it.
His information is copious and singularly accurate so far
as we have tested it; and his literary criticisms at least are
sound, penetrating, and genial. As a biography, his work
is far more valuable, because more concise and impartial,
than any which has appeared in England. As a criticism, it
is generally instructive, and often suggestive."

**PRINCE METTERNICH'S AUTO-
BIOGRAPHY.** Edited by his Son, PRINCE METTERNICH.
Translated by ROBINA NAPIER. With Portrait and Fac-
similes. 2 vols., demy 8vo, 36s.

**THE OLD RÉGIME: Court, Salons, and
Theatres.** By CATHERINE CHARLOTTE LADY JACKSON,
Author of "Old Paris." With Portraits of Louis XV.,
Marie-Antoinette, Rousseau, Voltaire, M^{me}. du Barry,
M^{lle}. Clairon. 2 vols., large crown 8vo, 21s.

THE HEART of HOLLAND. By Henry
HAYARD, Author of "The Dead Cities of the Zuyder
Zee," "Picturesque Holland," &c. Translated by Mrs.
CASHEL HOKY. Demy 8vo, with Eight Illustrations, 15s.

Popular Novels at all Libraries.

TWO WOMEN. By Georgiana M. Craik.
3 vols., crown 8vo.

BY THE AUTHOR OF "TOM BULLEKELEY OF
LISSINGTON."

A PINK WEDDING. By R. Mounteney
JEFFSON, Author of "The Girl He Left Behind Him,"
&c. 3 vols., crown 8vo.

"Nothing short of inspiration could have enabled Mr.
Jeffson to write in so life-like and spirited a manner."—
Daily News.

NEW IRISH NOVEL BY THE AUTHOR OF
"FLITTERS, TATTERS, AND THE COUNSELLOR,"
CHRISTY CAREW. By the Author of
"Hogan, M.P.," "The Hon. Miss Ferrard," &c. 3 vols.,
crown 8vo.

"An essay on modern Irish, or rather Dublin society,
which bears the impress of truth. Whatever may be the
political or religious bias of the reader, he can hardly fail to
find so life-like a sketch of society in an important portion
of the realm both timely and interesting."—*Athenaeum*.

"Christy Carew" is a very clever book, displaying in
many places passages such as one has at present the right
to expect from George Eliot alone. Is the authoress to be
her successor? There are not a few now watching her
career with great attention who think she can be if she only
chooses."—*Morning Post*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

HERÁT.

Herát: the Granary and Garden of Central Asia. By Col. G. B. Malleon, C.S.I., author of the "History of the Indian Mutiny," &c. (W. H. Allen & Co.)

COL. MALLEON is an acknowledged master of Indian history, and in this volume, as in his previous works, he has shown that he is a writer of great skill. Col. Malleon is one of those writers who, being seized with an idea, delight to clothe it in splendour and dignity of language, to present it and to re-present it in many forms, all more or less impressive to the pleased and dazzled imagination of their readers. In no work of Col. Malleon's is this high literary quality so conspicuous as in that which is now before us. Perhaps his idealistic power is assisted by the fact, which the author, it is just to say, nowhere conceals, that, like Sir Henry Rawlinson, he has never beheld the city or the country upon which he discourses with such ardour and determination. Let there be no mistake about this work; it is in its essential parts no history of Herát; no careful, dispassionate scrutiny of the manifold considerations of policy which centre at this moment in the region of Afghanistan; it is rather a heated and eloquent harangue summoning the British people to Herát, as to a crusade, and drawing them thither, at one time by exhibition of the fearful prowess of Russia, and, at another, by reference to the strategic importance and to the fruitful abundance of the country of which Herát is the citadel and the capital. We must proceed to make good these remarks by an impartial reference to Col. Malleon's work, which opens with an argument containing a justification of the Berlin Treaty and of the Government policy in regard to the Afghan War. The key to this work is contained in the confident expression of the author's opinion that in 1877 we were near to a condition of affairs which must ultimately have proved fatal to the hold of the British upon India. He says:—

"It cannot be doubted that but for the conclusion of the Treaty of Berlin that [Russian] spring would have been made in 1877. Russia had made all her preparations to reply in Afghanistan to the vigorous action which in Europe had snatched Constantinople from her grasp. Her secret manoeuvres were about to be supported by open co-operation. But both of these schemes were baffled; that of open co-operation by the Treaty of Berlin—the secret manoeuvres by the British invasion of Afghanistan. The one of these acts of high policy would have been incomplete without the other."

In that sentence it will be seen that Col. Malleon begs the whole bundle of political questions connected with Turkey, Russia, and Afghanistan. He deals quite as summarily with Herát. We are to go, if Col. Malleon can lead us by high sentiments and picturesque language, to his El Dorado, the city of Herát—to Herát, formerly "the Queen of Eastern cities;" to Herát in the valley of Heri-rúd, "the possession of which is the possession of a gold mine;" to Herát, which "in a few years will prove the milch-cow of India." Shall Persia have Herát? Perish the thought, says Col. Malleon. "Would Persia neglect Mashad to foster Herát? The thought is not to be entertained. Then, again, can Persia remain for ever indifferent to the blandishments or the arms of Russia? No one will assert it." Next we have an exhibition of Russia at Merv—a terrible prospect, in the opinion of the author—while England is still at Kandahar, for Russia would then be nearer by more than a hundred and fifty miles to the great prize of Central Asia; and the final words of Col. Malleon's argument are an assertion that "Herát is the gate of India. It is absolutely necessary that the possessors of that splendid estate should hold the gate leading into it."

The fundamental and peculiar error of this book lies in the fact that Oriental descriptions of Herát, and of the country round about, are made subservient to the author's purpose, and are not only literally rendered into English prose, but are offered to us in that garb as qualified to serve in the place of accurate description. "Khorassan is the oyster-shell of the world, and Herát is its pearl." "This once splendid city." Who has said that Herát was ever a splendid city, "possessing alike the most brilliant Court and the most splendid commercial mart in the Eastern world"? The Emperor Baber may have said so in 1506; but what of that? Do not the Persians call the mud hovels of Teheran and of Ispahan the jewels of the world? And, compared with one or the other, Herát is evidently a wretched place. Col. Malleon can find one sentence in Conolly's description to help his glowing picture, and he gives it. Conolly, who saw Herát in 1831, wrote:—

"We ascended by 140 steps to the top of the highest minaret, and thence looked down upon the city and the rich gardens and vineyards round and beyond it—a view so varied and beautiful that I can imagine nothing like it, except, perhaps, in Italy."

By this account, the splendour of Herát is reduced to one poor minaret, such as are half-a-dozen in the miserable squalor of Kúm or Shiraz. For his idea of the magnificence of the buildings of Herát, Col. Malleon resorts to the Emperor Baber. He ought to know better; he must be aware how foolish Eastern accounts of existing buildings, such as the ridiculous descriptions of the Chehil Minar of Ispahan, appear to those who have seen the wretched erections of the cities which most resemble Herát. Having quoted Baber, he naively says:—"I know no other description which brings so vividly to the mind the splendour of Herát as Herát was before it had been plundered and desolated by the Afghans."

Had there been "splendour," Conolly would have seen the traces; Vambéry would have seen them; and Col. Malleon would have found other help than that of Baber. When the Shah's eldest son was describing to the writer the magnificence of Ispahan, it required an effort to suppress contempt for his ignorance of the meaning which his words would convey in European language. Col. Malleon is the victim of his own zeal. He gives with all credence such rubbish as this old proverb:—"Which is the most splendid city in the world? If you answer truly you must say Herát!" On p. 68, in his own words, we have Herát the "magnificent capital of Central Asia;" on p. 78 it is "the beautiful city." On another page, Col. Malleon gives, with curious exhibition of evident acceptance, the statistics of Herát in 1219. They remind the present writer of the Prince Governor of Ispahan's assurance to himself that the Shah had 2,500,000 soldiers, and that whenever famine occurred in Persia his Majesty at once gave "a million pounds of English money" in relief; the Oriental use of thousands being utterly random.

Our present position with reference to Herát is well known. The city was besieged by Persia in the autumn of 1855, and was surrendered to the troops of the present Shah in the spring of 1856, which caused England to enter upon hostilities against Persia at Bushire and Mahommerah in the south, by way of the Persian Gulf. The Shah was forced, by a treaty concluded at Paris in 1857, to restore Herát to the Afghans. When we arrive at the only trustworthy description of Herát in the book, that of Vambéry (p. 98), there is no splendour nor trace of splendour, nothing but a bazaar very like that of Kashan, and a description of dirt and ruin familiar to anyone who has read accounts of the very similar cities of Persia. Col. Malleon employs with eloquence, sometimes with vehemence, every argument by which we may be led to Herát. For this he displays Oriental views of the richness and magnificence of the city and the neighbourhood; for this he paints with deepest dye the character and the conquests of Russia; he would lead us by cupidity, or, if we please, by his opinions as to the security of India; for the last he reserves an appeal to our compassionate feelings. Throughout his work the Afghan is represented very much from the Oriental point of view. He has no redeeming features; he is cruel, he is merciless, he is treacherous. One can almost imagine Col. Malleon assenting to the Indian proverb, "If you meet an Afghan and a cobra, kill the Afghan!" At last, our author appeals, as we have said, to our feelings. He says:—

"The Herátis have now, of their own accord, taken up arms against the Afghan oppressor. They see that England is at last in earnest. They have shown that they deserve to be free by themselves striking the blow. But their city still suffers in the hands of their enemy. With arms to combat that enemy in their hands, they still turn with longing eyes and earnest prayers to England. Surely England will not be deaf to the appeal!"

If this book were less desperate in the energy of its accomplished author, we might pause

to ask, Where is this appeal? Who can show us that the Heráti are longing for an English conqueror? But Col. Malleon on Herát is not to be trifled with by questions; this is a book of one idea, and that is the wisdom, the justice, the expediency, the mercy, the gain, and the blessedness that would result from a British advance to Herát. We do not accept Col. Malleon's *dicta* for argument; his style is admirable; his itinerary useful; his spelling is instructive; his reading in all that concerns India is profound—so much must be admitted: but there are at least two sides to every policy of conquest, and Col. Malleon does not give us a fair view of that which he rejects. ARTHUR ARNOLD.

EIKON BASILAIKH. A New Edition, with a Preface by C. M. Phillimore. (James Parker and Co.)

THE re-issue in the form of a Preface to a new edition of the *Eikon Basilike* of the article contributed by Miss Phillimore to the *Church Quarterly* is well timed. Except in producing an important letter by Levett the King's page, Miss Phillimore does not pretend to much more than the merit of reproducing arguments used by others; she has, however, put them in a clear and convincing form, adducing no slight reasons to show that the book was written by Charles long before Gauden claimed to have conveyed his forgery to him when he was a prisoner at Carisbrook in 1648.

No doubt there is something to be said on the other side, and Clarendon's silence on the subject in his History is undoubtedly a strong point; but, unless the account given by his son of what the exiled Chancellor said shortly before his death can be explained away, that silence must be accounted for on some other ground than his permanent disbelief in the King's authorship. On this point, indeed, there is evidently more to be said than Miss Phillimore admits. She throws doubt on the story told by Burnet that James II., when Duke of York, acknowledged Gauden's authorship on the ground that Somerset, who is said to have confirmed Gauden's claim, died too soon to have been able to testify anything about the matter; and yet she complacently quotes without hesitation the assertion of Clarendon's son that his father said that he thought that Charles II. had been convinced by Somerset that Charles I. was the real author. If the Duke of Somerset's death throws doubt on one story it equally throws doubt on the other.

The probability is that Gauden made his claim some little time before he wrote to Clarendon on the subject. This seems implied by the letter which Clarendon wrote to Gauden in reply. If the story of Clarendon's son is correct, the Chancellor believed that Somerset had convinced the King that Gauden's claim was untrue. But it also implies that Charles II. was not quite convinced, and Burnet's story tells us that James was not convinced. Burnet, however, is far too inaccurate to enable us to build much on his assertion. James could affirm nothing of his own knowledge, and, unless he had seriously investigated the question, a mere casual state-

ment in conversation would not prove much. The reference to Somerset is the curious thing; but, after all, Somerset's name may have slipped in by mistake for some other nobleman's.

However this may be, it is a pity that Miss Phillimore's edition had not been delayed for a few weeks, as this would have enabled her to make use of Mr. Scott's discoveries which he has recently disclosed in the pages of the *Athenaeum*. She would then have been able to quote the additional evidence of Bishop Mew, who informed Archbishop Tenison that he had himself seen fragments of the *Eikon* at Naseby, and to refer to the very curious fact that Nicholas, in quoting from the book in private memoranda for his own use, made his references to a MS. copy and not to the printed work—a proceeding which can hardly be explained, except on the supposition that he had access, either to the original MS., or at least to a copy in which he placed implicit confidence—a supposition which is the more probable when it is remembered that his own secretary, Oudart, had transcribed the original for the press, and that the MS. from which he quotes preserves in one instance what has all the appearance of being a true reading in the place of a misprint in the printed copies.

Upon the question of internal evidence Miss Phillimore has little to say, and if by internal evidence is meant literary evidence, she is undoubtedly in the right. It is a matter that has been already fully discussed, and which will hardly bear condensation. Yet, after we have made up our mind whether such an expression as "feral birds" is the private property of Gauden or the common property of writers of the time, the important question remains to be asked whether the book is true to character, a question which can only be answered rightly by those who have made a minute study of Charles's life.

It is pleasant to accompany an author as far as it is possible to do so, and it is easy to agree with Miss Phillimore in her argument that the *Eikon* reveals Charles's own patience and meekness in affliction. But when she asks us to trace in it Charles's ability it is necessary to part company with our guide. Ability of a certain sort Charles undoubtedly possessed. Starting from certain premisses, and being quite sure of the conclusion which he intended to reach, he could pick his way from one to the other in excellent style, and could often turn the tables upon his opponents by dragging to light the logical inferences to be drawn from their own arguments. But of true statesmanlike ability to grasp the full character and tendencies of the men with whom he had to deal, and the full bearing of the circumstances in which he was placed, he was absolutely deficient. Very much the same may be said of his character. That he was sincerely desirous of acting rightly, and thoroughly honest in intention, may fairly be granted. But he was constantly taking part in what ordinary men characterise as intrigues, because he had not imagination enough to take a broad view of the circumstances around him. The strongest possible argument for the authenticity of the *Eikon* lies in its exact representation of Charles's character in his weakness as well as in his strength.

From this point of view, the very inadequacy of the book to furnish a true picture of the time is a strong argument in favour of its authenticity. Writers who express astonishment that they do not find historical narrative misunderstand both the intention of the book and Charles's own character. It may fairly be asked whether Charles ever, in the whole course of his life, gave an accurate historical account of anything. It was his habit to blur the outlines of facts and to acknowledge just as much as it suited his purpose to acknowledge, because that was all that was visible from his mental horizon at the moment.

It is no doubt difficult to convey the impression produced by the *Eikon* upon anyone who has not been recently studying Charles's life with the assistance of all the new material now at the disposal of the historian; but the defenders of his authorship might, perhaps, be content to rest their case on the first chapter alone. Such sentences as the following breathe the very spirit of Charles's life:—

"The odium and offences which some men's rigour or remissness in Church and State had contracted upon my government, I resolved to have expiated by such laws and regulations for the future as might not only rectify what was amiss in practice, but supply what was defective in the constitution, no man having a greater zeal to see religion settled, and preserved in truth, unity, and order, than myself, whom it most concerns both in piety and policy; as knowing that no flames of civil dissensions are more dangerous than those which make religious pretensions the grounds of factions."

"I resolved to reform what I should, by free and full advice in Parliament, be convinced of to be amiss, and to grant whatever my reason and conscience told me was fit to be desired. I wish I had kept myself within those bounds, and not suffered my own judgment to have been overborne in some things, more by others' importunities than their arguments."

If this is not self-portraiture, it is hard to imagine what is. The utterly inadequate account of the causes which brought about the summoning of the Long Parliament, the complacent reference to his own good intentions, the recognition of the facility with which he allowed his own judgment to be overborne by others, are all marks of Caroline authorship.

Nor are these paragraphs in any way dissimilar to the rest. Advocates of the theory which attributes the book to Gauden may be challenged to produce one line from it which gives a dissonant note. Everywhere there is just that reticence of self-communing which touches lightly upon fact, or alludes to it obliquely as if it were unnecessary to go into detail.

How much, for instance, is implied by those simple words,

"I looked upon my Lord of Strafford as a gentleman whose great abilities might make a prince rather afraid than ashamed to employ him in the greatest affairs of State,"

for those who know that Charles, after following his Minister's aggressive projects after the dissolution in 1640, had shrunk from carrying them into execution; and that still later, when the Long Parliament met, he had refused to carry out the same Minister's advice to open the session by bringing an anticipatory charge of treason against Pym and his associates.

Allusions, which are no more than allusions, accumulate as we read on. The charges against Strafford are said not to have given "convincing satisfaction to the major part of both Houses, especially that of the Lords;" which is true if the absent members of the Commons be taken into account, though a forger would be more likely to remember that the division gave a majority of about three to one the other way.

Then, again, there is the reference to a whole controversy about the meaning of the words *leges quas vulgus elegerit* in the paragraph in the sixth chapter:—

"I think my oath fully discharged in that point by my governing only by such laws as my people, with the House of Peers, have chosen, and myself consented to."

The chapter, too, upon the King's going to the Scots, and on the Scots delivering up the King, would hardly have been put by a forger into the present tense. That the sentiments in them are Charles's sentiments at the time may be gathered from the letters addressed from Newcastle by Sir Robert Moray to the Duke of Hamilton, which will soon be in the hands of members of the Camden Society. The repudiation of the charge of obstinacy was no doubt intended to reflect upon Charles's friends as much as on his opponents. A few weeks later Moray, on the part of the Hamiltons, was urging Charles to swallow the Covenant in order to regain his crown. "So fatally he sticks to his principles," was the despairing cry of the baffled diplomatist.

It has been recently announced that Mr. Scott is preparing a preface to a new edition of the *Eikon*, to be issued by Mr. Elliot Stock. He will no doubt handle the bibliographical questions involved in the argument with competent knowledge. Those who reply to him must remember that they have to face at the same time an argument totally disconnected either with his or with Miss Phillimore's. Either they must point out some passages in the *Eikon* inconsistent with Charles's very peculiar character, or they must admit that in Gauden, scoundrel as he was, England possessed another Shakspeare unawares.

SAMUEL R. GARDINER.

New Poems. By John Payne. (Newman & Co.)

UNDER the somewhat hackneyed title of *New Poems*, the author of *The Masque of Shadows* has published another volume of verse. As with all works from the same pen, this book, from dedication to colophon, is imbued with sombre melancholy; for poetry would appear to exercise as saddening an influence upon Mr. Payne as sweet music did upon Shakspeare. Nearly the whole burden of his book, and of his preceding works—save some portions of *Villon*—is that, with respect to poor humanity, "while his flesh is upon him he shall be sorrowful, and while his soul is in him it shall mourn." Whether this be due to a natural idiosyncrasy of the author, or whether it be due to an artifice of his art, it is, perhaps, needless to investigate; but it must be affirmed that, though "sorrow be the soul of song," song that is all soul is not always the most acceptable to οἱ πολλοί. It was, doubtless, an excess of this melancholia

more than its horror—so natural, indeed, and so much in keeping with the theme—that caused Mr. Payne's latest publication, *Lautrec*, to meet with somewhat less critical unanimity of approbation than his former volumes did. Soaked through and through with this tint as is the present volume it is still, in some portions of the contents at least, an advance in power upon its predecessors, even as each one of them had been upon its forerunner. It contains a little too much of those fantastic mediæval forms of verse with which the reading world has been so cloyingly fed of late—archaic forms which once had their use in restraining the unbridled licence of youthful languages, but which now are neither necessary nor needed. A poet dowered with such affluence of thought and facility of expression as Mr. Payne is may not find the mechanical limits of *rondelets*, and *rondeaux*, and *ritournels*, or even of *rondeaux redoublés*, and double ballads, very restrictive, but a man who can write such poems as "The Rime of Redemption" and "The Westward Sailing" should not waste his genius upon these literary gymnastics. Funambulatory labours of such a sort may still have their uses in restraining the unfashioned antics of a youthful artist, but for a master of his art, as Mr. Payne has proved himself to be, they are but too frequently monuments of wasted talent. "Wenn man alt ist," says Goethe, "muss man mehr thun, als da man jung war;" consequently, as Mr. Payne, though young in years, is growing old in reputation, it behoves him to do more—that is to say, better—in each new volume he offers to the world. And it must be conceded that although these *New Poems* are, necessarily, unequal in merit, they contain work quite as good, and in some respects even better, than anything previously published by their author. Indeed, no amount of praise that could be awarded to Mr. Payne would do more, if so much, to sustain and enhance his reputation as would the citation of the "Prelude" to the present book. It is scarcely too much to affirm of it that no contemporary could excel it in symmetry of form, excellence of workmanship, and, above all, alliance of sound with sense. In justification of such high praise, these opening lines may be quoted:—

"Geoffrey of Rudel! How the name
Leaps to the lips like a flower of flame,
Holding the heart with a dream of days
When life lay yet in the flowered ways
And the winds of the world were stirred and strong
With blast of battle and silver of song!
When love was long and women were true
And the bell of the steadfast sky was blue
Over a world that was white as yet
From load of labour and fruitless fret
Of hunger for gain and greed of gold,
That now have made us our young world old!
I hail thee, honest and tender time!—
I, last of many, that with rude rhyme
Ring out reproach to the cheerless air
And chide the age that it is not fair.

How shall we say sweet things in rhyme
Of this our marvellous modern time,
We that are heavy at heart to sing,
But may not rejoice for remembering?
We care not, we, for the gorgeous glow
Of wealth and wonder, the stately show
Of light and luxury, that sweeps past,
Unheeded, before our eyes downcast.

The pageant of passion and pride and crime
That fills the face of the turncoat time,
The gold that glitters, the gems that glow,
Hide not from us the wasting woe
That gnaws at the heart of the hungry age.
The starving soul in the crystal cage
Looks through the loop of the blazoned bars,
As out of heaven the sorrowing stars
Gaze on the grief of the night newborn."

A thorough mastery over the complex mysteries of rhyme and rhythm is evidenced by these well-balanced and delicately wrought verses, wherein meaning and melody are so skilfully interwoven. The present generation has been so pampered with poetic dainties that it fails to appreciate the refinement of diction and subtle strength of the work its poets are doing for it; but should the rivers of inspiration again run dry, and the aridity of the past century be repeated, with what intensity of admiration may not our posterity regard the lyrical leaders of to-day! And the authorship of such a poem as "Thorgerda" should certainly qualify Mr. Payne for admission into that honourable, but small, circle. "Thorgerda" is the longest of these *New Poems*, and, had not its author lavished his poetic treasures with a somewhat wasteful improvidence, it would doubtless have been issued in a separate form, when its merits might have received more immediate and protracted attention than they are likely to in their present method of publication. In nakedest details the theme is not a new one, for many poets have sung of semi-human beings loving mortals; and, by their love, destroying those mortals, but then "les grands esprits," as Théophile Gautier says,

"qui ne sont touchés que du Beau, n'ont pas cette préoccupation du neuf qui tourmente les cerveaux inférieurs. Ils ne craignent pas de s'exercer sur une idée connue, générale, appartenant à tous, sachant qu'elle n'appartient plus qu'à eux seuls dès qu'ils y ont apposé le sceau de leur style."

Although the references and characters of "Thorgerda" are Scandinavian, the whole creation of the work is richer and more voluptuous in tone than is usual for anything emanating from, or referable to, the grotesque mythology of the North. In some respects, indeed, it approximates to, and may honourably challenge comparison with, Shelley's *Witch of Atlas*. If fault be found with "Thorgerda"—doubtless Mr. Payne's *chef-d'œuvre*—it will be for its superfluity of splendour, for its almost wasted wealth of simile and description, as, for instance, in such stanzas as this:—

"All hail! the sweet of the day is ours!
Our wings are wet with the salt of the sea!
Our task is over, our feet are free
To fare where the foam-bells shiver in showers
And the seaweeds glitter with glory of flowers.
The lines of the land do faint and flee:
We come to the heart of the mid-sea bowers
On the race of the running billows' glee!"

But the *technique* of such work is irreproachable; the onomatopoeial sense of sound is most discriminative. A very effective richness has been gained by the alternation of open vowels and the most producible consonants. These effects do not arise from accident, but are invariably the result of imagination, combined with, and curbed by, a full knowledge of the mechanism of verse.

The repetition of similar sounds is so naturally, so (apparently) unartfully produced, that it scarcely seems fair to refer it to "alliteration's artful aid." Nor does Mr. Payne, despite the fluency of his language and facility of lyrical expression, belong to any of those numerous cliques of poetasters who mix too much water with their ink; his compactness of form and distinctness of meaning, at least nowadays, leave little to be desired.

"The Ballad of Isobel" disputes the palm of excellence with "Thorgerda," and with the many will, doubtless, gain the preference. In tone and form it is the opposite of "Thorgerda," being as cold, chaste, and simple as that is warm and voluptuous. It resembles the old ballad in simplicity, at times, almost, in baldness of description, and tells of supernatural things in that unquestioning, straightforward mode which constitutes the strength and fascination of our ancient lyrical lore. The power and pathos producible by such unostentatious workmanship are undeniable; even an isolated stanza, as

"She will not come!"—A soft, cold air
Upon his forehead fell:
He turned him to the empty chair,
And there sat Isobel,"

will exemplify this fact, although the full force of the lines can only be appreciated when they are read in conjunction with the rest of the poem. The story, as are so many of its author's, is an eerie one:—

"It is

A tale more fit for the weird winter nights
Than for the garish summer days, when we
Scarcely believe much more than we can see."

Of the "Light o' Love," the second longest poem in the volume, we are not inclined to speak so favourably as of those already mentioned; it is too indicative of those literary influences under which it has, apparently, been produced. Many of the shorter poems are very beautiful, however, and all, or nearly all, truly bear out their author's words in his initial volume—

"Whoso is fain

To enter in this shadow-land of mine,
He must forget the utter summer's shine
And all the daylight ways of hand and brain"—

only, it should be remarked, the shadows have grown more distinct and stronger than in the earlier days. "Melisande," which is the last poem in the book, read in conjunction with "Tournesol," its prelude, gives that continuity and completeness without which no work of art is perfect.

A logical definition of poetry is still wanted, and it is far safer to affirm what it is not than what it is, but that Mr. Payne's *New Poems* are richly dowered with it, and are replete with that indefinable "light that never was on sea or land," may be safely asserted without fear of authoritative contradiction.

JOHN H. INGRAM.

ENGLISH MEN OF LETTERS.

Southey. By Edward Dowden. (Macmillan.)

IF the story of Southey's life had been related as at one time seemed possible by the author of *Philip Van Artevelde* it might have rivalled the *magnum opus* of Lockhart. From a literary point of view it would, no doubt, be absurd to compare Southey with Scott; but

the record of the Poet Laureate's career has in it much that is as fascinating as Sir Walter's, and incidents that are even more pathetic. Prof. Dowden has done as much justice to his subject as could be done in 200 pages, but a cabinet picture like this fails to convey a vivid impression of the varied features which give a charm to the portrait of Southey. The materials at the disposal of the biographer are ample—we had almost said too ample. A little cold, perhaps, and haughty to strangers, towards his friends Southey showed no reserve; all that was in his heart found utterance in his correspondence; and if the frankness of his confessions sometimes raises a smile, the manly integrity of the writer is visible on every page. Sara Coleridge thought her uncle Southey the best man she had ever known, and her judgment seems to have been well founded. His defects lay on the surface; his virtues were eminently noble and solid. They were by no means the niggard virtues practised by the respectable Englishman, who has some conscience and some regard for his reputation; nor were they the virtues of the careless-hearted spendthrift who borrows money to relieve distress, and forgets to pay the lender. With great ambition and high aspirations, Southey laboured daily at task-work for the sake of those he loved; and, while winning a frugal living, which would now be regarded as a mere pittance, was nobly generous both of time and money. Again and again we read of splendid sacrifices made for the sake of literature or friendship. In the early days of his poverty, with a young wife to support, he found leisure to relieve the distress of Chatterton's sister by editing that "marvellous boy's" works; he was ready to start his brother in life with the produce of *Thalaba*, and undertook to support his sister-in-law, Mrs. Lovell. He provided also through many a long year for the wife and children whom Coleridge had perversely left upon his hands; and at about the age of forty-seven, when an old friend who had once done Southey good service fell into difficulties, the poet sent him £625, the whole savings of his life, and wished he had more at his command.

In other ways, too, Southey had a free and generous nature. We know something of party spirit in our days, and the fashion of calling names is not wholly obsolete. In the early years of the century, when the Tories were for fighting Napoleon to the death, and the Whigs, as represented by the *Edinburgh Review*, "predicted ruin to all who dared to oppose the Corsican," and affirmed that France had conquered Europe, it is not to be wondered at if rougher words were used by the opposing parties than any to which we are now accustomed. Southey, an ardent politician, was liberally bespattered by the friends of France, and used no doubt plenty of hard words in return; but he had only to meet a political or literary foe in order to lose every thought of enmity. Jealousy or envy, the faults of the literary character, were wholly unknown to Southey, who in this respect, as in many other fine qualities, resembled his friend Sir Walter. In the large natures of these poets there was no room for aught that was ignoble in feeling; but in one respect Southey was superior even to Scott,

the most loveable of men, for he never hankered after wealth, and was content from first to last with plain living and high thinking. If we may hint a fault in this admirable man, it is to be found, perhaps, in a somewhat overweening conviction that his mind was well disciplined, his heart pure, his integrity unimpeachable. He was a Christian, but knew little apparently of the struggles through which some men fight their way to peace. He fell into no Slough of Despond, fought no Apollyon, toiled up no Hill Difficulty, and encountered no grim fiends in the Valley of the Shadow of Death. His road in this respect seems to have been a smooth one, and so vivid was the impression of things unseen that to Southey Skiddaw itself was scarcely more visible than the Delectable Mountains and the City that lay beyond them. He loved his library of fourteen thousand volumes with the passion of a book collector; he found the deepest joy of life in his wife and children, and he cherished an abiding sense that he should some day raise his head to the stars as a great English poet. In spite, however, of these vivid interests, coupled with the keenest sense of enjoyment, he held lightly by life, and, while confessing that his disposition was invincibly cheerful and his lot an eminently happy one, looked forward with eagerness to the day when he might go home and take his wages.

"Such," says Prof. Dowden, "was Southey's constant temper; to some persons it may seem an unfortunate one; to some it may be practically unintelligible. But those who accept of the feast of life freely, who enter with a bounding foot its measures of beauty and of joy—glad to feel all the while the serviceable sackcloth next the skin—will recognise in Southey an instructed brother of the Renunciants' rule."

If Southey had been as ambitious in a worldly sense as he was to leave a name that should not "perish in the dust" he might have readily gained a large income. But he could only have done this at the cost of all he most valued in life. His vocation was literature; and no author has done more to ennoble the literary profession than Robert Southey. Yet, although never repenting of his choice, he recommends no one to follow it, and observes that a youth had

"better seek his fortune before the mast, or with a musket on his shoulder and a knapsack on his back, better that he should follow the plough or work at the loom or the lathe, than trust to literature as the only means of his support."

The advice is sound, no doubt, but on men who have a passion for literature it will be thrown away. They write, as Southey wrote, because they cannot help writing, and, like him, prefer happiness and freedom to wealth and servitude. Few men, however, enter upon the profession blessed with Southey's resources. He had ample knowledge of books if not of men, an energy and spirit that no labour exhausted, and a conscientiousness that compelled him at all times to do his best. Possibly, as Macaulay said, and like Macaulay, he sometimes lacked judgment, and no doubt as a political prophet he made blunders, as such prophets are wont to do; but he had ever a clear sense of right, a dislike of exaggeration.

tion, the wish, at least, to think temperately and justly, and his character may be seen in his manly, unaffected style. That style contrasted with Lord Macaulay's is as the clear white light of day compared with the brilliant glare of gas lamps; and, if style be the salt of literature, much that Southey has written is secure of preservation.

"His industry," writes Prof. Dowden, "was that of a German; his lucidity and perfect exposition were such as we rarely find outside a French memoir. There is no style fitter for continuous narrative than the pedestrian style of Southey. It does not beat upon the ear with hard metallic vibration. The sentences are not cast by the thousand in one mould of cheap rhetoric, nor made brilliant with one cheap colour. Never dithyrambic, he is never dull; he affects neither the trick of stateliness nor that of careless ease; he does not seek out curiosities of refinement, nor caress delicate affectations. Because his style is natural, it is inimitable, and the only way to write like Southey is to write well."

In a brief narrative it is impossible to show what Southey was as a letter-writer. All that Prof. Dowden attempts to do is to transcribe a few characteristic passages. At present, readers become acquainted with Southey under great disadvantages. The six volumes of his *Life and Correspondence* and the volumes edited by Warton afford a large mass of material; but it is ill arranged, and contains much that should have been omitted. The reader who would sift the wheat from the chaff in this capacious granary has a weary task before him. The labour, however, will not be without recompense. Southey probably never lost a friend, and the men whom he "grappled to his soul" were worthy of his friendship. Coleridge, Wordsworth, and Southey were called by Landor "three towers of one castle," and Landor, himself a faithful and admiring friend of Southey, might well have formed another tower of the same building. These were noble friends indeed, and of the four the heart that beat most warmly, generously, and steadily, was that of Robert Southey. The love that Southey had once felt for Coleridge changed, as was but natural, to "condemning sorrow;" but there was no change in his practical kindness. Scott, too, was Southey's friend, and not a friend only, but an admirer of his genius, for he read *Madoc* through four times. And there were a number of men, of lesser mark, indeed, than these, but men worthy of his love, who formed part of Southey's life. To them he opened his heart, wrote sense or nonsense as the fancy took him, and found relief from the cares of authorship in a frolicsome kind of humour that might have suited a big boy. And in his cheeriest mood he could speak of himself to his friend Grosvenor Bedford as writing poems and history for posterity with his whole heart and soul.

"One daily progressive in learning, not so learned as he is poor, not so poor as proud, not so proud as happy. Grosvenor, there is not a lighter-hearted nor a happier man upon the face of this wide world."

In his chapter called "Ways of Life at Keawick, 1803-39," Prof. Dowden brings out with great skill the salient points of this happy life. Through many long years it may be safely said that no home in England witnessed

more of home blessedness than Greta Hall. The joyous happiness of those days, when his children were around him, has been described by Southey in many a charming picture. He records, too, with delight how he possesses on his shelves the harvest of many generations, and when he goes to the window, "there is the lake, and the circle of the mountains and the illimitable sky."

The writer has taken, we think, a sound view of the poet's literary position. Southey did not always estimate rightly what the age could bear, and wrote as if antediluvian days and boundless leisure were the common heritage of his readers. Had he not himself in his young days read the *Faerie Queene* through thirty times? and after a feat so gigantic was it likely that he should remember that men were no longer giants? Southey did not wait for flashes of inspiration, but what he did was done, as Prof. Dowden observes, in workmanlike fashion:—

"In the gathering of facts Southey was both swift and patient in an extraordinary degree; he went often alone and he went far; in the art of exposition he was unsurpassed; and his fine moral feeling and profound sympathy with elementary justice created, as De Quincey has observed, a soul under what else might well be denominated Miltonically 'the ribs of death.'"

He accomplished so much, not because he produced with unexampled rapidity, but because he worked regularly and never fell into a mood of apathy or ennui."

Such a method was good for an author who could pass from prose to verse with mill-horse regularity, but it is not the method which produces the noblest works of genius. The inspiration which calls forth a lovely poem will not come punctually at the beck of a poet who writes histories or biographies until dinner-time, from dinner to tea writes letters, and "after tea goes to poetry." Southey's best verse was written before he may be said to have been thoroughly in harness as a man of letters. Prof. Dowden says truly that his heroic personages are *high souled*; but they do not take hold of the reader, and the epics which their writer believed would confer upon him immortality are even now, it is to be feared, well-nigh forgotten. On the other hand, a few slight pieces of verse expressive of personal feeling have gained a recognition which promises to be permanent. If his ten volumes of poetry fail to sustain the fame of Southey, he will live as a prose writer in the wit and humour, the geniality and extensive learning of *The Doctor*, and in such masterpieces as the lives of Wesley and of Nelson. The little volume has, perhaps, delayed us too long, but Prof. Dowden's theme is one on which it is pleasant to linger, and all the more so since he has treated the honoured name of Southey with the estimation it deserves.

JOHN DENNIS.

NEW NOVELS.

The Weird Sisters. By Richard Dowling. (Tinsley Bros.)

The Queen of the Meadow. By Charles Gibbon. (Chatto & Windus.)

A Pink Wedding. By R. Mounteney Jephson. (R. Bentley & Son.)

Under the Southern Cross. By Robert Richardson. (Edinburgh Publishing Company.)

IN *The Weird Sisters*—it may be as well to say at once that these are two dismal towers, not two dyspeptic spinsters with a turn for pessimism and strong tea—Mr. Richard Dowling has, it is to be hoped, exhausted what may be called the "Pollaky and Victor Hugo business." Both his short and his long stories prove him to be capable of much higher work; with his direct style and powers of analysis and plot-weaving, he ought to be able to strike out a line for himself. Not that *The Weird Sisters* is in any sense feeble. It is a supper of horrors, but there can be no question as to the excellence of the cooking, or the art shown in the arrangement of the table. There are magnificently horrible things in Victor Hugo; but he has few "scenes" equal in intensity to that in which Walter Grey takes the body of his murdered wife to his Tower of Silence, and prays over it with the fervour of Louis the Eleventh when the superstitious fit was on him. Somehow one sympathises not a little with Grey, though his crimes and miseries occupy three volumes. He is no saint by any means. He is an embezzler on a gigantic scale. He swears lies on the Bible by the dozen. He deliberately murders his wife; for, taking advantage of her weakness of tipping, he places a decanter of brandy within easy reach of her, and, when he finds her stupefied with its contents, he chokes her. He is repudiated by his mother, a terrible and terribly honest woman, whose character is the most powerfully drawn in the book. Yet, after all, Grey was the creature of what the late Lord Lytton, in his *Paul Clifford* days, emphasised and defended as "circumstances." It was the danger of his bank, rather than sordid personal ambition, that prompted him to enter on his career of fraud and crime. When, too, one thinks of his daily punishments, his terrors, his fainting fits, his alternations of hope and despair, it is almost impossible not to wish he had escaped in the end, even although that would have prevented such a melodramatic close as his being burnt with the body of his wife. Most of the other characters are without character, including Sir William Midharst, who glides, like a country pupil-teacher through his "apprenticeship," into the positions successively of guardian, lover, and husband to his cousin Maud. He bursts, however, once into bad language, and has the good sense not to shoot Grey with the latter's revolver, although asked to do so.

In *The Queen of the Meadow* Mr. Gibbon gives us a pleasant, though somewhat spun-out, English country love story. Polly Holt and Michael Hazell were intended by Nature, no less than by their relatives, to come together. Their misunderstandings and differences, for which it must be said that Michael, with all his magnanimity, is mainly to blame, serve only in the end to convert their mutual affection into a passion. The story, however, as already said, is spun out, and one is occasionally tempted to wish that Dickens's Mr. Dick would appear upon the scene and by some such idiotic but appropriate suggestion as

"Polly, put the kettle on, and let us all have tea," cause matters to be adjusted once for all. Tom Walton, the rival to Michael, and a rather likeable ne'er-do-well, is well drawn; and there is character, if nothing else, in the fortunate yet unfortunate Sarah Hodsoll. Mr. Gibbon does not succeed in drawing unpleasant girls. There are some good scenes between Miss Walton and Polly, but as the tyrant of her household and a pretender to social position, Miss Walton is a caricature. As usual, Mr. Gibbon is careful as to matters of detail. With a robust plot, he should make a considerable success of his next English fiction.

Mr. Jephson, in the person of his hero, Reginald Mauleverer, makes this prophecy, which, being the most important thing in *A Pink Wedding*, deserves to be given at once: "It is my opinion that before twenty years are over Japan will be a Christian country, with an established Christian Church throughout the length and breadth of the land." If Japan progresses at this rate, then we cannot be too thankful to photographers of the country in the course of its rapid changes, or think they can be too numerous. Mr. Jephson might, therefore, have done a service to mankind if, instead of writing a third-rate, ill-connected, and, in many respects, rather silly novel, he had written a book giving his own or "inspired" information about Japan. At the least, he might have spared us the third volume. The ghastly "Pink Wedding," reeking of alcohol and "sport," with its tragic conclusion—an elopement followed by a suicide—is as much in place here as the Ghost of Banquo would be in the "Fairies' Home." Besides, Mr. Jephson, who does not improve the more he writes, has spoiled even the first two volumes, which describe Japan and its customs, by his fifth-form jocosities, even more than by his vigorous efforts to prove that he has not forgotten Horace and Ovid, Milton and Shakspeare. He has a fair stock of somewhat 'Arryish animal spirits, but no real humour. He seems to think the Moltbury family "good fun," but, with the exception of little Violet, they are a set of grinning imbeciles that would be hissed off the boards of any respectable theatre, even in the pantomime season. It is doubtful whether Mr. Jephson's description of lovemaking or his ridicule of such "sweet lunacy" is the more ludicrous. Here is a specimen of serious "spooning." The reader must understand that on the occasion of "an *al-fresco* meal," Mr. Moltbury, the senior male noodle of the family, has quoted Byron's lines,

"Fell upon what was offered, like
A priest, a shark, an alderman, or pike,"

and that, amid explosions of laughter, the rôles of priest, shark, and alderman, have been assigned or appropriated.

"Mauleverer, you and Miss Moltbury must be content with the comparatively insignificant rôle of the pike between you."

"It was with quite a thrill that Mauleverer heard the sentence pronounced. It was sweet to be coupled with her in any way. It was delicious to think that they were to be one pike together. Well might Shakespeare say that 'Men being in love have then a nobility in their natures more than is native to them.'"

Mr. Jephson should abstain from novel-

writing for a year or two. During that period he might visit (or revisit) Japan, and bring back notes of the interesting and inevitable change from Shintoism to Christianity.

Beneath the Southern Cross is, it may be presumed, the work of a young writer. It is a simple, healthy, unpretending tale of the old school, and if Mr. Richardson would eschew quotations, and develop a vein of humour indicated by his portraits of Lotty Vallance and of Mrs. Upshott, an Australian Mrs. Malaprop, he might do good work. There seems no particular reason why the scene of *Beneath the Southern Cross* should be laid in Australia—Twickenham or Timbuctoo would have done equally well—although it is no doubt something after all to make the acquaintance of the laughing jackass, with his "uproarious peal of laughter, elfish, eerie, half human, half demoniac—wonderful, baffling description, dying away at last in a smothered, sardonic, Mephistophelian chuckle." The hero, George Herbert, *alias* Dumaresque, is rather mysterious and miserable about little; surely a man need not think his prospects in life blighted because his brother is accused of shooting a fellow-student and a Scotch jury returns a verdict of "not proven." Arnold Denison, bank manager and villain, has more dash about him; all he does is to try to steal his neighbour's good name, and, failing in that, to steal his employers' money, which, of course, is trash, and therefore not worth recovering. Two more hints to Mr. Richardson. Let him look after his printer. "Rock-mellons" are no doubt delicious, but most so with one "l"; and we do not care to hear of Mabel Vallance having a *spirituelle* head. Let him also keep a guard over his young ladies' lips. Quiet middle-class girls like Mabel are not in the habit of talking to their male acquaintances about the condition known as "hipped." No doubt it is very smart of Lotty to say that "redeeming the time" suggests "something in pawn." But, having no "fast" brother, was she likely to hear about the vulgarest of all human transactions?

WILLIAM WALLACE.

RECENT VERSE.

A Life's Idylls. By Hugh Conway. (O. Kegan Paul and Co.) Mr. Conway, in his Dedication, expresses a certain doubt whether his work be worthy or worthless. It is certainly not worthless, but there may be different opinions as to the degree of its worthiness. We are by no means of those who hold imitation to be fatal to a young poet's claim to be heard, but the imitation which is to be excused must be general and not specific. Too often we can trace the very poems which have inspired Mr. Conway to write verse that is almost always harmonious and correct, and is not seldom very spirited. "A *Duel à la Barrière*" would certainly never have been written had it not been for Mr. Browning's "Before" and "After." The poems more specially called "A Life's Idylls" testify to a curious commingling of the inspiration of the Laureate and of Mr. Coventry Patmore, and so forth. We shall not quote any of Mr. Conway's verse, because the imitated notes ring so loudly that hasty readers might let them outsound all the residue. There is a residue, but it is not large.

The Truce of God, and other Poems. By W. Stevens. (O. Kegan Paul and Co.) There is very good work in this volume. Its chief con-

tents are short tales or history pieces, generally in blank verse. Unfortunately, although good work is absolutely necessary to poetry, it is not absolutely sufficient. The following extract will give a very good idea of the "thus far and no farther" which has apparently been accorded to Mr. Stevens:—

"The Christians to the lions!" Stormy voiced,
The cry o'erleaped the wide arena's bound
And swept the street like some destroying blast.
Then men rushed madly, all athirst for blood,
And searched the city in hot scent of death.
Their clamour shook the temple shrines, and
priests
Came forth with curious smile to see, while still
Like roaring wave encompassing it spread.
The blameless worker seized with sudden hands,
Like one hurled headlong in a raging sea,
Heard the fierce shouts and knew his hour was
come.
The shrinking maiden, dragged to meet her
doom,
Grew pale a moment as the eager crowd
Gazed unabashed, then faced with tranquil
mien
The beasts that glared less cruel; till there
came
Bright angels down the shining slope of heaven,
With victor palms to bear her spirit home.
So martyrs perished and their faith prevailed."

Songs in Exile. By H. E. Clarke. (Marcus Ward.) Mr. Clarke is a poet *sans phrase*, and we should not have included him in this *omnium gatherum* of minor singers had it not been for a certain tone of imitation chiefly of Walt Whitman and Mr. Swinburne, from which in these *Songs of Exile* he has not known quite how to disembarass himself. But that he is a poet, and not a minor poet, we have but little doubt. Nor do we think that anyone who reads the following poem on "Age" will have much doubt either:—

"All the strong spells of passion slowly breaking,
Its chains undone,
A troubled sleep that dreams to peaceful waking,
A haven won.
A fire burnt out to the last dead ember,
Left black and cold;
A fiery August unto still September
Yielding her gold.
A dawn serene, the windy midnight over,
The darkness past,
Now, with no clouds or mists the day to cover,
The day at last.
Thou hast thy prayed-for peace, O soul, and quiet
From noise and strife,
Now yearn for ever for the noise and riot
That made thy life."

Here again:—

"ON THE PIER.

"A crash of music, a blaze of light
Where the dancers whirl in glee.
And out beyond the silent night
Over the sighing sea.
Whose waves sigh on—sigh on—sigh on—
Whose waves sigh on for ever.
So with its music of mirth and song,
Its glory of laughter and love,
To a maddening measure life whirls along,
But death is around and above.
And still thro' the music we hear the rhyme,
The sorrowful song of the tide of time,
Whose waves sigh on—sigh on—sigh on—
Whose waves sigh on for ever."

And again the verses of "On the Embankment":—

"Under the mist and the moonlight I wander alone
along,
Between the hum of the city and the river's
soothing song,
And the wind that blows from the water is keen
like a sword and strong."

"I love to roam by the river in the grey of the winter nights,
Till I seem to be nought but a shadow among the shadowy sights,
Above and below and around me a dazzling tangle of lights.

"Lights that glow in the water, lights that burn in the sky,
Lights that twinkle and change, lights that flitter and fly,
And the great moon over all ruling supreme on high,

"Clothed by the shining mist with a wedding garment of white.
And the tide of the Thames to left and the city's tide to right
Run swiftly out in the darkness, filling the ear of night

"With a musical, mingled murmur that wakes in my dreaming brain
Thoughts that are sad for pleasure and yet too soothing for pain,
And steals 'twixt the thoughts awakened like a far-off song's refrain.

"There is passion and pain and sorrow, there is hope and rest and ease,
And labour with love for a guerdon in the mingling melodies,
And my vague unrest is quiet, and I am content and at peace."

The rest of this poem is, perhaps, too strongly suggestive of *Leaves of Grass*. Indeed, Mr. Clarke's matter is so strangely compounded of originality and reminiscence, that we have thought it better to quote than to comment. He has some spirited "rebel songs" and some tuneful agnosticism, of both of which we feel some suspicions as to their sincerity, but none whatever as to their goodness. Altogether, this first book of his is the most interesting of its kind which has been published for some years. But all must depend on his next.

Lloyd's Poetical Magazine. (Elliot Stook.) We have not been able to discover in this almost exclusively poetical magazine any justification for the panegyric which Mr. James Payn recently passed on magazine verse. "A Prose Poem" with which it begins does not strike a very high key-note, and the verse-poems—as we suppose they are to be called—which follow are for the most part no better. Here and there among sixty or seventy pages of verse there is evidence that the writers have read some poetry, but we cannot perceive that they have written any.

Poems and Translations. By Henry Lowndes. (C. Kegan Paul and Co.) Mr. Lowndes has collected in this volume a very large number of pieces, which are for the most part very short, including a considerable number of translations and a good many sonnets. As Mr. Lowndes is fond of the sonnet it is a pity that he does not study its form more closely. His work on the whole, however, is not work to be disrespectfully spoken of. It is not ambitious, and for the most part lacks distinctness of character, but the following short poem puts forth a claim which is, on the whole, not ill justified:—

"MY LITTLE BARK.

"With little bark and lowly sail,
I hug the shore and shun the gale.
Let others dare the storm-swept sea;
The sheltered peaceful bay for me.

"My little craft I hand and steer,
And veer about without a fear.
To more adventurous hearts I leave
To fare forth where the billows heave.

"And tiny though my shallop be,
It is a ship and on a sea.
And something of the joy I share,
Of those who farther seaward dare."

Peepul Leaves. By H. C. Keene. (W. H. Allen and Co.) Mr. Keene's little book, the

title of which is rather too exclusively Indian for its contents, gives, as one reads it, a pleasant feeling, which is not easy to justify by any special quotation or extract. The author is somewhat too fond of moulding, not merely the form, but the subject of his verse, on that of others—a sign of a somewhat dubious and hesitating talent. His thought is often ingenious, but seldom perfectly expressed, while his expression, as we have hinted, partakes too much of imitation. Still, we repeat, *Peepul Leaves* is a pleasant book to read, with greater variety and body in its themes than the majority of such books. "The Death of Akbar," a dramatic fragment deserving completion—we are rather inclined to fear that Mr. Keene is one of those who shrink from much labour in their literary work—shows considerable aptitude in its class of composition.

The Lay of the Bell, &c. By Andrew Wood, M.D. (W. P. Nimmo.) Dr. Wood has amused himself with taking certain very well-known works of Schiller, the "Lay of the Bell," the "Ring of Polycrates," the "Cranes of Ibycus," and so forth, and translating them into an artless kind of English verse, which has the merit of being generally faithful, and the demerit of being almost invariably tame. He has prefixed an admiring Preface, in which he analyses the poems he has selected in a rather innocent fashion.

Cædmon, Ralph, and other Poems. By A. V. Irwin. (Charing Cross Publishing Co.) We have endeavoured with some pains to find a quotation which shall do justice to Mr. Irwin, and have failed. Few pieces of his are free from some absurdity, which might lead the reader to think his book even worse than it is, while it would be necessary to quote many to exhibit the dead level of monotonous incompetence on which he chiefly disports himself.

La Fontaine's Fables. Books I. and II. *Les Orientales*. First Series. Translated by J. N. Fazakerley. (Kerby and Endean.) Mr. Fazakerley is certainly one of the boldest men whose acquaintance, in a literary sense, we have ever had the pleasure of making. To translate La Fontaine and Victor Hugo is a task which the most intimate familiarity with French literature and English composition would not embolden some people to attempt. Mr. Fazakerley, as usual, has been "requested" to publish his versions, and he modestly claims for them that they are "at least fairly literal," a boast which is evidently sincere, inasmuch as he gives the original face to face with his Englishing. The proceeding is honest but unwise. On the first page at the end of the address to the Dauphin we find the words:—

"Et si de t'agréer je n'emporte le prix
J'aurai du moins l'honneur de l'avoir entrepris."
Here the honour is transferred from the poet to the prince, for Mr. Fazakerley renders the last line "at least thou'rt honoured by an adventurous muse." Turning over the leaves, we come to the fable of the drones and the bees. Here we have "n'a-t'il pas assez léché l'ours?" rendered "Has he not cleanly licked the platter?" Now, not only is there not the slightest imputation in the original on the judge's honesty, but Mr. Fazakerley seems to have no notion of the meaning of "lécher l'ours," which means to "lick a thing into shape"—to take much pains over it. An acquaintance with idiomatic French is surely a *sine qua non* for a translator of La Fontaine. As for the version of *Le Feu du Ciel*, we would much rather not say anything about it. M. Victor Hugo is made in it to appear in a guise sorry enough to satisfy Mr. Myers himself.

The Earth: an Epic Poem. By Mrs. C. B. Langston. (S. Tinsley and Co.) The author of an epic poem on the earth which does not

occupy more than sixty pages cannot be accused of unduly spinning out her subject. Some other accusations might possibly be brought against the poem, but Mrs. Langston has excused herself from any charge of rashness beforehand. "Who," she says, "when led by the muse to the dazzling regions of fancy, rapt in her mesmeric enchantment, is sensible of the dangers of the precipice or the deadly malaria of the jungle?" We really cannot answer this question, being ourselves as critics not given to take such excursions under such circumstances. The muse who guided Mrs. Langston to the dazzling regions of fancy appears to have suggested Thomson's *Seasons* as a useful guide to versification of the wonders there beheld. At any rate, *The Earth* is more suggestive of the good-natured Bard of Kew than of any other model. We cannot, however, say that Mrs. Langston is a proficient in Thomsonian verse, and we fear that a writer who begins one part of her poem with such a verse as

"When eternity was cleft and from its womb,"
and ends another with such a verse as

"And whose chambers are thy crystal waters,"
must be quite destitute of ear.

The Heresy Hunt. By a Layman. (Dundee: Kidd.) The circumstances of this little narrative or satire, or whatever it is to be called, are wholly Scotch, and it scarcely appeals to readers south of the Tweed, who do not know the mania for scenting heresy which besets the aggrieved parishioner north of that river more strongly even than the desire to fend off the scarlet lady besets his southern brother. The poem is written in a curious style which is half-consciously and half-unconsciously burlesque, but it is perhaps in its favour that the end is, on the whole, better than the beginning.

The Storm, and Random Rhymes. By John MacLaughlin. (Newman and Co.) These random rhymes are exactly what they describe themselves to be, verses for the most part occasional, usually fairly observant of grammatical and metrical rules, but deserving no further notice.

NOTES AND NEWS.

MESSRS. SAMPSON LOW AND Co. are about to issue, in a cheap and popular form, a series of "English Philosophers," the object of which is to present a connected view of the contributions made to the advancement of philosophy by English thinkers. Each volume will contain an exposition of the views of one philosopher (or, in a few cases, of two or more), with brief biographical sketches. Among the contributors will be Profs. Fowler and Green, of Oxford, and Monck, of Dublin; Dr. Huxkin, St. John's College, Oxford, Head-master of Repton; Miss Helen Taylor; Messrs. Lang, Buckle (All Souls'), Gosset (New College), J. A. Farrer, Harry Johnson (Queen's), &c. The series will be edited by Mr. Iwan Müller, of New College, Oxford.

We understand that Sir George Dasent is at work upon the Life of his brother-in-law, Mr. John T. Delane, and it may be expected in the course of the autumn. Messrs. Macmillan and Co. will be the publishers.

The March number of the *Antiquary* will include, *inter alia*, an original autograph letter of King Charles I., as yet unpublished and unknown to historians. It is dated from Caversham, near Reading, only six months before his execution, and is addressed to his son James, afterwards Duke of York and eventually King.

In addition to the daily illustrated paper which is projected, we hear that there is some talk of a new weekly, to be devoted to fiction and general literature.

OLE BULL, whose death was erroneously reported in the papers not long ago, has just celebrated his seventieth birthday at his residence in Cambridge, Massachusetts. Among the guests were Mr. Longfellow, Mr. J. T. Fields, and Dr. Oliver Wendell Holmes. Letters of apology for non-attendance were read from Mr. Whittier, Mrs. Louis Agassiz, and others.

THE third centenary of the death of Camoëns, which occurred on June 10, 1580, will be celebrated this year in Lisbon.

MR. ALEXANDER MACKINTOSH SHAW, of Chipping Barnet, Herts, has nearly ready for the press *Historical Memoirs of the House and Clan of Mackintosh and of the Clan Chattan*. In this work, which will be issued to subscribers only, separate accounts will be given of the Macphersons, Macgillivraes, Macbeans, and other septes of the clan.

MESSRS. MACMILLAN AND CO. have in the press and will publish about Easter a new volume of poems by Mr. Ernest Myers. Beside lyric and elegiac pieces, it will contain a translation of the eighteenth book of the *Iliad* ("The Armour of Achilles") in a metre which, though akin to the hexameter in length and in rhythmical movement, has its lines rhymed. The volume opens with a narrative poem (in the same metre) on the "Defence of Rome" in 1849 by the Republic against the French troops.

"BELOW THE LIBERAL GANGWAY" is the title of a series of sketches commenced in the *Congregationalist* for March, the subject of No. 1 being Mr. Joseph Cowen.

A REVIEW by Mr. Stephen Tucker, the present Rouge Croix, of Mr. Joseph Foster's new *Peerage* appeared in the January number of the *Genealogist*. It acknowledged that Mr. Foster's elaborate volumes might ultimately become "a book of reference of great value," but contained some severe criticism on their "glaring faults," and some sarcastic references to the assistance which the compiler had derived from some of the officials in the College of Arms. Mr. Edward Bellasis, the Bluemantle of that venerable institution, has printed for private circulation among the devotees of heraldry and genealogy a vigorous rejoinder, in which he defends Mr. Foster's statements, and comments on the aid which Rouge Croix has given to other works of a similar character. The quarrel is a very pretty one, and very entertaining to all but those who are enamoured of heraldry or the heralds. Surely it is not desirable in the interests of the gentlemen serving in the College of Arms that the public should be enlivened by such displays of fraternal animosity. *Bellum plusquam civile*. The fate of a house divided against itself is proverbial, and a thousand instances have proved its truth.

MESSRS. HINRICHS, of Leipzig, have issued their annual systematic survey of the German book market. According to them the number of new works issued in 1879 amounts to 14,179, as against 13,912 in the previous year. The greatest increase is shown in the departments of jurisprudence, pedagogic, politics, and statistics, while the decline is most visible in all departments of *belles lettres*.

MESSRS. MOXON, SAUNDERS AND CO., of Henrietta Street, Covent Garden, have in the press *Gwynedd: a Tragedy, and other Poems*, by the author of *Margaret's Engagement*, *My Insect Queen*, *A Horrid Girl*, &c.

MESSRS. ADAM AND CHARLES BLACK have a new work in the press by the Rev. Dr. Raleigh, entitled *The Book of Esther: its Practical Lessons and Dramatic Scenes*.

AN interesting reminiscence of Webster is preserved in a letter belonging to a lady in one of the Western States of America. The letter was written by the owner's grandmother, and in it

the writer explains that the reason why she had time for letter-writing in the evening was that "Cousin Grace Fletcher is trying to entertain a young man by the name of Daniel Webster by playing checkers. Father and Uncle Chamberlain think him a young man of great promise, but we girls think him awkward and rather verdant."

H. TOLLIN, of Magdeburg, has issued a reprint of Servetus' *In quendam Medicum apologetica Disceptatio pro Astrologia*. The reprint is of interest because the book was one of those publicly burnt, and it was supposed that no copy was extant until this was discovered in the Paris Library.

UNDER the will of the late Mr. J. Brown Bright, of Waltham, Harvard University will receive the munificent sum of £10,000, half of which is to be used in scholarships for students bearing the testator's name and descended from his Anglo-Saxon ancestor, Henry Bright, and the income of the other half to be applied annually for the increase of the college library. Harvard now possesses scholarships of the aggregate value of £5,000 per annum.

MR. HORACE HOWARD FURNESS has finished the new volume, *Lear*, of his *Variorum Shakspeare*, and copies are expected to reach England about the middle of April. Mr. Furness has dedicated his *Lear* to the New Shakspeare Society.

STUDENTS of palaeography will find in the *Rassegna Settimanale* of February 15 a full history of the famous Medicean Virgil in the Laurentian Library of Florence. The article is by Prof. Cesare Paoli, a weighty authority in palaeographical science.

MR. W. J. ROLFE's edition of *King John* in his School and College Series of Shakspeare's plays is just published. His edition of the *First Part of Henry IV.* is all in type, as well as half his edition of the *Second Part*.

THE question of who was the inventor of printing was, it seems, by no means settled by Dr. van der Linde's *Life of Gutenberg*, and his claim for that German worthy as the long-sought inventor. The well-known incunabulist, Mr. J. H. Hessels, has been patiently examining Dr. van der Linde's supposed proofs of Gutenberg's claim, and finds them almost as ill-supported, almost as much founded on forgeries and documents with faulty pedigrees, as Dr. van der Linde found that Coster's claim and the "Haarlem Legend" were. Mr. Hessels' series of articles on Gutenberg and what may be called the "Metz Legend" will appear in monthly instalments in our excellent contemporary, the *Printing Times*, published by Messrs. Wyman, of Great Queen Street. Every document of importance in the controversy will be translated and commented on, the forgeries exposed, and the copies of the copies of supposed originals that have never been produced, and whose whereabouts has never been ascertained, will be shown to be as valueless as they really are; at least, so we are informed.

MISS AMELIA B. EDWARDS requests us to state that to Mr. Andrew McCallum alone belongs the honour of having discovered the rock-cut adytum, crude-brick courtyard, pylon, and staircase, at Abou-Simbel, mentioned in Prof. Sayce's letter on "Egyptian Research" (*ACADEMY*, February 21). Miss Edwards assisted in the work of excavation, but can claim no share in the discovery.

WE understand that some metrical correspondence which was exchanged last summer between Mr. Austin Dobson and Mr. E. C. Stedman is to appear in the March number of *Scribner*.

MESSRS. PAETEL BROS., of Berlin, are

about to bring out in parts an important work on Spain, by Theodor Simons, with numerous illustrations by Prof. Alexander Wagner, of Munich.

THE new Director of the Ecole Normale de Paris, appointed to succeed the late M. Eugène Bersot, is M. Fustel de Coulanges, the distinguished historian, whose chief work is a study on *La Cité Antique*, full of incisive scholarship and philosophical acumen. This selection is all the more universally approved, as M. Fustel de Coulanges is wholly unconnected with party politics.

MR. THOMAS HAYES, of Manchester, has disposed of his extensive second-hand bookselling business to Messrs. H. Sotheran and Co., of London.

Nana, M. Emile Zola's new novel, has just been issued by Messrs. Charpentier. It is stated that 40,000 copies were sold in advance of publication.

WE understand that the Commentary on the Gospel of St. Luke, by the Rev. E. H. Plumptre, D.D. (the new volume of the *Commentary for Schools*, edited by Bishop Ellicott), is being passed through the press as rapidly as possible, in order to meet the requirements of students competing in the Cambridge Local Examinations of 1880. The work will be issued in a few days by Messrs. Cassell, Petter, Galpin and Co.

THE death is announced of the Russian poet Glinka, which occurred on the 23rd inst.

WE have received the fifth annual edition of the *Classified Directory to the Metropolitan Charities for 1880*, by W. F. Howe (Longmans); *Battles in South Africa, including the Zulu War*, by D. C. F. Moodie (Adelaide: Robertson); *The Defence of Great and Greater Britain*, by Capt. J. C. B. Colomb (Stanford); *The Book of Job*, translated from the Hebrew by J. M. Rodwell, third edition (F. Norgate); *The Gospel in the Nineteenth Century*, third edition (Cassell, Petter, Galpin and Co.); *Poesie di Maria Ricci Paternò Castello* (Firenze: Le Monnier); *In the Beginning*, by B. H. Sandys, second edition (Pickering); *A Treatise on Statics*, by George M. Minchin, second edition, corrected and enlarged (Clarendon Press); *Mrs. Beeton's Book of Household Management*, new edition, revised and corrected (Ward, Lock and Co.); *Drill Book of Vocal Culture*, by the Rev. E. P. Thwing, fourth edition, enlarged (Partridge); *Puzzledom: for Fireside Amusement (Hand and Heart Office)*; *A King's Daughter, and other Poems*, by S. R. Keightley, second edition (Grattan, Marshall and Co.); &c.

PARIS LETTER.

Paris, Feb. 19, 1880.

The great literary event of the month of January was the reception of M. Hippolyte Taine at the French Academy. The situation of this eminent writer has, within the last two or three years, become a very singular one. For many years previously, although he had always confined himself to the domain of pure speculation, the bold character of his philosophy had caused him to be regarded as a leader by the representatives of the Revolutionary party, while the Clerical party were so bitter against him that M. Guizot could not obtain a prize from the French Academy for the *History of English Literature*, which is still M. Taine's best title to fame. But since M. Taine has dealt with the French Revolution, he has applied to the study of the events which took place before and after 1789 the same method as he had before applied to the study of English literature. Drawing his conclusions with mathematical rigour, he finally maintains, like Carlyle, that that revolution was above all a revolution of

famished men, and that behind the display of great principles the real revolutionary force was the urgent need of a people driven to extremities. Immediately, with a marvellous revulsion of feeling, the foes of Liberal ideas, in their delight at finding this theory maintained by a man so little exposed to the charge of Clericalism, began to laud him to the skies in place of their former depreciation, and the foes of Clericalism in their turn to accuse the historian of apostasy. M. Taine, who is a philosopher and nothing else, and who, like Spinoza or Kant, thinks for thinking's sake, without troubling himself about the outer world, was astonished, on presenting himself at the Academy, to meet friends where he had only looked for foes, and foes where he had expected friends. This little comedy is worthy of remark as indicating the extreme intensity of political passion in France, which causes the introduction of politics even where politics are altogether out of place. We must thank M. Taine for having preserved his composure in presence of this injustice of opinion with regard to his scientific conscience to such a degree that his discourse on M. de Loménie was a masterpiece of proportion and tact, and likewise a finished portrait, drawn by an excellent painter, of a somewhat insignificant model.

Immediately after M. Taine, another Academician became the lion of the day. I refer to M. Alexandre Dumas, whose social pleadings have always had the power of rivetting public attention. He has just delivered himself in a discussion on Divorce which has been raging for some months. M. Alfred Naquet, a member of the Extreme Left, having, as the saying is, "belled the cat," has published a book on the re-establishment of divorce, which was established in France by a law of 1792, and suppressed by a law of 1816. M. Naquet has delivered several lectures on the subject, and has brought in a Bill which has suggested to M. Léon Renault, a member of the Left Centre, the preparation of a masterly Report. The Catholics have taken the alarm at this movement of public opinion in favour of divorce, and have undertaken a campaign in the opposite sense. The fashionable preacher, a Dominican, F. Didon, has made divorce the subject of his Advent sermons, which he has published in a volume entitled *L'Indissolubilité du Mariage*. M. Emile de Girardin has answered him in the *Gaulois*. M. l'Abbé Vidieu, vicar of one of the first churches in Paris, has published another work against divorce under the title *Famille et Divorce*. It is this book of M. l'Abbé Vidieu to which M. Alexandre Dumas now replies in a brochure of four hundred pages, *La Question du Divorce* (Lévy). M. Dumas has confined himself to the theological ground on which M. l'Abbé Vidieu had placed the question, and has endeavoured to prove that there was no dogma peremptorily forbidding divorce; that, in point of fact, between 1803 and 1816, the Church pronounced its benediction on unions which were subject to the law of divorce; and that, moreover, it was a necessity for the Church to avoid entrenching herself in an irrevocable *non possumus* unless she desired to alienate modern society for ever. This pamphlet of M. Dumas does not seem to have convinced M. l'Abbé Vidieu, who has replied in the *Figaro* by a letter in which he stigmatised M. Dumas' book as utterly anti-Catholic. Confining ourselves to the literary point of view, we can scarcely regard this work as equal to its author's high reputation. Whether it is that theological detail is too prominent in it, or that M. Dumas has neglected to mark by very clear divisions the various stages of his argument, it is certain that, as a whole, it leaves a confused impression on the reader's mind. We must mention, however, one very fine and eloquent passage on the mis-

understanding which exists between the Church and modern France. This passage begins with the lines:—

"On n'a pas eu impunément le front rafraîchi par l'eau du baptême, on n'a pas impunément été bercé par vos doux cantiques, par vos poétiques fictions, par vos mythes séduisants . . ."

It should be added that M. l'Abbé Vidieu, now brought prominently into view by M. Dumas' letter, is a writer of merit, to whom we are indebted for a good history of the Paris Commune in 1871.

If we except this book, which is notorious rather than really remarkable, the beginning of the year has been characterised by an unusual dearth of original publications. Philosophy, strictly so called, is almost solely represented by a work of M. Ernest Naville on *La Logique de l'Hypothèse* (Germer-Bailly). Everybody knows that saying of Newton's, "hypotheses non fingo," as well as the contempt professed by the two founders of modern logic, Bacon and Descartes, for the hypothetical method. It has become a commonplace that modern science is distinguished from mediæval precisely by the substitution of the experimental and rational method for the hypothetical and imaginative. Such is not the opinion of M. Ernest Naville, who considers the hypothetical method as the great scientific weapon—a view which leads him to attribute a very large share in the investigation of the laws of nature to the force of the individual genius of men of science. Perhaps the distinction is, after all, rather verbal than real, for scientific hypothesis is distinguished from the hypothesis of the Middle Ages by features which would necessitate two different terms for the two methods. However this may be, M. Naville's book will be found to contain a number of ingenious observations, and a very careful and well-written chapter on the history of philosophy.

Nor has literary or critical philosophy produced a large number of works in this unpromising opening of the year. Now, in France, since the death of Ste.-Beuve, criticism has been in a most pitiable state. There are many writers, like M. Emile Zola in his *feuilleton* to the *Voltaire* or M. Barbey d'Aurevilly in his articles in the *Constitutionnel*, who review contemporary books; but these two writers, to take them as an instance, are likewise original authors, and they hold combative doctrines which do not allow them to be, like Ste.-Beuve, an impartial thermometer, fixed, as it were, on the forehead of the age, and marking even its slightest indications almost mechanically. The only two men who might play this difficult part of analysers of contemporary taste are MM. Taine and Edmond Scherer. But the one has confined himself to history, while the other is expending his energy in political life. Meanwhile, a writer has arisen, already fiercely attacked, but apparently destined little by little to become one of the most influential arbiters of literature. This writer—M. Ferdinand Brunetière—belongs to the *Revue des Deux-Mondes*, to which he contributes a monthly *chronique*. He has just collected a considerable number of these *chroniques* under the title of *Etudes critiques sur l'Histoire de la Littérature française* (Hachette). These are essays corresponding to the chief periods of our literary history. The first article treats of the Middle Ages, which, after being very unjustly despised, are much too blindly admired in their semi-barbarous literature. Do not certain scholars go to the length of placing the *Chanson de Roland* on an equality with the *Iliad*? M. Brunetière refutes them in pages full of earnest and powerful satire, which are, to our thinking, the best in his book. Then come articles on Pascal, on M^{me}. de Sévigné, on Molière, &c. M. Brunetière is a man of the seventeenth

century by virtue of his taste for a literature consisting of ideas rather than sensations. But he is quite a man of our own time by the extreme abundance and rare accuracy of his knowledge. His defect is that he possesses too little of that quality of which Ste.-Beuve possibly possessed too much—I mean the capacity of understanding tastes and temperaments most utterly opposed to his own. Is not a critic at once a reporter and a judge in the literary cases which come before him—a reporter, to impartially register the arguments *pro* and *con*; a judge, to decide in the last resort? It appears to me that in M. Brunetière the judge is more prominent than the reporter.

In the order of less militant and far remoter criticism, we must not pass over without a recommendation to those interested in the things of antiquity M. Alfred Croiset's book on *Pindare et les Lois du Lyrtisme grec* (Hachette). M. Alfred Croiset has endeavoured to show what circumstances of civilisation and what a harmony between the various arts gave rise to that unique production, with its combination of poetry and music, the Greek ode. The whole of the technical portion of this work, in which the author has availed himself of the labours of a French musician, M. Bourgault-Ducoudray, on the popular songs of modern Greece, will possess peculiar novelty for those students who have by practice acquired an intimate knowledge of the Greek strophe. But this is a work for specialists, and it will be understood that we cannot dwell upon it at any length under the penalty of falling into a dissertation. We must now pass to works of the imagination, which constitute the literary movement strictly so called.

These are far from numerous, and almost all belong, so far as the novel is concerned, to the so-called "naturalistic" school of which M. Zola is the head. First we may mention *La Fin de Lucie Pellegrin* (Charpentier), by M. Paul Alexis. This contains four tales, which, under different titles—"La Fin de Lucie Pellegrin," "L'Infortune de M. Fraque," "Les Femmes du Père Lefèvre," and "Le Journal de M. Mure"—depict with much accuracy the details of manners in certain corners of Paris and of the provinces. Although this is a maiden volume, it is no novelty to the readers of papers for the young, for M. Paul Alexis had published these tales more or less everywhere. Great clearness, a faculty of very minute observation, a gaiety which is often contagious, recommend these novelettes. Unfortunately, M. Alexis, like the rest of his school, takes pleasure in the commonplace, and does not possess the infinite sensibility of Dickens, or the stately style of Balzac, to preserve him from vulgarity. Yet he is far above the level of MM. Vast and Ricouart, who have just published a new novel, *Le Tripot* (Derveaux), in which they have tried to analyse the decline and fall of a man of the world under the influence of a passion for gambling. These writers are too utterly deficient in style; but they nevertheless give us some curious details of the hidden haunts in Paris in which gambling, tracked down by the police, has taken refuge. A third writer of the naturalistic school, M. Léon Hennique, has brought out with the same publisher a very novel work in dialogue form, *Les hauts Faits de M. de Ponthau*. He announces in his Preface that his intention was to show by a parody the absurdity of romantic methods. As a matter of fact this parody turns out to be a fairly brilliant picture of religious fanaticism in the reign of Henri Quatre. When we have mentioned the appearance at M. Dreyfous' of a novel by M. Adolphe Racot, *Madame Félicia*, which deals with the question of divorce in its different aspects, we shall have passed in review all that is most noteworthy in this branch of literature. It is evident that the above are all

second-rate works; but the publishers announce, for immediate publication, M. Emile Zola's new novel, *Nana*, already the subject of so many discussions and attacks, which will perhaps furnish me, in my next letter, with an opportunity of criticising the naturalistic school in the person of one of its most prominent masters.

Poetry, again, is not represented by any productions from the famous pens of our contemporary Parnassus. M. Antony Valabrègue publishes, through Lemerre, *Les Petits Poèmes Parisiens*. Like M. Alexis, M. Valabrègue has scattered these pieces, which he gives in their collected form, broadcast through a host of journals and reviews. It makes a pretty book of very short poems, for the most part treating of subjects of every-day life. M. Antony Valabrègue especially delights in the somewhat confined landscapes, the woodland or village corners, in the neighbourhood of Paris. It is all very graceful, though slightly feeble, and occasionally reminds one of the sonnets of your Lake school as revealed to us by Ste.-Beuve by the translations in his *Joseph Delorme*. Beside this thoroughly modern book, we may mention the translation of Ovid's *Amores*, by M. le Comte de Séguier (Quantin), a translation which is often perilously accurate. We have here one of those books by scholars, untroubled by scruples, like the magistrates of the eighteenth century. M. Quantin has given us an edition which is a gem of elegance. We must not leave this publisher without mentioning a reprint of Millevoye under the supervision of the "Bibliophile Jacob," which may be considered a new edition on account of the large number of pieces hitherto scattered among the reviews of the time, and now first collected by the learned annotator. It produces a very singular impression to re-read these verses of the beginning of the century, which seem old and faded like the toilettes of the long-departed beauties of the day. Yet it cannot be denied that some few pieces are still touching by virtue of a charm of delicate sensibility which is now nowhere to be found save in the verses of M. Sully-Prudhomme.

Reprints, it should be added, are all the vogue. Never were famous or even half-known authors the object of more pious care. M. de Lescure has just issued, with Jouaust, in two volumes, an excellent selection from the works of Champfort, the misanthropic moralist of the end of the eighteenth century. He has prefaced this selection with a remarkably complete notice, containing a very subtle characterisation of this peculiarly French genius, biting and cruel, isolated and pitiless, of whom Balzac said, "We should make a book with what he puts into a *mot*," and of whom Roederer wrote, "It would need a volume to explain to an American intellect the whole sense of an epigram of Champfort." And M. de Boislisle is beginning through Hachette the publication of the standard edition of the *Memoirs of the Duc de Saint-Simon*. The text is carefully collated with the original MS., and all the comments written by Saint-Simon himself in the margin of Dangeau's journal are added; while a mass of documents and of matter that throws light on the text combines to give to this masterpiece the character of a standard history of France at the close of the seventeenth century and under the Regency. We shall return at a subsequent stage of its progress to this magnificent work, which will comprise not less than thirty volumes.

CORRESPONDENCE.

CHAUCER.

Banff: Feb. 21, 1880.

Chaucer's "Frere's Tale" (vol. i., p. 350, ed. Bell-Skeat, 1378) exposes the extortions practised by the summoners of the ecclesiastical courts under threat of prosecution for immorality or some other ecclesiastical offence. These very extortions formed the subject of a complaint in Parliament in 1378 (*Rot. Parl.*, iii. 43). The fines exacted by these means were dignified by the name of Bishop-alms ("Bischope-almois"). The coincidence is a testimony to the accuracy of the poet's pictures of English life; and the curious thing is that the horse and cart which figure so picturesquely in the "Frere's Tale" also appear in the parliamentary petition, which complains that poor men were often served with citations when driving their cart and horse.

J. H. RAMSAY.

BASQUE, SCANDINAVIAN, AND URALIC NAMES FOR "SATURDAY."

6 Norfolk Terrace, Bayswater, W.: Feb. 21, 1880.

The Basque names for "Saturday" are *larumbat*, Guipuscoan, Biscayan, and Labourdin; *ebiakoitz*, Low Navarrese; and *neskanegin*, Souletin. The first word means "one quarter," from *lauren* "quarter" and *bat* "one"—viz., "one quarter of a lunation," four lunations or weeks being taken for one month, and Saturday

* " & auxint les ditz Somnours facent lour sommons as diverses gentz par malice, come ils sont en alantz a lour charuetz en les champles, & aillours, & les surmettent diverses crimes torceuses, & la facent les povres gentz de faire fin, qu'ils appellent *The Bi-chope Almois*: ou autrement le dit Somnour les face sommons de XX. ou XL. leukes de la, einz & aucun foitz en deux lieux a un jour, a grant descease, empovrement, & oppression des ditz povres Communes."

being the last day of the week or the completion of the quarter. The second word, *ebiakoitz*, *irakoitz* at Bardos, is a corruption of *egubakoitz*, given by Harriet in his Grammar, p. 420. It means *egun bakoitz*, "day unique," and applies very well to Saturday, considered as a day of rest or holiday, as it is by Jewish and Sabbatarian Christians. With regard to the third word, *neskanegin*, *neskanegun* at Boncal, its meaning is "the maid-servant's day." *Neska* means in the Boncalese sub-dialect of the Souletin "maid-servant;" *neskaren*, of which *neskan* is the abbreviation, "of the maid-servant;" and *egun* or *egin* "day." This name can only have been properly applied to Saturday, when it was generally kept as a day of rest, in the same way as Sunday is now kept as a day of rest or holiday by servants in general, and by Basque maid-servants in particular.

As to the Icelandic Saturday, *laugardagur*, and its Swedish and Danish derivatives, *lördag* and *lørdag*, it means "bath-day," from *laug* "bath," whose genitive is *laugar*, and *dagur* "day." It is but natural to think that the idea of bathing and purifying one's own body should have been given to Saturday from the time when it had not yet ceased to be kept as a holiday, as it is well known that preparatory ablutions very often precede holiday ceremonies.

Among the Uralic languages, *lauvantai*, Fin, and *lavardak*, Lap, are mere corruptions of *laugardagur*, Icelandic; *laupäev*, Estonian, is also such in its first part *lau*, although its second part, *päev*, is pure Uralic. The Lief *puol püüva* means "half-day." The Permian *subbōta*, the Zirianian and Mordvin *subbota*, the Mordvin *subta*, the Hungarian *szombat*, do not require explanation. The Votjak *kōs nunal* and the Tcheremiss *kuksh-keshid* both signify "dry day," and this meaning applies very well to a holy Saturday; while the Vogul *chotit chotel*, meaning "sixth day," excludes all idea of holiness from it.

L.-L. BONAPARTE.

THE WALDENSO-CELTIC VERSION OF THE LORD'S PRAYER.

Edinburgh: Feb. 16, 1880.

To Prince Lucien Bonaparte my best thanks are due for the characteristic politeness of his ready response to my appeal on this subject. If there be no earlier edition of the *Oratio Dominica* than that of 1700, to which I have traced back what the Prince well calls the egregious blunder of the Waldensian-Celtic dialect, then it is not unlikely that on "B. M. Typogr. London," the editor or compiler of that edition, must rest the responsibility of palming off on us, in joke or sober earnest, this ponderous philological "claimant." But is it not premature to conclude that there is no earlier edition? The edition of 1700, like that of 1713, bears in large type on its title-page the imprint of EDITIO NOVISSIMA. At first sight these two editions appear to be identical, but a closer examination shows that it is not so. The earlier edition was on sale by DAN BROWN ad insigne Bibliorum, and W. KEBLEWHITE sub Cygno in area Boreali D. Pauli. But in 1713 DAN BROWN conducted his business apud Cygnum nigrum extra Temple Bar, and associated with him in the sale of the work were CHR. BATEMAN, ad Biblia in Pater-noster-row, and W. INNYs, sub Insignibus Principis in area Boreali D. Pauli. The copperplate illustration on the title-page is also reversed, the sheep-dog which, under an overhanging beech tree, in the one edition, watches a flock of large-tailed sheep grazing quietly on the uplands to his left being in the other edition stationed at the left of the landscape and looking to the sheep on his right. There is the further difference that the edition of 1713 has introduced Bishop Wilson's Manx version of

the Lord's Prayer, which does not appear in that of 1700.

But the point to which I desire especially to direct attention is the practical importance of discovering how this Irish or Erse version of the Lord's Prayer came first to be printed as "Waldensian." My theory is that either directly, or at second-hand from the album of some collector of philological curiosities, it was under that name copied into the *Oratio Dominica* from the "Waldensian" MSS., brought back by Sir S. Morland from his mission to protest against the cruel persecution of the Waldenses, and in 1658 deposited for safe-keeping in the library of the University of Cambridge.

As bearing on that theory, I beg to add that the early copies of this "Waldensian" version, before being touched up by future editors, bear internal evidence of their being copied, not from the printed page, but from MS., and that by a scribe who knew nothing of Irish or Scotch Gaelic. His mistakes of n for u, b for h, e for c, imm for uinn, r for t, &c., and his transposing the last and emphatic word of the last petition to the commencement of the Doxology cannot be reasonably accounted for on any other supposition.

And now if my theory is well founded, it implies that in the beginning of last century there existed in the Cambridge University Library, among a large but well-arranged collection of "Waldensian" MSS., a most valuable Celtic MS. translation of the New Testament, or of large portions of it, which may yet, I hope, be brought forth into the light of day.

DONALD MASSON.

TREGELLES' GREEK NEW TESTAMENT.

Cambridge: Feb. 18, 1880.

An article by Mr. Pocock in the ACADEMY of February 14 on the posthumous concluding part of Dr. Tregelles' *Greek New Testament* contains some statements or implications which ought not to remain uncorrected. On matters of opinion, such as Mr. Pocock's desire to read a new and original description of Dr. Tregelles' critical views instead of an arranged collection of scattered pertinent passages from Dr. Tregelles' own writings, no remark need be offered.

1. "It does not appear what parts have been assigned to each editor." The desired information is given in detail at pp. xxviii., xxix., xxxi.

2. In two places Mr. Pocock implies that in "the first two gospels" alone Dr. Tregelles was unable to use the Sinai MS. in the formation of his text. Unfortunately, this was the case in all four gospels, the last chapter of St. John excepted.

3. "It would have been something if only his editors had given some opinion on their own part how far the text . . . would have been modified by the additional evidence afforded by" the Sinai MS. At p. xxx. this sentence will be found:—

"It is manifestly impossible for anyone else to supply by conjecture a list of the readings which Dr. T. might be presumed to have wished to correct; but it seemed worth while to distinguish by certain marks those readings, supported by fresh evidence, which were likely to have seemed to him at least worthy of serious consideration on a fresh revision."

The next two paragraphs explain in detail three classes of these readings, which bear distinctive marks throughout the *Addenda*. Dr. Tregelles' "opinion of the value" of the Sinai MS., as broadly exemplified in his text of the later books, was naturally a chief guide in the insertion of the marks.

4. "In the *Addenda et Corrigenda* . . . we find a mixture of notes which are for the most part, we suppose, due to Dr. Tregelles, but in many of which Dr. Tregelles' name is quoted." Two of the "four pages of Introduction signed

with the initials" of the senior editor (xxviii. ff.) describe in detail the selection and collection of the *Addenda et Corrigenda* (occupying, be it said in passing, not "several," but fifty-two leaves) as furnished by himself and his colleague; nothing is said of notes left by Dr. Tregelles for this part of the work, except "a short list of *errata*" already printed, for, unfortunately, there was nothing to say.

F. J. A. HORT.

PROF. WEBER AND BABU RAJENDRALALA MITRA.

Calcutta: Jan. 15, 1880.

I request the favour of your inserting in the ACADEMY the accompanying letter in reply to Prof. A. Weber's letter published in your issue of November 15 last.

RAJENDRALALA MITRA.

"To Prof. Albrecht Weber, Berlin.

"MY DEAR SIR,—I thank you for sending me a revised slip of the letter which you have addressed to me through the columns of the ACADEMY of November last.

"You complain in your letter, first, of my having commented on your paper on the Krishna *janmāsh-tamī* without having read it; and, second, of my having committed 'a gross mistake' in a foot-note in my work on Buddha *Gayā*.

"With regard to the first, addressing me, you say, 'You certainly cannot have read at all my paper.' Pardon me, my dear sir, if I am mistaken, but I cannot help thinking that this sentence has been written without sufficient consideration. You were well aware when writing it that I had quoted in my book a passage from your paper, and also reproduced one of your illustrations; and you will, I am certain, admit that I could not have done so without reading at least a part of your paper. Is it possible that you use the words 'at all' in the sense of *carefully*? If so, permit me to observe that there is no fixed standard for care, and opinions may differ as to what is sufficient for any particular purpose, and that without meaning any offence.

"In refutation of the statements contained in the foot-note to which you take exception you have been pleased to refer me to the *Indian Antiquary*, vol. iii., pp. 21ff., vol. vi., pp. 28ff., and vol. vii., p. 285. The first two volumes contain an English translation of your essay, and p. 285 of the last has a paper on the Malayalam language, but nothing about the nativity of Krishna. I have read all the three volumes, but I have failed to find out in what respect I have committed a 'gross mistake.'

"In the foot-note there are four statements:—(1) That in describing a certain picture you have erroneously called the mother in it Devaki, whereas it was Yasodā; (2) that Devaki had no opportunity to perform the maternal duty of nursing her child; (3) that, according to the Bhāgavata Purāna and the Harivansa, Krishna was, as soon as born, taken away from his prison-cell and left with Yasodā, who reared him up; (4) that Hindus in India would not so grossly falsify the story as to make Devaki nurse her son.

"As regards the first statement, I must at once admit that I was well aware that your paper was written with the primary object of working out the theory that the story of the nativity of Krishna was founded on some corrupt version of the Biblical account of the birth of Christ. I was, however, not certain that you had deliberately substituted Devaki for Yasodā, and therefore used the word 'erroneously,' which, I thought, was the least likely to give offence. That the picture represents Yasodā and not Devaki I had no reason to doubt, and a second reading of your paper has not sufficed to convince me that I was mistaken.

"According to the description quoted by you (*Ind. Ant.* vi. 285), 'A picture of Devaki, made of gold, silver, copper, brass, clay, wood, or jewels, or only painted with colours, is to be placed in the middle of the *Sūkādhriha*. This represents Devaki as endowed with all the characteristics of beauty, as half asleep, as radiant as burnished gold; moreover, in company with her son, as having, in fact, just given birth to him, and being rejoiced in

consequence of this moment (of the pain overcome?), while the sleeping child, lying at her side, is drinking at her breast.' Had you not stopped short in your quotation you would have added that the child 'should be four-handed, holding a mace, a discus, a conch shell, and a bow, and decorated with a garland of wild flowers.' The words of the text are—*sankha-chakra-gadā-sārnga-vana-mālā-vibhāṣitam, chaturbhujam mahāpunyam śhāpayet, latra bhaktitah*. In the picture produced by you there is a woman, richly ornamented, sitting bolt upright on a sofa, and holding a two-handed child, also richly ornamented, and sitting upright. You will admit that two sitting figures cannot be accepted as a fair pictorial representation of a description which has a sleeping mother just after her confinement, with a sleeping child lying by her side. The artist could have had no difficulty in producing two figures lying side-by-side, and giving four hands to the child; and since he has not done so it is obvious that he had some other scene in view.

"It should be added that the picture recommended in the description is nowhere stated to be a faithful representation of the nativity, but a fanciful, ornamental one, for the decoration of the lying-in-chamber. It should include, not only the mother and child, but Yasodā, Nanda, Devās, Nāgas, Yakshas, Vidyādharas, Uragas, Prajāpati, Dakṣha, Garga, and others, who are nowhere said to have been present in the lying-in-chamber on the occasion of Krishna's birth; as also various scenes from the life of Krishna, such as his destruction of demons and the like, which, according to the legend, happened long after his birth. Had you referred to these you would have given a correct account of the ceremony, though it would have seriously interfered with the analogy between the nativity of Krishna and that of Christ, which you undertook to establish.

"With reference to the second and the third statements, I beg to refer you to verses 37 and 38, chap. iii., of the tenth book of the Bhāgavata Purāna, where you will find that as soon as the child assumed the natural human form (*prākṛitah Sīsuḥ*) he was removed from the lying-in-chamber to the abode of his foster mother. (Verse 37 begins with *ityukta niddha*, &c.) To the Vaishnava there is no scriptural authority higher than the Bhāgavata, and it entirely contradicts your position. Your authority to say that the picture produced by you was of Devaki is a Persian label put on a picture painted by a Mussalman, and I rely on the Bhāgavata Purāna. If you will kindly bear this in mind you will easily perceive how the so-called 'gross mistake' has arisen.

"The fourth statement needs no comment. It must follow, as a matter of course, if the correctness of the first three be admitted. As a Vaishnava by family religion, a descendant of a long line of Vaishnavas, and one in whose family chapel the fast of nativity is celebrated every year, I can only repeat that neither I nor my co-religionists believe in Krishna having been nursed by Devaki. Thousands of printed pictures are annually sold of the *Madonna lactans*, and they all represent Yasodā, and Krishna, and not Devaki and her new-born babe. Let me add that the pictorial representation is not deemed an essential part of the ceremony, nor is it anywhere produced in Bengal on the occasion of the fast. At the Puri temple the nativity is enacted by a dancing girl and a priest, very much in the same way in which scenes from the life of Christ were enacted in the passion plays of mediæval Europe.

"I follow your example, and send this letter for publication in the ACADEMY.—With every sentiment of respect, I remain, yours very truly,

"RAJENDRALALA MITRA."

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 1, 5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. London Institution: "Health and Dress," by Dr. B. W. Richardson.

8 p.m. Society of Arts: "Manufacture of India-rubber and Gutta-percha," V., by T. Bolas.

8 p.m. Victoria Institute: Paper by Prof. Stokes.

TUESDAY, March 2, 3 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schöfler.

8 p.m. Civil Engineers: Discussion on "The Use of Asphalt and Bitumen in Engineering;" "The Purification of Gas," by H. E. Jones.

8 30 p.m. Zoological: "Contributions to the Anatomy of Passerine Birds," I., by W. A. Forbes; "On New

Species of Birds from Eastern Ecuador," by P. L. Solater and O. Salvin; "On the Sea-Birds Collected by Lord Lindsay's Transit Expedition to Mauritius," by Howard Saunders; "On New and Little-known Butterflies from India," by A. G. Butler.

8.30 p.m. Biblical Archaeology: "Notes on the Assyrian Numerals," by George Bertin; "On a Cuneiform Tablet relating to the Capture of Babylon by Cyrus, and the Events which preceded and led to it," by Theo. G. Finches.

WEDNESDAY, March 5, 7 p.m. Entomological.
8 p.m. Royal Academy: "Pictures in Galleries and Churches from London to Venice," by Eyre Crowe.

8 p.m. Society of Arts: "The History of Musical Pitch," by A. J. Ellis.

8 p.m. Archaeological Association: "Recent Excavations at Pergamos," by Dr. Phané; "Romano-British Interments at Firgrove, Hants," by Dr. J. Stevens.

THURSDAY, March 6, 8 p.m. Royal Institution: "Recent Chemical Progress," by Prof. Dewar.

4 p.m. Archaeological Institute.
7 p.m. London Institution: "The History of Gems," by E. J. Waterston.

7 p.m. Numismatic.
8 p.m. Linnean: On the Phosphorescent Organ in Fishes," by Dr. Günther; "On *Coditium Gregarinum* (A. Braun) as a new British Alga," by E. M. Holmes;

"Abnormal Head of *Antilocapra Americana*," by J. Jenner Weir; "On the Hebridal Argentine," by Dr. F. Day.

8 p.m. Chemical.
8.30 p.m. Royal. Antiquaries.

FRIDAY, March 5, 8 p.m. Geologists' Association.
8 p.m. Philological: "A Comparison of the Gaurian with the Romance Languages—Part II., Morphology," by E. L. Brandreth.

9 p.m. Royal Institution: "Deep-Sea Dredging and Life in the Deep Sea," by H. N. Moseley.

SATURDAY, March 6, 8 p.m. Royal Institution: "Dryden and his Period," by George Saintsbury.

SCIENCE.

Medicinal Plants: being Descriptions, with Original Figures, of the Principal Plants employed in Medicine, and an Account of their Properties and Uses. By R. Bentley and H. Trimen. 4 vols. (J. & A. Churchill.)

THE authors of this laborious work, the publication of which has extended over more than four years, may be congratulated on its completion. They may fairly claim for it the merit of being the most valuable addition, during recent years, to the literature of the border-land between botany and pharmacy. The scientific pharmacist should be acquainted, not only with the medicinal effect of drugs and with their microscopic structure and other properties, but also with their botanical source. And it is remarkable how wide are still our gaps in this department of knowledge. But little trustworthy information is to be had respecting the trees, shrubs, or herbs from which are obtained many of the drugs which form not unimportant articles of commerce in London and the other capitals of Europe. Whatever is certainly known, or conjectured with probability, will be found in these handsome volumes, together with a coloured drawing of the plant, and generally also details of the part which yields the economic product. Of the mode in which the work has been done nothing but good can be said. The drawings, nearly all original, are somewhat unequal in value, and some few do not seem to us to come up to the high standard aimed at; but on the whole they are excellent. The two authors have arranged between them a plan of distribution of labour by which Prof. Bentley takes the pharmaceutical and Dr. Trimen the more purely botanical portion of the work. The unrivalled stores of knowledge possessed by the former of these gentlemen in his own department, and the unusual advantages of the latter in ready access to the rich collections at the British Museum, were thus utilised; and the result is the production of a work which will long retain its place as a standard book of reference

replete with the most trustworthy information on the subject of which it treats.

ALFRED W. BENNETT.

Introduction to the Science of Language. By A. H. Sayce. 2 vols. (C. Kegan Paul & Co.)

In the *Principles of Comparative Philology*, published six years ago, Prof. Sayce dealt almost exclusively with questions still under controversy. The acuteness, freshness, and width of learning displayed in that work were recognised at the time in these columns; and the principles set forth in it have since received very general, if not universal, acknowledgment. The accomplished author has now published "an attempt to give a systematic account of the Science of Language, its nature, its progress, and its aims, which shall be at the same time as thorough and exhaustive as our present knowledge and materials allow." It is naturally based upon the method and theories set forth in the former work; but these, though occasionally confirmed by new arguments and illustrations, are assumed rather than discussed; and a much larger part of the present volumes is devoted to a statement of the universally admitted facts of the science. Hence the two works have each their independent value, and are equally indispensable for the student of philology.

In attempting to form a judgment on Prof. Sayce's new book, it is impossible to avoid a comparison with the works of Prof. Max Müller and Prof. Whitney, which have hitherto been deservedly the favourite text-books with English students. As compared with either of these, Mr. Sayce's volumes will probably be felt to be less well fitted to be the first "introduction" to the subject. If based upon lectures—as to which we have no information—the lectures must have been such as would be delivered to an academical and not to a general audience. Though clearly written, and abounding in happy illustrations, they cannot be said to have the fascinating grace of style which lends such attractive power to Prof. Max Müller's lectures; and they frequently assume an acquaintance with the problems of linguistic science which makes their study a severer strain on the "general reader" than either of Prof. Whitney's more popular volumes. But in systematic completeness they are far superior to the former; and in wide range of mastery of the latest results of philological enquiry they have a not less marked advantage over the latter. In one very important respect Mr. Sayce has come to his task better equipped than either of his predecessors. It would, indeed, be great injustice to accuse either of these eminent scholars of being merely a Sanskritist. But Mr. Sayce's extensive Semitic and Accadian studies give him a freedom from "Aryan" predispositions, the effect of which is clearly seen for good in his treatment of many of the most important and difficult problems of his science. Hence his new work may fairly claim to hold a place that has been vacant hitherto. As a text-book for academical study, we have nothing which is comparable to it; and such are the varied attainments needful for the production of a work of the

kind that we may venture to predict it will long remain unrivalled.

In his first chapter Mr. Sayce gives an account, more full than any accessible to the English reader, of the history of philology, from the earliest times at which men began to reflect upon the nature of language. Few will be inclined to charge this with undue length, as Mr. Sayce seems to fear. It is quite essential to a proper understanding of scientific method, as distinguished from wild guessing. It is hard to see why the date 272 B.C. should be assigned to Livius Andronicus, and what is meant by "the Alexandrine origin" of the plays of Plautus (vol. i., p. 17); and in the survey of more recent works undue favour seems to be shown to the theories of Westphal and Ludwig: but on the whole the review is admirably sound and instructive.

In a second chapter Mr. Sayce discusses the nature and science of language, and develops his doctrine of the sentence as the unit of speech, and the basis of the only sound classification of languages, with much force and clearness.

The third chapter, on "Change in Language," is noteworthy especially for the abundance of its highly interesting illustrations.

In the fourth chapter, on "Phonology and Sematology," the physical basis of speech is clearly and very fully described; and the fact that it has been revised by Mr. Sweet is an additional guarantee, if any were needed, of its completeness and accuracy. The "science of meanings," which by its very nature is one of the most difficult branches of the science of language, is treated much more briefly, but some valuable hints are given, under seven distinct heads, as to the causes which have led to a transference of meaning.

In the fifth chapter, on the Morphology of Speech, the Metaphysics of Language, and Comparative Syntax, there are more points of detail open to criticism, but the general principles are as firmly grasped as anywhere. The last section of this chapter is apparently treated but slightly; but a fuller discussion of the recent advances in our knowledge of comparative syntax, which might be looked for here, will be discovered in chap. vii.

The chapter on Roots is one in which Mr. Sayce is brought sharply into conflict with some widely current philological doctrines, and some of his propositions are, to say the least, not yet firmly established. He defines roots as "the phonetic and significant types discovered by the analysis of the comparative philologist as common to a group of allied words," and quotes with approval the words of M. Bréal:—

"It is not probable that in the ante-grammatical period there were as yet no words to denote the *sun*, the *thunder*, or the *flame*. But the day when these words came into contact with pronominal elements, and so became verbs, their sense also became more fluid, and they dissolved into roots which signified *shining*, *thundering*, or *burning*. We can understand how the old words which designated the [individual] objects afterwards disappeared to make room for words derived by the help of suffixes from these newly created roots."

It is not quite clear, either from these words or from any others of his own, how far Mr. Sayce would be prepared to admit the inde-

pendent existence of these roots; but he rejects most emphatically the doctrine that there ever was a time when men spoke "in single syllables, indicative of the ideas of prime importance, but wanting all designation of their relations," and pronounces this language a sheer impossibility. But is not this to ignore, what elsewhere he rates at its full value, the power of gesture and tone to help out language? Relations may be indicated, even where they are not designated by spoken language; and thus a vague and indefinite (not philosophically "abstract") root may have done duty as a "sentence word." There are two arguments on which Mr. Sayce seems to lay special stress as supporting his views. One is the tendency of savage and barbarous dialects to create a superabundance of names for the individual objects of sense, while general terms are very rare. But this argument unconsciously postulates, what is elsewhere expressly denied, a uniformity in the methods of thought and expression among various races. It is a blunder to force Aryan and Semitic forms of thought upon wholly unconnected languages. Is it not an equal error to argue that the Aryans must have passed through a particular stage because we find this existing in Zulus, Cherokees, and Tasmanians? Secondly, there are groups of words which cannot be referred to any root—that is, they do not share any phonetic type with any group of words; *door*, *fores*, *theta*, *dudram* are isolated in their several languages. But here, again, though we may not be able with certainty to establish any root for want of materials, we may with some plausibility suggest a common source—for instance, in the root *dhu*, "to blow through," which enables us to bring *forum*, "an open space," and other words into the same group. Mr. Sayce would have strengthened his position if he had shown more explicitly how a language such as Chinese differs essentially from a combination of predicative and demonstrative roots, such as Whitney's theory assumes. The evidence on which he believes that all roots were originally at least disyllabic might have been stated with more fullness. Fick's theories do not help him much. But the limits of a brief notice do not admit of a discussion of the numerous interesting points in this chapter, nor of more than a hasty glance at the remainder of his second volume.

The genealogical classification of languages is based upon Dr. F. Müller's *Grundriss der Sprachwissenschaft*, the value of which has already been recognised in these columns. The survey of the inflexional families of speech is thoroughly trustworthy, and is marked by a familiarity with the latest researches which is really astonishing considering the ground covered. On comparative mythology Mr. Sayce's words are full of a caution and sobriety which are most welcome in the presence of the rash theorising which has been so abundant in the realm of folklore. He repeats once more the warning, which seems to need constant reiteration, that, so soon as we overstep the limits within which philology guides us, we are apt to become the sport of all kinds of vain imaginings. In a concluding chapter he passes over a wide range of subjects—from the origin of language, where he shows a wise eclecticism, to our

English orthography, where he is a vigorous champion (like almost all philologists of name) of a thorough-going reform. A very full list of authorities and a detailed analytical Index close the work.

The remarks already made will serve to show that Mr. Sayce's volumes may claim henceforth to be the standard work upon their subject. But a standard work should be made as far as possible faultless; and it is only in the hope of contributing to that result that I venture to suggest a few improvements for a subsequent edition. In the first place, Mr. Sayce, though not sparing of references, has left us without the means of verifying some of his statements, which are novel, and sometimes doubtful. Thus *Ἀπόλλων* may be *Ἀ-κ'ολίων*, "the son of the revolving one" (i. 319), the root *kvar* appearing in Greek as *πελ*, *πολ*; but the derivation is by no means generally recognised, and should have been supported by a reference or a note. The statement that "in the second century B.C. a Latin writer could still use *prior* as a neuter, *prios* or *prius* as a masculine" (i. 344 and elsewhere) is true enough in the first part (though even here a reference is desirable for the younger student); I do not know any authority for the second part of it. Secondly, while no one can accuse Mr. Sayce of ignoring the most recent researches, he is sometimes a little inclined to accept a hypothesis because it is the latest. Thus he several times refers with approval to Fick's essay, in which that scholar endeavours to prove that, e.g., *λεῖπω* is earlier than the root *λπ*, and regards his conclusions as established, whereas most scholars would probably be willing to admit that they have been absolutely demolished by the criticisms of Curtius, to appear in the new edition of his *Verbum*. Thirdly, Mr. Sayce must be begged, in the interest of younger students, to add a few more critical notes to his list of authorities. It is hardly fair to add the warning "(to be read with caution)" to Sir G. W. Cox's *Aryan Mythology*, while the works of Pictet, de Gubernatis, Westphal, Merguet, and others pass unqualified. At all events, some hints might be given as to the order in which books should be studied, and the extent to which their conclusions are generally adopted. And, finally, while all gratitude is due for the excellent index, let us have a fuller table of contents. Then the critic and the student will be hard to please who are not fully satisfied.

AUGUSTUS S. WILKINS.

CURRENT SCIENTIFIC LITERATURE.

Lightning Conductors: their History, Nature, and Mode of Application. By Richard Anderson. (Spon.) The author, having pointed out the extreme importance of the subject of the preservation of lofty buildings and ships from the effects of lightning, goes on to give a very exhaustive discussion, historical and otherwise, of the best methods of protection. He traces the early history of lightning conductors, the improvements in shape and material, Sir W. Snow Harris' classic experiments, and the latest developments. He gives, moreover, a complete list of works relating to the subject, and tables of accidents and fatalities from lightning. The book is clearly and sensibly written, and sufficiently illustrated, and is the work of a practical

man who thoroughly understands what he is talking about. We may specially commend it to the notice of architects, builders, and municipal officers who have the custody of large isolated buildings.

The Mechanical Theory of Heat. By R. Clausius. Translated by Walter B. Browne, M.A. (Macmillan.) At a time when the mechanical theory of heat was in its infancy, Prof. Clausius, of Bonn, published in the *Transactions* of various scientific societies a large number of memoirs tending to illuminate and to advance the subject. These have ever been regarded as among the bases of the theory. The comparative inaccessibility of the separate memoirs induced their author to collect them into one volume, and this was translated into English a few years ago by Dr. T. Archer Hirst. When a fresh edition of the original work became necessary, Prof. Clausius determined to entirely remodel it, and to convert it from a collection of isolated and sometimes disconnected papers into a text-book of the science. Accordingly he entirely rewrote the book, and it now forms, in the opinion of the translator, "a systematic and connected treatise on thermo-dynamics for use in universities and colleges and among advanced students generally." Mr. Browne has very carefully translated the work, and the proof-sheets have been examined by some of our most eminent mathematicians—Lord Rayleigh, Mr. Routh, and Prof. James Stuart. Three short Appendices have been added with a view to rendering the treatise as complete as possible: these relate to (1) the thermo-elastic properties of solids; (2) the application of thermo-dynamical principles to capillarity; and (3) the continuity of the liquid and gaseous states of matter.

NOTES OF TRAVEL.

THE *Alpine Journal* continues Mr. Freshfield's charming papers on "The Maritime Alps." In the present instalment he gives two separate essays—a spring picture of the seaward valleys and an autumn picture of the Baths of Val d'Ieri. Mr. Pilkington's paper on "An Ascent of the Meije without Guides," read before the Alpine Club last December, is also printed in this number. Mr. G. A. Passingham gives a lively account of his attempt to make an old mountain look new by ascending the Weisshorn from Zirral; and Mr. A. Cust has an interesting paper on the survey of the Rhone Glacier by the Bern engineer, Herr Gosset. The notices of foreign Alpine literature are serviceably put together, as usual; but it is a little cruel to wind up an account of Würster's Rigi-panorama with an attack upon the Brothers Schreiber, who for so many years have done more than anyone to make a stay on the Rigi accessible to persons with small purses, and whose praise stands recorded in hundreds of travel diaries. The writer should read Prof. Osenbrüggen's testimony to them.

WE understand that Mr. Hormuzd Rassam will probably start on another expedition to the East before Easter.

PROF. NORDENSKIÖLD will leave Italy in the *Vega* on Sunday next, and expects to arrive in London at the end of March.

SIGNOR MATTEUCCI and Prince Borghese have lately started from Rome on a journey of exploration in Central Africa. From Cairo they intend to proceed to Khartum, whence they will make their way to Darfur, the Wadai country, and the kingdom of Bornu, in Central Soudan, a region still very imperfectly known, the numerous waterways of which flow towards Lake Chad. From Bornu the two explorers contemplate directing their course towards Baghirmi and the Gulf of Guinea. If, however, the difficulties of such a journey should

prove insuperable, they will make for Tripoli, following Gerhard Rohlfs' route.

By a letter from the West Coast of Africa we learn that Mr. Stanley has founded the first Belgian station at Vivi, on the Congo, about a hundred and thirty miles from the coast, and five miles below the Yellala Falls. The position chosen is the summit of a hill, about a hundred and fifty feet above the river, and here an iron and a wooden house have already been erected. Mr. Stanley makes this place his head-quarters, but is constantly starting off without notice on expeditions into the surrounding country. The writer of the letter referred to, who had just returned from Vivi, is much impressed with the enormous difficulties which the expedition will have to contend with in traversing the mountainous country to Stanley Pool at the head of the Cataracts, where the second station is to be placed; indeed, he thinks it will take years to make a road and transport all the baggage, &c., of the expedition across such a wild region. Mr. Stanley, we learn, includes in his programme the thorough exploration of the Western Congo and the countries on both banks, after he has once reached the Lualaba. The expedition is stated to have taken the title of the "Société d'Etudes du Haut Congo."

THE International African Association are said to have received intelligence of the departure of the fourth Belgian expedition, under M. Alphonse Burdo, from Zanzibar on January 25. As M. Burdo only left Europe on December 10, his caravan must have been organised in readiness for his arrival, and such a prompt start is a strong proof of the energy and determination with which the association are now prosecuting their work, and which contrast favourably with the dilatoriness of the first expedition.

AN expedition has recently started from the French colony of Senegal to explore the Upper Niger region, but no very definite information has been received as to the details of the journey beyond the fact that the party will visit Ségou, where M. Paul Soleillet was detained so long in his vain attempt to reach Timbuktu.

UNDER the auspices of the Ministry of Public Instruction at Paris, M. Henri Lucereau is about to make a highly important journey to Upper Ethiopia and the Blue and White Nile region. He will visit Shoa, Enarea, Kaffa, and the Galla country. Possibly, also, he may find an opportunity of penetrating into the unexplored region southwards towards Mount Kenia and Kilima-Njaro.

DON RAMON LISTA has just published (Buenos Ayres: Libreria Europea) a volume entitled *La Patagonia Austral*, which he describes as the complement of his *Viaje al Pais de los Tehuelches*, to which we alluded some time back. In this second work Señor Lista gives an account of journeys and explorations in Southern Patagonia, as well as the results of his observations on the country and its past and present inhabitants. The principal chapters deal with orography, fauna and vegetation, Tierra del Fuego, and the Rio Chico, of which Señor Lista discovered the sources. The present work contains several illustrations and a sketch-map of part of the Chico. Señor Lista, we may add, hopes to publish a work of a more extended scope, under the title of *Descripcion Geográfica de la República Argentina*.

IN connexion with the inter-oceanic canal project which is just now attracting so much attention on the other side of the Atlantic, it may be interesting to remind our readers that the Archives at Madrid are said to contain details of a scheme put forward some three hundred years ago by D'Avila, whose idea was to join

the Rio Grande and the Chagres by means of a canal.

MR. ANDREW GOLDIE is reported to have arrived at Thursday Island from a cruise on the coast of New Guinea, in the course of which he discovered some tribes hitherto unknown to foreigners. His exploration appears to have been chiefly along the shores of the Gulf of Papua, where he found an excellent harbour in Freshwater Bay.

SCIENCE NOTES.

The Geological Society of London.—At the annual meeting of this Society, held on Friday, the 20th inst., Dr. H. C. Sorby delivered the anniversary address, and resigned the presidential chair to Mr. R. Etheridge, the palaeontologist of the geological survey. The address of the retiring president formed a sequel to that of last year, and dealt with the origin of the non-calcareous stratified rocks. At the same meeting the three medals which are in the gift of the Society were distributed. The Wollaston Medal was awarded to M. Daubrée, professor of Geology in the Natural History Museum at Paris, and director of the National School of Mines. The award was a mark of recognition of his labours in the field of experimental geology—labours which have been extended ever the last thirty or forty years, and which are represented by the magnificent volume recently noticed in these columns. The Lyell Medal was presented to Dr. John Evans, who has especially distinguished himself in that branch of the science where geology tails off into archaeology. The Murchison Medal and Fund went to Mr. Etheridge, who has been for many years engaged in the preparation of an elaborate tabular work on British fossils, to be issued, we believe, from the Clarendon Press at the expense of the University of Oxford. The balance of the Wollaston Fund was given to Mr. T. Davies in recognition of his unobtrusive labours in the arrangement of our national collection of minerals; while the balance of the Lyell Fund was presented to the veteran Prof. Quenstedt, of Tübingen, who has made his mark not less in mineralogy than in palaeontology.

PHILOLOGY NOTES.

THE *Indian Antiquary* for January contains some Bengali stories translated into English by the lamented Mr. Damant, of the Bengal Civil Service, who was lately killed by the rebel Nāgas near Mozema. The last report of Dr. Müller, archaeological surveyor to the Government of Ceylon, is also reprinted *in extenso*. It confirms the very curious fact that though there are many inscriptions of the first four centuries of our era, and a few of still older date, there are none yet discovered between the fifth century and the ninth; from the ninth century onwards they are numerous, but unfortunately very short, and very badly preserved. There follows a very interesting and valuable paper on the history of India, translated from a Chinese dictionary into French by the late M. Rémusat, and from French into English for the *Indian Antiquary*. It gives several details of importance regarding the darkest period of Indian history—the last days of Buddhism, and the early beginnings of Hinduism. Prof. Cowell, of Cambridge, contributes the text and translation of a poetical summary of the Vedāntist system of philosophy, well known in India under the name of Hastāmāla. If it were not for the great influence exercised by such short abstracts of far-reaching systems of thought, they would be of but little importance, and the present poem is unusually short, con-

sisting only of fourteen stanzas. The usual notes and queries and book notices complete the number, the review of Prof. Max Müller's Hibbert Lectures by Principal Fairbairn, of Airedale College, being the most important of these shorter articles.

The Anabasis of Xenophon. Book III. With the Modern-Greek Version of Constantine Bardalaches, and a Prefatory Note by R. C. Jebb, M.A., LL.D. (Glasgow: Maclehose.) The relations between Ancient and Modern Greek have often formed the ground both of experiment and of satire. On the one hand we laugh at the senior classic who, after spending a quarter of a century on the study of Greek, is not able to ask for a glass of water in Athens; on the other, you will be assured in Athens that there is no such thing as Modern Greek at all, and that one and the same language has been spoken at all times by the Hellenic race. On the one hand it is insisted that the best way of teaching Greek to Englishmen is to accustom them to speak it colloquially; on the other, the traveller who has carefully furnished up a Modern-Greek sentence is told by his dragoman, as the writer was told by his, that he "can't stand [understand] Ancient Greek." The truth probably lies between these two extremes. The modern language is not identical with the ancient, although it resembles it enough to make it profitable for Greek children to learn to read out of the New Testament. The ancient language would receive a more living interest if the learner was encouraged to connect it with the lighter and more rapid medium of the modern tongue. This last result Prof. Jebb has attempted to obtain in this little work. It contains the third book of Xenophon's *Anabasis*, printed face to face with a Modern-Greek version. Two advantages will obviously spring from this arrangement. The learner will derive unexpected light on points of derivation and construction, and, further, he will have vividly brought before him the fact that the language has had an unbroken, though sometimes obscured and depressed, life down to the present day. If he goes beyond this he may acquire some power of speaking the modern language, and the idle public school-boy who despises Greek because "it is of no use in after-life" may be made to feel that it will help him when serving his country in Cyprus or shooting wild duck on the Albanian coast. The chief points of difference between Ancient and Modern Greek are well and shortly put in the Preface.

MEETINGS OF SOCIETIES.

SPELLING REFORM ASSOCIATION.—
(Tuesday, Feb. 24.)

THE REV. F. G. FLEAY in the Chair.—Mr. J. B. Rundell read a paper on "The Graphic Representation of Vowels." Prof. Max Müller had said that scientific precision in the distinction of minute differences of sound was impossible without the aid of a "phonometer." Supposing such an instrument to exist, Mr. Rundell thought that there would still be needed a simple notation to express these sounds on paper so as to avoid the repetition of long definitions like "low-back-narrow," &c. Such a notation might be obtained by observing the following rules:—Given the line of writing, and that all vowels should be expressed by short advancing strokes drawn upward or horizontally, then "high," "mid," and "low" vowels would be expressed by the point of origin of the vowel-stroke being above, on, or below the line of writing. "Back," "mixed," and "front" would be indicated by the direction of the strokes either vertically upward, midway towards the horizontal, or actually horizontal. "Round" vowels would be distinguished by curved strokes; and "wide," as distinct from "primary," vowels by difference of length. These conventions were illustrated by diagrams showing how the system provided perfectly for the expression of each of

Melville Bell's thirty-six vowel sounds. In some such way as this, the writer thought, an international phonetic shorthand might eventually arise. —In the discussion which followed, Messrs. Fleay, Pitcairn, Evans, Woollen, Pagliardini, and others took part.

FINE ART.

UNGER'S ETCHINGS FROM THE
BELVEDERE GALLERY.

Die Kaiserl.-Königl. Gemälde-Galerie in Wien in Radirungen. Von Prof. William Unger, mit erläuterndem Text von Prof. Dr. Carl von Lützow. Lieferungen i.—x. (Vienna: H. O. Miethke; London: Dulau & Co.)

PROF. UNGER is rendering a genuine service to art in devoting himself to etching the masterpieces of the Belvedere Gallery, a service which will be nowhere more appreciated than by art students in England. For of all the great European collections, that of Vienna is the one with which our public is the least acquainted. Much of this is unquestionably due to its remoteness; something also to the fact that by whatever route the traveller has reached Vienna, he has previously explored the galleries, either of Germany or Italy. Again, it has not the reputation of possessing any of what may be called epoch pictures; as the *Transfiguration*, our *Raising of Lazarus*, the combined effort of Michelangelo and Sebastian del Piombo, the so-called *Night Watch*, or the *Mona Lisa* and *Marriage at Cana* in the Louvre. Neither is it celebrated for the representation of any particular school. Furthermore, of its 1,500 pictures, it must be admitted that a large proportion are of very secondary interest; so that many, who have not made art the study of their lives, may find themselves in the position of Mr. Boffin while prosecuting his literary researches. What to believe was his difficulty. For some time he was divided in his mind between half, all, or none; at length, when he was decided as a moderate man to compromise with half, the question still remained, which half? and that stumbling-block, we are told, he never got over. On this point, however, trustworthy assistance may be obtained from Prof. Unger's taste and sagacity; every work he has selected having, more or less, a representative character.

But in spite of whatever may be said, the Belvedere Gallery justly holds its foremost position. If no school can be better studied here than elsewhere, the same cannot be said of certain masters, notably Rubens, by whom there are thirty-nine works; though perhaps there are some among us from whom this statement will not elicit an enthusiastic response. Titian and the Venetians are in great force at Vienna; Albert Dürer is represented by the unusual number of seven examples. Pieter Breugel's naïf and vigorous presentations of rustic life are also more abundant here than elsewhere, and of exceptional excellence.

It must also not be forgotten that the enjoyment of the pictures is enhanced by their position and surroundings. The Palace of the Belvedere is a noble setting for the gems it contains. The works may not all receive such admirable lighting as that of the

recently erected gallery at Cassel, which should be studied by the architects of future picture galleries; but we all feel a certain appropriateness in the conversion of these old palaces, which have ceased to be royal residences, into museums—using the word in the Continental and correct signification—of the master-work of the great painters of past times. Their dignity adds value to the treasures they enshrine. And, after having studied the pictures, instead of finding oneself, as at London or Paris, in the turmoil of the streets, the stroll back from the Belvedere through the quaint gardens and park, with the view of the panorama of the city and distant hills, gives fitting pause and breathing space for reflection. Something of this feeling would be obtained if, devoting the present building in Trafalgar Square to the modern pictures, we removed the old masters to a National Gallery on the site of Kensington Palace. We should scarcely choose Cornhill to dally with a page of Catullus, or Threadneedle Street for the full enjoyment of an idyll of Theocritus.

Before Prof. Unger commenced his present undertaking he was favourably known to the art world by his publications of the Amsterdam, Brunswick, and Cassel Galleries, his Frans Hals series, and other etchings, principally in the *Zeitschrift für bildende Kunst*. These were all smaller in size than his latest effort. And, beside the increase in the size of his plates, his admirers will gladly recognise an increase of richness and finish of style which places him second to none in reproducing the old masters. Indeed, this may be pronounced Herr Unger's special gift. Many English and French etchers are unsurpassed in rendering modern pictures; hitherto few have shown that same sympathy with the noblest art of the past as their German rival. And still more remarkable is the fact that he is equally at home with all the elder schools; all are found truthfully and surely expressed, and with genuine artistic delight.

Among the forty larger etchings already published, and about the same number of smaller incorporated with the text, may be particularised the portrait of Rembrandt by himself. The picture represents him in his forty-eighth year, when he was in the plenitude of his power. Power is expressed in his penetrating yet genial regard; one sees he is a man who will miss nothing coming within his range, and will appropriate all for the service of an imagination for which no theme was too high or incident too humble. The etching is a master-work of the art, and the prince of etchers, whom it portrays, would not have disdained acknowledging it. Most of all, it possesses that indefinable quality of mobility, as distinguished from action, so characteristic of Rembrandt's portraits. Of the Titians which have appeared, the most important is the *Ecce Homo*. Here, too, the picture is admirably put before us, and a notable invention it is. At the top of the steps of a building of Renaissance architecture stands the Redeemer, naked, and with bowed head. Pontius Pilate is presenting him to a crowd of Venetian knights and soldiers, nobles and senators, who throng the steps or stand below. The composition is enriched with banners and halberds, flashing armour, emblazoned shields,

and splendid draperies. Among the fierce and sensual heads stands one fair Venetian maiden. With all the action and movement there is the feeling of order and balance that Titian never wants. The series contains Giorgione's *Mathematicians*, a profoundly imaginative conception, and furnishing materials for a first-rate etching. The philosophers, in their semi-classical, semi-Oriental costume, contrast finely with the stretch of fair country, an Italian pastoral scene lit up by the setting sun. As effective as well drawn are the bare tree trunks and branches that stand in shade against the sky. The restrained intellectual activity, contrasted with the repose of nature, gives an almost typical character to this charming idyll. This passion for nature, combined with the studious, contemplative mood of the scholar, here seems to have anticipated some of the more thoughtful passages of modern poetry.

To the statement that the gallery is numerically rich in pictures by Rubens, it may be added that in quality they are unsurpassed. And, as was to be expected, in rendering the compositions of the great painter of nature and humanity, Herr Unger is at his best. He gives us the full crash and whirlwind of the storm and cataract in the *Philemon and Baucis*, and the soft flesh painting of the beautiful Helena Fourment going to the bath, nude, saving for the mass of dark crimson drapery which serves to heighten the dazzling brightness of her rounded form. The etcher is perhaps greatest in the *Venusfest*, which is one of the pictures bought from the Duke of Buckingham by the Archduke Leopold William. In the old catalogue of the Buckingham collection, it was described as "another large piece, wherein are several gods and goddesses of the woods, and little Bacchuses." It epitomises the Renaissance. It celebrates the triumph of liberated humanity. Nymphs, and fauns, and satyrs are dancing round the goddess of fecundity; troops of Cupids, hand in hand, swarm round the smoking tripod, or flutter among the foliage above, scattering fruits and flowers on the joyous company below. As elsewhere, the etching of the human form is masterly, and the whole composition, figures and landscape, glows with sunlight. Herr Unger must have learnt the secret of storing away sunbeams; he seems always to have such an inexhaustible supply at command. In the Van der Capelle, the paper is positively saturated with sunshine. Some ships and boats float idly on a calm sea, on a summer's day, when sea and sky are blended in an atmosphere of opalescent light.

Of very different character is the charming specimen of Terburg's delicate art. Here all is quiet, subdued and tender in tone. A lady in silken hood and fur-bordered *caraco* is seated peeling an apple, while a child, in feathered hat, gazes wistfully at the operation. Both mother and child have an air of refinement, as if bred in an atmosphere of cultivated burgher prosperity. The refinement of sentiment is carried out in the execution of the softly gradated lines and velvety tints of the etching needle. Simply from the point of view of execution, it is interesting to compare this with the Holbein and Dürer portraits, where the clear and decisive

outline and delicately modelled form are rendered with a firm regularity of line which rivals the early German engravings.

The letterpress which accompanies this remarkable example of genius and patient industry is from the pen of Dr. von Lützow, and discourses of the pictures and their histories in a pleasant and learned manner.

HENRY WALLIS.

THE "MADONNA DEL SACCO," BY ANDREA DEL SARTO, IN THE CLOISTER OF THE CONVENT OF THE SERVI AT FLORENCE.

THE state of decay into which this noble painting in fresco has fallen has been already noticed in the columns of the ACADEMY. A commission of eminent artists has been appointed by the Italian Government to report upon its condition and to suggest means for its preservation. If the account given in the *Gazzetta d'Italia* of the opinion of the experts is accurate, nothing could well be less satisfactory, for they affirm that its deterioration is principally due to the banging of a door beneath it which leads into the church, and that this must be removed and a glazed porch substituted. They also suggest the glazing of the entire cloister so as to protect this work of art and the other frescoes by Poccetti, Salimbeni, and Viscardi which adorn the arches. Every artist and lover of art must feel interested in the condition and best means of preservation of this famous mural picture, and I shall therefore endeavour to give as accurate an account of it as may be possible without the erection of a scaffold for its close examination. As the wall beneath it is three feet four inches thick, manifestly solid, and as the door is light of structure and is padded, I altogether dismiss it as the cause, in any appreciable degree, of the appearance and decay of the fresco. Could it shake so strong a wall, and could the shocks reach the picture, which is three feet above it, it might be anticipated that the *intonaco* would be loosened—a familiar and, unhappily, frequent cause of damage to frescoes. There is no appearance of anything of the kind; but on the other hand, there are abundant proofs of the action of damp in this part as well as in nearly every other of the arcades. The roof is inclined from the back walls of the cloister to the arches, and is covered with tiles—of course, easily displaced. Leakage in such roofs and carelessness as to their maintenance may be said to be the rule, and the same defects are the sources of injury to innumerable mural pictures everywhere; thus the cause and the effects are equally obvious. In estimating the nature of the decay of this picture it is useful to examine Andrea's work and method of painting. Few frescoes have a higher reputation in popular opinion than this one, and there can be no doubt that it is a very impressive work. It is apparent that the entire picture has been designed and drawn, as the Italians express it, "*di maniera*"—that is, without the presence of living models; thus some defects in action and form are obvious enough, and the drapery is very conventional in Andrea's large, broad manner. The face of the youthful Virgin is beautiful, as is also that of the Child, who is about three years old. Joseph's face is almost obliterated. The fresco has been thinly and rather carelessly executed, and has afterwards been strengthened by the artist in parts with distemper colour. The Virgin is clad in a red tunic, painted in fresco; her sleeves are pale yellow, also fresco; a green scarf covers her head, and winds round the body; this, I think, is distemper, and has stood well. As usual with Andrea, red, the complement of the green, is thrown into the shadows; it is almost invariably thus that he obtains power and contrast of colour

and harmony in his mural pictures. A white bodice is worn by the Virgin, and portions of her blue cloak are seen near the ground; these have been laid in in fresco with a gray tint of black and white, and afterwards covered with ultramarine in *tempera*, which has nearly disappeared. The costume is designed with very little reference to truth, for with the exception of the tunic, the Virgin is clad in the scraps of drapery found in an artist's studio, cast about her in a picturesque way inconsistent with the gravity and dignity with which this figure should always be draped. Joseph is dressed in a tunic of a purplish red, called by the old artists "*amatista*"—an earth not now found; and the general form, especially of the folds, is weak and conventional. A loin cloth on the Child is of the same colour. The architecture of the background is pale stone colour in fresco, much decayed. The *nimbus* of Joseph is of yellow ochre, also in fresco; those of the Virgin and of the Child have disappeared. The sack (which gives the name to the picture) is slightly yellow, with a green tie of *terra verde*. It is apparent that damp has injured the flesh tints, which have not been painted with sufficient solidity, while the draperies, more forcibly executed, have resisted its action better. The blue *tempera* as usual has suffered, but the green has stood well, and appearances of black spots here and there on the surface suggest fungi, arising from damp. The state of this remarkable and popular work is obviously irremediable, and the only way to preserve it in future is by providing a perfectly water-tight roof. The suggestions of the commission without this are useless. To remove the fresco altogether might rescue it if the *tempera* painting is not injured by the process; but the idea of its removal is necessarily painful. It is probable that in its present position it will disappear in the ensuing century.

I hope that the account which I have given of the real state of a painting, so long the object of admiration, may be found interesting. My recollections of it extend backwards for nearly fifty years, and my impression is that within that period there has been marked decay.

CHARLES HEATH WILSON.

PS.—FIESOLE.—The venerable cathedral, founded in 1028 and completed in the fourteenth century, is in the hands of the restorers. The Renaissance altars on the side walls are being removed, and we may be permitted to hope that no modern ones will be substituted. It is by their modern substitutes for older works that the Italians excite the warm criticism of foreigners; by such intolerable designs as those in the interior of the Cathedral of Florence or in Santa Maria Novella that they destroy all confidence in their taste and judgment. Better far were the heavy compositions of George Vasari than those now substituted. The Cathedral of Fiesole is an ancient church of great interest. If it is touched with reverent hands, it may be admitted that it will be well to remove the disfigurements which deform it, like many other ancient Italian churches, always provided that modern ones are not substituted.

NOTES ON ART AND ARCHAEOLOGY.

THE Annual Report of the National Gallery for the year 1879 has just been issued. It takes count, among other matter, of the important bequests made by the late Miss Solly of Clifton, by the late Mr. John Henderson, and by the late Mr. J. H. Anderson. About six thousand pounds has been spent on pictures during the year, more than three-fourths of this having been expended, as has been elsewhere pointed out, upon two Italian pictures. Of these the most famous is the newly acquired Perugino. Several minor English works have been bought at small prices, the Gallery having added to its collection of Morlands, Stothards,

and Wilsons. The number of visitors to the Gallery is believed to have been rather less than the number in the previous year, but the difference is slight. A curious return in the Report of the pictures most often selected for copying shows works of Greuze and Sir Edwin Landseer at the top of the list. It has to be noted that the Gallery is only open to visitors 180 days out of the 365. Perhaps a re-arrangement of the duties of some of the officials may lead to what we cannot but think a desirable amendment in this respect.

THE *Magazine of Art* prize competition drawings, the exhibition of which at Messrs. Howell and James' is about to close, cannot be said to reveal any very great amount of artistic ability among the subscribers to that excellent periodical. One cause of this, viz., the smallness of the amount awarded for prizes, is, we are glad to see, to be removed at the second competition, when £50 will be set aside for rewards, and distinct prizes given for figure painting and landscape. The drawing by Albert G. Morrow, to which the first prize has been awarded, is very neatly executed and cleverly designed for a youth of sixteen.

THE fifth annual exhibition of original paintings on china will be held at Messrs. Howell and James' during the months of May, June, and July, when valuable prizes will be given by many members of the Royal family and others.

THE same firm announces an exhibition of tapestry paintings by lady amateurs during next winter.

ABOUT half of the modern village built on the ruins of the temple at Eleusis has been purchased by the Archaeological Society of Athens with a view to the excavation of the site. New houses will be built lower down by the edge of the bay, and, when the present population has been withdrawn to these new quarters, the workmen of the society will begin operations—probably in the course of the present year.

THE contents of the tomb recently opened at Acharnae in Attica, and found to be of the same construction as the so-called treasury of Atreus at Mycenae, are being prepared for publication by Dr. Lolling, of the German Institute in Athens. They have the same character as the antiquities formerly obtained from the tomb at Spata in Attica. The excavation was at the cost of the German Institute.

EFFORTS are being made in Athens to prevail on the Government to remove to that city the sculptures found at Olympia in recent years in the course of the German excavations. The people of the district naturally wish to retain them as a matter of pride and perhaps also to attract visitors; but the chief difficulty is the law ordering antiquities to be preserved in the centres where they are found, so far as possible. In the case of Olympia there are circumstances which were not contemplated when this law was framed, and it is hoped that, by giving them fair consideration, the Government will agree to the removal of the sculptures to Athens, where room for them could very well be found in the National Museum. Olympia is difficult of access and ill provided with accommodation, while Athens is in both respects the reverse. Besides, Athens, with all her charms, would be the better for a large increase of specimens of ancient art, so that it may no longer be said by the typical traveller that he can "do" the town in two hours.

PROF. CURTIUS, of Berlin, contributes to the last number of the *Hermes* a short article against the commonly received opinion that the ancient statues of Harmodios and Aristogeiton in

Athens are to be recognised in the sketches of two advancing combatants on a vase in the British Museum, on a marble chair at Athens, and in the two well-known marble statues in Naples. Prof. Curtius thinks that these statues, and the sketches as well, had been derived from a pictorial original, and that they represent Miltiades and Kallimachos at the Battle of Marathon, leading on the attack in the attitude in which he supposes them to have been figured in the painting of that battle scene by Panaenos, in the Stoa Poekile at Athens. In this view there is nothing that is not, perhaps, reasonable in itself; but it may be doubted whether it will find general acceptance until stronger arguments are brought to bear against the existing opinion which associates the statues and sketches with the ancient group, made originally by Antenor, and, when it had been carried off by the Persians, reproduced by Kritios and Nesiotes. That the Naples statues cannot be placed so as to form a group is a matter of opinion and experiment on which the last word has not been said.

THE order to quit which, as we have before stated, has been given by the French Government to the Museum of the Luxembourg is exciting much indignation in artistic circles in Paris. A petition has been lately drawn up, which all artists are invited to sign, begging that if it is found absolutely necessary that the picture galleries shall be given up for the use of the Senate, they yet shall not be dismantled until some suitable building is provided in the centre of Paris for the reception of the works they contain; and likewise that the museum shall be preserved in its entirety, and not broken up, as at one time contemplated, and its pictures dispersed in other galleries. There does, in truth, seem a great deal of hardship in the sudden ejection of this time-honoured picture gallery, one of the favourite sights of Paris. What would be said if all the old pictures and relics stored at Hampton Court were unceremoniously turned out into the streets? No doubt the petition against this proceeding with respect to the Luxembourg will be largely signed.

LIEUT. CONDER is about to explore the site of Kadesh, that ancient fortified city of the Kheta (Hittites), which was besieged by Rameses II. in the fifth year of his reign. This siege, it will be remembered, is represented in a series of great military *tableaux* sculptured upon the pylons of the Temple of Luxor and of the Ramesseum, as well as on the north wall of the great hall in the large temple at Aboo Simbel. It also forms the subject of that celebrated Egyptian epic known as the *Poem of Pentaur*. Kadesh is shown in the sculptures as a fortified island situated in a bend of the river, and it is connected by a bridge with one of the banks.

THE Duc d'Aumale has been elected a member of the Académie des Beaux-Arts, in place of the late M. de Cardailiac.

A COMPLETE history of Faenza will be published this spring by the Bolognese firm of Romagnoli. The author is Dr. Carlo Malagola; the work will be entitled *Memorie Storiche delle Maioliche di Faenza*, and will form a volume of about five hundred pages octavo, enriched with many newly discovered documents.

A SELECTION from the late Anselm Feuerbach's sketches is now on view in Berlin. Two large compositions, an *Entombment* and *Medea abandoned by Jason*, are especially praised by connoisseurs.

THE German excavations at Pergamus have unfortunately come to an end, the Turkish firman granted for the purpose having expired. The last discoveries are statues of Zeus and

Augustus, found near the Temple of Augustus, which appears to date from the time of Tiberius.

AMONG the pictures purchased by the Government of New South Wales at the close of the International Exhibition at Sydney are five by the French artists MM. Dubufe, Landelle, Lesrel, and Defaux. These, with the six English pictures purchased and others recently acquired, will all be placed in the Sydney Museum. This colonial national gallery is, indeed, progressing so rapidly that it evidently hopes some day to be able to vie with similar institutions in older countries.

M. P. ROUQUETTE, of Paris, is about to publish fifty-seven original drawings executed by Honoré Fragonard for Didot's edition of La Fontaine's *Contes* (1795). M. Martial is the engraver.

AN exhibition of the drawings of the late architect, M. Viollet-le-Duc, is shortly to be held in the Musée de Cluny, in a large *salle* that has not yet been opened to the public. M. Viollet-le-Duc *fil*, who has just received the order of the Légion d'Honneur, has been appointed, in connexion with M. du Sommerard, to classify the large and important collection left by his father, and to organise its exhibition.

THE *Times* announces the death, at Innsbruck, of the German painter, Franz Hellweger, at the age of sixty-seven years. He was associated with Cornelius in some of his most important tasks, working with him during three summers at the frescoes in the Ludwigs-kirche at Munich. He had also a large share in the decorative works in the cathedrals of Cologne and Spire.

THE *Gazette des Beaux-Arts* for February has chiefly an archaeological interest. M. F. Lenormant, whose notes on his tour in Southern Italy have recently appeared in the *ACADEMY*, contributes a first article on the result of the excavations in Suessula; and M. Anatole de Montaigon continues his account of the antiquities and curiosities of the ancient town of Sens, describing especially the treasures preserved in its cathedral. Another archaeological subject is that of the ancient apsidal mosaic in the church of St. John Lateran at Rome, executed by the Torriti in the thirteenth century. The other articles of the number include the continuation of M. Lefort's "Velasquez;" the Vereschaguine exhibition; a biographical sketch of Pierre Vaneau, a provincial sculptor; an obituary notice of Alexandre Denuelle; and a review of the last works of the German etcher, W. Unger. The chief artistic worth of this number lies in a very fine etching by M. Rajon from a painting by Velasquez, representing Juan of Austria, jester to Philip IV.

IN his last Report on the trade and commerce of Hiogo and Osaka, H.M. consul furnishes some interesting notes with regard to the condition of Japanese art manufactures. Among these we learn that there is at present a very large demand for Awata ware, principally in the shape of vases, *tête-à-tête* tea sets, toilet services, and, to a limited extent, of dishes; these last-mentioned articles, however, are expensive, as great difficulty is experienced in burning flat pieces without warping, and failures from this cause alone often amount to fifty per cent. The better kind of Kioto stoneware is very chaste, but generally made in small pieces for native use. With regard to bronzes, those from Kioto are more artistically treated than those made at Osaka, and contain a large percentage of copper. The great amount of spelter in the latter description gives them a disagreeable appearance, which gilding and colouring fail to remove. Of the many articles included under the name of toys the following are in great demand:—Arima basket ware, paper

parasols, silk nursery balls, and *tajima* straw-covered boxes and cabinets. Considerable quantities of Kaga and Owari porcelain ware are, it is stated, now finding their way down to Hiogo and Kobe for shipment to Europe, for which purpose they appear to have been specially manufactured. Many new branches of industry in connexion with the art manufactures of Japan are continually coming into existence through the great amount of encouragement afforded by the demand in foreign countries, and it may be hoped that in his next Report H.M. consul may be able to afford us some information regarding the process of manufacturing such *articles de luxe* as the small inlaid bronzes and the transparent *cloisonné* of Kioto.

THE STAGE.

Forget me Not—a play which made a distinct impression upon the comparatively few playgoers who saw it at the Lyceum last autumn—was revived a few nights since at the Prince of Wales's, the occasion being the first performance at this theatre under the direction of Mr. Edgar Bruce, the new manager. *Forget me Not* bids fair to make a distinct mark both as an acting play and, in a lesser degree, as an addition to the literary drama. The principal character—a sufficiently repulsive one—is played by Miss Genevieve Ward with great and varied power, her performance here being finer than it was at the Lyceum in the "off-season." Miss Ward, we understand, has since last autumn repeated the part often in the provinces. The gentler and more attractive heroine is played by Miss Kate Pattison. Mr. John Olafson represents the chief male character with great discretion and restraint, his performance here counting as one of the best that he has given us. Mr. Edgar Bruce is, on the whole, to be congratulated on the choice of the play. It is likely to bring good fortune to his theatre, even though it by no means follows the traditions of the little Tottenham Street playhouse.

Macbeth is now performing at Sadler's Wells Theatre. Much has been done to ensure the success of the representation in a place full of Shaksperian memories. The scenery, the appointments, and the music are all good, though, of course, not on so costly a scale as was adopted under the same management at the Lyceum. In the yet more important particular of the representation of the chief characters, little is left to be desired. Mrs. Crowe is confessedly about the most competent Lady Macbeth—some would say even the only Lady Macbeth—now on the English stage. Mr. Talbot certainly cannot claim a like distinction; but he is a careful, thoughtful actor, gifted with fine voice and presence. About a dozen years ago he acted *Macbeth* at Drury Lane, and since then he has been a good deal in the colonies, where legitimate acting finds an appreciation which, until lately, has been apt to be denied to it in London. Another Shaksperian play will shortly be produced at Sadler's Wells, with a cast hardly less efficient than the present; and Mrs. Bateman is evidently doing all that she can do to render the little playhouse, which was so long the sole home of Shaksperian drama, continuously attractive.

UNDER the auspices of what is styled the International Literary Association there are to be given some afternoon entertainments by men of letters at the Steinway Hall, Lower Seymour Street. The first took place on Monday last, when an audience of moderate size assembled to hear Mr. Edward Jenkins read *Ginx's Baby*. Mr. Jenkins had a severe cold upon him, which, of course, interfered with the effectiveness of his delivery. There was, however, considerable dramatic power shown in the latter part of the reading, Mr. Jenkins having then, in spite of

his indisposition, warmed to his work. Mr. Justin McCarthy will shortly give a reading, not from his own works, but from Dekker.

M. SARDON's new play at the Théâtre Français has been very fully reported in more than one English paper. Few pieces have excited so much curiosity, but the play is not a success, though it is undoubtedly a sensation. In it M. Sardou has gone even farther than other French dramatists have gone before him in the discussion upon the stage of grave problems. We have listened in France to the discussion at the theatre of the question of why a woman who is not all she should be is sometimes more attractive to a man of too ample experience than a woman who is. We have heard a senator's protest against the *luxu effrené des femmes* drawn out into the dialogue of a four-act play. Divorce has been discussed, and what is to become of illegitimate children, and whether a democrat is not of necessity a humbug, and whether mothers should give up their only children to fight for France. But the profoundest questions of religion and scepticism have perhaps never before been touched so nearly as in the new play, which is made acceptable to mixed audiences only by the acting of Delaunay and Mlle. Bartet. The actress was some time at the Vaudeville, where, especially in the *Désirée Delobelle* of *Fromont jeune et Risler aîné* she made her mark as an actress of pathos, but her success in the new piece is more pronounced than in any other character.

In confirmation of Shylock having been treated in earlier days as a comic character, which the chief comedian, the Buckstone or Toole of the day, would play, we reprint Sir William Davenant's prompter's account, in 1706-8, of

"Mr. Dogget. On the Stage, he's very Aspectabund, wearing a Farce in his Face; his Thoughts deliberately-framing his Utterance Congruous to his Looks: He is the only Comick Original now Extant: Witness *Ben. Solon, Nikin, The Jew of Venice, &c.*" (J. Downes, *Rosc. Angl.*, p. 51.)

THE Hindu version of Shakspeare's *Cymbeline*, "Tara," has been lately very well performed at Baroda by a native troupe, the women's parts being acted by boys, as on the Shaksperian stage.

MUSIC.

ANTON DVORÁK'S SEXTETT.

LAST Monday evening was played for the first time at the Popular Concerts a sextett in A major, op. 48, for two violins, two violas, and two violoncellos, by Anton Dvorák. The composer, born in 1841 in a Bohemian village near Kralup, on the Moldau, is one of the most promising musicians of the day. The talent displayed by some of his early works obtained for him the "artist's stipend" granted by the Austrian State to assist "young and talented artists without means." By the kindly influence of Brahms, his *Slavische Tänze* and *Klänge aus Mähren* were published by Simrock. His works have been most favourably noticed by L. Ehlert in the *Berliner National Zeitung*. Herr Taubert, Royal Prussian *Capellmeister*, and J. Joachim have also helped to spread the reputation of the composer, and it is undoubtedly owing to the latter that we have had an opportunity of hearing the sextett this season in London. We may here notice that his first set of *Slavische Tänze* was performed last season at the Crystal Palace concerts, and that a second set is promised at one of the concerts of the present series.

The first movement (*allegro moderato*) of the sextett is full of clear melody, pleasing modulations, and highly interesting thematic developments, and may be considered, despite some

peculiarities, as in orthodox form. The leading and second themes are not, perhaps, particularly striking or original, but they are graceful and unaffected, and, furnishing material, not only for the development section, but also for the various episodes, gradually acquire an importance and interest which they do not at first seem to possess. The first somewhat reminds one of the *terzetto* of the third act of *Fidelio*, and the second recalls a phrase in "See the Conqu'ring Hero comes." While on the subject of reminiscences, we may mention that in the analytical remarks of the programme book the opening passage of the third movement is noticed for its likeness to a theme in one of Beethoven's quartetts.

The second movement, entitled "Dumka" (Elegy), reveals the composer's nationality. The leading theme with marked rhythm commences in D minor and closes in D major. To this succeeds a short *adagio* (*quasi tempo di marcia*) and a charming *andante* (*molto espressivo*); the latter leads back to the opening subject. A brief *coda*, recalling the *adagio* and principal theme, brings this short and unpretending movement to an end. It is followed by a *scherzo*. Fast and furious is the pace, and well in keeping with the fantastic title (*Furiant*) of the movement. The *alternativo* is also full of spirit, but of quieter character.

The *finale* consists of an air with variations. The theme is clear and concise, and the variations are clever, and effectively scored. The *codetta*, however, does not form a very satisfactory conclusion.

A first hearing of the work would lead us to regard the first movement as the most intellectual, the third as the least interesting, and the other two as the most characteristic. The influence of Schubert is especially to be traced in the *allegro* and "Elegy." The instruments are throughout skilfully employed, but we do not find the rich and varied scoring to which Brahms has accustomed us in works of a similar kind.

The sextett was excellently performed by Messrs. Joachim, Ries, Straus, Zerbini, Pezze, and Piatti.

J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.

To-night, at 8, a Play, in five acts,
THE OLD LOVE and the NEW,
By BROUSSE AND the NEW,
Messrs. Coghlan, Phipps, Leathes, Price, Deane, Holman, Benn, Douglas, Phipps, and Anson; Mesdames A. Roselle, Emery, Giffard, J. Roselle, and White.
Morning Performance of "The Old Love and the New," Saturday, March 13.
Box-office from 11 till 5. No fees.

DUKE'S THEATRE, Holborn.

Managers, HOLT and WILMOZ.

On Saturday will be produced (for the first time at this theatre) the great emotional Drama of BELPHEGOR the MOUNTBANK.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

TOOLE, Saturday evening (for a limited number of nights), in three pieces. At 8, THE WEAVERS.
At 10, the celebrated trial, BARDELL v. PICKWICK.
OUR CLERKS.

TOOLE, Saturday evening, as SERJEANT BUZZFUT, in the celebrated trial, BARDELL v. PICKWICK, dramatised, by permission of the late Charles Dickens, from his private reading copy, for Mr. Toole.
TOOLE, Saturday evening, as JOHN PUDDICOMBE, in OUR CLERKS, and SIMMONS, in THE SPITALFIELDS WEAVER, for a limited number of nights, prior to the production of "The Upper Crust."

GLOBE THEATRE.

LES CLOCHES DE CORNEVILLE.

To-night at 8, this celebrated Opera, with new scenery, new dresses, and new effects.

Messrs. Shiel Barry, Edward Marshall, Frederic Darrell, C. Ashford, and Wilford Morgan; Mesdames Kate Munroe, Laura Clement, Clara Graham, Kate Chorley. Increased band and chorus. Conductor, Mr. E. SOLOMON.
Preceded, at 7, by the Oriental Extravaganza.

THE HAPPY MAN.

Mr. Shiel Barry, &c. Doors open 6.30, close at 11.0.

Stage Manager, Mr. H. B. FARNIE.

IMPERIAL THEATRE.

Shakspeare's Comedy, AS YOU LIKE IT.
Every afternoon at 3, in which Messrs. Lionel Brough, Herman Vezin, W. Farron, Kylie Bellow, F. Everitt, E. F. Edgar, J. Bannister, C. Cox, G. Coventry, F. Charles, E. Allbrook, F. Stephens, G. Trevor, C. Bunch, and Miss Litton. Miss Crosswell, Miss Brunton, Miss Sylvia Hodge will appear.
The overture and incidental music selected and arranged by Mr. Barnard from the works of Dr. Arne, Bishop, Farren, Martini, and C. Horne.
The Comedy produced under the personal superintendence of Miss Litton.
Stage Manager, Mr. COLE.

The doors open at 2.30; Overture at 3.45; Comedy precisely at 3; Carriages 5.45.

LYCEUM THEATRE.

MERCHANT OF VENICE.

Shakspeare's Comedy, having been received with the utmost enthusiasm, will be repeated every evening at Eight o'clock.

SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Morning Performances of THE MERCHANT OF VENICE every Saturday.

SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Box Office open daily from Ten to Five under the direction of Mr. JOSEPH HURST, where seats can be booked six weeks in advance.

NEW SADLER'S WELLS.

SHAKSPEARE'S PLAYS.

MACBETH, February 25, for ten nights only.

OTHELLO, March 6, for six nights.

Miss Bateman (Mrs. Crowe), Miss Carlisle, Mrs. Charles Calvert, Mr. Herman Vezin, Mr. H. Talbot, and Mr. Pennington specially engaged for this series of Plays. Mr. Walter Bentley, Messrs. F. W. Wyndham, Robert Lyons, J. Archer, E. Lyons, E. Kidwood, &c.
Prices, from 6d. to 7s. 6d. Doors open at 6.45. Farce at 7.15; Play at 8.

OPERA COMIQUE.

CHILDREN'S PINAFORE.—EVENING PERFORMANCE.

"CHILDREN'S PINAFORE."
To-night, at 7.45, a new and original Vaudeville, written by F. DESPREY music by ALFRED CELIER, in the SULK.
Characters by Mr. Richard Temple, Mr. F. Thornton, and Miss La Rue.
At 8.30, THE CHILDREN'S PINAFORE.
Being a representation of Messrs. GILBERT and SULLIVAN's popular Opera, "H.M.S. Pinafore" (all the characters sustained by children). At 10.30, AFTER ALL.

PRINCE OF WALES'S THEATRE.

Sole Lessee and Manager, Mr. EDGAR BRUCE.

Every Evening the Doors will be opened at 7.30. At 8 o'clock will be played an original Comedietta, A LITTLE CHANGE.
By STONEY GUNDOY. Followed, at 8.40, by HERMAN MERIVALE and F. C. GUYOT's original Play, FURST-ME-NUT
(by arrangement with Miss Genevieve Ward, and in which she will appear in her original part).

The Characters in the Plays will be represented by Miss Genevieve Ward, Mrs. Berris, Beers, Miss Kate Pattison, Mrs. Leigh Murray, Miss Ada Gordon, and Miss Layton; Mr. Edgar Bruce, Mr. Throckton, Mr. J. G. Shore, Mr. Edwin Hayley, Mr. Arthur Brewitt, Mr. J. Robertson, and Mr. John Clayton. New Scenery by Mr. Bruce Smith. The Orchestra will be under the direction of Mr. Bucalowski.

No Fees on any description. The Box-office open daily between 11 and 5.

Secretary and Treasurer, Mr. W. H. GRIFFITHS.

ROYALTY THEATRE.

Managers, Mr. and Mrs. J. P. BURNETT.

This evening, at 8.15, J.O.
Messrs. J. P. Burnett, Groves, Charteris, Crisp, Wilkinson, Edwards, Leigh; Messrs. Bennett, Brunel, Robertson, K. Lee, Steele, Drummond, and Jennie Lee. At 7.30, B.B.
Messrs. Leigh, Crisp, &c.; Messrs. Robertson, Lee.

THE MULTIPLEX COPYING PROCESS

gives Forty Copies of Circulars, Music, Drawings, Plans.
This process has been adopted by Her Majesty's Government, who have paid the inventor (Mr. Fellows) £600 for the privilege of using it throughout all their Departments.

No tedious washing off. Negatives last for years.

Full particulars post-free.

CHARLES FELLOWS, 17, Tottenham-road, Wolverhampton.

DURRANT'S HOTEL,

GEORGE STREET, PORTMAN SQUARE, LONDON.
For Families and Gentlemen. CHARLES ARNELL, Proprietor. Suites of rooms from 6s. 6d. per day.

SUN LIFE ASSURANCE SOCIETY.

CHIEF OFFICE, 63, THRADESDALE STREET, LONDON;
BRANCH OFFICE, 60, CHANCERY CROSS;
And at Oxford-street, corner of Vere-street.
Established 1810.

Policies effected before next Midsummer will participate in the division of Profits at Midsummer 1882. Specially low premiums for Policies Without Profits.

J. G. PRIESTLEY, Actuary.

PHENIX FIRE OFFICE, LOMBARD STREET

and CHANCERY CROSS, LONDON.—Established 1782.
Prompt and Liberal Loss Settlements.
Insurances effected in all parts of the world.

JOHN J. BROOMFIELD, Secretary.

EAGLE INSURANCE COMPANY.

14, DOWGATE HILL, LONDON, E.C.

PAINLESS DENTISTRY.

MR. G. H. JONES,

Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name."

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HASSALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

TARAXACUM and PODOPHYLLIN.—A

solid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPEK, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on MOEDER'S HIRE SYSTEM. The original, best, and most liberal. Cash prices.

No extra charge for time given.
Illustrated Price Catalogue, with full particulars of terms, post-free F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862.

F MOEDER begs to announce that the whole

of the above premises have recently been rebuilt, specially adapted for the Furniture Trade, and now form one of the most commodious warehouses in the metropolis.

Bed-room Suites, from 25 6s. to 50 guineas.
Drawing-room Suites, from 20 9s. to 45 guineas.
Dining-room Suites, from 27 7s. to 40 guineas.

And all other goods in great variety.
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.
Strengthens the Nervous and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

In consequence of Spurious Imitations of LEA & PERRINS' SAUCE,

which are calculated to deceive the Public, LEA & PERRINS have adopted

A NEW LABEL, bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of

WORCESTERSHIRE SAUCE,

and without which none is genuine.

Sold Wholesale by the Proprietors, Worcester; Grosse & Blackwell, London; and Export Oilmen generally. Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."

Wordsworth's Chemical Food of Health.

Prepared from the choicest Peruvian Leaf. The New REMEDY for GENERAL DEBILITY, NERVOUS PROSTRATION, NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.

H. WORDSWORTH & Co., Homoeopathic Chemists, 6, Sloane street, and 4, King-street, Kensington, London.

LOCKYER'S SULPHUR HAIR RESTORER.

Large Bottle, 1s. 6d. Restores the Colour to Gray Hair in a few days. The best, safest, and cheapest. Quite equal to expensive ones. Sold by Chemists and Hairdressers.

DINNEFORD'S MAGNESIA.

The Medical Profession for over Forty Years have approved of this pure solution as the BEST REMEDY for

Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion,

And as the safest Aperient for Delicate Constitutions, Ladies, Children, and Infants.

DINNEFORD'S MAGNESIA.

NEW BOOKS AND REMAINDERS.

*** An early order for these books is necessary, as the present small editions or remainders will soon be exhausted.*

THE LENOIR COLLECTION of ORIGINAL FRENCH PORTRAITS at STAFFORD HOUSE (now in the possession of the Duc d'Aumale), auto-lithographed by Lord RONALD GOWER. Imperial folio, 146 Tinted Plates (numbered irregularly 1—136), containing 185 Portraits, beginning with Jean Sans Peur, Duke of Burgundy, and ending with Marie-Antoinette in her youth. Gilt cloth, £5 5s. (1874.)

Only one hundred copies were produced.

The most genuine and interesting collection of historical French Portraits in existence; with biographical notes by Lord RONALD GOWER. The celebrated antiquary ALEX. LENOIR spent twenty years in the formation of the collection. The stones have been destroyed.

FACSIMILES OF THE FRENCH HISTORICAL PORTRAITS AT CASTLE HOWARD.

CLOUET (Francois). THREE HUNDRED FRENCH PORTRAITS, representing personages of the Courts of Francis I., Henry II., and Francis II. Auto-lithographed from the originals at Castle Howard, Yorkshire, by Lord RONALD GOWER. 2 vols., atlas 4to, 303 Plates (somewhat in the style of Holbein's Heads from the original Sixteenth Century designs) (published at £6 6s.), cloth gilt, £4 4s. (1875.)

The stones have been destroyed.

Now ready, complete in Two Parts, forming One Volume 8vo, xvi. and 884 pp. double columns, cloth, £2.

REDHOUSE'S ENGLISH-TURKISH and TURKISH-ENGLISH DICTIONARY.
New and Enlarged Edition. By Dr. CHARLES WELLS, Ph.D.

This improved edition is ready for delivery.

The first edition has been long entirely out of print; the few copies which have turned up occasionally have been sold much above the original publishing price.

All the Officials throughout the Turkish dominions speak Turkish, even in those countries where Arabic is the language of the people.

THE VISION of the TWELVE GODDESSES: a Royall Masque. By Samuel DANIEL. Presented upon Sunday night, being the eight of January, 1604, in the Greate Hall at Hampton Court, and Personated by the Queene's Most Excellent Majestie, attended by Eleuen Ladies of Honour. Reprinted and Edited, with Introduction and Notes, by ERNEST LAW. 12mo, vellum wrapper, 5s. (1880.)

Printed at the Chiswick Press on fine toned hand-made paper, with uncut edges.

The text of the author's explanatory dedication and of the Masque is a facsimile reprint from the Edition of 1623.

The Introduction and Notes contain an historical sketch of the "Grand Christmas" at Hampton Court in 1603, many curious extracts from letters and papers never before published, a full description of the Masque, the scenery, dresses, dances, &c., and biographical notices of the author and the performers.

OMAR KHAYYAM and JAMI: the Rubaiyat of Omar Khayyam, the Astronomer-Poet of Persia, rendered into English verse. Fourth Edition. SALAMAN and ABSAL, an allegorical Sufi poem, by Maulana Nur ud Din Abd ur-Rahman bin Ahmed JAMI, in English metre, with a notice of Jami's life. Second Edition. 2 parts in 1 vol., 12mo, pp. xv. and 112, half-roxburghe, 10s. 6d.

"The translation by Mr. FITZGERALD of some of the Quatrains of OMAR KHAYYAM, the Astronomer-Poet of Persia, was published anonymously, and at first utterly neglected by an unappreciative public. Presently, however, the great merit of the poems came to be known, and the book rapidly ran through three editions; we now welcome a new and enlarged reprint, which, together with the same translator's version of a poem by the celebrated Jami, forms an elegant and most readable little volume."—*Saturday Review*, January 17th, 1880.

JAGOR (F.), TRAVELS in the PHILIPPINES. Small 8vo, 370 pp., with numerous woodcut Illustrations and a Map (published at 16s.), cloth, 7s. 6d. (1875.)

A small book, but one of considerable interest and importance. There is no other work in the English language, of an exhaustive or comprehensive character, upon the Philippine Islands.

*** Catalogues of BERNARD QUARITCH's extensive stock of valuable old books gratis on application.*

LONDON: BERNARD QUARITCH, 15, PICCADILLY.

THE ACADEMY.

No. 409.
[New Issue.]

SATURDAY, MARCH 6, 1880.

PRICE 3d.
[Registered as a Newspaper.]

MESSRS. HATCHARD, PUBLISHERS.

FOR EASTER.

In the press, in small crown 8vo, price 1s. 6d.
FYNIE'S FLOWER: an Easter Story.

By BRENDA, Author of "Nothing to Nobody," &c.
With Three Illustrations by H. R. Robertson.

In the press, in crown 8vo, price 6s.
DEEP unto DEEP.

By the Rev. Sir EMILIUS BAYLEY, Bart., B.D.

Second Edition, Revised and Corrected, small crown 8vo, 6s.
THOROUGH:

Being an Attempt to show the value of Thoroughness in several Departments of Christian Life.

By the Rev. Sir EMILIUS BAYLEY, Bart., B.D.

"We can heartily recommend this work. It is an earnest and faithful protest against superficial Christianity. Readers will find in it much to admire, instruct, and invigorate their spiritual life."—*National Church.*

"A practical volume which will be read with much pleasure by those to whom it is addressed, whilst the sincerity which marks every page and the thought which it suggests will make that reading profitable to both young and old, and we are glad to recommend it to our readers."—*John Bull.*

Second Edition, Revised, fcap. 8vo, cloth, 2s.

MORAL EDUCATION of the YOUNG in RELATION to SEX, MEDICAL and SOCIAL ASPECTS. By Dr. ELIZABETH BLACKWELL.

"Wise and useful."—*Literary Churchman.*

"Should be read by parents and guardians. It behoves all who are charged with the care of young people to ponder well the grave arguments which the talented authoress addresses in support of her views."—*Public Opinion.*

Revised and Cheaper Edition, square fcap. 8vo, 3s. 6d.

DIES IRÆ:

The Final Judgment and Future Prospects of Mankind.
By the Rev. R. B. GIRDLESTONE.

"The topics discussed are solemn and important beyond all others, and have been handled by the author in a very careful and reverent spirit."—*Christian Observer.*

Square crown 8vo, 6s.

THE PSALMS.

The Authorised Version in the Original Rhythm.

By Rev. W. M. SINCLAIR, Chaplain to Bishop of London.

"Should be of great attraction to the devotional reader."—*Nonconformist.*

"This work will put the Psalter in a new light to many readers, and discover beauties at present lying hid."—*Church Times.*

Square fcap. 8vo, cloth, 3s. 6d.

LIFE after DEATH, and the THINGS to COME. By the Rev. J. CULLEN. With Memoir of Miss F. E. B., by the Rev. W. H. M. H. AITKEN.

"In doctrine sound, in argument convincing, and in appeal powerful."—*Christian Observer.*

28th Thousand. Thick 8vo, cloth, 8s.; calf, 16s.; mor., 19s.

LIGHT in the DWELLING;

Or, a Harmony of the Four Gospels.

By the Author of "The Peep of Day."

With Short and Simple Remarks for Family Reading.

LENT LECTURES.

TEMPTATION: its Nature and Limits.

By the Rev. DANIEL MOORE, M.A. Fcap. 8vo, 2s. 6d.

"These were the Lent lectures of one of our most gifted preachers, and everywhere furnish ample evidence of his great gifts as a sound expositor of Scriptural principles, and as an eloquent enforcer of their claims on the consciences of all sincere believers."—*English Churchman.*

Seventh Edition, Revised, small crown 8vo, cloth, 3s. 6d.

SCRIPTURE and SCIENCE not at VARIANCE.

By Archdeacon JOHN H. PRATT.

"The Archdeacon's reply is firm and candid, and has one great quality which we earnestly recommend, that it is decided in tone. He does not flinch from vindicating the full plenary inspiration of the Word of God in general, and specifically the plenary inspiration and inerrancy of the first eleven chapters of Genesis. He is not blind, but discriminating, in his maintenance of this position."—*Christian Advocate.*

Ninth Thousand. 2 vols., small 8vo, 10s. 6d.
Vol. I., 6s.; Vol. II. (On the Loss of Friends), 4s. 6d.
Also the 2 vols. in calf and morocco, 24s. to 31s. 6d.

THE SHELTERING VINE.

By the late Countess of NORTHESE.

With an Introduction by Archbishop TRENCH.

"The object of this work is to afford consolation under the various trials of mind and body to which all are exposed, by a Selection of Texts and Passages from Holy Scripture, and Extracts from Old and Modern Authors, in Prose and Poetry, with a Selection of Prayers adapted to the same.

Third Edition, 2 vols., crown 8vo, 10s. 6d.

LOUISA, QUEEN of PRUSSIA:

Her Life and Times. With Sketch of Prussian History.
By E. H. HUDSON.

"From its fine domestic tone, and the nobility of its subject, it ought to become a common family and school-book in our country. No better present or prize-book could be named."—*British Quarterly Review.*

Crown 8vo, with Two Photographs, cloth, 12s.

HISTORY of GLANVILLE'S WOOTTON, in DORSET.

Including its Zoology and Botany.
By C. W. DALE.

"Mr. Dale has devoted much time and careful labour to his task, and as a consequence has given a very valuable little monograph to the world."—*Science Gossip.*

BY G. WASHINGTON MOON.

1. THE DEAN'S ENGLISH.

A Criticism on the Dean of Canterbury's Essays on the Queen's English. Tenth Edition, fcap. 8vo, 3s. 6d.
CHEAP EDITION, the Eleventh, fcap. 8vo, limp, 1s. 6d.

"Demonstrating that, while the Dean undertook to instruct others, he was himself but a castaway in matters of grammar."—*Edinburgh Review.*

"Coming out for wool, in fact, the Dean went back shorn; rushing forth to teach, he went home taught."—*Record.*

2. BAD ENGLISH EXPOSED.

Criticisms on the Errors of Lindley Murray and others.
CHEAP EDITION, the Sixth, fcap. 8vo, limp cloth, 2s.

"Well worthy of the careful study of all who aspire to write English elegantly and accurately."—*London Quarterly Review.*

"A useful contribution to the art of writing the English language with accuracy."—*Times.*

Just published, Cheaper Edition, crown 8vo, 6s.

FIVE MINUTES to SPARE.

Selected from the Every-day Book of Rev. J. GUARD, late Rector of Langton, North Devon.

"There is much in this collection that is both amusing and suggestive, and the volume may be recommended as a good one to answer the purpose implied in the title."—*Field.*

"It is just the book to take up for a few minutes, to open at random and read anywhere, for every page abounds in short, amusing, or instructive stories, anecdotes, or statements of facts, for the most part from the choicest fields of authorship, and occasionally altogether original."—*St. Luke.*

WORKS BY ELLICE HOPKINS.

1. OCCUPATION for the SICK;

Or, Practical Suggestions for Invalids and those who have the care of them. Just published, 16mo, 1s.

"Exquisitely and gracefully written. It answers fully, in short, to its second title, and to all this second class in particular we recommend this little book as one that will prove an unspeakable help in their difficult avocation."—*Guardian.*

2. WORK among the LOST. 18th Thousand.

With Two Plans, Six Illustrations, and Appendix. 16mo, cloth, 1s. 6d., post-free.

"If any words of ours commend the little book which lies before us, and the good work of which it is a simple and pathetic record, it is well. Every page is full of proof of sagacity and kindness."—*Spectator.*

"A beautiful and touching account."—*Guardian.*

3. WORK in BRIGHTON;

Or, Woman's Mission to Women. Fifteenth Thousand, with Additions. 16mo, paper cover, 6d., post-free.

"From my own experience in long-past years, I am quite sure that the way indicated in 'Work in Brighton' is the only true way; and I would entreat the women of England to read the little book, and then judge, each for herself, in what way she can help a cause which, for the sake of home and family, has a claim on every woman. I bid the work 'God-speed' with all my heart, and soul, and strength."—*Preface by FLORENCE NIGHTINGALE.*

4. ACTIVE SERVICE;

Or, Work among our Soldiers. Twenty-second Edition, Royal 16mo, cloth, 1s., post-free.

"This is indeed a record of active service, and such service as few, even of the most matured and earnest Christians, would be willing to undertake. Miss Robinson, of whose doings so interesting an account is here given, selected as her field of labour the barracks near her residence. How well this was done, and with what results, this little volume will show."—*Review.*

5. NOTES on PENITENTIARY WORK.

Crown 8vo, in wrapper, price 6d.

"To all who are interested in this momentous subject we recommend this little work, which will be found to offer some very wise suggestions, the fruit of large experience dictated by a broad love of souls."—*Literary Churchman.*

6. A PLEA for the WIDER ACTION of the CHURCH of ENGLAND in the PREVENTION of the DEGRADATION of WOMEN.

As Submitted to the Committee of Convocation held July 3, 1879.
Fourth Edition. Crown 8vo, sewed, price 3d.

7. LADIES' ASSOCIATION for the CARE of FRIENDLESS GIRLS.

Being an Account of the Work in Brighton. Ninth Thousand. 18mo, 1d.
Reprinted from the "Day of Rest."

HATCHARDS, PUBLISHERS, 187, PICCADILLY, LONDON.

CROSBY LOCKWOOD & CO.'S

New and Recent Publications.

LARGE TUNNEL SHAFTS, A Practical and Theoretical Essay on the Construction of. By J. H. WARREN BUCK, M.Inst.C.E., Resident Engineer, L. and N.W. Railway. With folding Plates. Royal 8vo, 12s., cloth.

WOOD-WORKING MACHINERY: its Rise, Progress, and Construction. With Hints on the Management of Saw Mills, and the Economical Conversion of Timber. Illustrated with Examples of Recent Designs by leading English, French, and American Engineers. By M. POWIS BALZ, C.E., M.I.M.E. Large crown 8vo, 12s. 6d., cloth.

AID TO SURVEY PRACTICE, for Reference in Surveying, Levelling, Setting-out, and Route Surveys of Travellers by Land and Sea, with Tables, Illustrations, and Records. By Lewis D.A. JACKSON, A.M.I.C.E., Author of "Hydraulic Manual and Statistics," &c. With numerous Wood Engravings and Plates. Large crown 8vo, 12s. 6d., cloth.

A BOOK ON BUILDING, CIVIL and ECCLESIASTICAL: including Church Restoration. By Sir EDMUND BECKETT, Bart., LL.D. Second Edition, Enlarged, with Illustrations. 18mo. 5s., cloth boards; or, limp cloth, "Wesley's Series," 4s. 6d.

N.B.—CHURCH RESTORATION, from the Second Edition of Sir E. Beckett's "Book on Building," may be had separately. Crown 8vo, price One Shilling.

METALLIFEROUS MINERALS and MINING (a Treatise on). By D. C. DAVIES, F.G.S., Mining Engineer, &c., Author of "A Treatise on Slate and Slate Quarrying." Illustrated with numerous Wood Engravings. Crown 8vo, 12s. 6d., cloth.

"As a history of the present state of mining throughout the world this book has a real value, and it supplies an actual want, for no such information has hitherto been brought together within such limited space."—*Athenaeum*.

"Without question the most exhaustive and the most practically useful work we have seen. The amount of information given is enormous, and it is given concisely and intelligibly, so that neither the practical miner nor the general reader, interested in mines, can have a better book for his companion and his guide."—*Mining Journal*.

ELECTRO-PLATING: a Practical Handbook, including the Practice of Electro-Typing. By J. W. UNGER, C.E. With numerous Illustrations. Crown 8vo, 5s., cloth.

"The volume is without a rival in its particular sphere."—*Design and Work*.

"A thoroughly practical manual."—*Iron*.

"A large amount of thoroughly practical information."—*Telegraphic Journal*.

THE NAVAL ARCHITECT'S and SHIP-BUILDER'S POCKET-BOOK OF FORMULAE, RULES, and TABLES; and Marine Engineer's and Surveyor's Handy Book of Reference. By CLEMENT MACKROW, A.I.N.A. 600 pp., with numerous Illustrations. Fcap. 8vo, 12s. 6d., limp roan, with elastic band.

"Mr. Mackrow has compressed an extraordinary amount of information into this useful volume."—*Athenaeum*.

"There is scarcely a subject on which a naval architect or shipbuilder can require to refresh his memory which will not be found within the covers of Mr. Mackrow's book."—*English Mechanic*.

EVERY MAN'S OWN LAWYER: a Handy Book of the Principles of Law and Equity. By A. BARNES. Revised to the End of last Session, comprising Summaries of the Habitual Drunkards Act, the Sale of Food and Drugs Amendment Act, the Limited Liability Amendment Act, the Racecourses Licensing Act, &c. Seventeenth Edition. Crown 8vo, 6s. 8d.; postage, 6d.

"A useful and concise epitome of the law."—*Law Magazine*.

"A complete epitome of the laws of this country, thoroughly intelligible to non-professional readers."—*Bell's Life*.

Works by "The Engine-Driver's Friend."

"Mr. Reynolds deserves the title of the engine-driver's friend."—*Railway News*.

THE MODEL LOCOMOTIVE ENGINEER, FIREMAN, and ENGINE-BOY. By MICHAEL REYNOLDS, M.S.E., formerly Locomotive Inspector, L. B. and S. C. B. With Illustrations and Portrait of G. Stephenson. Crown 8vo, 4s. 6d., cloth.

"Contains information of a technical kind, and facts that every driver should be familiar with."—*English Mechanic*.

"Replete with information for the railway man who seeks practical knowledge."—*Railway Service Gazette*.

LOCOMOTIVE ENGINE DRIVING: a Practical Manual for Engineers in charge of Locomotive Engines. By MICHAEL REYNOLDS, M.S.E. Fourth Edition, greatly Enlarged, comprising, besides other additional matter, a Key to the Locomotive Engine. With numerous Illustrations, and a Portrait of the Author. Crown 8vo, 4s. 6d., cloth.

"Mr. Reynolds has opened a new chapter in the literature of the day. Of the practical utility of Mr. Reynolds's book we have to speak in terms of warm commendation."—*Athenaeum*.

In preparation, by the same Author.

STATIONARY ENGINE DRIVING: Illustrated with numerous Wood Engravings. In crown 8vo.

London: CROSBY LOCKWOOD & Co., 7, Stationers' Hall-court, E.C.

HURST & BLACKETT'S

NEW WORKS.

COMPLETION OF MR. DIXON'S ROYAL WINDSOR. Now ready, demy 8vo, 30s., completing the Work.

VOLS. III. AND IV. OF
ROYAL WINDSOR.
By W. HEPWORTH DIXON.

"The second half of this important work fully realises the promise of its commencement. Indeed, the latter portion is of much greater interest than the former, coming, as it does, so much closer to our own times; consequently the materials are fuller, the facts more certain, and the historical associations of much greater moment. In his researches in Windsor Castle the author had, by special permission, rare opportunities for making himself well acquainted with every nook and corner, every association and legend of the grand old fortress, its surrounding park and its adjacent forest, and the result has been an infusion of local colour into his work which adds to its pictorial value, and at the same time strengthens its historical truth. Of all the royal residences in Great Britain, there is none with such a history, there is none so picturesque, there is none, from a thousand associations, which is so endeared to Englishmen as that of which Mr. Dixon has given us so comprehensive a narrative."—*Sunday Times*.

Now ready, in 2 vols., 8vo, 30s.
CONVERSATIONS WITH DISTINGUISHED PERSONS DURING THE SECOND EMPIRE.

FROM 1860 to 1863.
By the late NASSAU W. SENIOR.
Edited by his Daughter, M. C. M. SIMPSON.

"Mr. Senior's 'Conversations with M. Thiers, M. Guizot,' &c., published about a year and a half ago, were the most interesting volumes of the series which had appeared up to that time, and these new 'Conversations' are hardly, if at all, less welcome and important. A large part of this delightful book is made up of studies by various critics, from divers points of view, of the character of Louis-Napoleon, and of more or less vivid and accurate explanations of his tortuous policy. The work contains a few extremely interesting reports of conversations with M. Thiers. There are some valuable reminiscences of Lamartine, and, among men of a somewhat later day, of Prince Napoleon, Drouin de Lhuys, Montalembert, Victor Cousin, Renan, and the Chevaliers."—*Athenaeum*.

"The journal now published is the last which Mr. Senior wrote. Their style and matter display his highest point of perfection in a branch of literature which he may almost be said to have invented. Many readers may not unreasonably prefer the dramatic or literary merit of Mr. Senior's 'Conversations' to their historical interest, but it is impossible to insert extracts of such length as to represent the spirit, the finish, and the variety of a book which is throughout entertaining and instructive."—*Saturday Review*.

DIARY of a TOUR in SWEDEN, NORWAY, and RUSSIA in 1827. By the MARCHESS of WESTMINSTER. 8vo, 12s.

LODGE'S PEERAGE and BARONETAGE for 1886. Under the Especial Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 31s. 6d., bound gilt edges.

"This work is the most perfect and elaborate record of the living and recently deceased members of the Peerage of the Three Kingdoms as it stands at this day. It is the most useful publication. We are happy to bear testimony to the fact that scrupulous accuracy is a distinguishing feature of this book."—*Times*.

THE NEW NOVELS.
LILY of the VALLEY. By Mrs. RANDOLPH, Author of "Gentiana," &c. 3 vols.

"This novel abounds in those brilliant qualities which characterised Mrs. Randolph's former books. We strongly recommend 'Lily of the Valley' as a work which rivets the attention of the reader from the opening to the last page."—*Court Journal*.

A SYLVAN QUEEN. By the AUTHOR of "RACHEL'S SECRET," &c. 3 vols.

"A 'Sylvan Queen' is a picturesque and, on the whole, very pleasing story, the principal merit of which consists in its bright little pictures of country life and character."—*Athenaeum*.

"A novel of a very high order. The language is vigorous, the characters are drawn with lifelike fidelity, and the plot is wrought up with such artistic skill that the reader's attention is kept alive from the opening to the last scene."—*Court Journal*.

YOUNG LORD PENRITH. By JOHN BERRICK HARWOOD, Author of "Lady Flavia," &c. 3 vols.

"An interesting and well-told story."—*Post*.

"The reader follows the narrative with pleasure and genuine admiration. There are scenes which will have the charm of novelty for many readers and of masterly treatment for all."—*Pall Mall Gazette*.

IN THE SWEET SPRING-TIME.
By Mrs. MACQUOID, Author of "Patty," "Diane," &c. 3 vols.

"A most interesting story, written in Mrs. Macquoid's best style. It abounds with dramatic situations, and is not wanting in pathos and humour. It is a delightful and refreshing book, in every way deserving of popularity and worthy of its author's reputation."—*Post*.

"Mrs. Macquoid's new story is a graceful and artistic piece of work, pleasantly readable."—*Academy*.

FRIEND and LOVER. By Iza DUFFY HARDY. 3 vols.

"A powerful story, well worth reading."—*Post*.

THE GREATEST HEIRESS in ENGLAND. By Mrs. OLIPHANT. SECOND EDITION. 3 vols.

"The Greatest Heiress" is noticeably good among the great number of Mrs. Oliphant's good novels. The story maintains the reader's interest completely throughout."—*Athenaeum*.

YOUNG MRS. JARDINE. By the AUTHOR of "JOHN HALIFAX." SECOND EDITION. 3 vols.

FOR HER DEAR SAKE. By Mary CELIA HAT, Author of "Old Middleton's Money," &c. 3 vols.

WM. H. ALLEN & CO.'S

NEW PUBLICATIONS.

DESERT LIFE: Recollections of an Expedition in the Sudan. By B. SOLYMS. 8vo, 15s. [This day.]

THE AFGHAN WAR.—GOUGH'S ACTION at FUTEHABAD. By the Rev. C. SWINERTON, Bengal Chaplain, Chaplain in the Field with the First Division, Peshawar Valley Field Force. Crown 8vo, with Frontispiece and Two Plans, 6s.

HERAT: the Granary and Garden of Central Asia. With an Index and a Map. By Colonel G. B. MALLISON, C.S.I., Author of "History of the Indian Mutiny," &c. 8vo, 8s.

OUR BURMESE WARS and RELATIONS with BURMA: being an Abstract of Military and Political Operations, 1824-25-26 and 1852-53. INFLUENCE of JOY upon the WORKMAN and his WORK. By H. REDELLACK HEWERTSON. Illustrated by Autotype Facsimiles of Drawings by William Blake, Frederica March, and others. 4to, boards, 5s.

NUMBER PICTURES. For the use of Nursery and Kindergarten. Consisting of Fourteen coloured sheets of the Numbers 1 to 12, illustrating their composition by coloured dots, arranged in a manner similar to the groups found on playing cards, dominoes, &c., and rendering clear the meaning of the numbers, and also giving a true conception of them, by means of Coloured Figures of Familiar Objects, arranged in the corners of each sheet. Price per set of Fourteen Sheets, one Roller, 7s. 1d.; in 10s. folio, 8s. 6d.; mounted on varnished canvas, with rollers, 12s.; or on boards, varnished, 14s.

SHERWOOD'S (Mrs.) JUVENILE LIBRARY. Numerous Illustrations. 3 vols., 18mo, cloth, each 2s. 6d.

W. SWAN SONNENSCHIEIN & ALLEN, London.

RICHARD BENTLEY & SON'S NEW WORKS.

NOTICE.

The Second Edition of THE TEMPLE BAR MAGAZINE for January, in which the two new Serials, "ADAM and EVE" and "THE REBEL of the FAMILY" are commenced, is ready at all Booksellers', price One Shilling.

LORD BEACONSFIELD: his Life, Character, and Works. A Critical Study. By GEORGE BRANDES. Translated by Mrs. GEORGE STURGE. Demy 8vo, 10s. 6d.

FROM THE "TIMES."

"We have no space to examine in detail the manner in which Herr Brandes has executed his task. It was manifestly congenial to him, and he has not a few qualifications for it. His information is copious and singularly accurate so far as we have tested it; and his literary criticisms at least are sound, penetrating, and genial. As a biography, his work is far more valuable, because more concise and impartial, than any which has appeared in England. As a criticism, it is generally instructive, and often suggestive."

PRINCE METTERNICH'S AUTOBIOGRAPHY. Edited by his Son, PRINCE METTERNICH. Translated by ROBINA NAPIER. With Portrait and Facsimiles. 2 vols., demy 8vo, 36s.

THE OLD RÉGIME: Court, Salons, and Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris." With Portraits of Louis XV., Marie-Antoinette, Rousseau, Voltaire, M^{me}. du Barry, M^{lle}. Clairon. 2 vols., large crown 8vo, 24s.

THE HEART of HOLLAND. By Henry HAYARD, Author of "The Dead Cities of the Zuyder Zee," "Picturesque Holland," &c. Translated by Mrs. CASHEL HOBY. Demy 8vo, with Eight Illustrations, 16s.

THE EDINBURGH EDITION of the INGOLDSBY LEGENDS, in large type, with Thirty-two Illustrations by CRUIKSHANK, LEACH, TENNIEL, and DU MAURIER, specially Re-engraved for this Edition by Mr. GEORGE FRASER. In crown 8vo, 6s., cloth.

POPULAR NOVELS AT ALL LIBRARIES.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLES," NO RELATIONS. By Hector Malot. Translated by the Author of "Hogan, M.P." &c. 3 vols., crown 8vo.

"An extremely fascinating story, written with unflagging force, and as full of genuine pathos as of graceful descriptions. . . . The novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

TWO WOMEN. By Georgiana M. Craik. 3 vols., crown 8vo.

NEW NOVEL, BY THE AUTHOR OF "FLITTERS, TATTERS, AND THE COUNSELLOR,"
CHRISTY CAREW. By the Author of "Hogan, M.P.," "The Hon. Miss Ferrard," &c. 3 vols., crown 8vo.

"Christy Carew" is a very clever book, displaying in many places passages such as one has at present the right to expect from George Eliot alone. Is the authoress to be her successor? There are not a few now watching her career with great attention who think she can be if she only chooses."—*Morning Post*.

BY THE AUTHOR OF "TOM BULLEKELEY OF LISSINGTON,"
A PINK WEDDING. By R. Mounteney JEPHSON, Author of "The Girl He Left Behind Him," &c. 3 vols., crown 8vo.

"Mr. Jephson may be congratulated on having given us quite the most amusing book of the new year."—*Vanity Fair*.

"Nothing short of inspiration could have enabled Mr. Jephson to write in so life-like and spirited a manner."—*Daily News*.

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

REMINGTON'S NEW BOOKS AT ALL LIBRARIES.

THE FIFTH EDITION OF GEORGE AUGUSTUS SALA'S
NEW WORK,

PARIS HERSELF AGAIN, will be ready in a few days, with 400 Illustrations, by the first French Artists of the day. 2 vols., demy, handsomely bound, 25s.

"For those who do and those who do not know Paris these volumes contain a fund of instruction and amusement which can be 'drawn' at almost any page with the certainty of a 'find.'"—*Saturday Review*.

"Such a pleasant mixture of anecdote, observation, experience, knowledge, intelligence, and insight as none but Mr. Sala could supply."—*Pall Mall Gazette*.

AMONG the BOERS: Notes of a Trip to South Africa in Search of Health. By JOHN NIXON. 1 vol., demy 8vo, illustrated and handsomely bound, 10s. 6d.

"There is no doubt that the book will be read."—*Scotsman*.

HERMANN: a Novel. By E. WERNER, Author of "Under a Charm," "Success, and How He Won It," "Riven Bonds," &c. 1 vol., 10s. 6d.

"A powerful tale, and, like most of the productions of its prolific author, very readable."—*Athenaeum*.

FOLLY: a Novel. By Mrs. NEWTON SEARS, Author of "Kismet," "Cleansing Fires," &c. 3 vols., 21s.

"It is smoothly told and has a decided interest."—*Athenaeum*.

TENDER and TRUE: a Novel. By WM. ARTHUR LAW, late 21st R. S. Fusiliers. 1 vol., 7s.

"Author and publishers alike have combined to make this work readable. It is a very charming volume."—*Graphic*.

A MODERN IAGO: a Novel. By C. DESPARD, Author of "Chaste as Ice, Pure as Snow," "Wandering Fires," &c.

"A striking novel; will recommend itself to all who have still a liking for good English and a healthy tone of writing."—*Morning Post*.

ILL WEEDS: a Novel. By Madame FOLZ, Author of "The Spanish Cousins." 1 vol., 7s.

"Told with a degree of vivacity that well suits so highly spiced a plot."—*Scotsman*.

A TANGLED WEB: a Novel from the French of Madame NELLY-LIEUTIER. By MARY DICK. 1 vol., 7s.

"In a 'Tangled Web' Messrs. Remington have again lent their powerful aid towards ensuring the success of Miss Dick's capital translation of Madame Lieutier's pretty little novel. . . . It is just the novel to place in a young girl's hands."—*Graphic*.

EL DORADO: a Novel. By Alfred LEIGH, Author of "Maud Atherton." 2 vols., 14s. [Next week.]

FIGHTING and FARMING in SOUTH AFRICA: a Narrative of Personal Experiences in the Colony during the years 1877-8-9. By FRED. G. BROWNING, late of the Frontier Light Horse and 3rd Cape Yeomanry. 1 vol., large post 8vo, handsomely bound, 10s. 6d. [Next week.]

TIME'S WHISPERINGS: Sonnets and Songs. By GEORGE BARLOW, Author of "Through Death to Life," &c. 1 vol., fcap. 8vo, 3s. 6d. [Next week.]

AUTHORS and the PUBLIC are informed that all future First Editions of Novels will be published at the rate of 21s. the Three Vols., instead of 31s. 6d. Special prices quoted to Libraries and others who purchase in large numbers. Authors desirous of submitting MS. for publication are informed that all works not approved are returned within a month from date of their receipt.

REMINGTON & Co., Arundel-street, Strand, W.C.

SAMPSON LOW, MARSTON, & CO.'S NEW WORKS.

A THIRD EDITION is nearly ready.

MEMOIRS of MADAME de RÉMUSAT (1802—1809). Translated by Mrs. CASHEL HOBY and Mr. JOHN LILLIE. 2 vols., demy 8vo, cloth extra, 25s. [Vol. I. now ready; Vol. II. nearly ready.]

From the SATURDAY REVIEW, February 31.
"Of the three volumes which are to contain the memoirs of Madame de Rémusat, two have been published, and of these two, one and a-half have been translated into English. The translation is unusually well done being remarkably free from the stiffness and the foreign air which mark most translations. Nor can anyone doubt that these memoirs deserved to be translated, and to be well translated, into English. 'They are entertaining; they bear on a subject of permanent interest—the character and habits of Napoleon. . . . What between the text and the notes, those volumes are eminently readable, and those who have gone as far as what has now been published will take them will concur in eagerly looking for the completion of the task which M. de Rémusat and his very efficient translators have set themselves.'"

NEW BOOK OF ASIAN TRAVEL.

THE FORBIDDEN LAND: Voyages to the Corea. By G. OPPERT. With Illustrations and Map. Demy 8vo, cloth extra, 21s.

SECOND EDITION.

LIFE and WRITINGS of HENRY THOMAS BUCKLE, Author of "The History of Civilisation." By ALFRED HENRY HUTCH. In 2 vols., demy 8vo, cloth extra, with Two Steel Engraved Portraits of Buckle, price 32s.

FIVE YEARS in MINNESOTA. By MAURICE FARRAR, M.A. Crown 8vo, cloth extra, 6s. [Now ready.]

Now ready, demy 8vo, cloth extra, 10s. 6d.

THE CONFLICT of CHRISTIANITY with HEATHENISM. By Dr. GERHARD UHLHORN. Edited and Translated from the Third German Edition by G. C. SMYTH and C. J. H. ROPES.

Now ready, crown 8vo, cloth extra, 8s. 6d.

THE NATIONAL MUSIC of the WORLD. By the late HENRY FOTHERGILL CHORLEY. Edited by HENRY G. HEWLETT.

Contents.—Music from the East—Music from the South—Music from the North—Music from the West.

Now ready, crown 8vo, cloth extra, 5s.

A FOOL'S ERRAND. By One of the FOOLS.

THE SUGAR BEET: including a History of the Beet Sugar Industry in Europe. Varieties of the Sugar Beet, Examination, Soils, Tillage, Seeds and Sowing, Yield and Cost of Cultivation, Harvesting, Transportation, Conservation, Feeding, qualities of the Beet and of the Pulp, &c. Illustrated. By L. S. WARE. 8vo, cloth extra, 21s.

THE BOY'S FROISSART. Selected from the Chronicles of England, France, Spain, &c. By SIDNEY LANIER. Fully illustrated. Crown 8vo, cloth, 7s. 6d. Second Edition.

Now ready, small post 8vo, 5s.

HOW to GET STRONG and HOW to STAY SO. By WILLIAM BLAIR. A Manual of Rational Physical Exercise. With Illustrations. "Worthy of everyone's attention, whether old or young."—*Graphic*.

STUDIES in GERMAN LITERATURE. By BAYARD TAYLOR. Edited by MARIE TAYLOR. With an Introduction by the Hon. GEO. H. BOKER. 8vo, cloth extra, 10s. 6d.

THE NEW ADDITION TO LOW'S STANDARD SIX SHILLING NOVELS IS
THE AFGHAN KNIFE: a Novel. By ROBERT ARMITAGE STERNDALE, Author of "Scoundrel." Small post 8vo, cloth extra, 6s.

WITH THE SANCTION OF THE SCIENCE AND ART DEPARTMENT OF THE COMMITTEE OF COUNCIL ON EDUCATION. To be published in Monthly Parts, each containing Eight full-size Plates, price One Shilling.

THE SOUTH KENSINGTON MUSEUM. In order to render the Collection of South Kensington available for the instruction of all classes, it is proposed to publish a Series of Engravings of many important Objects in the Museum and of the Decorations of the Building, with brief descriptions, at the lowest possible price. [Part I. is ready.]

"Perhaps unparalleled for cheapness."—*Daily News*.

Now ready, 4to, in wrapper, No. 51, price 1s. 6d., of
MEN of MARK, containing Three Permanent Medallion Cabinet Photographs, specially taken from Life for this work only.

ST. NICHOLAS, for March, is now ready. Illustrated. Price 1s.

Price 2s. 6d.
THE NORTH AMERICAN REVIEW, for March. [Now ready.]

LONDON:
SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,
Crown-buildings, 188, Fleet-street, E.C.

SATURDAY, MARCH 6, 1880.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

ROMAN CATHOLICISM AND RITUALISM.

Per Crucem ad Lucem. The Result of a Life. By T. W. Allies, M.A. In 2 vols.

The Anglican Ministry: its Nature and Value in Relation to the Catholic Priesthood. An Essay by Arthur Wollaston Hutton, M.A., of the Oratory of St. Philip Neri; with a Preface by his Eminence Cardinal Newman. (C. Kegan Paul & Co.)

WE notice these works together, because both are written by converts to Rome from the English Church, and both directed against those who have remained behind; yet their characteristics are different. Mr. Allies was a member of the old "Oxford School"; Mr. Hutton belonged to the modern Ritualists.

Probably a more frank admission was never made by a literary man than that with which Mr. Allies' book opens. He had published two editions of a learned work intended to vindicate the Church of England from the charge of schism, when (in 1850) he discovered "that by a statute, passed in the reign of Henry VIII., and accepted by the English Church, the Papal supremacy had been transferred to the Crown; and that the existing relation between the Church of England and the State was simply the result of that statute, which, though it had been repealed under Mary, had been re-enacted under Elizabeth."

It is a curious phenomenon that a man should have written a voluminous and really learned work on the position of the English Church since the Reformation while he was wholly unacquainted with so cardinal a document as the statute in question. Whether he is right in his interpretation of it—whether the Crown really has all the power which the Pope possessed before the Reformation—we do not now enquire. At all events, this startling discovery of this recondite statute led Mr. Allies to change his views with the utmost rapidity, and with equal speed to write a book on the Royal Supremacy which "neither friend nor enemy, so far as he knows, set himself to refute." This is the first treatise republished in this volume. In the same year, while still a beneficed clergyman of the Church of England, Mr. Allies' rapid pen produced a book on *The See of St. Peter*, in which the fullest claims of the Church of Rome are advocated with the same learning and ability with which he had a year or two before defended the Church of England. This was of course his last act as an English clergyman; in those days an English clergyman who adopted Roman views joined the Church of Rome. Fifteen years later, a reference to Mr. Allies in Dr. Pusey's *Eirenicon* called forth a letter to Dr. Pusey in his own defence,

which received no acknowledgment; and this same *Eirenicon*, which does not seem to have been exactly a peacemaker, also led Mr. Allies to examine Dr. Pusey's theory of heresy and schism in a more considerable work—*Dr. Pusey and the Ancient Church*—published in 1866. These treatises form the first volume. In the second are republished five articles—on the Testimony of Grotius and Leibnitz to Catholic Doctrines, on the Education of the Ministers of the Church of England, on Christian and Anti-Christian Education, on Church and State in England, and on the Catholic and Protestant Conception of Missionary Work—together with an important treatise on "St. Peter, his Name and his Office, as set forth in Holy Scripture." Each volume has an Introduction, that to the first forming an essay of about eighty pages. As it is obviously impossible within our limits to notice adequately such a collection as this, we must content ourselves with taking a specimen of the author's competency to discuss a historical question. He tells us quite gravely (vol. i., p. 37) that

"it cannot be doubted that, in the first instance, the College of Apostles, having St. Peter at its head, divided the world for the purpose of evangelising it, assigning to each bishop his sphere of action. From that division sprang the whole order of the ancient Church, at the head of which stood the three sees of Peter—Rome, Alexandria, and Antioch—as St. Gregory the Great in his letters observed to the patriarchs of the two latter sees."

That is to say, Mr. Allies introduces a statement which rests on no evidence whatever, with the words "it cannot be doubted;" and this, too, although the diocesan system notoriously followed the lines of the imperial divisions, and in all probability was derived from them. To introduce the statement of any fact which is important for your purpose with the words "it cannot be doubted" is certainly a very convenient way of writing history.

And one instance we will give of his humour. The Act 1 Eliz. c. 1 denies "any manner of power, jurisdiction, &c., on the part of any foreign prince, prelate, State, or potentate," in England. Thereupon Mr. Allies takes occasion to remind us (vol. i., p. 24) that "St. Peter himself, like his Divine Master, was a Jew," and that, therefore, the objection to a "foreigner" "might be pleaded with exactly as much or as little force against the authority of our Lord Himself." If this is a joke, it is a very dull, not to say a profane, one. And yet Mr. Allies cannot be serious; for he must know that the objection would equally lie against a "foreign prince" who chanced to be an Englishman born; and, for that matter, Englishmen are not absolved from yielding obedience in lawful matters to a ruler who chanced to be a Jew. Race has nothing to do with the matter, as Mr. Allies very well knows. If any nation has accepted the maxim, "there is neither Greek nor Jew, barbarian, Scythian, bond nor free," it is the English.

Mr. Hutton's work is directed entirely against the Ritualistic party in the Church of England; its aim is to show the Ritualists that, on their own principles, their position is untenable; that the Church of England is not a Church which ought to satisfy those

who hold the sacerdotal views which the Ritualists undoubtedly do hold; that it is, in fact, essentially Protestant. It is a curious sign of the times that a Roman Catholic should devote a considerable volume to proving that which a generation back was universally acknowledged; and that the epithet "Protestant," which Laud and his school did not repudiate, should now be with many members of the English Church an opprobrious appellation. The book is extremely well written, and discusses the points at issue with temper and good taste. Mr. Hutton does not forget that he is an English gentleman, and he treats of matters which deserve earnest thought from those whom he addresses. To originality he makes no great pretension, and in that part of the work which treats of the validity of English Orders he confessedly depends mainly upon Canon Estcourt.

Mr. Hutton evidently understands thoroughly the position and views of the Ritualist party; as is natural, some things in which he once took part now seem to him mere follies or solemn mockeries of great realities. His description of the perplexities of an Anglican who has resolved to adopt Eucharistic vestments is as true as it is amusing; and what he says of the young priest, as soon as the bishop's hands have been laid upon him, "inviting all, of whatever age, condition, or sex, to come to him for private confession," will command the assent of all sensible men.

In considering the character of the Anglican ministry, much, of course, turns on the historical questions relating to the consecration of Archbishop Parker. The "Nag's Head fable" has vanished from all respectable pages, and of course does not appear in Mr. Hutton's; that Archbishop Parker was in some way consecrated is agreed; the principal point in question is whether Barlow, the consecrator of Parker, was himself a bishop. As to this, the evidence is not unfairly stated, and Mr. Hutton sees that there is a very strong presumption that Barlow was a duly consecrated bishop. It is, in fact, simply incredible that Barlow, one of the best-hated men in England, could have passed for a bishop for thirty-two years, and taken his seat in the House of Peers as such, without any objection being alleged during his lifetime, if he had not been actually consecrated. He was capable of consecration, and what possible motive could he have had for avoiding consecration, or the archbishop for refusing to consecrate him? Barlow could clearly have gained nothing but insecurity. It is indeed suggested that the thing was done to flatter the King with the notion that he could make a complete bishop without the intervention of any spiritual person. But in order to gratify the King in this way, the absence of consecration must have been a notorious fact; he must have been able to point to a bishop of his own sole making in the face of the world. To have chuckled over the thing with Barlow himself and the two or three who were in the secret would surely not have been very gratifying to him. And it is certain that to the end of his days Henry believed in the sacrifice of the Mass, and therefore was not likely to consent to an act which would have intro-

duced into the Church a number of seeming priests who had not really received power to offer the sacrifice. Henry held, no doubt, that the powers which the Pope had once exercised in England resided in himself; but he could not have inferred from this that bishops needed no consecration, though he might conceivably have thought himself qualified to consecrate. This, however, no one affirms that he did. The fact is that all that can be alleged against Barlow's consecration is the absence of a record of it in Cranmer's register—a register which is said to have been generally very carelessly kept. The other suspicious circumstances to which Mr. Hutton refers are comparatively of no importance.

But Mr. Hutton, like Mr. Allies, by no means admits that, if the historical question as to Barlow's consecration is decided in his favour, then the ordinations of priests and bishops in the Anglican Church are valid; he alleges theological principles to the contrary. Here one cannot but be struck by the highly technical and artificial nature of the rules which determine the "validity" of a rite, and we are therefore not surprised that (p. 523)

"Catholics are not called upon to hold that in no single case has there been a bishop who, for lack of valid baptism, ordination, or consecration, was a bishop only in name. But they may well believe that the government of the Church would be so providentially ordered as to hinder such a person from being called upon to continue the succession."

That is, the "validity" of the consecration of any given bishop in the Roman Catholic Church at this moment is purely a matter of faith and not of evidence. It surely must have occurred to Mr. Hutton that others beside Roman Catholics may have a similar faith in the Orders of their own Church; and he can hardly expect even Ritualists to accept as conclusive the *dicta* of Gury and Lacroix on the conditions of a valid consecration. He says, very truly (p. 160), that

"the Sacrament of Holy Orders, . . . though instituted by Christ, was not, so far as we are able to learn from the Gospel narrative, made by Him to depend on any one outward and visible sign, or on any one form of words. That is to say, the regulation of its matter and form appears to have been left to the Church."

The argument in the last sentence appears to be this:—"Christ prescribed no form of ordination; therefore the *dicta* and practices of the existing Roman Church in this respect are to be accepted as of Divine authority." If Mr. Hutton expects the Ritualists to accept this, he must have a very mean opinion of their understanding. In truth, here, as in all books of this kind, we come upon the old standpoint of Roman Catholic controversialists: "Accept the Roman Church; believe what the Church tells you; that is your only safety." The reasoning which is to persuade a man to accept the Roman Church depends ultimately, not on general truths, but on the authority of that Church itself.

The greater part of Mr. Hutton's arguments Evangelical Protestants may accept without being in any way moved to join the Church of Rome. They may assent to Mr. Hutton's proposition (p. 161) that "if we disregard the practice of the Church

. . . it is by no means clear that we should be able to insist upon the necessity of Episcopal ordination, as distinct from Presbyterian, at all," with perfect equanimity; and certainly they will be ready enough to admit that the leaders of the Church of England in Elizabeth's time did not contemplate the kind of sacerdotalism which is essential to the theory of modern Ritualism.

Mr. Hutton hopes that he may persuade one or two to pass over to the Roman Church. Perhaps he may attain that modest degree of success; but hardly more. For few men are very anxious about the logical coherence of the religious system to which they belong; most men hold their tenets because they always did hold them, or because they find them in some way pleasant and comfortable; and still fewer have not only the desire for logical completeness, but the courage which leads them practically to follow their principles to their legitimate conclusions. The Ritualist body of the present day does not contain such men as Newman, or Manning, or Ward.

S. CHERTHAM.

Lord Beaconsfield: a Study. By Georg Brandes. Authorised Translation by Mrs. George Sturge. (R. Bentley & Son.)

Lord Beaconsfield: ein Charakterbild. Von Georg Brandes. (Berlin: Gebrüder Paetel.)

WHEN a distinguished foreign critic studies our society, or our literature, or our eminent persons, we care more to listen than to dispute; we learn more by attending to his voice than by raising our own. Probably, notwithstanding the description—pleasing to lovers of the sensational picturesque—of Lord Beaconsfield as a sphinx, each of us has a fairly definite conception of the sphinx's nature, and of his achievement in the world of action and the world of letters. The opinion of a Continental critic will not greatly modify that already formed by each of us; but to see how things look to alien eyes is a piece of education. Besides, the foreign student professes, and perhaps attains, a measure of impartiality too Olympian for a British voter and tax-payer. Absolutely impartial, indeed, he cannot be. A Dane cannot but remember 1862, when a Liberal Ministry left Denmark to arrange her affairs single-handed with Germany, and when Disraeli stepped forward to expose "the weakness, confusion, vacillation, and inconsistency" of the Government. Upon the whole, however, Brandes is a disinterested critic. Continental Liberalism is, in some respects, so different from English Liberalism that one who sides with the intellectual party of movement abroad may yet look with imperfect intelligence and small regard on the faith and aspirations of an English Liberal. Moreover, upon the whole, Brandes writes more as a man of letters than as a politician, and to examine a personality possessing curious aesthetic interest concerns him more than to ascertain the meaning of a "scientific frontier" or a "peace with honour."

From Isaac Disraeli his son inherited the eighteenth-century irony and scepticism which underlie all his romance and mysticism; the romance is positive, and even in the mysticism there is something worldly and materialistic.

"In his castles in the air you do not find the malaria arising from the Maremmas of superstition and prejudice; they are the Fata Morganas of the desert, the products consciously constructed of an arid and fiery fantasy."

From his father, too, came an instinctive liking for the Tory way of thinking, and a peculiar sympathy with the royal house of Stuart. From elder generations and from his race was derived his pride of ancestry. Yet this aristocrat of Abraham's house, popular in boyhood for his personal qualities, and already burning with the consciousness of inward power unrealised and unrecognised, was through his ancestry an alien and an outcast in English society. Young Vivian Grey at school is a "seditious stranger;" Contarini Fleming, with his Venetian countenance, finds himself alone among his blue-eyed, flaxen-haired fellow-pupils. Each is an insulted victim; each thirsts for revenge, and each drinks a delicious draught of that bitter cordial.

With a fund of talents and unbounded self-confidence, Disraeli started on his career. *Forti nihil difficile.* What was the motive-power which impelled his talents? How shall we discover through the young author's writings, asks Brandes, the author's self? Not in the main outline of story, nor in the moral quality of the characters, but "in casual expressions, in turns of thought which serve as exemplifications, in the choice of metaphors, in lyrical outbursts which do not belong to the course of the narrative." Such irrepressible lyrical outbursts Brandes cites from *Vivian Grey* and *The Young Duke*, celebrating the power of ambition and the strength of revenge. Ambition may take the form of a love of fame or a love of power.

"It appears to me that if Disraeli had had his choice, whether to be the powerful president of a secret tribunal or a Tasso fêted at Ferrara, he would have chosen the former. But the two objects have certainly never been separated in his aspirations, although he felt his relations towards them to be different. He saw fame before him as if he could grasp it, or extort it by his talents; there was, therefore, no need to gain over or flatter anyone; he would, perhaps, attain it best by challenges on all sides. Power was far off, very far, and was only to be attained step by step; the path was slippery and tortuous; but he was firmly resolved to spare no pains, to shrink from no humiliation, no trial of patience, that might lead to the goal."

To attract attention is a first step towards fame and power. Graft the desire of attracting attention on an Oriental temperament, and that in an age of Brummell-worship—may not the result be an incomparable dandy? Even Byron was part coxcomb, part man of genius. Disraeli, who had his share in the elegant *cultus* of Byron, uses a phrase which characterises his ideal of life at this period—"half passion, half fashion." The coxcombry of precocious worldliness, of affected cynicism, went along with other youthful vanities of the time. To appreciate perfectly the arts of a coquette and the flavour of a lobster-salad is evidence that one is no longer on the sixth form of a school.

Disraeli had no university training, and the lack of scientific education has avenged itself, and left something lacking in his intel-

lect. The germs of fantasy and paradox in his mind were in conditions only too favourable for growth. Hence a curious, half-developed mysticism, a taste for the mysterious and ceremonially impressive, a remarkable preference for all unscientific knowledge, a liking for the apparatus of the conjuror. Why should the new and unpicturesque hocus-pocus of the chemist let us farther into the secret of the universe than the venerable and impressive ceremonies of the ancient mage? This boasted "useful knowledge" of the nineteenth century not only strips away the romance and charm of life and levels all the ancient distinctions of race and rank, but tends to falsify one central fact of human nature—that men are governed more by the imagination than by the reason. "Mormon counts more votaries than Bentham."

So speaks and thinks, exclaims Brandes, "der Wissenschaftlose," he who lacks the scientific sense and scientific training. Yet, in the high value placed by Disraeli on imagination as a factor in politics, the originality of the man consists.

"There is some truth, something even profound, in this view of imagination as a political motive-power. It springs from his own peculiarly imaginative temperament; and this mode of looking at things is to such an extent the central point with him that to understand Disraeli's feeling for the part played by imagination in politics and his adroitness in turning it to account is to possess the key to his inward life as poet and statesman."

We might perhaps ask whether the highest imagination, in the world of action or in the world of art, is antagonistic to science, which is but another name for a knowledge of facts, their groupings and their laws. If it be, then so much the worse for imagination.

The novels of Lord Beaconsfield are studied by Brandes in chronological order, and each is traced to its origin in the author's character and circumstances or in some political situation. Their individuality, their piquancy, their poetry, are valued by the critic at the full worth, or perhaps a little more than the worth; while he is not insensible to the too frequent substitution of counterfeit ideas for thought and counterfeit sentiment for feeling. To *Tancred* he would assign a very high place, if not the place of honour, among the inventions of Lord Beaconsfield.

"It is a book having, Janus-like, two faces—the one expressive of impenetrable irony, the other of almost pure mysticism; and the contrast is not done away by *diversus respectus*, for the irony hovers over the mysticism, which is the pivot of the book, and is indeed to be found in the mysticism itself."

In the young Emir, Fakredeem, a curiously altered likeness of the young Disraeli may be found.

"There is in the Emir's political character the most singular mixture of lofty aims and ambiguous conduct, of faith in an idea and faith in intrigue. . . . Fakredeem is engrossed with the idea of the re-organisation of Western Asia. Sometimes he is animated by Disraeli-like confidence in the power of ideas, or in *formulæ* which appeal to the imagination; but the next moment he looks about him for petty means and artifices."

External nature in these novels forms a

melodramatic background for the struggles of the human adventurers.

"Nature is to Mr. Disraeli never anything but—what he characteristically calls her in two of his works—an Egeria, that is, a source of political inspiration. He has taken refuge with her when weary of politics, like the tired soldier in the *vivandière's* tent. But he never loved her for her own sake."

On the love of man and woman, as presented in *Henrietta Temple* and elsewhere, Brandes writes:—

"In Disraeli's manner of writing about women and love three stages may be noticed. In his early youth, in *The Young Duke*, he shows keen observation and freshness, much insight and surpassing irony; in his manhood he depicts the ardent, admiring love of two creatures, and, strongly affected by it himself, breaks forth into a song of praise in honour of Eros; in the third stage, woman is to him a higher, more representative being than man—she is the symbol of a great idea, and he describes her, and love for her, in the appropriate spirit—that of reverent tenderness. Thus Sybil represents the people and the Church; Eva, in *Tancred*, Judaism and the East; Theodora, in *Lothair*, Italy and national liberty."

Faith in race, faith in the force of great individuals, distrust in the machinery of constitutional government, and, in conjunction with the new Toryism, a deep sympathy with the spirit of revolution—each of these is a note of the genius of Disraeli, and each is the occasion of admirable comment from his critic. Of *Lothair*, Brandes writes:

"What makes *Lothair* psychologically interesting arises from the same position of affairs that has made the style official—namely, that the author stands at the summit of his wishes, and has realised his schemes, so that he no longer needs to take various circumstances into consideration. *Lothair* is a more straightforward book than the 'trilogy,' so-called, which preceded it. It is not only without false mysticism, but, in a religious point of view, it is the most openly free-thinking work that Disraeli has written, so opposed to miracles that it might be taken for the work of a rationalist if the fantastic author had not signed it with his fantastic doctrine, never renounced, of the sole victorious Semitic principle."

From a comparison of Lord Beaconsfield with his great antagonist a few sentences must be given:—

"Gladstone is a character, a man capable of development, and always developing, and of extraordinary gifts, especially of great practical understanding; he has the head of a financial Minister and the heart of a philanthropist; he is a man of figures, with sympathy for the suffering of humanity; but he is uninteresting and wanting in originality. The character of Lord Beaconsfield, on the contrary, is absolutely original; there is something daemonic in him. His mind is of the metallic order, while Gladstone's is of the fluid sort. . . . Gladstone is a clear and energetic, but far too discursive speaker; not a single word, not a telling phrase, stands out in the torrent of his eloquence so as, once heard, never to be forgotten. He has himself defined the relations between the speaker and his hearers; he says that the speaker gives them back in the form of a river what he receives from them as vapour. He himself is the speaker thus defined, and it is on the close relation to his hearers here indicated that the great effect of his words depends; they seldom read well. Lord Beaconsfield's speeches, on the contrary, are eminently monologues, the products of an original, paradoxical, and therefore

isolated mind, the work of a born author, brilliant and sparkling, excellent in parts, but long passages of them are trivial, a mere tissue of spangles."

Having skimmed so much cream from this very interesting volume, I leave much more behind. The English translator has made a pleasant, well-written book, which in the main faithfully represents the original, though, if it were to be subjected to minute tests, it would be found that in some instances less ready acquiescence in a readable phrase would have been wise that so a fuller and more exact substitute for the words of her author might have been discovered.

EDWARD DOWDEN.

Henrici Archidiaconi Huntendunensis Historia Anglorum (A.C. 55 to A.D. 1154). Edited by Thomas Arnold, M.A. (Rolls Series.)

MR. ARNOLD'S Introduction to the Archdeacon of Huntingdon's *History of the English* is so crammed with learning as to be not a little difficult of digestion. Most of his readers, we think, would gladly have spared part of his laborious analysis of the MSS. which he has collated for this edition, in exchange for a little more information respecting the historical additions made by his author to the chroniclers upon whose foundations he built. This information is not withheld, but is for the most part relegated to foot-notes appended to the text, which are far less easy to consult than the Introduction.

The Archdeacon's *History* was compiled, at the instance of Alexander of Blois, Bishop of Lincoln, upon the basis of Bede and the Saxon chroniclers, and continued down to his own time. It occupied him from about the year 1125 until his death, soon after the accession of Henry II., which is the last event it records. The five editions issued during the author's lifetime were respectively brought down to the successive dates of their appearance. The last three received sundry additions from his hand of a religious, moral, or rhetorical character. A supplementary book, *De Miraculis*, which in his third edition the author annexed to the narrative of the Conversion of the English, Mr. Arnold thinks it right to omit, but evidently with reluctance, and he atones, as far as possible, for the omission by giving copious extracts from it in his Introduction. Its account of the prodigies performed by the English saints he holds to possess "considerable interest," an opinion in which this sceptical, prosaic age of ours will scarcely, we think, concur. Of more historical value are some of the particulars contained in the epistle "De Contemptu Mundi," inserted in another edition, in which the writer describes, from personal knowledge and other special sources, the chequered lives of many of his illustrious contemporaries. This epistle Mr. Arnold judiciously includes in the Appendix.

An ecclesiastic of rank like the Archdeacon, confined within the narrow circle of a provincial diocese, seems to have been less favourably situated for obtaining first-hand knowledge of contemporary events than humble monks, such as Matthew Paris and Ordericus Vitalis, who, at the great monasteries where they dwelt, frequently enter-

tained as visitors men of the highest distinction, and heard them describe many stirring scenes in which they had themselves been actors. Of events which he had personally witnessed, the Archdeacon refers to but two that possess any particular interest—viz., Stephen's breach (while residing at Brampton, near Huntingdon) of his coronation oath not to claim forestal rights in any woods which had been already disafforested, and the rebuilding of Lincoln Cathedral by Bishop Alexander of Blois.

From his partial estimate of the fens (which he describes as "pulcherrimæ paludes") and a reference to the Abbot of Ramsey as his lord, it may be gathered that the Archdeacon was a native of Huntingdonshire or Cambridgeshire. He may thence have derived some of the local traditions of Saxon times which embellish the narrative that he has for the most part compiled from native chroniclers. His account of a hero at Balsham, in Cambridgeshire, who singly withstood a whole army of Danish invaders in the year 1010 (p. 178) and of the treachery of Edric at the Battle of Assendune in 1016 (p. 184) may be instances of this kind. His embellishments, however, are often so obviously rhetorical that it is difficult to put faith in any. He imitates Thucydides in ascribing long speeches to distinguished generals upon the eve of important engagements; Caesar, William the Conqueror, and the rival leaders at the Battle of Lincoln in 1141 being thus credited. His love of exaggeration displays itself in his multiplying by ten the number of five hundred men whom the earlier chroniclers state to have fallen in the assault on Worcester in the reign of William Rufus (p. 214). He is responsible for altering the Saxon chronicler's statement, that in the Conqueror's days a man of mark might fare unharmed across the kingdom with his bosom full of gold, into the poetical version, "puella auro onusta" (p. 210). He describes in the following grandiloquent terms the battle of Burford in 752: "Acies loricis crispantes; galeis acutas, lanceis hirsutas, vexillis depictas, auro resplendentes" (p. 121)—which are more appropriate to a conflict of Romans and Parthians than to the armies of Wessex and Mercia. He perverts a simple statement of earlier writers that there was a great murrain among birds in 672 into a story of a "maxima pugna volucrum," which he caps by another of later date in which one thousand were found dead on the field (p. 61). This he interprets as one of the portents of the time, about which he is specially credulous, telling or inventing numerous stories of historical calamities having been preceded by omens in the sky, blood boiling in pools, and the like. Notwithstanding the suspicion thrown upon his pages by this florid extravagance, we are indebted to him for a few striking narratives which he can hardly have invented, but must be presumed to have borrowed from writers not now extant. Of this class are the anecdotes of Cnut and the tide, and the heroism of Siward Earl of Northumbria.

The Archdeacon's characteristics as an historian are disposed of by Mr. Arnold in the following well-balanced judgment:—"He was ambitious, but not laborious; literary, but

not exact; intelligent, but not penetrating." His chronology of the period before the Conquest appears to be very inaccurate, but he may be relied on when dealing with events of his own time. That he was ignorant of Saxon is apparent from his frequent misrenderings of common words, such as "mere" and "dyke," which he converts into names of places (pp. 111, 153), and the fact that his citations of native phrases and verses are rarely given in the original. His chief merits as a chronicler seem to have been the comparative impartiality of his political views and a freedom from racial prejudice remarkable in a writer of purely Norman blood. Mr. Arnold has performed his editorial task, if possible, only too conscientiously, and no aid that marginal headings, notes, glossary, and index can render to the student has been forgotten.

HENRY G. HEWLETT.

Our Future Highway. By Verney Lovett Cameron, C.B., D.C.L., &c. 2 vols. (Macmillan.)

MR. CAMERON'S excellence as a traveller was triumphantly established by his march *Across Africa*. The present work exhibits rather his deficiencies. In tramping through the Dark Continent pluck and the pistol may be the voyager's best friends; in an excursion through the well-trodden Mesopotamian valley the pen must be well trained, well informed, and always bright if it is to carry the traveller creditably through two volumes. In comparing this work with the record of Mr. Cameron's previous achievement, we see at once how essentially different are the qualities requisite for success. We pardon almost every kind of literary fault in the man who presents us with the rude impressions of a great battle with Nature in the closest of her strongholds; but we cannot extend the same consideration to an account of a journey upon the Tigris and the lines of at least ten competing schemes of railroad. In this field Mr. Cameron's work bears no comparison with that of others. Mr. Grattan Geary's book *From Bombay to the Bosphorus*, describing, as to its greater part, the same route, is in every way superior to that of Mr. Cameron.

Perhaps Mr. Cameron's error, which is conspicuous on nearly every page, is natural to a man of his experience. In travelling through Africa the best thing he could do was to keep a journal, to enter in that journal the smallest incidents in the life of each day, and to give the contents of that journal to the public. He seems to have followed the same plan in a country where the every-day incidents of travel are familiar to all readers and have but little interest. It is requisite, for the writing of an interesting book upon a country so well known as that Mr. Cameron now treats of, that the writer should have the faculty for giving *impressions de voyage*, as Alexandre Dumas entitled his works, with originality and with some unusual knowledge. Mr. Cameron has no originality, and his style is perhaps almost the least interesting to which it is possible to descend. We may hope that this book will not detract from his well-earned reputation. Now and then through its tiresome pages we catch glimpses of the rare and sterling qualities he undoubtedly

possesses—courage and personal strength—but, on the whole, there is no useful purpose whatever served by the publication of such a book.

This may seem a harsh judgment, but it is formed after a most careful reading. The following is a fair specimen of Mr. Cameron's literary style:—

"It was with mingled feelings that we rode away from Baalbek, for, though we were glad to be again on the road after such an unforeseen delay, the ruins seemed to grow upon us, and, as we lost sight of them, it seemed like leaving old friends."

Mr. Cameron's route is from Cyprus to Beyrout; through Baalbek and Homs to Aleppo; thence to Diarbekr and Mosul. From Mosul, he follows the well-known Tigris route to Bagdad, and from Bagdad by the Shat-el-Arab and the Persian Gulf to Kurrachee and London. He does not conceal his admiration for Lord Beaconsfield's policy. One Nazim Khan congratulated Mr. Cameron on being "the countryman of Gladstone and Argyll," but the Nazim "rather winced" when Mr. Cameron "told him of the Russian rule in Poland, the enormous standing armies which are at the beck of the Czar, the knout and Siberia, the secret police," &c. We, however, will not follow Mr. Cameron into politics. There must be something of the Rip van Winkle about a man who has spent years in tramping through the oblivion of Central Africa. The *idée mère*—Mr. Cameron is very fond of displaying French, *à propos*, as he would say, *de rien*—of this work is the discovery of the best line of railway, and if Mr. Cameron had with that view given his book a practical flavouring, it would have possessed more substantial value. The railway results of his journey, which are really of some importance, are huddled up in two or three pages of a chapter in the second volume, to which we can approach but slowly through the bewildering mass of trivialities, which, as we have said, would possess interest if they related to perfectly unknown tribes of Africa, but which are wearisome beyond expression as concerning the well-known habits of Asiatic Turkey, and, we must add, when they are set down with the indiscriminating and uninteresting pen of Mr. Cameron.

It is curious to notice with what shrewdness the natives of a village so remote as Tel Kala'ach appreciate the construction of a railway. They do a very fair business, as they buy the wheat of the surrounding villages at the same price as if they were farther from the coast, and, as they have comparatively little to pay for carriage, they make large profits. If a railway were made, they argued that they would be in a still better position, but they objected very strongly to having a railway beyond Tel Kala'ach. That is an interesting reference, but the majority of Mr. Cameron's pages are occupied with matter such as the following:—

"At Tripoli we had bought from two small boys, who were dragging him about, a little mongrel terrier—which had evidently strayed from some ship—for the large sum of fivepence, and the little beggar was here, there, and everywhere after the hares and foxes."

Now and then, as if by accident, he touches

upon matter to which he would have done wisely to devote a large share of attention—the consequences of the war to the population and to productive industry. Near Homs he met with families “travelling with all their scanty belongings packed on camels and donkeys.” On being asked

“what they were tramping the country for, the answer was nearly always the same. The village they were quitting had dwindled down in numbers owing to sickness and the war. In consequence of this, the taxes, which had been assessed at the last census according to the then population, had begun to press heavily upon the reduced numbers, and they were going to some town or village which had not been so unfortunate, where they hoped to find life less burdensome.”

Mr. Cameron, who is evidently a man of frank and generous nature, while he does justice to the rival work of Mr. Grattan Geary in describing it as “clever,” is probably a far better authority than Mr. Geary as to the natural habitation of turkeys and bustards, and he points out that Mr. Geary is wrong in his idea that turkeys first came from America. Mr. Cameron gives one or two very interesting details of Turkish misgovernment, which he collected from Mr. Malet, whom he met at Aleppo. Mr. Malet, then first secretary of legation at Constantinople, is now political agent in Cairo. Mr. Malet spoke of a headman of a village

“who had built a very fine house out of bribes he had received from people who tried to escape the conscription. He had not seemed at all ashamed of this. When men were drawn to serve in the army he had told them to give him amounts varying according to their wealth, and then to go away and hide in out-of-the-way places until the parties sent round to collect the conscripts had gone away, when he would send and give them notice that they might return. When the recruiting officers came he betrayed all these people to them, so they had both to pay and to go as soldiers, whilst he pocketed the money, and also got rid of probable enemies.”

Such information makes us wish for more, and we doubly regret when Mr. Cameron relapses into his usual style, which is of this sort:—“Two hares were started and coursed, and one killed after a good run; and I was delighted to find that Sultan could, after the first hundred yards, get away from Schaeffer's Masood.”

It is a great fault in this book that the progress of the journey is obscured by the continual narration of trumpery incidents of sporting. Mr. Cameron is always “after gazelle,” or “flushing snipe and duck,” or doing battle with “pig,” with no variety in the process; but we obtain a better glimpse of the real prowess of the man when, in vol. ii., p. 34, we see him riding a race with Sheik Hosayn, and while galloping beside the Sheik, Mr. Cameron says, as if it were the easiest matter in the world, “I put my arm round his waist, and, before he well knew where he was, had him across my saddle.” That is the man to walk across Africa, but his hunts after gazelle are a little tedious. When he gets to “the country stretching away to the Tigris north of Mosul,” this is the leading incident:—

“I tried patient stalking. At last my perseverance was rewarded, and I got within a hundred and fifty yards of three [gazelles], and,

carefully selecting the biggest, sent a Henry expanding bullet into his *pot pourri*. He went a short distance, but another through his heart dropped him dead.”

We dare say Mr. Cameron will think it “sickly sentimentality” on our part, but we must confess that we find this sort of thing somewhat nauseous. The chapter on railway communication is, as we have said, the only valuable portion of these uninteresting volumes, and the line which Mr. Cameron advocates with much good sense and sound argument would pass “from Tripoli to Homs, Hamah, Mara, Idlib, Aleppo, Urfa, under Mardin, Nisibin, Mosul, and then by the valley of the Tigris to Baghdad, thence to Bushire, and in some future time by Laristan and Beluchistan to Karachi.” But—and the omission is significant—Mr. Cameron nowhere tells us where the money is to come from for this great enterprise upon the line of “our future highway.”

ARTHUR ARNOLD.

Selections from the Kur-án. By Edward William Lane. A New Edition, revised and enlarged; with an Introduction by Stanley Lane Poole. (Trübner.)

THIS interesting and instructive volume is more modestly than correctly described in the title-page from which we have extracted our heading. So much new and original matter has claim to distinct consideration, and is without the scope of a second edition or re-issue. The book is, in fact, to quote the words in the Preface, a brief “Sketch of the beginnings of Islám,” illustrated, or rather supplemented, by Lane's *Selections from the Kur-án*, revised and enlarged. The author has, too conscientiously perhaps, given a list of authorities from whom he may not only have purposely borrowed, but whose words he may have unwittingly used in the course of his Introduction; and he could hardly have supplied a better guarantee for the soundness of his information. It will gratify the English reader to observe that one-third of the able Orientalists he has named—not necessarily linguists—are his own living fellow-countrymen, some of them apparently on the mere threshold of a distinguished career. Mr. Poole's subject is divided into four chapters, treating of “the Arabs before Mohammad,” of “Mohammad,” of “Islam,” and of “the Kur-án” respectively. These are, we think, better adapted to the general taste of the day than could be any abridgment, or modification, of Sale's “Preliminary Discourse,” such as the late Mr. Lane himself prefixed to his *Selections* on first publication. The opening chapter is agreeably interspersed with poetry and anecdote; and we are glad to see utilised, among the specimens of the former, Mr. Lyall's spirited translations, which, while sufficiently literal for truth, are made to imitate the metres of the original Arabic.

Referring to the virtues and repute of the Arab women of the desert, our author says:—

“It was the wife who inspired the hero to deeds of glory, and it was her praise that he most valued when he returned triumphant. The hero of desert song thought himself happy to die in guarding some women from their pursuers

Wounded to the death, ‘Antarah halted alone in a narrow pass, and bade the women press on to a place of safety. Planting his spear in the ground, he supported himself on his horse, so that when the pursuers came up they knew not he was dead, and dared not approach within reach of his dreaded arm. At length the horse moved, and the body fell to the ground, and the enemies saw that it was but the corpse of the hero that had held the pass. In death, as in life, *sans peur et sans reproche*, ‘Antarah was true to the chivalry of his race.”

This account of the death of a popular character in Arab romance would, perhaps, be disputed by those who apply the test of close criticism to legend as well as history. We hear of a more probable and more ancient tradition, showing that ‘Antarah was killed by an arrow shot at him by a man of Tayyi, as he was riding along alone in a pass among the hills. Moreover, M. Fulgence Fresnel, in his third letter* on the Arabs before Islamism, gives to another desert warrior the credit of the heroic deed celebrated in Mr. Poole's story. The learned writer says:—

“Rabiah, fils de Moukaddam, . . . un des plus illustres cavaliers de la tige de Moudar, et des plus valeureux, . . . fut tué par un Soulaymide nommé Noubayschah dans la journée de Kadid. Voici comment ce meurtre fut amené selon diverses traditions, dont une remonte à Abou-Obaydah, et une autre à l'Asmaïyy.”

He then proceeds to relate that, pending adjustment of a blood feud between the two Bedouin tribes of Soulaym and Firás, a party of the former, seeking to avenge the death of two comrades, came upon a convoy of women belonging to the latter. With the convoy were some chiefs of the Firás, and among them was “Rabiah,” then ill with small-pox, and borne in a litter. The young man saw the threatening danger and, notwithstanding his weak condition, mounted his horse, to reconnoitre the enemy's movements. As he was about to ride off he heard some women hint that he was bent on saving his own life; so, turning to his sister, he remarked they should know him better than to think he could turn his back on a foeman. Galloping towards the Soulaym horsemen, he attracted their attention, and one came out of the rank to meet him. He simulated flight, and rode back towards the women; then, turning upon his pursuer, he slew him in single combat before their eyes. Soon afterwards, “Noubayschah” wounded him in the arm with an arrow; his mother bandaged the wound; but the Soulaym were pressing on, and no time was to be lost for ensuring the safety of the convoy. He bade the women mount their camels, and retire through a gorge of the hills. This achieved, M. Fresnel adds:—

“Il se porta donc au lieu le plus étroit du défilé et, pour ne pas tomber de cheval, ficha en terre la pointe de sa lance, et resta appuyé sur la hampe, tandis que les femmes prenaient le chemin du camp. Cependant l'ennemi n'osait point approcher de Rabiah. Noubayschah, fils de Habib, qui l'observait avec attention, s'écria subitement:—‘Il penche la tête: je gage qu'il est mort!’ et il ordonna sur le champ à un homme de Kouzaïah, qui se trouvait avec lui, de décocher un trait sur le cheval de Rabiah. Le Kouzaïde obéit et atteignit le cheval, qui

* *Journal Asiatique*, February, 1838.

s'emporta, et jeta par terre, du premier bond, le cadavre qui le montait."

Another version of the tale, we are informed, makes "Noubayschah" himself wound the horse as well as its rider. In any case, his body having fallen to the ground, the Soulaym Bedouins penetrate the gorge, but the convoy had escaped them. Rabiah's enemies covered his remains with a heap of stones.

Of course, the same thing may have happened to two heroes; the same honourable termination of a life may have been spontaneously chosen by two kindred spirits; or the more modern hero may have avowedly imitated his predecessor. In justice to one, however, we must not omit a *quasi* certificate of originality which M. Fresnel accords to "Rabiah" in the following postscript to his narrative:—

"Abou-Oubaydah dit expressément d'après Abou-Amr, fils d'Alala, 'Je ne sache pas d'autre exemple d'un homme tué, ou mort naturellement, qui ait sauvé un convoi de femmes.'"

But, after all, these points do not demand any strict verification. We accept the stories as national, or, it may be, tribal, traditions, truthfully illustrating the characteristic qualities of men who, compared to the money-making or pleasure-seeking occupants of towns, are heroes from birth to death. 'Antarah or Rabiah—let our protector of women be one or the other—may be accepted as a faithful type of Arab chivalry.

Many will find the sketch of Muhammad too laudatory; but not many will find it hard reading. It has the immense advantage of imparting a great deal of information in a few clear and well-expressed paragraphs; and those who have never yet attempted to wade through a Life of the prophet of Islam may be attracted by Mr. Poole's brief chapter to learn something more of the figure which he has described. The author's notice of the Muhammadan religion is in much the same strain, and to much the same effect, as that of its founder. In either respect it would be curious to compare the late writings of Mr. Bosworth Smith and Mr. Poole with those of our expounders in former centuries. Let anyone set them, for instance, side by side with "The Life of Mahomet, Mohammed, or Muhammed, the Saracen Law-giver," as recorded by Purchas in the third book of his *Pilgrimage*, and mark the change of treatment now exhibited. The chapter on the "Kur-ân" is very short, and too immediately connected with the Selections which follow to require separate consideration.

For the Selections themselves, their use to the general reader is undeniable. They have been carefully grouped under two headings—Islâm, and other religions regarded in Islâm. In the first division are systematically set forth "the more important utterances of Mohammad on what his followers must believe and do;" the second contains Muhammad's own "versions of the history of the patriarchs and other personages of the Jewish and Christian writings." The second division, moreover, is "almost unchanged from the first edition;" but to the first many fresh extracts have been added, and some new matter has been supplied in the foot-notes.

"Wedan," the opening word in the quotation

—or, let us call it, paraphrase—from Ezek. xxvii., used in Mr. Poole's Introduction (p. xxx.) as evidence of the ancient commerce of the Arab traders, will doubtless afford occasion for new remarks in the forthcoming revised English version of the Old Testament. As the text now stands it is "Dan also," a reading adopted in the Latin Vulgate and, we believe, most translations. We observe that the Arabic version of the Bible printed in London in 1848 begins the verse (19th) with "Dan," but that "Wa Dan" is in the one printed at Oxford in 1871. Whether "Wa" is a conjunction or the first syllable of a proper name is still a question for commentators.

F. J. GOLDSMID.

NEW NOVELS.

Christy Carew. By the Author of "The Hon. Miss Ferrard." In 3 vols. (Bentley.)

Jeff Briggs' Love Story, and other Sketches. By Bret Harte. (Chatto & Windus.)

The Story of Barbara. By Miss Braddon. In 3 vols. (Maxwell & Co.)

Young Lord Penrith. By John Berwick Harwood. In 3 vols. (Hurst & Blackett.)

In spite of discussions on Irish politics too lengthy to be suitable to a novel, *The Hon. Miss Ferrard* was so clever, so original, and yet so simple in construction that we hoped great things from its author. *Christy Carew* has, however, few, if any, of the qualities which distinguished the former work, while it has more than all its faults. The characters are of the middle class of Dublin society, and live, almost without exception, in a world of sordid aims and vulgar behaviour. From the latter charge the heroine herself is not exempt, and she behaves to her step-mother in a way which amply justifies that lady's treatment of her. In other respects she is hardly a living being at all, and the most impassioned novel-reader will have a difficulty in getting up any excitement over her attachment to Sugrue. By far the best chapter in the book is a very delicate and life-like portrait of Father Considine, the old bibliophile, who lives in a tumble-down cottage on the hills, dines off three potatoes and a herring, and has two hundred and fifty Douai Bibles and an Elzevir copy of Theocritus. (Is there an Elzevir edition of Theocritus, by-the-way? We doubt it.) There are a great many different sorts of priests scattered up and down the book, who form a text for endless after-dinner conversations which no one who is not Irish is likely to read. The influence of one of them spoils the life and breaks the heart of Esther O'Neil, Christy's bosom friend, who acts as a foil to all the vulgar and good-hearted ladies to whom we are introduced. Esther dies almost at the last page, just after her old friend, Father Considine. We knew this was inevitable; but surely it was absolutely unnecessary to drown poor little Elsie, Christy's step-sister, in whom, as an unobtrusive infant, the reader had taken some interest. The author has committed various artistic mistakes. Stress is laid on events which end in nothing—as, for instance, the reading of Sugrue's letter by Mrs. Carew. We shall hope to see some-

thing from the same pen very much better than this.

Jeff Briggs (in Mr. Bret Harte's new volume) is one of the most attractive of all the long-limbed, rough-spoken, soft-hearted giants with whom Californian fiction has made us acquainted. His lines have not fallen in very pleasant places, for he is landlord of the "Half-way House," an inn which could not be made to pay in spite of Jeff's hard work and the pious, if not always relevant, ejaculations of his aunt. Like many others of his build, he falls in love at first sight, and this love threatens to be the ruin of him, body and soul. It would not be fair to the author to tell his story—how Jeff was saved, and what became of Miss Mayfield, the heroine of the idyll, who is less lively than most of Mr. Harte's ladies. There is a splendid fight on the mountain side with some robbers, and for one moment we feared that we had seen the last of our old friend Yuba Bill, but the author has been merciful, and has reserved him to be the hero of many more adventures. "Views from a German Spion" contains a very clever description of carnival revellings among the lower orders in a small German town, and gives a vivid, if dreary, picture of their pleasures.

Can any good thing come out of Nazareth? was a question asked long ago, and after reading *The Story of Barbara* we are tempted to enquire, "Can a well-bred lady really come out of Camberwell, as described by Miss Braddon?" Barbara is a mere shadow, whose passiveness stood her in good stead, and in due time brought her reward. But what is to be said for the breeding of an old lady who refers to her husband as "Mr. T.;" or for the vivacity of a young lady who habitually speaks of her father as "the author of my being," or sometimes, with a kind of circumlocution that passes for wit nowadays, as "the author"? This repulsive young person, Flossie, is Barbara's only sister, and she leads up to the great catastrophe of the book by accidentally dropping an important letter of Barbara's to her absent lover. Flossie conceals this fact, and the loss of the letter is not discovered for some years, when circumstances force her to confess her carelessness, which she does with much indifference to the ruin she has wrought. The men of the novel are the ugly and unattractive Mr. Penrith, husband of Barbara; his weak brother, Mark; and Barbara's early lover, Major Leland, whose tendency to unprovoked conversation about his own exploits has seldom been equalled even in the pages of novels. In addition to this domestic history, there is, of course, the usual allowance of murders and suicides to keep up the spirits of the reader.

No one can complain of want of incident in *Young Lord Penrith*. Every form of violence against which we petition in the Litany finds its place in these pages, and St. Paul himself did not surmount more perils than the hero, Hugh Ashton. Mr. Harwood's book has the merit, or demerit, of laying bare the plot from the very beginning. From the moment we learn Hugh's anxiety about the fate of the pleasure-boat with a beautiful young lady on board we know that, in spite

of their apparent disparity of position, Maud Stanhope is his destined wife. And surely, if gallant deeds go for anything, he richly deserved her. Hugh might have taken out a patent as a savor of life, so varied are the dangers he conquers. We followed him when he rescued Maud, when he swung Will Farleigh up the edge of a cliff, when he took a drowning crew off a sinking ship and stopped two trains from banging into each other, and then our reason tottered and refused to grasp any more. Beside these exciting events there are murders and attempts at murder, burglaries, suicides, and sudden deaths, all of which are conducted to a happy conclusion. The part of the book dealing with the Cornish coast is interesting and life-like. Mr. Harwood knows what he is writing about here, and perhaps also when he introduces his readers to the great capitalist, Mr. Dicker—as vulgar a man as it has often been our lot to meet with even among capitalists. Mr. Harwood's own style is not free from blemishes. "He had saved a little money now, had Peter Bland," is a form of expression he frequently indulges in; and though he mentions Hugh's "golden hair" more than once in the beginning, the hero is ever after spoken of as possessing dark locks.

L. B. LANG.

CURRENT LITERATURE.

Royal Windsor. By William Hepworth Dixon. Vols. III. and IV. (Hurst and Blackett.) Since the first two volumes of *Royal Windsor* were noticed in these pages, the versatile hand and brain, whose work, whether fiction, biography or history, never failed to arouse the interest of the public, have passed away, and the present volumes of his latest work have been finished by a daughter's pious care. The history of the Castle is carried on from the first feast of St. George held by the first Tudor king down to the reign of the present Queen, when the stately pile, which has been by turns a fortress, a prison, a Court, has with more peaceful times adopted the more peaceful aspect of the sovereign's country home. But the book is scarcely a history; nor does it pretend to be one. Detached scenes which mark an epoch in the life of the Castle have been selected and narrated in a dramatic style, with picturesque details and imaginary conversations which often contain the author's explanations of the causes of historical events. Characters and personal peculiarities are distinctly marked. Perhaps the colours are laid on with too vivid a brush to suit the taste of those who have tried for themselves to gain a clear sight of the past through the mists of historical uncertainty and contradiction; but to others this very quality will be an attraction. There are few great movements in the history of the country in which Windsor has not been concerned, and about which Mr. Dixon has not some fresh incident to relate, or fresh details to add to what was known before. Surrey and Wyatt's midnight raid on Richard Gresham's house in Lombard Street and the Bishop of Winchester's Stews in the early days of the Reformation is told in a very amusing style, and so is the fracas between the French ambassador and the Provost of Eton, who refused to let him out of the college after hours. None of the Stuart kings find much favour in Mr. Dixon's eyes. He thoroughly enters into the feelings of the Windsor people when James I. tried to shut up the park and curtail the public rights of taking firewood from the forest, though it is very doubtful whether "Page and Ford" could

ever "stalk through the grass with dog and gun" without considerable risk, for the use of hand-guns was forbidden by statute to persons who had not £100 in lands, a qualification which neither of those worthy burgesses was likely to possess. The Civil War and the abdication of James II. are the last stirring events which come within the scope of the book, and about both there is something new and fresh, especially in the chapter on Fortescue and Dodington and the other Cavaliers who were the last prisoners confined in the Castle. As in the case of the preceding volumes there are no references to authorities, but there is a good Index.

Contemporary Portraits. By E. de Pressensé, D.D. Translated by Annie H. Holmden. (Hodder and Stoughton.) This book may be divided into two sections, dealing respectively with the affairs of Catholicism and Protestantism in our time. These are unequal in length, and still more unequal in value. On Thiers, Arnaud de l'Ariège, and, still more, Bishop Dupanloup, M. de Pressensé has nothing very striking to say; he says nothing that is not sensible, but nothing which anyone else might not have said as well. Even in the papers to which the title of the volume can only apply very loosely—"The Antecedents of the Vatican Council," "Strauss and Voltaire," and "The Culturkampf in Germany"—we do not rise above the level of newspaper articles. We are told what a sober and (in the best sense) liberal Protestant thinks of these subjects; but then this is just what anyone would have expected such a Protestant to think. And it may be questioned whether the warning to France against engaging in a *Culturkampf* is not neutralised by the proviso that preaching is to be free so long as it "does not incriminate any of the laws and institutions of the country." We in England should have thought it an infringement of religious liberty if a clergyman of the Established Church could have been prosecuted who, a few years ago, called the Divorce Act a "statute of Omri." The real interest of the volume lies in the three (or rather four) longer sketches of "Adolphe Monod," "Alexandre Vinet," and "Verny and Robertson." These are sympathetic studies of four great preachers who, in different ways and in very different degrees, got beyond the narrowness of Evangelical orthodoxy without losing the fervour of Evangelical devotion; and the author delicately suggests the lesson from their careers that it will be found necessary to keep closer than some of them did to orthodox beliefs, while their liberality of temper can be combined with it if only the thought of the Church be left free from external interference. The book will be useful if only to make French and English Protestants less ignorant of each other's recent Church history. Comparatively few Englishmen, even if heirs to the Evangelical tradition, know how widely the English Evangelical revival influenced Protestant thought on the Continent as soon as the long peace gave it a chance. On the other hand, M. de Pressensé, while recognising this influence to the full, falls into considerable inaccuracies relative to English Evangelicalism. The activity of Wesley and Whitefield did not begin at the end, but before the middle, of the eighteenth century; and instead of predestination being an essential doctrine of the Gospel as conceived by them, it was one on which they fundamentally disagreed, and on which the later Evangelicals for the most part agreed to differ. The translation (issued, it seems, simultaneously with the original) avoids the faults commonest in translation from the French—it is fairly readable and idiomatic. But it has some obvious and easily avoidable blunders.

Register of the Rectors and Fellows, Scholars,

Exhibitioners, and Bible Clerks of Exeter College, Oxford. By the Rev. C. W. Boase. (Oxford: Privately printed.) Exeter College was founded in 1314 by Walter de Stapledon, Bishop of Exeter, with the object of establishing a seat of learning for the natives of Devon and Cornwall, and for more than five centuries it retained an intimate connexion with those counties. The connecting links have gradually been severed, and the present roll of fellows contains only two holders of local fellowships. An ample knowledge of the history of the West country is an indispensable qualification for the historian of Exeter College. Without it the clues for the succession of earlier fellows could never have been discovered, and the college may be congratulated on possessing in Mr. Boase an antiquary well versed in the history of the West of England. The life of a college in the University of Oxford is a fragment of our national history. From the careers of the fellows of Exeter may be traced the various changes in the religious life of England. In the early years of Elizabeth most of its members were devotees of Roman Catholicism. Under Holland, the illustrious Professor of Divinity, it was imbued with Puritan feeling. After the Restoration its discipline was lax, and its fellows delighted in "drinking and duncery." Of all its fellows in the last century not more than half-a-dozen rose to eminence in literature or science. Its fortunes were highest in the days of Prideaux and Conant, when a great crowd of distinguished foreigners and the English nobility flocked thither to sit at the feet of those learned dons. The first and greatest Earl of Shaftesbury was sent to Exeter College, and has left us a lively account of his college life. The staid Earl of Radnor was another of the pupils of Prideaux; and Anthony Wood, when writing his Life of that great Rector of Exeter, did not lose the opportunity of attacking his Churchmanship through those two illustrious peers. Any undaunted antiquary who may not shrink from taking up the history of Oxford learning from the period when it was dropped by Wood will find his labours lightened by the industry and knowledge of Mr. Boase. We hope that this volume may be followed by similar works on the other colleges of the university.

A Holiday in Iceland. By N. L. van Gruisen, jun. (Elliot Stock.) The writer describes how he travelled over the hackneyed route from Reykjavik to the Geysirs by way of Thingvellir, thence to Hekla, and home by Reykum. This has been detailed a dozen times in as many years, and we are quite surprised that publishers are not more alive to the fact. Iceland is no longer a *terra incognita*. It is no longer *ultima Thule*. It is within five days' sail of Leith, and is visited yearly by some scores of people. That part of the country described by the author is the most familiar and most easy of access of all. The details of voyage are more curiously inaccurate in many respects than we could have imagined possible. The book must have been compiled from a much-blurred note-book, without any reference to a trustworthy work. The spelling is shocking. No attempt is even made to preserve the phonetic effect. A few examples will suffice. Dr. Hjal-talin appears as *Hjalekin* (p. 28); Hrafnagil is called *Hrafna Dag* (p. 52); Nærfholt becomes *Neurfholt* (p. 79); the Thjorsá is called the *Thorejor* (p. 88); the River Oxeraá becomes the *Axis*, and so on. Now as to details of facts, two quotations will save us the necessity of any further comment:—(p. 41) "At length, Zoega, dismounting, commenced to lead his horse down the two hundred feet precipice, stepping from crag to crag as nimbly as a cat." There are five errors in these three lines: at the point of descent into Thingvellir the chasm is not two hundred feet deep; the descent is effected by a sloping causeway, anything but a precipice, on

which there are no crags; and finally, although we have seen Zoëga's plucky little brown pony do wonderful things, we are certain it never stepped as nimbly as a cat down the Thingvellir causeway. We have no space to point out the errors in the following sentences, but any Icelandic traveller will at once detect them:—"The Strokr is an ill-conditioned looking well of about ten feet diameter and of basin-like form, the sides contracting until, at a distance of some twenty feet below the surface, a kind of tube is seen where the water is boiling with great fury" (p. 63). And again with reference to Helkeä:—"Then far below, in a kind of crevice near the base, a cloud of reddish smoke betokened the new crater of '78. This eruption broke out in April, but never reached any great importance, and by the middle of July had almost ceased" (p. 83). Without wishing for an instant to be unnecessarily caustic or severe, we may honestly ask the author, when he next attempts to write even a little journal of travel, to take care that his facts are correct, and to avoid the possibility of misleading people who really desire to know the truth.

Woman's Work and Worth: with Hints on Self-Culture. By W. H. Davenport-Adams. (John Hogg.) Nowadays, few persons can fail to recognise the social importance of woman's future position in society; any work proffering fresh information on the subject is, therefore, of interest. This bulky addition to the literature of women's claims, notwithstanding the enormous quantity of matter it contains, by no means furnishes all that one could have wished for upon this topic. The author is very anxious that all the educational advantages enjoyed by the masculine half of humanity should be shared by the feminine half, and he adduces innumerable data to prove woman's capability of competing with man in the more intellectual pursuits of life, yet is evidently fearful of carrying his proposition to its logical conclusion. "I have assumed," he is careful to remark, "that woman's chief duty lies at home," ignoring the fact that many thousands of toiling, and would-be toiling, females have no home, and unless more paths be open to them have little prospect of ever making one. Mr. Adams's information as to what literary, artistic, and scientific work woman has done, if not very new, is very copious, and is, as a rule, carefully compiled, although it would have been rendered more interesting to the general reader had it consisted of memoirs of a few famous women instead of such a tremendous array of names; it is, probably, the most exhaustive cyclopaedia of female biography yet published. The book is, moreover, replete with appropriate quotations and stimulating anecdote, but—by those really interested in the subject of female education—the two final chapters will be regarded as the most valuable portion of the work. They are devoted to a full and very useful account, corrected and brought down to the present moment, of what is now being done towards the promotion of advanced female education; furnish particulars as to the subjects taught at the various existing colleges and high-class schools; the cost of teaching and the results, so far as known, of the tuition, as, also, much kindred information. The book, so far as it goes, is calculated to prove serviceable to all occupied in the matter of woman's work, but, as already intimated, it fails to deal with a large portion of the question; the educational curriculum to be adopted will be an important factor in the solution of the problem, but certainly does not constitute the solution itself. There are some curious *errata* that should be corrected in a second edition; as, for instance, that at p. 372, where the authorship of *Les Dames Illustres* is ascribed to a "Mademoiselle Jaquette."

NOTES AND NEWS.

THE third volume of *Henrici de Bracton de Legibus et Consuetudinibus Angliae Libri Quinque*, edited by Sir Travers Twiss, Q.C., as part of the Rolls Series, has passed through the press, and will shortly appear. It will contain Bracton's treatise, "*De Assisa Novae Dissey-sinae*," and the editor's Introduction will treat of the origin of the Great Assize and the important amendments made in the administration of justice during the reigns of Henry II. and Henry III. It will also call attention to the disappearance of the "*Magnus Rotulus*" of the statutes, which Sir Robert Cotton describes in the early part of the seventeenth century as preserved in the archives of the Tower of London, but with which no roll of the statutes at present preserved in the Public Record Office is found to correspond.

MESSRS. R. BENTLEY AND SON have in the press *Honor Carmichael*, a posthumous novel by Miss Henriette A. Duff, of whom an obituary notice appeared in the ACADEMY of November 22, 1879. Her *Virginia: a Roman Sketch*, was, it will be remembered, received in 1877 with a unanimous verdict of approval by the press, and we are assured that *Honor Carmichael* will show a marked advance of skill in construction and narration on her former work. The scenes are laid in the South of France and in England.

MESSRS. C. KEGAN PAUL AND Co. have in the press an authorised translation of the forthcoming German edition of the *Life of Amalie von Lasaulx*. It will be published shortly under the title of *Sister Augustine*.

WE understand that Principal Caird's long-promised work, *An Introduction to the Philosophy of Religion*, is now so far advanced that Mr. Maclehoose, the publisher to the University of Glasgow, expects to have it ready before the end of this month. He has also just put to press a new volume of poetry by the author of *Olrig Grange and Hilda*.

M. G. HANOTAUX is to publish for the Camden Society a very curious memoir of M^{me}. de Motteville, written with a view to Bossuet's funeral oration on Henrietta Maria, Queen of Charles I. Bossuet has evidently made use of this memoir, and has taken several passages from it almost *verbatim*.

WE regret to say that Prof. Bugge, of Christiania, has been for some time, and still is, seriously indisposed, so that he will not be able to bring out his paper on the Celtic Origin of Norse Mythology so soon as his friends had hoped. His illness is ascribed to overwork.

DR. LEOPOLD SELIGMANN will deliver a course of three lectures on Shakspeare's *Lea*, *Macbeth*, and *Hamlet*, at the rooms of the Society of Biblical Archaeology, on Tuesdays, March 9, 23, and 30, at 8.30 p.m.

MR. JOHN HODGES has in the press a *Chronicle of the English Benedictine Monks, from the Renewing of their Congregation in the Days of Queen Mary to the Death of King James II.*, edited from a MS. at St. Gregory's Priory, Downside, by a monk of the same congregation. The work was compiled in 1709 by Dom Bennet Welden, O.S.B., a monk of St. Edmund's, Paris, and frequent allusions to the MS. are made by Dodd, Tierney, Oliver, and other writers.

ANOTHER contribution to the history of the Order is the *Zeitschrift für Geschichte und Statistik des Benediktinerordens*, which is shortly to appear under the editorship of Dom Maur Kinter, O.S.B., archivist of the monastery of Reigern, in Moravia.

WE understand that Messrs. Macmillan and Co. will shortly publish for the Delegates of the Clarendon Press a treatise on Geodesy by Col.

A. R. Clarke, C.B. The only adequate treatise on Geodetic Surveys hitherto published in the English language was Sir G. B. Airy's article on "The Figure of the Earth" in the *Encyclopaedia Metropolitana*. Since this was written many most important contributions, scientific, descriptive, and official, have been made to our knowledge of the subject. Col. Clarke, having fully availed himself of these works, hopes that his book will to some extent fill a gap in our scientific literature.

AFTER the lull which ensued upon the Laing sale, book-collectors have again had their attention aroused this week by two important events: the disposal on Monday, by Messrs. Sotheby, Wilkinson and Hodge, of an assemblage of rare editions of *Reynard the Fox*, in various languages; and, on Tuesday and Wednesday, by the same firm, of Mr. Lake Price's collection of books containing woodcuts, including "Little Masters" of the French and German schools, such as *Le Petit Bernard*, *Jean Cousin*, *Geoffroy Tory*, *Jost Amman*, *Tobias Stimmer*, and *Virgil Solis*, as well as some beautiful *Livres d'Heures* and the first edition of the famous *Poliphilo*. The competition was fierce, and was not confined to English bidders, French houses being likewise represented. Mr. Quaritch seems to have been the largest buyer on these as on several recent occasions.

MESSRS. CROSBY LOCKWOOD AND Co. will shortly publish *A Manual of the Alkali Trade, including the Manufacture of Sulphuric Acid, Sulphate of Soda, and Bleaching Powder*, by John Lomas, alkali manufacturer, Newcastle-upon-Tyne and London.

THE Rev. Canon Simmons, of Dalton Holme, has sent to press for the Early-English Text Society his edition of *The Lay Folks' Catechism* in continuation of his *Lay Folks' Mass Book*. The Catechism is in Early-English verse in the Northern dialect, and expounds these six things:—(1) the fourteen Articles of the Christian faith; (2) the Ten Commandments that God has given us; (3) the Seven Sacraments that were then in Holy Church; (4) the Seven Deeds of Mercy to our fellow-Christians; (5) the Seven Virtues that every man should practise; and (6) the Seven Vices that every man should refuse. The Seven Deeds of Mercy are thus described:—

"The first is to fede tham that er hungry.
That othir, for to gif tham drynk that er thirsty.
The third, for to clothe tham that er clatheless.
The ferthe, is to herber tham that er houseless.
The fift, for to visite tham that ligges in sike-nesse.
The sext, is to help tham that in prisin er.
The sevent, to bery dede men that has mister."

The short Latin original of the treatise will be edited, as well the Northern text, by Canon Simmons, with Notes, Introduction, &c.

PROF. TYLER, of the United States, has rearranged and edited Prof. Henry Morley's *First Sketch of English Literature*—much to its improvement, says Mr. Arthur Gilman. He has gathered into a consecutive narrative, for instance, the information about Bacon that was scattered about on pp. 381, 464, 517, 524, and 584 in the original Morley; has split up the latter's 100 and 185 page chapters into more of reasonable length; has added new matter, and brought the book down more nearly to the present day. "If ever there was a good book spoilt in the making it was Mr. Morley's *First Sketch of English Literature*," says his Transatlantic critic; and now his American cousin has set it all right. They manage these things better in the States, you see.

THE poets of Bohemia have sent to Mr. W. R. Morfill copies of their works, with autographs and dedications, as an acknowledgment of his sympathetic article on the Bohemians and

Slovaks published in the *Westminster Review* for October last.

A LITHUANIAN Literary Society has been founded in Germany under powerful and influential auspices. Its object is to collect everything that has reference to the language and history of Lithuania, to establish a library for that purpose, and to publish a journal. It is well known that the Lithuanian language, hemmed in as it is on every side by German, Polish, Russian, and Lettish, is rapidly dying out, and that, unless everything that is within reach is now collected, it will soon be lost for ever. Lithuanian, as was shown by Bopp, is in some of its grammatical forms nearer to Sanskrit than any other European language; and though, by leaving out the qualification in some of its grammatical forms, a wrong impression has been created that Lithuanian was really a kind of European Sanskrit, the true scientific interest of that ancient language has always been recognised by all students of the science of language. The founders of the new society for saving what can still be saved from the approaching wreck of Lithuanian deserve the gratitude and active support of all scholars. The first number of the *Mittheilungen* of the Lithuanian Society has just appeared. We see among the members the well-known names of Nesselmann, Bezzenberger, Mannhardt, Fick, O. Schade, and Voelkel. The five honorary members are the President of East Prussia, Dr. von Horn; Bielenstein, the President of the Lettish Literary Society; Pott, Miklosich, and Max Müller. It was settled at the first meeting of the society that Lithuanian must be spelt without a th.

THE February number of the *Vyestnik Evropy* contains some remarks on the educational statistics of Russia. From these it appears that fifty per cent. of the pupils attend the middle-class schools and receive a classical education. Of these, however, only seven or eight per cent. pass on to the high schools, the others breaking off at the less advanced stage. Thirty per cent. study with a special view to the clerical office, but very few of these attain to positions of importance in the Church. The pupils attending the private middle-class schools are reckoned at six per cent., and the remaining fourteen per cent. may be divided between the Real Schools and the military gymnasia.

DR. HANS BENNEWITZ, of Magdeburg, has published at Halle a dissertation on "Chaucer's *Sir Thopas*: a Parody on the Old-English Romances." His quotations from the latter fully justify Chaucer's skit on them.

A TRANSLATION of Mr. Justin McCarthy's *History of Our Own Times* will shortly be issued by Messrs. Schlicke, of Leipzig. The translator is Mr. Leopold Katscher.

MESSRS. MARCUS WARD AND Co. have just published *Joan of Arc*, by Janet Tuckey, as the fourth volume in their "New Plutarch" *Lives of Men and Women of Action*.

MR. W. J. ROLFE's edition of *King John*, in his handsome series of school and college editions of Shakspeare's plays has just reached us from the United States. The Notes are as full and good, and posted up to the latest date, as in previous plays, and are enlivened by quotations from the Cowden Clarkes, Johnson, &c., on the special value, dramatically, of certain words and phrases. The "Critical Comments on the Play" are from Gervinus, Mrs. Jameson (more fully), Dowden, and Furnivall. An *addendum* gives from Campbell's *Life of Mrs. Siddons* that great actress's account of her own conception and acting of Constance.

ON the celebration of the tercentenary of Camoëns, two new translations and also five new Portuguese editions of the *Lusiad* will be published.

A COMMISSION has just been instituted, under the title of "Commission de Géographie historique de l'ancienne France," the chief work of which will be to complete and supplement the labours of the "Commission de la Topographie des Gaules." M. Henri Martin is the president.

WE had occasion some time since to review favourably a school edition of the first book of Horace's Odes, published by Mr. T. E. Page, Master at Charterhouse and late Fellow of St. John's College, Cambridge, in Messrs. Macmillan and Co.'s new series of "Elementary Classics." We are glad to learn that Mr. Page intends editing the remaining books of the Odes in the same way, but taking care that each book shall be complete in itself. This done, Mr. Page contemplates the preparation of an edition complete in one volume for the "Classical Series," addressed to colleges and the higher forms of schools; for this purpose he will abridge or amplify, as the case may require, the notes in the elementary edition, adding notes on points of criticism and philology, and finally a general Introduction to the whole work.

A SOCIETY for the promotion of Jewish studies has just been founded in Paris under the presidency of Baron James de Rothschild.

THE speedy publication is announced of two volumes of verse—M. Jean Aicard's poem, *Miette et Noré*, and a collection of tales of Paris by M. Maurice Bouchor. It is likewise stated that M. Emile Zola is about to begin a new novel, the scene and subject of which will be the fashionable shops, and in which he proposes to study trade in Paris.

PRINCE LUCIEN BONAPARTE asks us to correct an *erratum* in the sixth line of his letter which appeared in our last number. For "one quarter of a lunation" read "one quarter or a lunation."—In our paragraph about Gutenberg last week the *n* was accidentally left out of Mentz, which thus appeared as Metz.

MESSRS. FIRMIN-DIDOT are just publishing a *facsimile* chromo-lithographic reproduction of a remarkable Portuguese MS. of 1610, belonging to the Lisbon Royal Academy of Sciences, entitled *Pontificales Missae*, the work of Estevam Gonçalves Netto. It was exhibited by the Portuguese Government at the Paris Exhibition of 1867.

MESSRS. SAMPSON LOW AND Co. send us what claims, and with very good reason, to be "the popular paper-knife." In addition to being very light and pliant, it contains on its blade a large amount of information on postal subjects, together with a scale showing inches and centimetres. When the use of this paper-knife becomes as general as it should be, those who insufficiently prepay their letters will merit the contempt as well as the reprobation of mankind.

THE French Academy has filled up the vacancies caused by the death of M. de Sacy and M. St.-René Taillandier by the election of MM. Labiche and Maxime du Camp.

THE publishers Roux and Favale, of Turin, will shortly issue a work full of interesting details on Venetian life, in its artistic and social aspects, from the earliest times to the fall of the Republic. It is from the pen of Prof. Molmenti, well known for his devotion to Venetian studies, and will be entitled *La Storia di Venezia nella Vita privata dalle Origini fino alla Caduta della Repubblica*. It has carried off the great prize for works on Venetian history instituted in 1868 by the deceased patrician, Stampalia.

THE centenary of Dr. Chalmers, the distinguished divine, falls on the 17th inst., and the occasion will be celebrated at various places in Scotland. Dr. Chalmers was born in 1780, and died in the year 1847.

Not a Fair Start will be the title of No. 3 of "Moxon's Select Novelettes," to be published at the end of this month. Mrs. Walter Leigh Hunt is the author.

THE March number of the *Revue Historique* will contain "Le Procès de C. Rabirius et l'Opposition démocratique au Temps de Cicéron;" "Le Comité de Salut public de l'An III. et l'Espagne," by A. Sorel; "Un Corsaire normand sous Louis XIV., Mémoires de Jean Doublet de Honfleur," by Ch. Bréard; "Napoléon I. et le Roi Louis," by Baron du Casse.

THE *Revue Critique* states that M. Miliaraki has discovered at Andros a Greek MS. of the sixteenth century containing the poem of *Acritas*, in which the author's name is given as Eustathius.

MAGAZINES AND REVIEWS.

THE second number of *Le Livre* is a decided improvement upon the first. A series of articles on the provincial libraries of France is begun, and promises to be very interesting; the present instalment contains an account of the Rouen library, with two etchings illustrative thereof. The article on armorial bindings is continued. M. Honoré Bonhomme, already well known to lovers of French literature by the contributions he has made to a better estimation of the specially French genius of Piron, begins a discussion of the fairy tales of the late seventeenth and eighteenth centuries. A short note of the late M. Prosper Blanchemain's is accompanied—for so the fates would have it—by an obituary notice of the author. The notice is signed "O. U.," and may therefore be safely attributed to the editor of *Le Livre*. M. Uzanne is, as it behoves writers of obituary notices to be, very kind to the merits of his subject, and a little—not excessively—blind to his defects. M. Blanchemain was a book-lover of a type which is now commoner in France than in England, and of which the most distinguished living representative is the venerable M. Paul Lacroix. This type distinguishes itself by an omnivorous love of books rather than by strictly critical examination of their merits, and too often descends after the fashion of a *chiffonnier* into the gutters of literature. But it is a type which no student of letters could spare, and which provides in ample measure material for those who have more critical power to exercise themselves with. M. Blanchemain was in easy circumstances, and could indulge his vein without difficulty. His special period was the sixteenth and early seventeenth century, nor did he, it would appear, know much of the older French literature. But his editions of Ronsard, of St. Gelais, of Magny, and other members or contemporaries of the *Pléiade* deserve gratitude, and will have it. We need only add that Mr. O'Shaughnessy's English letter contains some noteworthy criticism of Mr. Swinburne's *Study of Shakespeare*.

THE January number of the *Revue Archéologique* contains two articles which might perhaps be overlooked by some of those whom they concern—viz., archaeologists and classical scholars. M. Heuzey, a most competent judge in matters relative to the history of art, in a paper on "The Babylonian Terra-cottas," arrives at the important conclusion that Babylonian art is generically different from that of Assyria. Though proceeding from the same starting-point, it developed itself in a different spirit, and may be said to occupy an intermediate position between that of Egypt and Assyria. M. Benoist gives us a fragment of a critical and exegetical work on Catullus (relative to xxix.), destined to appear shortly. The editions of Ellis and Munro are frequently referred to.

THE "Görres Gesellschaft" of Bonn has set

on foot an *Historisches Jahrbuch*, edited by Dr. Georg Hüffer, and published by Theisinger at Münster. Its object is to provide an organ for those historians "who regard Christ as the central pivot of history, and the Catholic Church as the divinely appointed institution for the education of the human race." With this object it purposes to maintain a strictly scientific character, and the contents of the first number quite bear out that intention. Among them are two articles specially interesting to English readers—one by Baron von Reumont, giving extracts from some unpublished papers of the last of the Stuarts, the Cardinal of York, together with notices of the rest of the Stuart family. Another article, by Freiherr von Helfert, deals with "Nelson before Naples in 1799;" it merely gives a *résumé* of the facts which a second article is to criticise.

THE GREEK LIBRARY AT SMYRNA.

Few travellers are aware of the interesting collection of objects of ancient art which are kept in the library and museum of the Greek community at Smyrna, known as that of the Evangelical school, near the Greek Cathedral of S. Photina. Several stelae and slabs bearing ancient Greek inscriptions are preserved under cover, and railed off on the south side of the cathedral; but the choicest specimens are kept in the library. Most of the inscriptions have been published from time to time in an occasional periodical issued by the committee of the museum. The best sculptures in the collection are a headless faun and a caryatid figure from Tralles, close to Aidin. Among the coins I noticed a silver Ptolemy with a youthful head; reverse, an eagle to the left, in front LN, behind KI, for, I suppose, Kitium in Cyprus. Far more interesting are the MSS., of which one splendid volume deserves a detailed description. It is in the largest quarto, and contains the Pentateuch, with the Books of Judges and Ruth beautifully written in Greek, with marginal scholia. This MS., which consists of 261 pages, is illustrated with between two and three hundred exquisite illuminated miniatures; but, as many of these are double, the real number may be reckoned as nearly as many again. Nothing can exceed the grace and delicacy of some of these paintings, which belong probably to the twelfth century. I append a few notes of the subjects of some of the most remarkable. (1) The Creator standing towards the left sustains the globe. (2) The divine hand is seen extended over chaos. (3) The divine hand divides the light from the darkness, which are personified by two figures, one of which carries a torch. (7) An extremely delicate representation of the creation of the fish and fowls. (9) Adam. (22) The expulsion of Adam and Eve from Eden by a ray of white fire. (27) Cain and Abel, the latter of whom brings a lamb. (30) The rainbow. (39) Treading the winepress and the covering of Noah. (44) Destruction of the Tower of Babel, from which the various nations depart habited in various national costumes. (71) Lot and his daughters depart from Sodom; his wife is shown as a white figure looking back toward the city. (41) Pharaoh's dream, the fat kine devouring the lean; very quaint. (142) Joseph crowned with a diadem on his throne, with Egyptians engaged in weighing corn in front; very fine. (147) Joseph feasts alone, the Egyptians at another board. (149) Wagons starting to fetch Jacob; fine. (168) Moses at the burning bush; below he is seen putting off his shoes. (176) Dismay of the Egyptians at the lice, which, six in number and purple in colour, settle upon them; the figures are admirable. (183) The murrain. (187) The pursuit in chariots of the Israelites, who are defended by a pillar of fire; the pillar

of cloud is poetically personified by an angel enveloped in a dark veil. (189) Destruction of the Egyptians in the sea. (190) Dance of Hebrew damsels. (191) The rest at Elim; palm-trees in a sort of oasis. (192) The giving of quails and manna. (194) Moses strikes a rock of pink-veined marble; figures very fine. (195) Arms held up during the battle. (201) The Mercy Seat, with two gold cherubim. (202) The golden candlestick. (206) Priest before altar. (211) The golden calf. (222) Priest and leper. (225) The scape-goat, which is black, with gilded horns and legs. (237) Return of spies with grapes. (239) Stoning a criminal; very fine. (244) Death of Miriam and her interment in a sarcophagus of pink marble veined with blue. (247) The brazen serpent. (270) Two figures gathering grapes and corn. (287) Joshua with a blue nimbus. (332) Figures with the most delicately painted faces; behind are buildings with curious architectural details; one of the finest miniatures of the series. (333) Jael and Sisera. (346) Ruth and Boaz among the corn.

This magnificent MS. was the property of the cathedral church, and is supposed to be that mentioned by Pococke as the property of the Greek Metropolitan.

MS. A—34. A quarto volume of the twelfth century, beautifully written in double columns, containing the works of S. Gregory Nazianzen.

MS. B—8. An imperfect volume in large octavo, containing ninety-six leaves, with most curious illuminations of early—eleventh or twelfth century—date. It is a work on physiology written by Epiphanius, Archbishop of Cyprus.

MS. B—50. A volume on *charta bombycina* of ecclesiastical music, very beautifully written.

MS. G—1. The gospels, in octavo, of the eleventh century. This book contains 251 leaves, and has five illuminated headings to each gospel.

MS. G—2. The gospel of St. Matthew, in octavo, of the thirteenth century, followed by that of St. Mark. A volume of 209 pages.

MS. G—5. The four gospels, with the Epistle of Eusebius prefixed—290 pages, very finely written—of the eleventh or tenth century. There is a picture of each evangelist at the commencement of his gospel.

Beside the above MSS.—which, with one exception, are written on vellum—and several others of less interest, the library contains a fine Book of Hours, on vellum, printed at Paris by Simon Vostre. GREVILLE J. CHESTER.

THE FRENCH ARCHIVES.

THE importance of the "Dépot des Archives du Ministère des Affaires Etrangères de France" is well known. This institution was founded in 1688 by order of Louis XIV. Its collections were continued from that date without interruption, and were speedily supplemented by the addition of the papers of the great Ministers of an earlier age—Richelieu, Mazarin, Colbert. Since the seventeenth century this jealous and almost inaccessible Office has kept a faithful, if too narrow, watch upon the documents relating to the foreign policy of France. Most European States would find in the Reports of the French ambassadors materials that would enable them to complete and often to rewrite a large portion of their history. At the present day the number of MS. volumes preserved at the Ministry of Foreign Affairs is said to exceed 40,000.

These priceless Archives were long closed to everybody. Only a very few workers—who can be counted on one's fingers—Voisenon, Anquetil, Lémontey, and the celebrated Fox—made their way into them at long intervals. The principle, up to within a very few years ago, was that the Archives of Foreign Affairs were a State secret.

However, as foreign Governments were setting an example of greater liberality, it was at length perceived that secrets two hundred years old were, or ought to be, secrets no longer. In 1874 the Duc Decazes, then Minister for Foreign Affairs, seemed to wish to half open the door. A commission was appointed, which was to superintend and authorise within reasonable limits the communication of the papers deposited in the Archives.

The Archives were classed under three heads:—(1) The oldest series of diplomatic correspondence down to the Peace of Utrecht (1713); (2) from the Peace of Utrecht to the end of the reign of Louis XV. (1774); (3) from Louis XVI. to our own days.

With regard to the first period, all researches were to be entirely free—any document might be copied and published; for the second, permission had to be obtained; for the third, documents were only communicated in exceptional cases, and under special conditions, laid down by the Minister in each case, according to the nature of the documents.

But it was not enough to have regulations; their application was likewise necessary. Now these new arrangements, which were approved unanimously by the press, were in reality a dead letter, or little more. The traditions so deeply rooted in the old staff of the Archives were too strong even for the will of the Minister. But some promising changes have just been effected in this staff and in the composition of the Commission of the Archives which are of better augury for the future.

The direction of the Archives is entrusted to M. Guérout, whose urbanity is known to all those who have had relations with the Ministry of Foreign Affairs. M. Girard de Rialle, a talented writer and a man of liberal instincts, is placed at the head of the sub-direction.

The most certain indication of the new spirit which is henceforth to preside over the communication of documents is to be found in the re-handling undergone by the Commission of Diplomatic Archives. The new president is M. Henri Martin, senator, member of the French Academy, and author of the *History of France*, which possesses a European reputation. With him are a group of senators, deputies, members of the Institute, and publicists, who have specially devoted themselves to historical and diplomatic studies. We remark in this list the names of MM. de Rozière, senator; Spuller, deputy; Renan; Maury, Director of the National Archives; Monod, editor of the *Revue Historique*; Boutmy, Director of the *Ecole des Sciences Politiques*; Rambaud, A. Sorel, &c.

It is hoped that, as soon as this new organisation has been brought into working order, the undertaking of a general revision and of the preparation of a catalogue of the wealth of the Archives will proceed rapidly. The public will thus be enabled to acquaint themselves with the real state of the collections, and to avail themselves, under proper superintendence and with the necessary restrictions, of the invaluable and boundless stores of historical information which they contain.

OBITUARY.

THE Rev. Charles William Russell, D.D., whose name has long been familiar in the religious and literary world, died at Dublin on the 26th ult. He was born in the county of Down in 1812, and has presided over the administration of Maynooth College since 1857, having been himself trained in that institution. Many years ago he published translations from the German of the tales of von Schmid and of Leibnitz's system of theology. His life of Cardinal Mezzofanti (1858) had its origin in an article on that wonderful master of living and dead languages which appeared in the *Edinburgh Review* during 1855. The book was

raised in price and size by the inclusion of notices of the most celebrated linguists in all countries. It was translated into Italian and published at Bologna in 1859. When a second edition of the *Life* appeared in 1863 it was augmented by ten additional facsimile autographs of the Cardinal in different languages, which were selected from a larger number in the Italian translation. In 1869 Dr. Russell received the honour of being appointed a member of the Royal Commission on Historical Manuscripts; and since 1872 he has edited, in conjunction with Mr. Prendergast, several volumes of the *Calendars of State Papers* relating to Ireland, beginning with the reign of James I. Dr. Russell contributed to the eighth edition of the *Encyclopædia Britannica*. His articles in the *ACADEMY* on M. Damalas' Commentary on the New Testament (October 28, 1876), and on Hilgenfeld's edition of the Epistles of Clement of Rome (September 1, 1877), will be in the memory of our readers.

THE name of Mr. Augustus Granville Stapleton, who died at Warbrook, Hampshire, on the 26th ult., has been for more than half-a-century familiar in the political world. He was born in 1800, and was educated at St. John's College, Cambridge. On leaving the university he became private secretary to Mr. Canning, and acted in that capacity until the premature death of the illustrious statesman. A few years afterwards he wrote a history in three volumes of the *Political Life of Canning from September 1822*. His smaller work on *George Canning and his Times* (1859) was deficient in method and needed curtailment. In 1843 he published, under the title of *The Real Monster Evil of Ireland*, a scheme for the relief of the destitution in that unhappy land; and four years later he issued another pamphlet on the duty of the British people with reference to the Irish priest. During the last thirty years Mr. Stapleton has produced a host of tracts and pamphlets on the political questions of the day. One of these, describing the true reasons for the breaking-out of the Franco-German war of 1871, was reproduced in Brussels in a French translation.

THE recent death of Izmail Ivanovich Sreznevsky deprives Russia of an excellent and indefatigable scholar. Born in 1812, and educated in the University of Kharkof, he at an early age devoted himself to the study of the Slavonic languages and of the literary antiquities of Russia. In 1854 he became a member of the Imperial Academy of Sciences, and in 1855 Professor of the Slavonic Languages in the University of St. Petersburg. In all that concerned the national literature, the history, and the archaeology of Russia, he took a lively interest; and on all those subjects he contributed a very great number of valuable articles to the *Transactions* of the Second Division of the Academy. Beside these he published a great many other excellent contributions to scientific periodical literature, edited numerous old Slavonic literary records, and for half-a-century never flagged in his efforts to throw light upon the early history of his native land and of other Slavonic countries. The *Dictionary of the Old-Russian Language*, to which he devoted many years of his life, has not yet seen the light. Among his published works may be mentioned his *Examination of the Heathen Worship of the Ancient Slavonians* (1848), *Zaporogian Antiquities* (1833-38), *Ideas as to the History of the Russian Language* (1850), *Materials towards a Comparative and Explanatory Dictionary and Grammar* (1854-56), *Ancient Slavonic Records* (1868), and many others, all in Russian.

By the death of Isidoro de Lumia, Sicily has lost an accurate and powerful historian, second only to Michele Amari. During sixteen years he filled the post of Director of the Archives at

Palermo, and brought out a series of important historical publications of great literary merit as well as diligent research.

CORRESPONDENCE.

NEBUCHADNEZZAR'S MADNESS.

New York: Feb. 7, 1880.

In the issue for December 13 of the *Philadelphia, U.S.A., Sunday School Times*, was an article contributed by Canon Rawlinson on the "Light from Oriental Discoveries on the Book." In it he stated, as his first illustration of the confirmations afforded by Assyrian monuments to the Bible, that Nebuchadnezzar's madness appears to be referred to in his own standard inscription; and, in support of the statement, he quoted Sir Henry Rawlinson's translation, to be found in the Appendix to the second volume of Canon Rawlinson's *Herodotus*. Another paper, the *New York Independent*, remarked in a criticism upon the article that Canon Rawlinson ought to have known that this was a very early, tentative translation of Sir Henry's, and "has long been given up;" and that Ménant's *Annales d'Assyrie*, or even the *Records of the Past*, would have shown him that, as now translated, the inscription contains no reference by Nebuchadnezzar to his madness. Canon Rawlinson writes, under date of December 31, a reply to this criticism, in which he says:—

"With respect to the inscription in question, I was of course perfectly aware that a different version of it had been put forth in the *Records of the Past* by a respectable Assyrian scholar, the Rev. J. M. Rodwell; but I intended to maintain the correctness of Sir H. Rawlinson's original translation, which he has never retracted, and of which he sanctioned

the republication without alteration in the year 1875—the same year in which Mr. Rodwell's translation made its appearance. I did not think the pages of the *Sunday School Times* the proper place for linguistic controversy; and I therefore made no allusion to Mr. Rodwell's version. In point of fact, I dispute its accuracy; and I think it bears internal evidence of being impossible."

That Mr. Rodwell's translation is, in substance, the one which is, nevertheless, universally accepted by Assyrian scholars is easy enough to prove from the writings of Oppert, Ménant, Lenormant, Schrader, George Smith, and Sayce; but as no American has yet made himself a proficient in Assyrian studies, I find it difficult to learn what is the evidence on which Canon Rawlinson represents Sir Henry Rawlinson as adhering to his original translation. He says that Sir Henry "has never retracted" it. This assertion would seem to be contradicted by Canon Rawlinson's own words: "Col. Rawlinson once thought he had found a reference to the illness in the Standard Inscription, but he now explains the passage differently"—*Herodotus*, vol. i., p. 516, note 4 (first edition, 1858); as also inferentially, where the Canon says: "It has been thought that there is a reference to Nebuchadnezzar's malady in the standard inscription. But this is now doubted"—*Five Great Monarchies*, vol. iii., p. 584 (1865). But now, not only does Canon Rawlinson assert that Sir Henry has never retracted his original translation, made, I believe, in 1855, but one or two other statements of his almost compel me to believe that Sir Henry has reverted to it. I notice that in the second edition of Canon Rawlinson's *Herodotus* the note quoted above is modified so as to omit all mention of the fact that Sir Henry "now explains the passage differently," and it is made to read that there appears to be a reference to the madness in the Standard Inscription. I also notice that in the first edition of *Herodotus* the appendix to the second volume, in which Sir Henry's translation appears, does not bear his initials in brackets, as is the case with scores of notes in the first volume, which had his constant supervision; just as the second had that of Sir Gardner Wilkinson. I should have imagined that Canon Rawlinson had himself inserted it, without Sir Henry's revision, from a newspaper copy of his translation of 1855, as Sir Henry says, in the *Journal of the Royal Asiatic Society*, was done in the case of the Nimroud inscription, quoted by the Canon on the preceding page. But I notice that in the second edition of 1875 this translation of the Standard Inscription, with its reference to Nebuchadnezzar's madness, appears unchanged, and that over it have been inserted Sir Henry's initials "[H. O. B.]," indicating that it had his approval. Now, although it is hard to believe that Sir Henry, after twenty years, should have "sanctioned the republication, without alteration," of this his early translation, in any such sense as would make him responsible in the least for its correctness, yet the fact that his initials are now placed over it would seem to indicate that such is the case. This, too, would warrant Canon Rawlinson's representation, in his letter to the *Sunday School Times*, that he still depends on Sir Henry, notwithstanding that this translation, so captivating to a hunter after "confirmations," has been given up by all other scholars. Perhaps some of your readers may be able to refer me to any passage in Sir Henry Rawlinson's writings, not accessible to me here, in which he has said what would justify the Canon in suppressing the note in which, certainly with Sir Henry's approval, he said in 1858 that Sir Henry "now explains the passage differently."

WILLIAM HAYES WARD.

"EUROPE AND ASIA."

6 Stone Buildings, Lincoln's Inn: Feb. 26, 1880.

It was only on the 14th of January last that I chanced to be informed of the review of my book, *Europe and Asia*, in the ACADEMY of the 13th of the previous September. In that review I found myself accused by Mr. Arthur Evans of "coolly appropriating whole pages from his work [on Bosnia], with only verbal alterations—and these not improvements—in most cases without citing his book or making any acknowledgment whatever." I immediately wrote to Mr. Evans, who resides at Ragusa, requesting him to name those whole pages in my book which were appropriations of whole pages of his book. I have now received certain "parallel passages," which he sends as a specimen of his justification. I wish to show both the futility of such "parallels" as evidence of "wholesale appropriation," and also to point out another serious misstatement of Mr. Evans's.

The facts which Mr. Evans states in support of his charge are the following:—(1) In little more than a dozen lines I mention certain historical facts with respect to Sissek which Mr. Evans also mentions, but in so different a way that he spreads them over two pages. (2) I mention that, in the market-place of Agram, there is an equestrian statue of the Ban Jellachitch, and—as everyone who has seen it and knows its significance must describe it—I describe it as fronting in the same direction in which Mr. Evans describes it as fronting. (3) I mention certain facts with respect to the costume of the Croats, among whom I travelled, which Mr. Evans also mentions. (4) I mention having been struck with certain characteristics of the House-communities of Croatia, which Mr. Evans was also struck with; and (5) I mention that over Serajevo towers Mount Trebovitich, that the springs of the Bosna become at once a river some fifty yards in breadth, and other similar facts which Mr. Evans also mentions.

Now, as to some of the historical facts briefly mentioned by me about Sissek, it is possible that they may have been the result, on Mr. Evans's part, of original research, and it is possible that I may have found some of these facts only in Mr. Evans's volume. I would rather, at any rate, admit this possibility than take the trouble of looking through my notes of the innumerable books read during the three years in which I was writing, or preparing to write, *Europe and Asia*. And if it was, as I thus admit that it may possibly have been, it follows, of course, that I must further admit that, with reference to one or two facts, I ought possibly to have cited Mr. Evans as my authority. Perhaps, also, some of the words I have used may have been reminiscences of having read Mr. Evans's book. But I confess that I am not aware that any one of these possible reminiscences was of such originality and brilliancy as to make it in any way incumbent on me specially to refer to Mr. Evans.

With respect, however, to all the other four categories of facts mentioned both by Mr. Evans and myself, his charge of "appropriation" of them from him I can scarcely characterise as other than grotesque. These facts, at all events, are either mentioned in ordinary books of reference, and even in common dictionaries, or they are taken from my own personal experience—an experience far more prolonged and extensive than Mr. Evans's when he wrote his book on Bosnia. I travelled in the countries of which I wrote as many, if not more, months than Mr. Evans travelled weeks in them; and, in particular, I, who am accused of borrowing from Mr. Evans the topographical facts I mention about Serajevo, actually stayed more weeks there than he stayed days. But, further, though I do certainly not refer to Mr. Evans as my authority

for what I could state on my own personal experience with respect to certain characteristics of the House-communities of Croatia, I find that, as confirmatory of my own experience, I have actually referred to Mr. Evans and his book both in my text and in a note (p. 476).

Let me point out also this curiosity of criticism. Though Mr. Evans now, in one of his "parallel passages," treats my agreement with him as to the hospitality of the South Slavs as a proof of "appropriation," in his review of my book he comments severely on what he represents as leading to a conclusion perversely different from his own as to South Slav hospitality. Differ, or even but appear to differ, from this candid critic, and you are a fool; agree with him, and you are a thief!

Permit me, in conclusion, to notice what I have above alluded to under the mild term of "another misstatement." For it is a "misstatement" which I resent almost as strongly as that with respect to my "cool appropriation of whole pages" of my critic's book. Throughout this, as throughout my two preceding volumes, Christianity is represented as at once effect and cause of a vast Moral Revolution. I argue that it is but the development of a Revolution of the sixth century B.C., which was common to both Europe and Asia, broke up all the Ancient Civilisations, and initiated a new age, not only of religious, but of political, and of social development—the age of what, as distinguished from those truly Ancient Civilisations which were broken up in the sixth century B.C., must be named, both in Europe and in Asia, the Age of Modern Civilisation. More years of systematic study than I care to count give me, not only the confidence, but, as I venture to think, the right, to say that this theory of the origin and history at once of Christianity and of Modern Civilisation will be found so fully verified as to affect all the current theories on these subjects. Not a hint, however, does my critic give of the existence even of such a theory in my book. But, on the contrary, in the very teeth of a theory pervading every page of it, and that makes his affirmation not false only, but grotesque, Mr. Evans declares that "no words can express Mr. Glennie's abhorrence of Christianity." And yet—will it be believed?—in the very midst of one of those very "parallel passages" offered as evidence of my "appropriation," I found, on turning to it in my book, that Mr. Evans had carefully omitted the following sentence:—"This" ["the geniality and generosity, open-heartedness, and open-handedness," of the members of the South Slavonic House-communities] "is Christianity in its better aspect as part of a great Moral Revolution" (p. 476).

Such, then, as I have above shown, is the groundlessness of Mr. Evans's charge of "wholesale appropriation." And such, as I have in this last paragraph shown, is one ground, at least, of my better-founded charge of misrepresentation. As for those inaccuracies which doubtless occur in my book, and which some change of a letter or a word would put right; those critics who, like Mr. Evans, make so much of them, I shall take the liberty of dismissing with a phrase of Locke's—"They miss the scope, and stick in the incident."

J. S. STUART-GLENNIE.

THE LITERATURE OF FOLK-LORE.

Fern Bank, Higher Broughton, Manchester: Feb. 27, 1880.

The library of Harvard College appears to be making a special feature of collections relating to folk-lore, folk-story, and folk-song. The recently published Annual Reports of the President and Treasurer of Harvard College, 1878-79 (Cambridge, 1880), contains the following interesting description:—

"The collection of folk-lore includes, in addition

to legends and superstitions, early ballads and tales of popular origin, and proverbs; mediæval romances follow as an appendix. It does not include works relating to mythology proper, which will immediately precede folk-lore in the shelf-arrangement, nor many important works which appear as parts of more general collections, and will be shelved elsewhere, nor, as a rule, modern poetic renderings of ancient legends. Modern ballads will find their place with their respective literature or with music. The arrangement of this collection is primarily linguistic, and there are various subdivisions. The order of arrangement and the number of volumes are as follows:—

I. General Collections	240 vols.
II. Indo-European:—	
1. Germanic:—	
a. English and Lowland Scotch...	429 "
b. Dutch	10 "
c. Flemish	13 "
d. Frisian	4 "
e. Icelandic	27 "
f. Danish and Norwegian	80 "
g. German	591 "
i. Swiss (almost exclusively German Swiss)	42 "
2. Romanic:—	
a. Spanish	84 "
b. Portuguese	12 "
c. French	151 "
d. Italian	111 "
e. Roumanian	23 "
3. Celtic (Breton, Erse, Irish, Cornish)	40 "
4. Greek (Modern)	34 "
5. Slavonic:—	
a. Russian and Little-Russian	121 "
b. Serbian	35 "
c. Bosnian, Montenegrin, and Dalmatian	8 "
d. Croatian, Slovenian, and Bulgarian	13 "
e. Bohemian, Moravian, and Slovak	42 "
f. Polish and Sorabian Wendish	53 "
g. Lithuanian	10 "
6. Aryan:—	
a. Indian	35 "
b. Persian and Armenian	19 "
III. Semitic (Arabian and Hebrew)	49 "
IV. Scythian:—	
1. Finnish and Lappish	33 "
2. Estonian	8 "
3. Hungarian	20 "
4. Turkish and Mongol	12 "
V. Miscellaneous (Basque, African, Japanese, Chinese, Polynesian, Eskimo, North American Indian, &c.)	30 "

"The collection of mediæval romances numbers 340 volumes, and is classified as follows, according to the scheme adopted by Didot in his *Essai de Classification des Romans de Chevalerie*:—

1. General Collections.
2. Breton or King Arthur Cycle.
3. Spanish Cycle.
4. Charlemagne Cycle.
5. Romances of the Crusades.
6. Romances of Classical Antiquity.
7. Romances of Love and Adventure.
8. Theological and Allegorical Romances.
9. Miscellaneous."

The above particulars will show that our Transatlantic cousins have at least a substantial foundation for a good folk-lore library. It would be interesting to know whether any English library has yet, to any considerable extent, made a special collection of the books dealing with the legends, customs, and superstitions of the people.

WILLIAM E. A. AXON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 8, 5 p.m. London Institution: "Life-saving Apparatus," by F. I. Palmer.
8 p.m. Society of Arts: "Manufacture of India-rubber and Gutta-percha," VI., by T. Bolas.
8 p.m. British Architects.
8.30 p.m. Geographical: "An Autumn and Winter

Yacht Voyage along the Coasts of Norway and Lapland," by Lieut. G. T. Temple.

TUESDAY, March 3, 1 p.m. Horticultural.
8 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schäfer.

8 p.m. Anthropological Institute: "Visualised Numerals and other Forms of Mental Imagery," by F. Galton; "Notes on Prehistoric Discoveries in Central Russia," by O. H. E. Carmichael.

8 p.m. Civil Engineers: "Purification of Gas," by H. E. Jones.

8 p.m. Photographic.

WEDNESDAY, March 10, 8 p.m. Society of Arts: "Recent Advances in the Production of Lambeth Art Pottery," by J. Sparkes.

8 p.m. Microscopical: "On a Sponge Parasitic within *Carpentaria Raphidodendron*," by Prof. P. M. Duncan; "On the Functions of Angular Aperture," by Prof. E. Abbe; "Double and Treble Staining of Animal Tissues," by Dr. H. Gibbs; "On a Petrographical Microscope," by A. Nachet; "On *Podophrya Quadriparsita*," by J. Badcock.

8 p.m. Telegraph Engineers.

8 p.m. Geological: "Rocks of the South of Ireland and North Devon," by Prof. E. Hull; "Review of the Family *Diatropidae* for the Purpose of Classification," by G. R. Vine; "On a New Therodont Reptile (*Cleio-rhodon orenburgensis*, Twelvetree), from the Upper Permian Cupriforous Sandstones of Kargalinsk, near Orenburg," by W. H. Twelvetree.

THURSDAY, March 11, 3 p.m. Royal Institution: "Recent Chemical Progress," by Prof. Dewar.

7 p.m. London Institution: "Some Predecessors of Bach and Handel," by Prof. W. H. Monk.

8 p.m. Society of Arts: "Balmains Luminous Paint," by C. W. Heaton.

8 p.m. Mathematical: "Notes on a General Method of Solving Partial Differential Equations of the First Order with Several Dependent Variables," by H. W. Lloyd Tanner; "Note on the Integral Solution of $x^2 - 2y^2 = -z^2$ or $+z^2$ in Certain Cases," by S. Roberts.

8.30 p.m. Royal. Antiquaries.

FRIDAY, March 12, 8 p.m. Astronomical. Quekett.

8 p.m. New Shakspeare Society: "On Kemp and the Play of *Hamlet*—Tarleton and Yorick," by Dr. B. Nicholson; "On Shylock," by H. Beighton; "Which is the Finest Passage in each Division of Shakspeare's Work? Hints towards an Answer," by the Rev. W. M. Wynell-Mayow.

9 p.m. Royal Institution: "The Dynamo-Electric Current and Some of its Applications," by Dr. O. W. Siemens.

SATURDAY, March 13, 3 p.m. Royal Institution: "Dryden and his Period," by George Saintsbury.

3 p.m. Physical.

3.45 p.m. Botanic.

SCIENCE.

Minutes of Proceedings of the Institution of Civil Engineers. Vols. LV., LVI., LVII., LVIII., forming the Proceedings for the Session 1878-79. (Published by the Institution.)

It used to be said that English engineers built works, and French engineers wrote about them. In former days this was no doubt in substance true. The sturdy race of men who were our earlier engineering celebrities, such as Brindley, Rennie, George Stephenson, and many of their followers, were more apt at handling the working hammer or the drawing compass than the pen; and, excellent as were the results at which they arrived, they would have been somewhat at a loss to explain clearly the mental processes by which these results had been arrived at, or to justify them by any written theoretical investigations. Such men were *practical* men in the highest and best sense; as they had acquired, by careful observation, good judgment, and long experience, the faculty of deciding, by a sort of intuition, what was the best and most suitable thing to do in any case that came before them. Our neighbours across the Channel have always been famed for acquirements of a different kind. The power of writing clearly appears to be a national characteristic with them, so strongly contrasted with the ponderous obscurity of the Germans; and those who are acquainted with French scientific literature know how admirably this quality is carried out in almost everything that appears. And when we add the fact that the French are notable

adepts at mathematical and mechanical investigation, it can hardly be wondered at that their writings upon engineering works have generally been much in advance of our own. The rule, however, has not been of universal application. Smeaton, for example, was a brilliant exception; he was not only a great practical engineer, but also an eminent philosopher, and his writings have always been held up as models in the profession. Many of his successors have followed in his steps, and if we want a proof that our countrymen are striving, in the present day, to take a higher place than formerly in regard to the literature and science of engineering, we need only point to the series of volumes of which the set for one year are mentioned at the head of this article.

When, a century ago, it first occurred to Smeaton and some of his brother engineers that it would be a good thing to hold occasional friendly meetings, they had no idea of carrying their discussions beyond mere conversation. It was not till a much later time that the plan of writing papers, in imitation of the Royal Society, came into vogue. The Institution of Civil Engineers was established in its present form in 1818, and it obtained its charter in 1828. For some time they conducted their proceedings without publicity, but in 1837 they began to print the records of their meetings, and the publication has continued regularly to the present time.

The volumes not only afford an interesting record of the progress of engineering throughout the kingdom, but, which is more *à propos* to our present object in noticing them, they exhibit a gradual but important advance in the mode of treatment of the subjects appertaining to this profession, in their literary and scientific aspects. For a long time the aims of the Institution were but limited. The managers saw that it was all-important, for the interests of the rising members of the profession, that there should be obtained and placed on record accurate and carefully drawn descriptions of works executed by the most eminent engineers of the day; and they therefore invited papers of this character, giving but slight encouragement to essays or discussions on matters of principle, which, being stigmatised as "theoretical," were rather looked down upon by the heads of the profession. This was, perhaps, at that time, a wise resolve; at any rate, the result has been most advantageous, as the volumes contain a mass of practical data on engineering works, of inestimable value, and which have been highly appreciated by the profession in all parts of the world.

Of late, however, this policy has been somewhat changed; for, while good descriptions of works of real importance or novelty are still valued, essays on matters of principle are invited and received; and as, in later times, the ranks of the profession have been often recruited by men of high education and great general ability, there has been no backwardness in responding to the call.

It will present a fair view of the present state of engineering literature if we give a brief notice of the contents of the four volumes before us, omitting, as unnecessary for our object here, any allusion to technical matters. In the first place, the *extent* of the

publication is significant. Down to 1869, one moderate-sized volume sufficed for each year's proceedings; then two were allowed; but in 1874 the allowance was further extended, and we have now four closely printed octavo volumes, of some five hundred pages each, issued by the Institution each session.

The contents of the volumes are divided into three sections. The first of these records the proceedings of the meetings. Out of all the papers sent to the Institution, a certain number only are selected to be publicly read, these being, of course, such as are most suited for discussion. During the last session of twenty-seven meetings, fourteen papers were chosen in this way, treating of the construction of harbours, docks, and dock gates; the warming and ventilating of large buildings; moveable bridges; lighthouses, with special reference to the application of the electric light; railway and water-works in foreign countries; and carriage-way pavements in large towns. The papers were illustrated by detailed descriptions of many large and important works executed under these various heads. Many of the papers treated scientifically of the principles involved in the works they referred to, and they all gave rise to long and interesting discussions, during which a great variety of facts and opinions were elicited from the members present, the whole being recorded in the volumes. These conversations form of themselves a very useful feature of the Institution, as they not only promote the amicable discussion of disputed professional topics, but by the comparison of opinions of the best authorities they tend, perhaps more than any other mode of investigation, to establish the truth in regard to them.

The second section of the proceedings consists of what are called "Other Selected Papers," *i.e.*, memoirs which, though not read at the meetings, are yet considered of sufficient value to be put on permanent record. There were during last session twenty-seven papers under this class, treating of canals in France, reclamation of desert lands, local water supplies, rock blasting, surveying, works in America, German railway management, irrigation in Ceylon, the St. Gothard tunnel, water filtration, the strength of materials, sea-beaches, Swiss bridges, machinery, and other engineering works of various kinds. The non-selection of these memoirs for public reading does not imply any disparagement to their merit or value; on the contrary, many of them show great ability on the part of the writers, and they all contribute, some very materially, to the advancement of professional knowledge. It is worthy of remark that among the authors of these papers are often found foreign engineers of eminence, who pay a high tribute of respect to the English body by desiring their writings to be published under the auspices of the Institution.

In addition to the two classes of papers named above, the society have added a third section to their proceedings, which has excited much interest, namely, a series of "Abstracts of Papers in Foreign Transactions and Periodicals." The Council have thought they could do good service to the profession generally by making known what was being

done in regard to engineering works, or engineering science, in foreign countries. For this purpose they have organised, among the members themselves, a staff of contributors who have undertaken to examine the publications of other countries, and to prepare short abstracts of such articles as are most interesting. These abstracts not only inform the English reader what is going on elsewhere, but, which is of more importance, they direct the English engineer where he may find data that may have an important bearing on special professional questions that come before him. The notices of this kind given in the present volumes are about 275 in number, drawn from foreign works in all languages; they now form a very prominent feature of the publication, and do great credit to the Institution, not only from their obvious interest and utility, but as showing the education and the literary ability to be found among engineers; for to make a good abstract of a complicated technical paper in a foreign language involves no mean amount of knowledge and skill. As a further contribution to this department, a series of special papers have been added, giving a summary of the progress of various branches of engineering in all parts of the world.

The illustrations form an important part of the volumes. These are indispensable, from the nature of the subjects treated of; and it has been a problem of no small difficulty how to compress the elaborate details often required into figures which, while they are of real use for engineering purposes, shall be brought within the compass of an ordinary octavo volume. This, however, has been successfully accomplished, and the illustrations, as a whole, may be looked upon as models of artistic production.

It need hardly be said that the *Proceedings* of the Institution are highly prized by the members, to whom they are of the greatest benefit, particularly to the large number residing abroad; and there is no doubt that the desire to possess these volumes is one of the motives which lead to such large and increasing applications for admission to the Institution. For it must be explained that this society does not allow the sale of its publications; they are only distributed to the members and to a few favoured institutions and libraries, and they are delivered to their recipients in all parts of the world, free of charge.

The volumes are worthy of the Institution, which, as it is probably the largest and the most prosperous of all the scientific bodies of the world, also excels all other societies in the character of its published records. The Council, who hold a heavy responsibility in the management of such an institution, have no doubt felt that it was incumbent on them to use the powerful influence at their disposal for the benefit of the profession, and they have done well to begin in a manner which has been so promptly appreciated. Their success in this will no doubt stimulate them to devote their attention to other matters where their action may be beneficial.

It only remains to add that no small share of the credit attaching to the volumes is due to the able manner in which their production

has been superintended by Mr. James Forrest, the secretary to the Institution.

WILLIAM POLE.

AD. ROEMER ON THE SCHOLIA OF THE CODEX VENETUS B OF THE ILLAD.

Die Exegetischen Scholien der Ilias im Codex Venetus B, eine philologisch-kritische Untersuchung. Von Adolph Roemer. (München.)

THOSE who are not deterred by the subject of this dissertation will find that it has the somewhat rare merit of supporting a definite philological thesis by a sufficient number of well-considered and convincing arguments.

The *Scholia* in question owe their celebrity in great degree to the accident that the MS. containing them is to be found side by side in the library of St. Mark's with the all-important *Venetus A*. The *Scholia* of these two MSS. were edited by Villoison (1788). But while the *Scholia* of Ven. A are unique, those of Ven. B are found in several other MSS., some of which (especially the *Victorianus* and *Lipsiensis*) were used by Bekker for his edition of the *Scholia* to the *Iliad* (Berlin, 1825). The *Victorianus* (in the library at Munich) is believed to be a transcript from the Townley *Iliad* of the British Museum. Bekker, however, incorporated the new material in such a way as to give no idea of the real relation between the several MSS. Consequently, as Dr. Roemer observes, it continued to be the general belief that the *Venetus B* was the chief representative of the class of *Scholia* which it contained, and which, in contradistinction to the critical *Scholia* of Ven. A, are termed "exegetical." It is the object of Dr. Roemer's present work to show that this is a mistake. The *Scholia* of the *Victorianus*—i.e., of the Townleianus—contain, it seems, all, or very nearly all, that is to be found in Ven. B, and they contain a great deal that is not to be found there. Moreover, it can be shown that in nearly all cases the shorter form of the *Scholia* is the result of omission. It follows that in a new edition of these *Scholia* the Townleianus should be taken as the basis, and that the reprint of the *Scholia* of Ven. B recently published at Oxford, under W. Dindorf's editorship, has not the character of finality.

The mere fact of a *Scholium* in one MS. containing more than the corresponding *Scholium* in another would not be sufficient to show priority. Dr. Roemer accordingly proves his point by a series of instances in which the priority of the fuller version is manifest. A single example will show the nature of this proof.

On the words δίπλακα μαρμαρέν (Il. iii. 126) the *Victorianus* informs us that the old copies read, not μαρμαρέν, *shining*, but πορφυρέν, *purple*, and goes on to note that this agrees with other passages (quoted) which speak of *purple* garments. Ven. B leaves out the mention of the reading πορφυρέν, and consequently the rest of the *Scholium*, with the quotations, is unintelligible.

The omission of old various readings, of which the *Scholium* just quoted is an instance, is common in the Ven. B. It is remarkable that the interest in textual criticism, which the great Alexandrians have in common with

modern scholars, had almost died out in the period of the later Scholiasts. Another characteristic of Ven. B is the habit of throwing into one connected paragraph the matter which in the *Victorianus* is divided into two or three distinct *Scholia*.

Dr. Roemer's Preface shows that he is an appreciative critic of the poetical art of Homer. Is it necessary to add that he is not a follower of Lachmann?

It may seem strange that the Townley MS. should have received so little attention, while MSS. of inferior value have been examined and edited. The reason, we fear, is simple. These other MSS. have been within the reach of scholars and students. The Townley MS. is in England.

D. B. MONRO.

NOTES OF TRAVEL.

WE hear that Mr. R. Arthington, of Leeds, the originator of the Tanganyika Mission, has offered the London Missionary Society the sum of £3,000 on the understanding that they will at once place a suitable steamer on Lake Tanganyika, visit all the tribes on its shores, explore the country between the north end and the Albert Nyanza and the neighbouring lakes, with the view of finding the best route from Lake Tanganyika to the Nile, and of bringing under the influence of Christian teaching the populations of the region up to 1° N. lat.; and they are also to visit as soon as possible the populations of Ulegga (or Uregga), Manyema, and Urua, and of the region of Lakes Moero and Bangweolo, classify their languages, and translate into them portions of the New Testament. We should almost fear, however, that Mr. Arthington's munificent gift will hardly suffice for the carrying out of so extensive a programme.

THE Rev. C. J. Wilson and Mr. Felkin, of the Church Missionary Society's Nyanza expedition, in their journey northwards from Lake Victoria, diverged to the north-west at Rabat-chamba, and, as a letter from Mr. Wilson, published last week, stated, they were on November 29 at Dem Solimam, a place somewhat to the south of the ninth parallel of north latitude. Later advices, we learn, left them still there in December, and intending to travel by way of Shaka and El Obeid to Khartum. We understand that, exclusive of stoppages—a serious item in reckoning journeys in Africa—it would take them ten days to reach Shika, whence it is twelve days' journey to El Obeid, from which point they will be ten more days in getting to Khartum. In keeping thus well to the westward of the Nile, they will travel through a very interesting region, which is at best imperfectly known. They will pass through a portion of Kordofan, and the report of their observations during their journey will be awaited with much interest, for their course lies through what may be called the home of the slave-trade. We may add that, in deference to the wishes of foreign Governments, who are anxious that Mtesa should not be molested, the Egyptians have withdrawn from the region immediately to the north of the Victoria Nyanza, and the country has lapsed into a state of absolute chaos.

THE London Missionary Society have received letters from their expedition on Lake Tanganyika giving full details of their proceedings, to which we briefly referred on February 21. Messrs. Griffith and Hutley, accompanied by Mr. Hore, crossed over to the western side of the lake on October 27, and landed at Mtowa, which is situated on the inner end of a broad cape between Cape Kahangwa and Biriudi,

Kasenge and Kavala Islands. In seeking for a locality for the mission station there, they met with numerous caves and arches in the red earth, formed when the lake was at a higher level than now, and they also found a slate quarry. Mtowa is in the territory of the chief of Ruanda, a town to the south, and the country between the two places is very beautiful. The rounded hill-tops, the numerous mountain streams abounding in tropical wealth and luxuriance, and the thick trees, with rich foliage and tropical creepers, make up, according to Mr. Griffith's account, a scenery which is seldom equalled in any land. From a point half way to Ruanda, a fine view is obtained of the lake, the group of islands mentioned above, and beyond even to Cape Kabogo and the mountainous shores of Kawendi and Kungwe on the east side of the lake, while to the south the shores of Uguha and Marungu are seen, and to the north the hilly country gradually rises to the mountainous region called Goma. From the general similarity of the country to Devonshire, and for other obvious reasons, the missionaries propose to give the name of Plymouth Rock to this the first settlement on the western shore of Lake Tanganyika.

A NEW French expedition is about to undertake an interesting journey of exploration from the West Coast of Africa into the Western Soudan. This expedition, under M. Olivier, an engineer, has started from Dakar on Cape Verde, and intends to ascend the Rio Grande as far as possible; the party will afterwards travel by land to the sources of the Niger, and then descend that river to its mouth. M. Olivier will bear all the expenses of the expedition, and he intends to assume the rôle of a doctor, as the healing art is held in high esteem among all the native tribes.

M. TH. LEOART, it is stated, is about to undertake a scientific mission in the country between the Senegal and the Upper Niger, with the view of making researches into the ornithology and entomology of that region.

WE hear that Prof. J. E. Nourse, of the United States Observatory, under whose editorship the official account of Hall's second Arctic expedition has lately been issued, has been commissioned by the United States Government to prepare a narrative of all efforts which have been made towards the construction of an interoceanic ship-canal through the American isthmus. Prof. Nourse will be assisted by Lieut. J. T. Sullivan, U.S.N., in his task, which will involve the examination and digesting of the records of various expeditions, as well as of the accounts of the explorations of individual travellers.

WE hear from Washington that Messrs. Morison and Brown, who sent out Lieut. Schwatka and "Joe" on an expedition to the Arctic regions, have received no intelligence of them since March last. Before Lieut. Schwatka started, he was furnished, by permission of the United States naval authorities, with copies of Capt. O. F. Hall's notes on Melville Peninsula, and it was understood that he would probably go there. As it is known that he was disappointed in his expectation of obtaining Esquimaux guides to lead him to Neitahille, whence some relics of Sir John Franklin were said to have been brought some time back, it is thought that he has most likely gone to Melville Peninsula.

THE Rev. S. Macfarlane, the well-known New Guinea traveller and missionary, has lately returned to England.

Seven Years in Southern Africa: being the Record of Travels, Researches, and Adventures in the Countries between the Diamond Fields and the Upper Waters of the Zambesi, is the title of a compendious work published by Dr. Emil

Holub in the author's native language, the Czech. A German edition is being printed in Vienna.

SCIENCE NOTES.

The Report of the Meteorological Council for 1878.—This Report, although referring to a period ending with last Easter, has only just been distributed, owing to the fact that the Council are instructed by the Treasury to make their report to the Royal Society in June, so that the document cannot possibly be presented to Parliament until the ensuing session. The contents, therefore, appear to be somewhat out of date. The percentage of storm warnings justified by subsequent weather was 77.5, nearly the same as in previous years. The results of the forecasts, which were only set on foot in April 1879, do not form any part of the Report. In part ii., the more scientific portion of the paper, we find a description of a new mode of discussion of wind data from ships' logs, by Mr. F. Galton, and a few other announcements of investigations undertaken by the Council. As regards the forecasts issued gratuitously to some thirty farmers during the last hay season, the results, as estimated by the recipients of the telegrams, have just been published in the newspapers, and the outcome is very fairly satisfactory.

Observations of Nebulae and Clusters of Stars made with the Six-foot and Three-foot Reflectors at Birr Castle from the Year 1848 to about the Year 1878. By the Earl of Rosse. Parts I. and II. In vol. ii. of the *Scientific Transactions of the Royal Dublin Society*, Lord Rosse has published the observations of nebulae procured by means of the great telescopes of his observatory in the course of thirty years. The late Earl, the constructor of these great instruments, had brought out several papers on a selection of the nebulae and clusters observed, the last one having appeared in the *Philosophical Transactions of the Royal Society* for 1861; but, with the exception of a monograph on the great nebula in Orion, published in the *Philosophical Transactions* for 1868, no further account of the observations had been given, and it was time that astronomers should be put in possession of whatever observations had been procured. It was obviously desirable that the original notes of the observers should be pretty fully transcribed in order to give due weight to their evidence. The brighter and more striking objects of Sir John Herschel's Catalogue of 1833 having been first examined, and the more interesting ones having been delineated in drawings published in the former papers, there remained less scope for the pencil, and the micrometer has been more frequently used instead. However, twenty-five nebulae or groups of nebulae have been figured on four plates, and the new drawings of the crab-nebula Messier 1, of G. C. 1,227 = H. V. 28, and of the spiral nebula Mess. 51, will be considered especially interesting. The absence of any indication of the places of the nebulae, except in a limited number of cases, is a serious drawback, since it renders constant reference to other publications necessary, and, indeed, gives to the observations a merely supplementary character. It is acknowledged that some difficulty has arisen now and then in regions rich in nebulae in identifying the object observed with a catalogued nebula; but it is believed that very few cases of uncertain identity remain. Into the text have been introduced diagrams, which are rough copies of those drawn at the telescope, and which will be useful in any re-examination, when they can be compared directly with the heavens. In an Appendix some letters are printed in vindication of the performance of the six-foot reflector, against some disparaging remarks which have appeared in a magazine article. Astronomers,

however, will probably be guided in their judgment chiefly by the work which has actually been accomplished. The present publication comprises the nebulae between 0h. and 14h. of right ascension; part iii. is intended to contain those within the last ten hours.

Periodicity of the Aurora.—Prof. Rubenson, of Stockholm, has begun the publication in the *Transactions of the Swedish Academy* of a complete catalogue of the auroras observed in Sweden from 1536 to the present time. Part i., covering the period up to the beginning of this century, has just appeared, and it is a copious storehouse of facts filling 184 pages quarto.

Prehistoric Archaeology in France.—The last number of M. Emile Cartailhac's *Matériaux pour l'Histoire de l'Homme* is embellished with five admirably executed plates in illustration of a valuable paper on the *tumuli* of Avezac, in the Hautes-Pyrénées, by MM. Piette and Sacaze. The group of barrows under description included fifty mounds, varying from three to thirty metres in diameter, and ranging in height from twelve centimetres to two metres. Each mound is surrounded by a stone circle, or cromlech. All the *tumuli* which have been opened belong to the early part of the iron age, or to Prof. de Mortillet's *Hallstadian* period, though the famous cemetery at Hallstadt is referred to the transition period between the bronze and the iron using ages. There is a complete absence of bronze weapons, all the arms being of iron, but the ornamental objects are either of bronze, or of bronze associated with iron. Some of the iron-bronze *fibulae* are extremely elegant. The interments have been by cremation, and a great variety of cinerary urns have been disinterred. One of the most curious of these vases is surrounded by the weapons of the deceased, the blade of the sword having been rolled up so as to resemble the coil of a crozier. All the evidence derived from the exploration of the *tumuli* tends to show that they belong to a time soon after the use of iron had been introduced into Gaul. Nevertheless, it appears that no Gallo-Roman urns have been found, and hence it may be inferred that these burial-places were not used after Aquitania had been conquered by the Romans.

Meteorology of Portugal.—M. de Brito Capello, the Director of the Infante D. Luiz Observatory at Lisbon, has published three useful papers—"On Barometrical Pressure at Lisbon, 1856-75," "On Rain at Lisbon, 1836-75," and "On the Meteorology of the whole Country based on the Returns from Nine Stations." These papers have been reprinted in the French *Atlas Météorologique* for 1878.

Thermometer Exposure.—M. Capello proposed at the Congress at Rome a screen for general adoption for thermometrical exposure, which offers several advantages. It is on the principle of Stevenson's, as being a closed louvered cage, but it is made of copper or zinc, and has double louvered walls with a space between. It is painted white. The dimensions are—height, two feet ten inches; breadth, two feet one inch; depth not stated. The paper is given in the *Atlas Météorologique* for 1878.

THE late Mr. Edward Hearle Rodd, whose lamented decease we had recently to announce, had in the press at the time of his death an interesting work on the Birds of Cornwall, and we are glad to learn that this will shortly be published by Messrs. Trübner and Co. The volume will be edited by Mr. J. E. Harting, and will contain a memoir and portrait of the author from a recent photograph. Apart from its value as a trustworthy guide to the ornithology of Cornwall, the addition of the memoir and portrait will make it an appropriate and acceptable souvenir to the author's numerous

friends and acquaintances throughout the country.

THE museum recently instituted in connexion with the chair of anthropology at the University of Moscow has been presented by Prof. Lund, of Aarhus, Jutland, with a valuable collection of objects belonging to the stone age in Denmark.

PHILOLOGY NOTES.

THE last number of the *Hermes* (vol. xv., part i.) contains matter of more than usual importance. In an elaborate paper of forty-three pages Hübner discusses the ruins of Oitania in Portugal, and the remains found there. His conclusion is that these ruins and remains belonged to an *oppidum* of the primitive population, which, in spite of some influence from Roman culture, was still in a half-barbarous condition. H. Jordan contributes two good papers, one on *Pomerium* and *Esquilie*, the inscription recently discovered in Lake Fucinus, and on *olea* and *oliva*; the other on the *parabasis* in Plautus' *Curculio*, the genuineness of which he disputes. Mommsen discusses the date (1) of the death of Porcia, the wife of Brutus; (2) of the epistles of the second book and of the *Arts Poetica* of Horace. E. Stutzer considers, from an historical point of view, the chronology of the speeches of Lysias. Tiedke continues his investigations into the metre of Nonnus. A Greek inscription found at Oyzicus in 1874 is discussed and assigned to the latter part of the sixth century B.C. by Mordtmann. Zeller ("Der pseudophilonische Bericht über Theophrast") argues against Diels in favour of his own hypothesis, expounded in a previous number of the *Hermes*, that the Stoic, against whom Theophrastus is arguing, is Zeno. The last article is by E. Curtius, on the two statues usually supposed to represent Harmodius and Aristogeiton, and has been already mentioned in the ACADEMY.

In the *Rheinisches Museum* (vol. xxxv., part i.) the most important papers are the first ("Die Römischen Gründungsdata"), in which G. F. Unger discusses the date of the foundation of Rome, and the last, by Usener, on the date of the composition of Plato's *Phaedrus*. The recently discovered fragments of Euripides are discussed by Blass and Bücheler. P. Egenolf publishes a new collation of the Copenhagen MS. of Herodian *περί μονήρους λέξεως*. The genuineness of the poem entitled *Phoenix*, and attributed to Lactantius, is defended by H. Dechent. K. Lange has an interesting essay impugning the trustworthiness of the descriptions of the statues at Constantinople by Christodorus and the Pseudo-Libanius. Notes on the history of Greek literature are contributed by A. Daub, on points of Latin lexicography by Bücheler, and on Seneca's Epistles by Ribbeck.

MEETINGS OF SOCIETIES.

ROYAL SOCIETY OF LITERATURE.— (Wednesday, Feb. 25.)

W. KNIGHTON, Esq., LL.D., in the Chair.—Mr. Robert N. Cust, in a paper "On Late Excavations in Rome," gave an interesting account of the recent researches in that city, which have been mainly due to the energy and zeal of the late Emperor Napoleon III., of Mr. J. H. Parker, and of the present Italian Government. In the course of a rapid but clear survey Mr. Cust dealt especially with five particular portions of the area of Rome which have been the scene of successful explorations, viz.:—(1) The Palatine Hill, the site of the house of Augustus and of the palaces of the later emperors; (2) the Forum; (3) the baths of Titus and the Colosseum; (4) the baths of Caracalla; (5) the banks of the Tiber within the city. The paper was illustrated by maps kindly sent for the purpose by Mr. J. H. Parker and Mr. John Murray.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 26.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—Mr. Lawrence P. Gomme read a paper upon the open-air-Courts of Hundreds and Manors. After a reference to courts in the open air, as usual among savage tribes, Mr. Gomme spoke of those which were known to have existed among the Hebrews, the Hindoos, the Icelanders, the Danes, and the Russians, and instanced the Tynwald Court in Man and the Eisteddfod in Wales as survivals of the same practice in these islands. Of Shiremoors held in the open air, there are no records extant, except local names, such as Shirehill, Shirewood, &c., which are evidence of obsolete practices. The Hundred Court partakes more of the character of a Manorial Court, and resembles in all points a Court Baron, except that it is held for the inhabitants of a whole hundred. At Swanborough Clump, in Wiltshire, such courts have been held within the memory of old men now living. In Warwickshire, the Court of Knightlow Hundred was held on Knightlow Hill at sunrise on Martinmas-day, and the rent due to the lord was deposited in a hole on Knightlow Cross; and there are a few other examples in Norfolk and elsewhere. In the case of Manorial Courts, the practice was once general, but is now rare; and where the meeting is summoned and commences out of doors an adjournment is generally made to a neighbouring public-house for the transaction of business. Mr. Gomme referred to the customs of the Manor of Aston, in Oxfordshire, of which an account is given in *Archæologia*, xxxiii.; to the Lawless Court at Rochford, held at night, when neither lights nor ink are allowed; to a court held near Basingstoke, in the Lawday Mead, when the lord of the manor is elected by the suitors; and to another at Warnham, near Bognor. There are also traces of a similar practice in the Channel Islands.—Mr. Ralph Nevill exhibited a square block of terra-cotta with a greenish glaze from Esher Place. It bore a buckle—the badge of the Pelhams—with the date (1534) and an inscription. The house was built by Bishop Waynflete, and was purchased from the see of Winchester by Queen Elizabeth. The date of its being pulled down is not known, but the gate-house was bought by Mr. Pelham, brother to the Duke of Newcastle, in 1729, and additions were made to it in the same style of building.

FINE ART.

ART BOOKS.

A Rule of Proportion for the Human Figure. By John Marshall, F.R.S., F.R.C.S., Professor of Anatomy, Royal Academy of Arts, &c., &c. Illustrated by John Cuthbert. (Smith, Elder and Co.) Mr. Marshall, who has done such good service already in art education by his *Anatomy for Artists and Anatomical Diagrams*, now presents us with a new rule of proportion for the human figure, which is at once simple and scientific. Its novelty consists in rejecting the stature of the body as a proper basis of measurement, being itself a complex measure composed of different parts—viz., the axis, including the head, neck, and trunk, and the lower limbs, which overlap the trunk at the thighs. Regarding the human form as a structure composed of an axial portion and appendages, his system commences with the measurement of these homological portions, and thence deduces the stature, &c. "Four factors . . . constitute the essentials of the rule." (1) The length of the head, neck, and trunk; (2) the distance between shoulder joint and hip joint; (3) the length of the arm and hand; (4) the length of the leg and foot. Taking one-ninth of the head as the unit of measurement, he divides these four lengths into so many heads and units. The head, neck, and trunk, which constitute the axial portion of the body, he estimates at four heads exactly; the distance between the hip and shoulder joints at two heads; the length of the arm and hand at one head and four units; and that of the leg from the hip joint to the heel at four heads; adding five units for the additional length of the foot

extended downwards. These are the proportions for a full-grown male figure, and will not apply either to the female figure or to immature persons; but Mr. Marshall applies the same system to the female mature figure and to male proportions of various ages—why he has not thought it necessary to give diagrams of female proportions at various ages he does not tell us. It is one of the advantages of Mr. Marshall's system that his unit, if taken as an inch, will make a figure corresponding in height to what has been proved to be the average stature of Englishmen, and that his ratio of nearly seven heads and a-half for the standing measure is in accord with the result of modern observation. To attain to the classic proportion of eight heads degenerate moderns must stand on tiptoe; then we do it—just. We have no doubt that Mr. Marshall's rule and Mr. Cuthbert's diagrams will be of great value to artists, as the former is simple and easy to remember, and both are founded upon ascertained facts.

Needlework. By Elizabeth Glaister. "Art at Home" Series. (Macmillan.) The aim of this book is not so much to teach how to work embroidery or how to design it, as how to cultivate a taste for what is good and true in this kind of art. It appeals, therefore, to a very large public, and its use will extend beyond the sphere of practical workers to that still larger class of buyers whose good or bad taste has so great an influence on production. It is difficult to believe that anyone who reads Miss Glaister's book with any care, and studies the dainty devices which adorn it, can be satisfied with poor or vulgar work in future. As for the embroiderer herself, to whom the book is addressed, it will be her fault and not Miss Glaister's if she fail to find some valuable hint on every page. Wisely discarding the ambition of laying down rigid principles with regard to so elastic an art, the authoress confines herself mainly to practical suggestions with regard to the decoration of different articles, such as curtains, chairs, and screens, accompanying them with descriptions of patterns, which have been already worked with success; but she does not leave the reader without sound general advice as to methods of study in design and choice of material and colours. The introductory chapter and those called theoretical and practical are not only very instructive, but are written with much charm, as the following quotation will testify:—

"You will find that the arts go hand in hand, they are a most united family of sisters, and if the grave elder ones are a little overpowering, seeing that they claim the whole life of their devotees, there are many merry little sisters, both good and fair, ready to brighten your leisure hours, while the one you choose for your special friend will lead you to an acquaintance with all the gracious troupe." Although the authoress "would not be thought to despise nature, or to undervalue the study of natural objects, on which all good ornament is founded," we think she directs the student's attention too exclusively to art work as a source of inspiration for design. In so conventional an art as needlework the knowledge to be derived from ancient patterns and designs of all kinds is practically infinite, and generally to be trusted, and ignorant attempts at copying nature realistically cannot be too much condemned; but surely it is going a little too far to say,

"If, being called Margaret, you wish to powder your mantle with daisies, do not listen to people who talk about 'nature' because they do not know art, nor draw your flower from the particular species that grows on the lawn, but adopt some such treatment as fig. 4, which comes from the tomb of Marguerite of Bavaria at Dijon. It is a true Marguerite, and will suit your purpose admirably."

This flower may be a "true Marguerite," but

it is not the Marguerite of England, and if, as Miss Glaister rightly hopes, Margaret's needlework will last after her death as a monument of the things that in her time were loved and sought after, she should work the daisy that was loved by Margaret of England in the nineteenth, and not that which was loved by Marguerite of Dijon in a previous century. We think also that it would have added much to the value of her book if Miss Glaister had given a few hints as to the decorative treatment of natural objects, such as flowers, with illustrations, showing their natural growth and their adaptability to design.

EXHIBITIONS.

THE Exhibition of the Institute of Art, now open at 9 Conduit Street, contains many pretty things, but nothing of much importance in the way of modern art productions. Mrs. Warner Sleigh deservedly carries off the prize for water-colour painting with a delicate little figure of *Zephyr*, and Miss Watson's flower pieces are good. Of Art Needlework there are some good specimens, the best being by Mrs. J. Elliot, to whose charming screen with birds and aquatic plants worked upon oatmeal cloth the first prize has been awarded. Miss Frances Deane takes the prize for lace with some very good point; Miss Samuda sends a prettily painted fan; and Miss Shoemith a hanging of satinette, painted with a very bold and effective design of tropical birds and foliage. We regret to see that the judges have not awarded prizes in many of the classes, and that the articles exhibited attest the justice of their decision in this respect.

THE visit of the Queen to Baveno has suggested to M. and Mme. de l'Aubinière the idea of an exhibition of views of that neighbourhood, painted, as the catalogue tells us, during a seven months' stay on the shores of Lago Maggiore. The works now on view at the Belgian Gallery in New Bond Street comprise thirty water-colour drawings by Mme. de l'Aubinière of very various degrees of merit. There are two or three clever sketches of quaint old houses in the village, and an *Interior of a Courtyard at Baveno* (No. 7) deserves attention for the care with which a difficult subject is worked out. The lower part of this picture, in spite of the somewhat monotonous neutral tint for which Mme. de l'Aubinière seems to have a considerable affection, is admirably treated; the gleams of the setting sun and the distant hills in the upper part are not so well managed. *Under the Acacias, Pallanza* (No. 12), and *Monterone, from the Moors above Baveno* (No. 22) are effective sketches; the twilight in the latter is truthful, and the obscure masses of moor and hill are well given. The finished picture of the same scene (No. 4) is far less satisfactory. The foreground is good (foregrounds are evidently a strong point with this artist), but the moors and hills are a failure. We cannot say, indeed, that the pictures included in this exhibition show that Mme. de l'Aubinière has mastered the difficulty of representing on a large scale sweeps of moorland or mountain scenery. There is, however, a good study of the peculiar tints of a mountain slope in the middle distance in *Intra, Lago Maggiore* (No. 20)—a rather lop-sided composition—and we must not omit to draw attention to a charming little picture called *The Last of the Light* (No. 19), a view of the mountains from the moors above Baveno. The woodland scenes are, generally speaking, successful; and one in particular, *The Course of a Torrent* (No. 24)—a very daring subject—shows considerable power of dealing with foliage. One or two trees above the figures seem to be rather carelessly worked, but the rest of the picture is in many respects satisfactory. M. de l'Aubinière has contributed a few oil

paintings to the exhibition, most of them evening studies of scenes in the neighbourhood of Baveno. His skies are noteworthy, and in a view of *The Lakes of Maggiore and Varese from the Mountains above Baveno* he has cleverly reproduced the peculiar effect of twilight over a striking landscape.

ART SALES.

ON Thursday, Friday, and Saturday in last week, Messrs. Christie, Manson and Woods were engaged in selling the large and valuable collection of pictures formed by Mr. James Fenton, of Norton Hall. The sale excited considerable interest, not only on account of the extent but also of the variety of the collection. The older English pictures were sold on Thursday, the assemblage of Old Masters fell under the hammer on Friday, and the pictures by artists now living were disposed of on Saturday. The Old Masters were not, generally speaking, by any means of the first order, and they did not fetch high prices. Among the early English pictures were some Morlands and Wilsons of pleasant quality and in good condition. These, with one exception—a picture by Morland of a butcher bargaining with a farmer—sold cheaply; the painting just named realised 290 guineas (West). We note also in the sale Romney's portrait of Lord Warwick's two children, £273 (Rhodes); *The Rialto, Venice*, by Guardi, 410 guineas (Colnaghi); *The Tunnel Bridge*, by J. M. W. Turner, 220 guineas (Wertheimer); a fine landscape with three cows, by T. Sidney Cooper, 240 guineas (Hooper); *A Glade in the Forest*, by Creswick—the figures being by Mr. W. P. Frith, R.A.—300 guineas (Vokins); *The Isle of Wight*, as seen from Lymington, by John Linnell, from a sketch made at the remote date of 1815, 480 guineas (Wertheimer); *The Young Fisherman*, by Thomas Webster, R.A., 235 guineas (Nathan); *Les Causeuses*, by the late William Collins, R.A., a picture of the year 1830, and exhibited at the Royal Academy, 335 guineas (Ellis); *The Sheepfold, Evening*, by J. Linnell, a picture painted in 1851, 455 guineas (Agnew); *Renzi in the Forum*, an early work of Mr. Alfred Elmore, exhibited in the Academy in the year 1844, 210 guineas (Evans). The entire sale realised £12,491, and was, perhaps, the most important yet held in King Street this season.

THE sale of the renowned collection belonging to Prince Demidoff cannot fail to rank as a very notable event in the art annals of our time. Treasures of such vast extent and of such extraordinary variety are rarely brought into the public market, and it is not wonderful that the occasion should already have drawn to Florence a host of collectors and connoisseurs. The sale is announced to commence on the 15th of the month, and the days set apart for public exhibition are the 10th, 11th, and 12th; but to those fortunate enough to have secured private invitations the collections have been accessible since the first day of the month. The illustrated Catalogue which has just been published affords ample evidence of the extent and value of the Prince's possessions. In certain directions, indeed, and especially in all the manifold forms of ornamental design, the contents of the Palace of San Donato may be said to provide the means of a liberal education in art. If there is anything to desire it is in the department of painting, and notably in those great schools of painting in which, from local association, we might have expected the fullest display. The Masters of Italy of the fifteenth and sixteenth centuries are not very strongly represented, but there are many choice examples of the art of Holland and of the French school of the eighteenth century. In virtue of the pictures alone, however, the sale would scarcely claim exceptional importance. Its extraordinary interest to students as well as to collectors

depends upon the rich array of objects of luxury and ornament upon which the decorative artists of the last four centuries have lavished the resources of their genius. The circumstances of the sale as set forth in a prefatory note to the Catalogue are in themselves curious and interesting. The fortunate possessor of the Palace of San Donato has apparently grown weary of these accumulated records of the past so diligently collected by himself and his predecessors. He aspires to exchange the rôle of a collector for that of a creator, and to employ his vast resources in a form that shall embody the spirit and talent of his time. Having acquired the Villa Medici, he is about to erect there an entirely new building, which is to rival in magnificence, if not in beauty, the palace constructed in 1569 by the combined talents of Buontalenti and John of Bologna, and with this intention he is content to pass on to others the treasures which have so long adorned the Palace of San Donato. We have already hinted that the strength of the picture gallery depends upon work of the Northern schools, but it is not to be supposed that the art of Italy is otherwise poorly represented. In sculpture, in furniture, and in magnificent embroidery the Italian genius is triumphantly vindicated, and among the most interesting pages in the Catalogue are those devoted to the contents of the *salon* named after Luca della Robbia. Here are to be found exquisite examples of the master himself and of several of his illustrious fellow-workers, including a charming infant figure by Desiderio da Settignano and a Madonna of the sweetest character and the most tender beauty by Rossellino. The craft of the Florentine sculptors in its application to objects of furniture is illustrated in the Throne of Giuliano de Medici dating from the end of the fifteenth century and by numerous cabinets of somewhat later date; while in this same room are hung rich embroideries of Italian design, and two superb pieces of tapestry executed from the cartoons of van Eyck and Roger van der Weyden. The Dutch pictures make up a very extensive collection, numbering some superb examples of the greatest masters. We may mention in particular *Le Concert de Famille*, by Jan Steen; a full-length portrait by Terburg; several landscapes by Ruysdael, Cuyp, and Philip Konick; a small interior by van der Meer, of Delft; *The Usurer*, by Metzuz; a superb Paul Potter; a series of highly characteristic works by David Teniers; and several portraits by Rembrandt, who is also represented by a half-length figure of Lucretia. The collection, it may be added, is specially rich in goldsmiths' work, including a representation of the style of every European country in porcelain, both ancient and modern, and in watches and snuff-boxes.

NOTES ON ART AND ARCHAEOLOGY.

EVERYONE knows the popularity of the Messrs. Scribner's magazines—the *Monthly* for grown people, and the *St. Nicholas* for children. In these magazines good writing has, of course, not been absent, but the particular element which has made the success of the serials has been the illustrations. It was, therefore, a very good thought on the part of the publishers to issue—as they have just now done—a "portfolio" of *Proof Impressions* from their two magazines. Though called a "portfolio" it is in reality a book—a Christmas book or an Easter offering, of the most luxurious kind. Some of the pictures are quite admirable. Modern wood-cutting has not gone farther than in the exquisite representation of an object of still-life here recorded—a peacock feather fan. As far as the designs themselves are concerned—and irrespective of their generally perfect transfer to the block and their

careful printing—praise is not of course to be universally given. The expression, for instance, of the girl child with the baby in the snow, in one picture, is distinctly exaggerated. But what an admirable design is that of "Jarl Sigurd's Christmas Eve"—how dainty are so many of the landscapes—how picturesque the interiors! And again, the plate No. 58—a portrait engraved after the original pastel in the Berlin Museum—is an exquisite little performance, of which the technical merit belongs, at all events, to the artist of *Scribner*. When so many vulgarly and flashily illustrated books are about—and some of them in high places where one does not expect to find them—it is refreshing to come upon a series of illustrations so meritorious as these.

THE Yorkshire Fine Art Society, the headquarters of which are at Leeds, will open a loan exhibition of pictures on May 1 next; and on September 1 an exhibition of modern paintings and other works of art, contributed principally for purposes of sale. The guarantee fund now amounts to £7,000.

SOME very valuable notes on moated mounds—that is, earthworks such as those which are, in the Saxon Chronicle, attributed to Eadward the Elder, and Aethelflaed, the Lady of the Mercians—appear in the last number of the *Builder*, under the initials "G. T. C."

SIR FREDERICK LEIGHTON has finished his large fresco of *The Arts of War* in one of the large lunettes of what is known as the South Gallery at the South Kensington Museum. The cartoons for this and for its companion lunette, *The Arts of Peace*, are so familiar to all visitors to the Museum that it is scarcely necessary to describe their general design. In that now finished, the President of the Royal Academy has wisely, we think, refrained from all temptation towards an abstract or allegorical representation of his subject, and has chosen to illustrate it by a scene in its history. Nothing could be more appropriate to a museum which contains so many splendid specimens of metal work and embroidery than the scene chosen by Sir Frederick, viz., the interior of an armourer's yard in Italy in the Middle Ages, filled with numerous picturesquely dressed figures of men and youths choosing their swords and armour, and a group of beautiful women embroidering tabards. We must postpone further description and criticism of this very important work till it can be seen from the distance at which the success of its effect can be properly judged. At present a curtain hides it from public view, nor will this be removed until the Queen's visit, the day for which has not yet been fixed.

OUR Government has again declined, for financial reasons, the proposal to form here a collection of casts from ancient sculptures. Meanwhile, in Paris preparations are being made to carry out a scheme of this kind on a large scale. Apparently the collection in Berlin will be taken as the model, at least as regards extent. The arrangement there is not such as should be followed, and in fact it is in course of being changed. But while a collection of casts should be as comprehensive as possible, the admirably selected series in Munich and Strassburg show that even with very limited means a highly instructive exhibition can be produced.

PROF. LEGROS has presented to the Art School of Aberdeen, through the Dean of Guild, eleven drawings, fifty-two etchings, and one portrait in oil, all executed by himself. The school has also received gifts of nine drawings and two etchings by pupils in the Slade School, University College, London; two etchings by Rembrandt; a water-colour and an etching by F. Bonvin; two etchings by Jacquemart; two by Léon Richeton; and one by de Nittis. These

works of art are for the present exhibited in the Town and County Hall of Aberdeen.

THE death is announced of Mr. Charles Lees, R.S.A., in his eightieth year. He was a regular contributor to the exhibitions of the Royal Scottish Academy, and was best known by a number of historical works—*The Murder of Rizzio*, *The Death of Cardinal Beaton*, *John Knox during his Confinement*, &c.; by a view of St. Mark's, Venice, under moonlight; and by various winter subjects, curling scenes, &c.

ONE of the students of the German Institute in Athens, who has occupied himself with classical architecture, intends to make a thorough examination of the Propylaea, and has already made a beginning at that most interesting point where the Temple of Victory adjoins the south-west end of the Propylaea. At the present moment the Temple of Victory is one of the burning questions in archaeology, and accordingly much is expected from this new investigation. The new fragments of the balustrade of this temple found in the excavations on the south side of the Acropolis are very much defaced, and have lost all the charm of the reliefs previously known. They are to be seen in the museum on the Acropolis, behind the Parthenon.

THE *Revue Archéologique* for January gives a view of the statue of *Victory* from Samothrace, in the Louvre, mounted on its ancient pedestal in the shape of the prow of a galley. The marble blocks forming this pedestal were found in 1878, and have now been put together in the Louvre. The statue naturally stands facing in the direction of the prow, and perhaps this fact might be useful in determining the position of the *Victory* of Paenios at Olympia on its three-sided pedestal resembling in general the prow of a galley.

IN the Uffizi Gallery of Florence a new room has been recently thrown open. It is named the "Sala di Lorenzo Monaco," and contains the famous *Coronation of the Virgin* by that master, painted for the Benedictine Monastery outside Porta Pinti, demolished during the siege of Florence in 1529. The picture has been restored by the late Signor Franchi. In the same room are paintings by contemporaries of Lorenzo Monaco, and likewise several specimens of Beato Angelico and Botticelli. A fine triptych by Gentili da Fabiano, formerly in the church of San Niccolò, is shortly to be added to the collection.

M. L. BASCHET is bringing out, in fascicules, a work on *Les Chefs d'Œuvre d'Art au Luxembourg*. The text will be by Gaston Schéfer and others; and the illustrations will be executed chiefly in *photogravure* by Messrs. Goupil.

THE death is announced of the French painter Adolphe Roger, a pupil of Gros, whose best-known works are the paintings of the baptistery of Notre Dame de Lorette, and the great cupola of St.-Rooh; of M. Heris, the expert of the Belgian museums, and author of an *Histoire de l'Ecole Flamande de Peinture au XV^e Siècle* (1856); and of the Marchese Pietro Selvatico, of Padua, a distinguished writer on art.

IN April next the Musée des Arts Décoratifs, which has been transferred from the Pavillon de Flore to the Palais de l'Industrie, will be opened to the public. It will comprise two distinct parts: (1) the museum properly so called, with the objects bought by the committee of management, and lent or given by collectors; (2) a temporary exhibition, organised by MM. Dreyfus and Ephrussi, of decorative art designs, specimens of jewellery, furniture, tissues, &c., from the Renaissance to the present time. This exhibition will include M. Paul Gasmault's ceramic collection, which has just been bought by M. Doubouché, and is to be placed in the

Limoges Museum, which already possesses the Jacquemart collection.

A STATUE is to be erected in the course of this year to George Sand. The site proposed is the Vallée Noire in Berry, the spot where so many of her romances had their birth.

THE drawings and paintings of Martin Distel, the famous Swiss caricaturist, are to be exhibited at Olten during the Schützenfest.

IT is announced that the small town of Urfa, the scriptural Ur of the Chaldees, has been nearly destroyed by fire. The inhabitants removed their valuables to the house traditionally known as Abraham's birth-place, which was uninjured.

TWO reproductions from George Cruikshank's works, one being the well-known *Election for Beadle*, and the other a clever political satire entitled *Coriolanus addressing the Plebeians*, published in 1820, are given in the *Magazine of Art* this month in illustration of a memorial article on that artist by Alice Thompson. It is strange that, though two years have now elapsed since George Cruikshank's death, no detailed biography of him has yet been published.

IN the last two numbers of *L'Art* are given two etchings from a pair of pictures in the San Donato collection, ascribed to Teniers. These are entitled *Taste* and *Smell*. The one represents a laughing youth holding a goblet apparently filled with some pleasant drink, while another youth behind waits with a jar to replenish the glass; and the other, an old gardener and his wife, who are supposed to be deriving satisfaction from the scent of a splendid pot of carnations that the man holds in his hands. The title strikes one as somewhat fanciful, but the pictures themselves are pleasantly treated little bits of common life.

THE STAGE.

CERTAINLY the time has come when a Shaksperian performance creditably done is sure of being well received. We chronicled last week the successful representation of *Macbeth* at New Sadler's Wells, and might have recorded at the same time the agreeable performance of *As You Like It* in Westminster. The Imperial Theatre within the building of the Royal Aquarium has, under Miss Litton's management, become noticeable for the refinement of its performances, and the new performance of *As You Like It* is no exception to the now well-established rule. To begin with, the scenery by Mr. Perkins, and the costumes from designs by Mr. Forbes Robertson, are excellent; there is thus a fitting frame for the picture which the play itself presents. Then, again, though certain minor characters, and some which are hardly to be accounted insignificant, do not find good representatives, some three or four of the principal persons of the drama are embodied by the performers with great capacity, good taste, and discretion. Mr. Vezin appears as Jacques. The part played by Jacques in the comedy of *As You Like It* is wont to be over-rated; or, at all events, nothing is more common than to mistake that portion of his part wherein lies the importance. The speech of Jacques about the seven ages of man—a speech traditionally regarded as the great effort of elocution—has little bearing on the play. It is really but an instance of a melancholy man's discontented and misanthropic observation of life, and an instance that Jacques, like "Signior Benedick," "will always be talking." But the very fact that it has so little to do with the action of the play makes its appropriate delivery a more difficult task than otherwise it would be. No one copes with its difficulties better than Mr. Hermann Vezin, who is discretion and temperance itself, and who does not fail to see in the part other and subtler opportunities for this display of character

than this famous speech affords. Mr. Lionel Brough is of course a merry Touchstone, but in the reflective portions of the part—in the utterance of its quaint conceits—he is not seen quite at his best. Mr. Kyrle Bellew plays Orlando with some sense of the poetry of the piece and the spirit of the character. Miss Litton is a happy Rosalind. Her dress becomes her, and her bearing becomes the part. She has that mixture of vivacity and gentleness which was certainly Rosalind's own, and if she is somewhat less forcible than one or two other contemporary interpreters of the part, she has the *qualités* of her *défauts*, as well as the *défauts* of her *qualités*. Indeed, this *As You Like It* at the Imperial is on the whole a very enjoyable performance: unequal; here and there disappointing; but with the merits greatly in excess of the faults.

At the Princess's Theatre, where the performance of *Drink* was cleverly repulsive and where that of *The Streets of London* is commonplace, though sensational, we are promised before very long an interesting representation. It seems that Joseph Hatton and Mr. Charles Dickens, jun., have together dramatised the great novelist's unfinished story, *The Mystery of Edwin Drood*. A drama must have a conclusion, even if a story have none, and in the dramatic version of *Edwin Drood* we shall look for something more than the exposition of John Jasper as the would-be murderer of Edwin. Everybody has long ago guessed that he was the would-be murderer. No other person was seriously interested in the disappearance of the ingenuous youth. The question readers put to themselves was never, Who was the would-be murderer? but rather, How will his attempt be discovered? and, Was the youth really murdered after all? More than one writer of fiction, both in England and America, we believe, has set himself to devise the natural end to the story; and one writer, a young Englishwoman, who had studied Dickens with extreme minuteness, managed in her work to catch quite the trick of his style; but certain facts revealed by Dickens in the six completed numbers which make the only half of the work which the public possesses, were hardly duly borne in mind by her. After all, this dramatic version now promised is quite likely to be more interesting by reason of the stage creations it may give us of Grewgious, Edwin, Jasper, and Rosa than by reason of any ingenuity which it may display in arriving at an appropriate end.

THE promised performance of *La Fille de Madame Angot* at Drury Lane Theatre at Easter will afford an opportunity of testing, with respect to the musical drama, what has already been tested with respect to comedy: that is, whether a piece which has been confessedly very successful on a small stage and under the conditions of performance in a small house will bear transplanting to a larger area. The experiment, if it can ever be made with success, will probably be made successfully with *Madame Angot*, where an increased band sounds throughout a larger theatre and gorgeous scenery can occupy the eye. The effects of pure comedy, which depend upon naturalness, are not to be so stretched with impunity on the transfer of the piece to a larger house.

MR. CHARLES KELLY now plays, with great ease and naturalness, the part of Joseph Surface in the performance of *The School for Scandal* at the Vaudeville. Mr. John Clayton, as was said last week, having had occasion to transfer himself to the Prince of Wales's to take a prominent part in the performance of *Forget Me Not* with Miss Genevieve Ward. The *Daily News* reports that *She Stoops to Conquer* will be played at the Prince of Wales's at the conclusion of Miss Ward's engagement.

MR. BOUICAULT's re-appearance in England may be expected early in April.

MUSIC.

RECENT CONCERTS.

A LARGE audience assembled on Thursday February 26, at St. James's Hall, on the occasion of Mdlle. Janotha's first pianoforte recital in London. This talented pianist has given of late at the Popular Concerts many sterling proofs of mechanical and intellectual ability, and we must frankly say that we do not think she did herself full justice either in the selection or performance of the various pieces at her recital. The programme was unusually short, and contained only one novelty. The concert commenced with Beethoven's sonata in C sharp minor ("The Moonlight"). Her playing of the first movement lacked warmth, the second repose, and the *finale* both power and passion. After the sonata came a *bourrée* from the English *suite* in A minor of Bach, and Chopin's *schërzo* in B minor, both well played, the latter especially with great brilliancy and delicacy of expression. After these a duet for two pianofortes by Herr Otto Goldschmidt, a light, graceful, and showy composition, which was performed with *entrain* by Mdlle. Janotha and the composer. The last piece was Schumann's *Carnaval* (op. 9). Some of the numbers were rendered in a peculiar and not altogether satisfactory manner, but the rest were given with much feeling and animation.

Herr Barth was the pianist at last Monday's Popular Concert, and played, as solo, variations on a theme by Paganini, op. 35, by Brahms. The composer has written two series of fourteen, and the programme book announced that a "selection from each would be given (with the approval of the author)—viz., nine from book i. and three from book ii., and disposed with the requisite consideration for effect," but Herr Barth gave thirteen from book i. and four from book ii. The variations are decidedly original, but the chief aim of the composer seems to have been to produce a work teeming with technical difficulties of every description. The pianist played them with wonderful ease, power, and self-possession—in fact, the greater the difficulty the greater the playing. He well deserved the hearty applause given to him, and acknowledged the same by giving as an *encore* Henselt's difficult study—"Danklied nach Sturm." Herr Joachim gave also a very fine rendering of Bach's wonderful *chaconne* for violin alone, and gave for an *encore* a movement from Bach's fifth *suite*. Bach's variations in the *chaconne* form a marked contrast to those of Brahms; both are replete with difficulties, but in the former they are without doubt only a means to an end. The programme included Mozart's *divertimento* in B flat and Beethoven's trio, op. 70, No. 2. Herr Henschel was the vocalist; he was in excellent voice, and sang with much effect an air ("Ye verdant Hills") from Handel's *Susanna*, and other songs.

Herr Joachim was solo violinist at last Saturday's Crystal Palace concert, and played with exquisite delicacy and refinement Spohr's concerto in A (No. 12). He also performed (for the first time in England) a theme and variations for violin and orchestra of his own. The theme is short and simple; the variations clever and pleasing, but full of difficulties, which, however, cease to be such in the hands of their author. The programme included *chaconne* and *rigodon* by Monsigny, and Beethoven's symphony No. 2 in D.

Mr. E. Dannreuther gave the fourth and last of a series of four interesting chamber concerts at Orme Square on Thursday, February 26. The programme included a MS. quartett in G by C. H. H. Parry, and Scambati's pianoforte quintett in F minor (second performance). Mr. Dannreuther gave a vigorous rendering of Beethoven's "Sonate-tèstament" (op. 111).

NEW AND IMPORTANT ETCHING

By M. RAJON.

M. RAJON is at present completing for the Scottish Royal Association for the Promotion of the Fine Arts an important Etching about 18 inches by 12—an interior with nine figures—after the picture of "The Legend," by the late G. PAUL CHALMERS, R.S.A., now in the National Gallery of Scotland.

The following are the different States open for subscription:—
 10 Artists' Proofs 20 Guineas. All subscribed.
 100 Proofs before Letters 5 Guineas.
 200 Lettered Proofs 2 Guineas.
 Prints 1 Guinea.
 For each Guinea the Subscriber will also have one chance in the Distribution of Paintings to be made by the Association in July next.
 Subscriptions should be intimated without delay to H. W. CORNILLON, Secretary and Treasurer to the Association, 130, George-street, Edinburgh.
 These prices will be doubled after 31st July, 1880.

STUDIO, with Ante-Rooms, &c., in Pembroke-place, Bayswater. Specially built for the purpose. Light and well lighted. Remaining Set.—Apply to E. & F. SWAIN, 82, High-street, Notting Hill, W. (7.375.)

LOAN COLLECTION OF OLD MINIATURES

Now Open at DICKINSON'S, 114, NEW BOND STREET.

SWANSEA PUBLIC LIBRARY.

CHIEF LIBRARIAN WANTED.—Salary, £175 per annum. Written applications, with testimonials and full particulars as to age, qualifications, &c., must be forwarded on or before SATURDAY, MARCH 27th, 1880, addressed to the HONORARY SECRETARY, Public Library, Swansea.

LIBER STUDIORUM (J.M.W. TURNER).
 PLATES of Wanted to Purchase by Messrs. DOWDSEWELL, 36, Chancery-lane, W.C.

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—
 1st. The absolutely facsimile nature of the result.
 2nd. Its cheapness for Small Editions of 250, 500, &c.
 3rd. The Prints being direct on the Paper there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.

* * For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, or reproductions of the chefs-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook. Second Edition (1880). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."
 Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIORUM." Facsimiled from Rare Prints in the best "states" lent by the Rev. Stophard Brooke, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE.

The Works, Ealing Dene, Middlesex.

General Manager, W. S. BIRD.

Director of the Works, J. R. SAWYER.

THE GOSPEL ACCORDING TO ST. LUKE.

By the Rev. F. W. FARRAR, D.D.,

Late Fellow of Trinity College, Cambridge, Canon of Westminster, and Chaplain in Ordinary to the Queen.

LONDON: CAMBRIDGE WAREHOUSE, 17, PATERNOSTER ROW.

TWO NEW VOLUMES OF POETRY.

8vo, cloth extra, price 6s. each.

SONGS in EXILE, and other Poems.

By H. E. CLARKE.

"Mr. Clarke is a poet *sans phrase*, and we should not have included him in this *omnium gatherum* of minor singers had it not been for a certain tone of imitation, chiefly of Walt Whitman and Mr. Swinburne, from which in these 'Songs in Exile' he has not known quite how to disenthrall himself. But that he is a poet, and not a minor poet, we have but little doubt. Nor do we think that anyone who reads the following poem on 'Age' will have much doubt either. He has some spirited 'rebel songs' and some tuneful agnosticism, of both of which we feel some suspicions as to their sincerity, but none whatever as to their goodness. Altogether, this first book of his is the most interesting of its kind which has been published for some years."—*Academy*.

GASLIGHT and STARS: a Book of Verse.

By Rev. FREDERICK LANGBRIDGE.

"Contains a great deal of genuinely good work. Mr. Langbridge has attained a wholly exceptional polish and grace of form and expression, while nearly every piece in the volume is inspired with an ardour of passion which, if it be not idealism, is the best possible substitute for it, because it creates in the mind of the reader the impression that the poet is proclaiming that which he feels, and is not writing for writing's sake."—*Scotsman*.

THE CONSTITUTION of the EARTH: being an Interpretation of the Laws of God in Nature, by which the Earth and its Organic Life have been derived from the Sun by a Progressive Development. By ROBERT WARD.

2 vols., demy 8vo, 21s.

DAILY LESSONS on the LIFE of OUR LORD on EARTH: being the Gospel Narrative in the Words of the Evangelists. With a short Exposition arranged for Daily Reading in the Household. By the Rev. G. J. COWLEY-BROWN, Rector of St. Edmund's, Salisbury.

Crown 8vo, 3s. 6d.

A CRITICISM of the Rev. O. VOYSEY'S "FRAGMENTS from REIMARUS." By JOHN SAWYER. London: GEORGE BELL & SONS, York-street, Covent-garden.

Now ready, crown 8vo, 480 pp., handsome cloth lettered, price 15s.

A TREASURY of ENGLISH SONNETS. Edited from the Original Sources, with Notes and Illustrations. By DAVID M. MAIR.

Of this work, which has been printed for private circulation, and very largely subscribed, the printers have a Limited Number of copies on hand, which they are authorised to sell at the above price, carriage paid.

*A very few copies printed in Quarto, on the best hand-made paper, price Five Guineas each.

"... The best collection of such pieces that was ever made. It is an abundant, profitable, and delightful store of those exalting harmonies of sound and sense and true feeling, useful thought or 'musical wisdom,' as Carlyle says of Goethe's poems, which can often find their way into the heart closed against the finest prose rhetoric. A more judicious selection and arrangement could not have been effected. . . . This is the amount of Mr. Mair's chief boon to the general reader, who must now be left to procure the book, as we heartily and honestly advise him to do, for an abiding treasury of intellectual profit and delight."—*Illustrated London News*.

"The notes are very good, and prove with what thoroughness and enthusiasm Mr. Mair has studied his subject. How extensive his reading must have been will be evident to the most superficial reader, and students of English literature will discover that in his literary comments the editor is generally as accurate as he is comprehensive."—*Full Mail Gazette*.

"This is a very fine collection of English sonnets, and, as far as we know, omits none which would be unquestionably regarded by all good critics as of the first rank in power and beauty. . . . As a test of Mr. Mair's discernment and judgment, we have compared carefully his selection from Wordsworth with that recently made by Mr. Arnold, and think it, on the whole, the better of the two. . . . Take it all in all, Mr. Mair's selection from Wordsworth's sonnets is more adequate than Mr. Arnold's. And as each selector has extracted about the same number, sixty sonnets, this is no slight praise. . . . For what it aims at, this book is a genuine success."—*Spectator*.

"The volume is a really valuable and interesting one, which most lovers of poetry will be glad to possess."—*Literary World*.

Will be welcomed by all lovers of poetry, and students of English literature. The book is said to be a 'labour of love,' and it bears the marks of it. It will not, we feel certain, be a labour lost."—*Daily Review*.

Manchester: ALEXANDER IRVING & CO., 7, Pall Mall

MONTHLY, PRICE 2s. 6d.

THE ART JOURNAL.

Illustrated with Numerous Engravings on Steel and Wood.

This popular MAGAZINE has been firmly established in public favour as an Organ representing the Fine and Industrial Arts, not only in Great Britain and the Colonies, but in America and on the Continent of Europe.

Having existed more than Forty Years, it has greatly assisted in cultivating a higher appreciation of the beautiful and valuable in Art and Art Workmanship in all its branches.

The chief feature of the ART JOURNAL is the large number of high-class LINE ENGRAVINGS on STEEL (already exceeding 1,000) which appear in its pages, including fine Examples of the Works of more than One Hundred Royal Academicians and other eminent British Artists, and also of Masterpieces of the great European Schools of Art and of Modern American Art.

The Proprietors are now resuming a project that was relinquished for some time in consequence of the necessity of fully representing the several International Exhibitions, and intend to give a Series of

ORIGINAL PRIZE DESIGNS FOR ART MANUFACTURE,

which will not be limited with regard to either style or purpose to which they may be deemed applicable.

Three of these Designs will be selected by eminent referees at the end of the year for Prizes in Art Publications of £25, £10, and £5 respectively. (See Prospectus.)

THE ART JOURNAL FOR JANUARY.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds; Glaciers; the Telephone. By W. J. MILLAR, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of "Principles of Mechanics," &c.

"We can confidently recommend Mr. Millar's volume to the attention both of teachers in search of an elementary text-book, and to private students, as well as to the general reader. It unites the utmost lucidity with strict scientific accuracy, and deals with ascertained facts rather than with vague theories."—*Greenock Daily Telegraph*.

"This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include objects as wide apart as whirlwinds and spectrum analysis, glaciers and the telephone."—*Liverpool Advertiser*.

Published at 21, Castle-street, Holborn.

F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21,
Morwell-street, W.C. Established 1863.

F. MOEDER begs to announce that the whole
of the above premises have recently been rebuilt, specially adapted
for the Furniture Trade, and now form one of the most commodious ware-
houses in the metropolis.
Bed-room Suites, from £5 6s. to 50 guineas.
Drawing-room Suites, from £9 9s. to 45 guineas.
Dining-room Suites, from £7 7s. to 40 guineas.
And all other goods in great variety.
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21,
Morwell-street, W.C. Established 1863.

TARAXACUM and PODOPHYLLIN.—A
fluid combination for Derangement of the Liver, particularly when
arising from slight congestion. By gently stimulating the action of the
liver, and slightly moving the bowels, the heavy, drowsy feeling, with
sensations of fulness, pain beneath the shoulders, and other
indications of Dyspepsia are removed. Taraxacum and Podophyllin is
much safer than calomel or blue pill, and quite as effective for removing
bile.—Prepared by J. PEPPE, 337, Tottenham-court-road, London, whose
name must be on the label.—Bottles 2s. 9d. and 6s. 6d. each. Sold by all
Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a
faithful compound of Quinine, the active principle of Yellow Cinchona, or
Peruvian Bark, blended with a refined, trustworthy preparation of Iron,
produced in a form which the system has proved the
best. It offers a ready means of gaining the strength and other benefits
afforded by Quinine and Iron, without any fear of ill consequences.—The
name of J. PEPPER is signed in red ink on the label.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,
and without which none is genuine.
Sold Wholesale by the Proprietors, Worcester;
Cross & Blackwell, London; and Export Oilmen generally
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf"
Wordsworth's Chemical Food of Health.
Prepared from the choicest Peruvian Leaf. The New
REMEDY for GENERAL DEBILITY, NERVOUS PROSTRATION,
NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.
Sold in Bottles, 1s. 1½d. and 2s. 9d., post-free.
H. WORDSWORTH & Co., Homoeopathic Chemists, 6, Sloane
street, and 4, King-street, Kensington, London.

LOCKYER'S SULPHUR HAIR RESTORER.
Large Bottles, 1s. 6d. Restores the Colour to Gray Hair in a few
days. The best, and cheapest. Quite equal to expensive ones.
Sold by Chemists and Hairdressers.

DINNEFORD'S MAGNESIA.
The Medical Profession for over Forty Years have approved
of this pure solution as the BEST REMEDY for
Acidity of the Stomach, Heartburn, Headache,
Gout, and Indigestion,
And as the safest Aperient for Delicate Constitutions, Ladies,
Children, and Infants.

DINNEFORD'S MAGNESIA.

PAINLESS DENTISTRY.

MR. G. H. JONES,
Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless
system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),
Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876,
Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention
displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to
hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry.
In recognition of your valuable services, you are at liberty to use my name.
"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen."

healthy condition of the Nervous and Physical Forces.

CLARENDON PRESS PUBLICATIONS.

NEW LIBRARY EDITION.

PROFESSOR STUBBS'S CONSTITUTIONAL HISTORY of ENGLAND. 3 vols., 8vo, £2 8s. [Now ready.]

*. Also, in 3 vols., crown 8vo, price 12s. each.

"We regard this work as the most valuable contribution to the knowledge of English constitutional history and law of our generation. So exhaustively and accurately does Professor Stubbs treat his subject that it seems hardly possible that anyone can ever attempt to cover his ground again."—*Westminster Review*.

THESAURUS SYRIACUS: Collegerunt Quatremere, Bernstein, Lorschach, Arnoldi, Field. Edidit R. PAYNE SMITH. Fasc. V., completing Vol. I. 4to, 21s. [Now ready.]

VOL. I., 4to, cloth, price £5 5s. [Immediately.]

A LATIN DICTIONARY, founded on Andrews's Edition of "FREUND'S LATIN DICTIONARY." Revised, Enlarged, and in great part Rewritten by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D., Professor of Latin, Columbia College, New York. 4to, 31s. 6d.

"The improvements are such as to defy quotation both from their length and their intrinsic character. New words are added, and new and most happy quotations are introduced; meanings are more carefully differentiated and arranged. The etymological notes certainly far surpass in accuracy and fullness anything as yet attempted in any dictionary."—*Athenaeum*.

"The distinguished American scholars under whose care it appears have spared no time or labour to make the book . . . as representative of the present state of Latin scholarship as Liddell and Scott of Greek."—*Guardian*.

"Everything that the most advanced student can fairly require will be found in these pages. . . . The work is evidently one of first-rate merit, and it is sure to command, as it deserves, an extensive circulation."—*British Quarterly Review*.

A TREATISE ON STATICS, containing the Fundamental Principles of Electrostatics and Elasticity. By GEORGE MINCHIN, M.A., Professor of Applied Mathematics in the Royal Indian Engineering College. Second Edition, Corrected and Enlarged. 8vo, 14s.

MANCHESTER NEW COLLEGE, LONDON.

LOCAL THEOLOGICAL EXAMINATION, 1880!

All Applications for these Examinations must be made in writing to the SECRETARY, not later than MARCH 31ST. Such applications must state—

- The full names and addresses of Candidates who intend to present themselves for examination.
- The subject in which they desire to be examined.
- The full names and addresses of at least two persons who will undertake personally to conduct the examination in accordance with the regulations. Of these, one must also undertake to act as local correspondent, through whom all subsequent correspondence with the College authorities must pass.
- A fee of 2s. 6d. for each Candidate must be forwarded with the application. P.O.O. to be made payable at Withington to the Secretary, Rev. CHARLES T. POYNTING, Fallowfield, Manchester.

UNIVERSITY OF ABERDEEN.

The Chair of Natural Philosophy in this University, in the patronage of the University Court, being vacant by the death of Professor Thomson, by a minute of said Court Candidates are requested to lodge applications, by such testimonials as they may think fit, in the hands of the Secretary of the Court, ROBERT WALKER, Esq., M.A., University Library, Aberdeen, on or before the 24th day of April ensuing.

The Secretary will afford such further information as may be desired. University of Aberdeen, 9th March, 1880.

TUNBRIDGE WELLS. — WARBERRY HOUSE, Bishopdown Park. — PREPARATION for the PUBLIC SCHOOLS and UNIVERSITIES, under the Rev. T. R. STEBBING, M.A., sometimes Fellow and Tutor of Worcester College, Oxford, First and Second Class Classics, First Class in Law and Modern History. Fees from 150 to 200 Guineas.

STIFFORD'S BRIDGE, near MALVERN. — A few delicate or backward BOYS, aged 14 to 18, willing to work, are received by JOHN C. GAYTHORNE, M.A. (Lancing and Oxford). Fees, 120 Guineas.

KING ALFRED'S SCHOOL, Wantage, Berks. — An Ancient Foundation. Buildings spacious and modern, in a healthy district. Thorough education for the Sons of Gentlemen. Fees moderate. Boys prepared for Commerce, the Professions, and the Universities. — Apply to HEAD MASTER.

QUEEN'S SERVICE ACADEMY, Ely- place, St. Stephen's-green, Dublin. — Preparation for all High-Class Exams. Special Work for ROYAL IRISH CONSTABULARY CADET-SHIPS. First place at every Public Competition for Cadetships during the last two years. — Apply to W. J. CRETWOOD CRAWLEY, LL.B. (Grad. Honours, Univ. Dub.), P.G.S., F.R.G.S. — Woolwich and Sandhurst Classes as usual: more than 250 Pupils have been successful at Army Examinations.

THE LIVERPOOL PHILHARMONIC SOCIETY have a VACANCY for a CONDUCTOR, in consequence of the resignation of Sir Julius Benedict. Particulars of the duties and emolument may be obtained from the Secretary, Mr. HENRY SUDLOW, Philharmonic Society's Office, Orange-court, Castle-street, Liverpool. Applications to be sent in on or before SATURDAY, 27TH MARCH. By order of the Committee, HENRY SUDLOW, Secretary and Treasurer.

ART MASTER. — WANTED, for the Belfast Government School of Art, a HEAD MASTER. — Applications, with statement of qualifications and previous service, to be forwarded to HUGH ROBERTSON, Assistant Secretary, School of Art, Belfast, from whom particulars regarding duties, amount of remuneration, &c., may be obtained.

MERYON'S ETCHINGS. MR. A. W. THIBAudeau, having lately secured a well-known collection of the above, formed by the Artist himself, and containing a great proportion of early impressions, begs to invite Collectors to inspect them at 14, Green-street, Leicester-square.

LIBER STUDIORUM (J. M. W. TURNER), PLATES of, Wanted to Purchase by Messrs. DOWDSEWELL, 36, Chancery-lane, W.C.

STUDIO, with Ante-Rooms, &c., in Pembroke-place, Baywater. Specially built for the purpose. lofty and well lighted. Remaining Set. — Apply to E. & F. SWAIN, 83, High-street, Notting Hill, W. (7,375.)

LARGE DETACHED STUDIO to LET. Size, 25 feet by 25 feet, 14 feet high. North light. — To view, &c., 243, Stanhope-street, Mornington-orecent.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

- Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.
- Note.—The special advantages of the Autotype Process for Book Illustrations are:—
- 1st. The absolutely facsimile nature of the result.
 - 2nd. Its Cheapness for Small Editions of 250, 500, &c.
 - 3rd. The Prints being direct on the Paper there is an absence of all cooking and that disagreeable effect inherent to all Mounted Prints.
- * * For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chefs-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea. "THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook. Second Edition (1869). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th. — "Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th. — "The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879. — "There is life and vigour in all the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIORUM." Facsimiled from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE.

The Works, Ealing Dene, Middlesex.
General Manager, W. S. BIRD.
Director of the Works, J. R. SAWYER.

BRYCE-WRIGHT, Mineralogist and Expert in Gems and Precious Stones, 90, Great Russell-street, Bloomsbury, London, W.C.

Now ready, 8vo, 800 pp., cloth, 21s.

ENGLISH CONSTITUTIONAL HISTORY,

From the Teutonic Invasion to the Present Time.

By T. P. TASWELL-LANGMEAD, B.C.L.,
Of Lincoln's Inn,

Barrister-at-Law, late Tutor on Constitutional Law and Legal History to the Four Inns of Court, and formerly Vinerian Scholar in the University of Oxford.

Second and Enlarged Edition, Revised throughout, and in many parts re-written.

Extracts from some Reviews of the First Edition.

"Though originally designed chiefly for the use of students at the Universities and Inns of Court, the author's expectation that it may not be found unacceptable to the ordinary reader is not without good grounds." — *Daily News*.

"Most completely stocked with all the important facts in the Constitutional History of England, which are detailed with much conciseness and accuracy . . . and is very full and clear." — *Spectator*.

"The volume on 'English Constitutional History,' by Mr. Taswell-Langmead, is exactly what such a history should be. Mr. Taswell-Langmead writes clearly and concisely, and yet, even when treating of dry subjects, he is always readable." — *Standard*.

"A valuable introduction to the more systematic study of the subject with which it deals; and its simple style, clear arrangement, and, we must add, copious index, adapt it for convenient and rapid reference." — *Daily News*.

STEVENS & HAYNES, BELL YARD, TEMPLE BAR.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars
and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds;
Glaciers; the Telephone. By W. J. MULLAN, C.E., Secretary to the Insti-
tution of Engineers and Shipbuilders in Scotland; Author of "Principles of
Mechanics," &c.

"We can confidently recommend Mr. Mullan's volume to the attention
both of teachers in search of an elementary text-book, and to private
students, as well as to the general reader. It unites the utmost lucidity
with strict scientific accuracy, and deals with ascertained facts rather than
with vague theories."—*Greenock Daily Telegraph*.

"This work consists of chapters from several sciences—astronomy, elec-
tricity, heat, light, &c. They cover a good deal of ground, and include
objects as wide apart as whirlwinds and spectrum analysis, glaciers and
the telephone."—*Liverpool Liberator*.

Published at 31, Castle-street, Holborn.

Now ready, in royal 8vo, pp. 604, price 10s., half-bound.

POLYCHRONICON RANULPHI

HIGDEN MONACHI CESTRENSIS; together with the English
Translations of John Trevisa and of an Unknown Writer of the Fifteenth
Century. Vol. VII., edited by J. R. LUMBY, D.D., and published by the
authority of the Lords Commissioners of H.M. Treasury, under the direction
of the Master of the Rolls.

The history in this volume commences with the death of Odo, Archbishop
of CANTERBURY, which happened A.D. 955; and, after relating the reigns
of EDGAR, EGGLESE, CANUTE, HARDCANUTE, EDWARD the CONFESSOR,
HAROLD, WILLIAM the CONQUEROR, WILLIAM RUFUS, HENRY I. and
STEPHEN, ends with the Siege of Oxford, A.D. 1152, the flight of Queen
MATILDA, and the death in 1153 of an old Squire of CHARLEMAGNE, JOHN
DE TEMPOREBUS, who had reached the great age of 361 years.

LONDON: MACMILLAN & CO.

TWO NEW VOLUMES OF POETRY.

8vo, cloth extra, price 6s. each.

SONGS in EXILE, and other Poems.

By H. E. CLARKE.

"Mr. Clarke is a poet *sans phrase*, and we should not have included him in this *omnium gatherum* of minor singers had it not been for a certain tone of imitation, chiefly of Walt Whitman and Mr. Swinburne, from which in these 'Songs in Exile' he has not known quite how to disentangle himself. But that he is a poet, and not a minor poet, we have but little doubt. Nor do we think that anyone who reads the following poem on 'Age' will have much doubt either. . . . He has some spirited 'rebel songs' and some tuneful agnosticism, of both of which we feel some suspicions as to their sincerity, but none whatever as to their goodness. Altogether, this first book of his is the most interesting of its kind which has been published for some years."—*Academy*.

GASLIGHT and STARS: a Book of Verse.

By Rev. FREDERICK LANGBRIDGE.

"Contains a great deal of genuinely good work. Mr. Langbridge has attained a wholly exceptional polish and grace of form and expression, while nearly every piece in the volume is inspired with an ardour of passion which, if it be not idealism, is the best possible substitute for it, because it creates in the mind of the reader the impression that the poet is proclaiming that which he feels, and is not writing for writing's sake."—*Scotsman*.

A complete list of MARCUS WARD & Co.'s Publications sent post-free on application.

MARCUS WARD & CO., 67 AND 68, CHANDOS STREET, LONDON, W.C.

Just published, in 1 vol., crown 8vo, price 12s.

HUGH HERON, CH. CH.:

Secretary of State for India in Council.

Vol. I., demy 8vo, pp. xii+330, cloth, 12s., still on sale.

Nearly ready, 8vo, cloth.

RECOLLECTIONS of TRAVEL in NEW ZEALAND and AUSTRALIA. By JAMES J. CRAWFORD.

Nearly ready, demy 8vo, cloth.

THE BIRDS of CORNWALL: a Contribution to the Natural History of Cornwall. By EDWARD HEARLE RODD,

LONDON: TRÜBNER & CO., LUDGATE HILL.

RICHARD BENTLEY & SON'S LIST.

LORD BEACONSFIELD: his Life, Character, and Works. A Critical Study. By GEORGE BRANDES. From the German by Mrs. GEORGE STUBBS. Demy 8vo, 10s. 6d.

THE "TIMES."

"Herr Brandes' information is copious and singularly accurate so far as we have tested it; and his literary criticisms at least are sound, penetrating, and genial. As a biography, his work is far more valuable, because more concise and impartial, than any which has appeared in England. As a criticism, it is generally instructive, and often suggestive."

VANITY FAIR.

"Herr Brandes is the first author who has touched the personality and history of Lord Beaconsfield with anything like scientific critical method. . . . As a rule his work is really remarkable for sound conclusions and calm sense."

THE OLD RÉGIME: Courts, Salons, and Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris," &c. With Portraits of Louis XV., Marie-Antoinette, Rousseau, Voltaire, M^{me}. du Barry, and M^{lle}. Clairon. 2 vols., large crown 8vo, 24s.

PRINCE METTERNICH'S AUTOBIOGRAPHY. Edited by his Son, PRINCE METTERNICH. Translated by ROSINA NAPIER. With Portrait and Facsimiles. 2 vols., demy 8vo, 36s.

THE HEART of HOLLAND. By Henry HAVARD, Author of "The Dead Cities of the Zuyder Zee," "Picturesque Holland," &c. Demy 8vo, with Eight Illustrations, 15s.

POPULAR NOVELS AT ALL LIBRARIES.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE."

NO RELATIONS. By Hector Malot. Translated by the Author of "The Hon. Miss Ferrard," &c. 3 vols., crown 8vo.

"An extremely fascinating story, written with unflinching force, and as full of genuine pathos as of graceful and delicate descriptions. . . . This novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

TWO WOMEN. By Georgiana M. Craik. 3 vols., crown 8vo.

"Those who have not yet perused this latest story by Miss Craik may be warmly recommended to do so."—*Morning Post*.

NEW NOVEL, BY THE AUTHOR OF "FLITTERS, TATTERS, AND THE COUNSELLOR."
CHRISTY CAREW. By the Author of "Hogan, M.P.," "The Hon. Miss Ferrard," &c. 3 vols., crown 8vo.

"'Christy Carew' is a very clever book, displaying in many places passages such as one has at present the right to expect from George Eliot alone. Is the authoress to be her successor? There are not a few now watching her career with great attention who think she can be if she only chooses."—*Morning Post*.

Also immediately.

LITERATURE.

France since the First Empire. By James Macdonell. (Macmillan.)

THIS is an eminently readable book. The style is easy and sparkling. It makes no severe demands on the thought or attention of the reader. The numerous anecdotes, if not very new, are well selected and smartly told. The characters of many prominent personages who have figured in French history during the present century are portrayed with truth and much literary finish. The writer is evidently moving over ground that he has made himself familiar with by study. He has no novel or peculiar views to set forth, and those who have read any history of the period will find little in his book with which they were not acquainted before. But it may be suspected that French history from 1816 to 1848 is a *terra incognita* to a great many Englishmen who are familiar with the events of the first Revolution, and have a fair general knowledge of what has passed in the central country of the West since the fall of Louis-Philippe. To such persons this book will be not only interesting but useful. It does not, indeed, pretend to be a connected narrative of events, neither is it a comprehensive review of the period as a whole. It is simply a collection of pleasant, chatty sketches of persons and situations, interspersed with comments which, if not throwing any very new light on French politics, are sensible, and forcibly expressed. In criticising it, we must remember that the author did not live to complete it. We are told that he had collected large materials, and that many years would probably have passed before it could have been finished. It may be that the literary polish apparent in even the most defective chapters only shows that he was in the habit of composing piecemeal, pitching on a scene here and a character there, as it struck him in his reading, and giving it such shape and finish as he thought necessary. He may have intended these detached studies to be merely the embellishments of a much more solid and comprehensive survey than is now given to us. Many authors love to work in this way. It is unfortunate that among the fragments now collected there is none relating to the second Republic, a subject which Mr. Macdonell was fitted to handle by his own personal knowledge and observation, and to which his contributions would probably have been both original and valuable.

From a statement in the Preface we learn that the chapter on the Revival of the Legitimist Monarchy is the only one which the author had really completed. To this chapter, therefore, it is best that criticism should con-

fine itself. At least half of it is taken up with portraits of individuals with which there is no fault to be found, except that the space might have been more profitably occupied. However, an author has a right to choose his public; and for one reader who desires a serious explanation of the Legitimist episode, there are probably ten who prefer to be regaled with anecdotes about Louis XVIII. and *bons mots* of Talleyrand. The same people, no doubt, will be interested to learn what noblemen presided over the royal kitchen, cellar, and pantry, and will not enquire what Ministers governed France. It is strange that no room has been found for even the names of the Duke Decazes and M. de Villèle; but stranger still that there should be no indication of their respective policies, although the conflict between those policies is simply the history of France under the Legitimist Monarchy. It would have been well to point out that devotion to an absolute King has never been the ruling sentiment with the party, which, since 1830, has been known as the Legitimists. Anyone who thinks so will find their conduct on several occasions an insoluble puzzle. They are, and always have been, not so much Royalists as feudalists. They called as loudly as the *Tiers Etat* for the convocation of the States-General in 1789, and their *cahiers* show what they hoped to gain by it. The Crown was to be forbidden to sell titles of nobility; wrongful assumption of titles was to be punished; nobles alone were to wear swords; the Bastille—the prison for the nobility—was to be demolished; the powers of the Minister of Police were to be restricted; the States-General were to meet regularly and not to be subject to dissolution by the King. The Court, on the other hand, convoked the States-General for the one purpose of depriving the nobility of its chief remaining privilege—exemption from the *taille*. After the Restoration the aim of the party led by Villèle, the Ultra-Royalists, as they were called, was not to invest the King with absolute power, but, on the contrary, to make him dependent on an assembly so composed as to reflect the views of the squirearchy. For this purpose they devised an electoral law especially intended to defeat the influence of *préfets* and other functionaries and to substitute for it that of the great proprietors. This law was rejected by the Chamber of Peers, where Court influence preponderated. The lower Chamber, consisting, like the Assembly of 1871, of "rurals," pulled to pieces the Ministerial budget, protesting that they would not be reduced to registering the decrees of the Crown. In a similar spirit they attempted to create departmental councils largely independent of Government control. All this, no doubt, was accompanied by extravagant professions of duty to the Sovereign which drew from Louis XVIII. the compliment or the sneer that they were a "chambre introuvable." But he dissolved them before the end of 1816, and in the elections which followed the influence of the Government was directed against the Ultra-Royalists. The whole machinery of arbitrary power was exerted to neutralise their influence over the rural voters, at that time very subservient to the great proprietors. In the new Chamber we

find Villèle denouncing the censorship as a violation of the Charter and "dangerous to the very basis of the Constitution;" while Chateaubriand opposes the conscription as "arming the Crown with a power for oppressing the public liberties." What these Royalists desired was a militia officered by country gentlemen—a sort of feudal levy, in fact. These aspirations of "Legitimism" Mr. Macdonell has not sufficiently brought out.

During the reigns of Louis XVIII. and Charles X. the monarchy was accepted by the nation, not indeed with enthusiasm, but with practical unanimity. Down to the very eve of the revolution of July its solidity was generally regarded as unquestionable. Republicanism, which had never been the creed of more than a very small minority of the population, could hardly be said to count as a political force after the expedition to Spain. What there was of it was merged for the time in Bonapartism, which itself existed chiefly as a vague sentiment. It had not in those days become the rallying point of reactionary interests, and, as a party, its followers made a very small figure. The liberal *bourgeoisie* were as truly monarchical as the so-called Royalists, and, though in theory and language they were less obsequious, a wise king would have seen that they afforded the surest support to the throne. That the Monarchy should eventually disappear was in the destiny of things; and perhaps France would in any case have been Republican by this time. But there was no tendency to revolution in 1830. The perverse folly of the King was the only element of disturbance; and, but for the crisis which he provoked, and the restlessness which it set up, France might perhaps have floated on to her Republican goal without any violent shock.

But Charles X. had formed his ideas in his youth, when he had no prospect of succeeding to the Crown, and when it had pleased him to pose as the leader of the nobility rather than as a brother of the King. And, being singularly stupid and retentive of early prejudice, he did not shift his position, as most men would have done, when he found himself in later life heir presumptive to the throne. It was a point of honour with him to stand by his old friends, and he did not rest till he had got them their milliard—a very unpopular measure, and of no advantage to the Crown. Again, he had turned *dévot*, and nothing did so much to bring on the crisis as his foolish patronage of the Jesuits, which excited the ire, not only of the *bourgeoisie*, but of many ardent Royalists, such as Montlosier, Agier, and Chateaubriand. Altogether it would be difficult to find in history a revolution so wantonly provoked, and so little in the necessity of things, as that of 1830.

There are some mistakes in the French quotations which the author would no doubt have corrected if he had revised the book. The famous despatch "Tout peut encore se rétablir" could hardly have been written even by Napoleon III. "after Gravelotte." It was in fact dated August 7, while Gravelotte was fought on August 18. The Assembly did not formally recognise the Republic in June 1871, but in August; and M. Grévy's election

did not take place in February 1878 but in January, 1879. The last two mistakes are Mr. Meredith Townsend's, who has contributed a chapter on "The Republic." As a whole, the book deserves the praise of accuracy in its details. E. S. Bessly.

The Antiquities of Greece—The State.
Translated from the German of G. F. Schömann by E. G. Hardy, M.A., and J. S. Mann, M.A. (Rivingtons.)

ENGLISH readers will no doubt receive with satisfaction this instalment of the translation of Schömann's standard book, which gives a great quantity of useful information on the political antiquities of Greece. Nevertheless, the work of the veteran scholar seems to us somewhat antiquated. It was written long ago, and is only revised up to 1871, since which time endless special studies have appeared in Germany that have thrown light on various obscure points. An edition with notes from recent German periodicals would, no doubt, have been a laborious task, and hardly worth the trouble; but it would have been a far greater boon to students who cannot read or follow this intricate literature. Still, the work of Schömann, as it stands, gives a full and accurate summary of the traditional views on Greek politics prevalent among German philologists up to the publication of Grote's *History*. The translators suggest that it affords a useful adjunct to that *History*, and a more agreeable one than a dictionary of antiquities. This is no doubt true, but still the book is rather dull reading, and any ordinary student will, in my opinion, learn infinitely more of Greek politics by reading Grote's *History* than by wading through the polemical commentary of Schömann. For the latter, as appears from his *critique* (translated by Mr. Bosanquet), is very much opposed to Grote's views, especially on Athenian politics, and takes every opportunity of combating them. In this controversy I am altogether on the side of Grote. The main point at issue (omitting details as here unsuitable) is that, in the opinion of the old Greek orators, whom Schömann follows, almost all the constitutional details of the Athenian democracy were perfected by Solon, or at latest by Cleisthenes; whereas, in Grote's opinion, this constitution was a gradual and slow growth, of which Solon only laid the foundations, and which in its full development would have been quite strange to him. Grote finds this reasonable view upon his own experience as a statesman, and upon the impossibility of conceiving such a thing as an advanced democracy in Solon's day. This *a priori* ground is not in conflict with any good evidence, and is not (I think) shaken by Schömann in a single important instance. Indeed, in the case of the *γραφὴ παρανόμων*, I think even Grote is too conservative, for he attributes it to Pericles, whereas Schömann makes it as old as Solon (p. 480). It seems to me that it is even younger than Pericles, and was meant to replace the ostracism which did not fall into disuse till ten years after his death. But it is here enough to point out the general issues between these great scholars. The English reader may now judge for himself.

He will be surprised to find frequent allusions to Mure's *Greek Literature*, a book greatly neglected by later critics, and which has obvious faults, but also great merits. The chapter on the Cretan State is remarkably full and interesting, and it appears to me that this and the chapters on Sparta are more satisfactory than those on Athens, though Schömann has so long and so thoroughly studied Attic law. Thus, when all kinds of private or non-political clubs are stated (after Gaius) to have been called *Hetaeiriae* (p. 363), and when the *antidoris* is said rarely or never to have come to an actual exchange of property (p. 464), we feel ourselves on very uncertain ground. Schömann will not even accept Grote's conclusive argument against the land law of Lycurgus. But here, it must be confessed, he has Curt Wachsmuth—a far younger scholar—on his side.

As to the execution of the present volume, I have not been able to compare the translation with the original, but it reads easily and pleasantly enough, and appears to be faithful. This is all the more to be noted as the *errata* with which the book abounds might lead to an opposite conclusion. The translators have given a list of thirty-five—far too long a list for a proper and careful piece of work; and I have found at least twenty more, especially in the earlier half of the volume. They show a painful uncertainty about German concordances in the titles of books, which might have been safely curtailed. Thus we have *Göttingen Gelehrte Anzeiger* (p. 225), *Neuer Schweizer Mus.* (p. 10), *Metrologischen Untersuchungen* (p. 18), and in the same note an unintelligible reference, as is often the case elsewhere; we have *δῆμος* (people), beside corrected faults in accent; faults of reference are also to be found, but these are more excusable. Many other uncorrected printers' mistakes need not be mentioned. But for the reasonable hope that so useful a book will reach a second edition, when these faults may be corrected, I should not have noticed them here, for such criticism is generally resented as captious and ill-natured, however reasonable it may be. I trust the translators of the present volume will acquit me of any such temper.

The Index from L onward is much fuller and better than the former half, and may indicate a mechanical division of the labour, which is also suggested by some peculiarities of the text; but concerning this we are afforded no particular information in the Preface.

J. P. MAHAFFY.

LES PETITS CONTEURS DU XVIII^e SIÈCLE.

Contes Dialogués de C. P. J. de Crébillon.

Avec une Notice bio-bibliographique par Octave Uzanne.

Contes du Chevalier de la Morlière—Angola.

Avec une Notice par Octave Uzanne. (Paris: A. Quantin.)

In a form of delicate luxury that would have warmed the hearts of the writers themselves, M. Quantin is publishing one by one those novelists of the *boudoir* and the alcove whose gallant romances formed the mind and the style of all fashionable Parisian ladies a hundred and twenty years ago. Morality

and decorum have spoken with much unanimity of utterance against these writers, the froth and bubble of an empty age; and now the only opinion that can boast of the slightest freshness is one that protests against the entire condemnation of such butterflies of literature. It is impossible to defend them for a moment against anybody of serious views. They are all light, tame, frivolous, and insipid; they aim at nothing but the amorous protraction of an idle hour, and they do not profess to give us anything earnest or weighty, or even tangible. Still, as long as there remains a public to admire a painted fan or a piece of Sèvres china or a picture by Boucher, so long the *petits conteurs* will also have a certain discreet group of admirers. To gratify this group, M. Quantin has already reprinted Voisenon, Boufflers, and Caylus, and now he presents us with Crébillon fils and the *Angola* of de la Morlière.

The defence of such a writer as Crébillon fils should probably open with a statement of his comparative harmlessness. His tales are never cruel or offensive in their frivolity; he never disgusts us as wittier writers, such as Vanbrugh or Machiavelli, contrive to do by the excessive heartlessness of his personages. A too yielding sweetness of temperament, a musky perfume of resignation, form the atmosphere in which his gentle plots slowly unfold their languid incidents. In a world of wax-lights and brocade, of coloured lamps and powder and polite transports, the *petits-maîtres* fall each upon one delicate knee before *petites-maîtresses* in rustling satins, who consult their two watches at once, and proceed to discuss the passion of love "delicately, and with no manner of galimatias." The only just way of judging this rosy, gilded literature is to compare it with the contemporary novels of the same class in England—not indeed with Fielding or Smollett, but with such minor romances as *Chrysal* and *David Simple*. The contrast lies, not entirely in style—although on this point the French novelists have an immense superiority—but also in matter. A book like Charles Johnstone's introduces us to a more brutal and terrible side of outdoor life, while developing a stronger narrative power; Crébillon, on the other hand, never exposes his exquisites to an air more severe than that of a gallery or an ante-chamber, and is much more closely occupied with sentimental analysis of experience than with the progress of his story.

Claude Prosper Jolyot de Crébillon was born on the 14th of February 1707, fourteen days after the marriage of his father, the tragic poet Crébillon, to his mother, a Burgundian girl of good family, with whom, against the wish of the grandparents, the poet had fallen in love with the sudden ardour of a Romeo. A spice of romance, of boisterous robustness, of doubtful legitimacy, clung about the child so born, during a long and not dishonourable life; he became an airy, brilliant creature, incapable of sustaining with any patience the restraints and dulnesses of existence; a rosy, lazy man, with a good-natured conscience. He pursued his avocation as comic novelist by the side of his tragic father; the one a colossus of six feet, with a pipe always between his serious lips, now

scowling at space, now declaiming aloud his sonorous periods; the other, a quiet, smiling personage, carefully musked and powdered, curled up in an easy-chair, singing ariettas, and sympathising with the rude giant only in his passion for cats, twenty of which shared the room with this strange father and son. In 1748 Crébillon fils married a mysterious Lady Henrietta Stafford-Howard, a lady of aristocratic birth, daughter of an English nobleman exiled with James II. This affair, which has provoked as many and as interesting romances as its hero's fancy ever evolved, has at last been cleared up, as much as it ever can be, by M. Uzanne, who has discovered the marriage entry among the documents of the parish of Arcueil. In 1759 M^{me}. de Pompadour contrived to obtain for Crébillon the lucrative post of Censeur Royal pour les Belles-Lettres, which he held until his death on the 12th of April 1777. He had reached the zenith of his fame in 1740, on the publication of his too notorious moral tale of *Le Sopha*, and for the last fifteen years of his life he had so far succumbed to laziness and a sort of eupptic indifference as to have become a mere butt for such satirists as Grimm and Fréron, a dead body of frivolity which they studded with their arrows without provoking a convulsion or a single cry of pain.

The works which have been selected for the present reprint are *Les Matinées de Cythère*, a dialogue first issued in London in 1755, but written as early as 1737; *Le Hasard du Coin de Feu*, 1763; and *Le Sylphe*. The latter is chiefly interesting to us because it teems with allusions to Pope's *Rape of the Lock*. It is a letter; the other two stories are in the dramatic form, and part of their vivacity is due to the cunning use of stage directions. *Les Matinées de Cythère* certainly takes the lead among the productions of Crébillon, and makes the most definite claim to be considered as literature. His occasional obscurity and pedantic gallantry give way more in this story than anywhere else to the transfiguring charm of style, and beneath a sort of roseate mist of good taste in rococo writing they become almost imperceptible. It seems hardly credible that we can support for one hundred and thirty pages the discussion of a single theme by two such insipid personages as Cidalise and Clitandre; but we do so, since the theme is love so treated as to throw a fresh light and colour over the sceptical and voluptuous intelligence of the eighteenth century. "A month or twain to live on honeycomb is pleasant," we are told, and it is certainly not necessary to subsist nearly so long on the luscious and enervating fare of *Les Matinées de Cythère*; nevertheless, for an hour or twain, the clear honey of style that flows from it may prove palatable enough.

The Chevalier Jacques Roquette de la Morlière was a much less pleasant personage than Crébillon fils; he was, in fact, not to put too fine a point upon it, one of the sorriest scoundrels that ever lived. A sort of French Tom Jones, with no Sophia Western to preclude an infinite succession of Lady Bellastons, he lived under the very paw of the police, always being watched and suspected, but never actually convicted of any sin against

property. His one respectable book, the *Angola* which is here reprinted, has been extravagantly praised, but we confess that we agree with the lady who said that all the *guimauve* in the universe would not suffice to enable her to read it through. M. Charles Monselet, on the other hand, preferred it to all the novels of its age, and called out in a rapture that nothing but a single letter divided Morlière from Molière. It is an extraordinary collection of Court slang and forgotten phraseology, the author kindly printing the cant terms in a different type for the benefit of outsiders, so that the English reader is ludicrously reminded of *Tom and Jerry*. For the rest, under the conventional terms of an Indian king, Erzebcan, and a fairy, Lumineuse, it depicts in colours as warm and true as Morlière could command the intrigues and gallantries of the Court of Louis XV. *Angola* is distinctly more vulgar, and therefore less able, than the dialogues of Crébillon fils of the same order.

It is, perhaps, worthy of record that M. Uzanne, whose merit as a bibliographer is certainly remarkable, has discovered the real date of the birth of Morlière, which did not occur, as previous historians have stated, in 1702, but seventeen years later, at Grenoble, on April 22, 1719. EDMUND W. GOSSE.

THE PERSIANS AND ARABS IN THE TIME OF THE SASANIDES.

Geschichte der Perser und Araber zur Zeit der Sasaniden. Aus der Arabischen Chronik des Tabari übersetzt und mit ausführlichen Erläuterungen und Ergänzungen versehen von Th. Nöldeke. (Leyden: Brill.)

PROF. NOELDEKE—who, among the editors of the critical edition of *et-Tabari's Annals* now in the course of publication at Leyden, is charged with that portion of the text which treats of the Sasanian empire—has given us, in the work named at the head of this article, a translation of all the passages of his text touching on Persian history. Though styled "History of the Persians and Arabs in the time of the Sasanides," the history of the latter people is only so far treated as it is connected with that of the former; that is to say, the succession of the vassal-kings of el-*Ẓīreh*, the Arabian conquests of Shāpūr II., the events which led to the conquest of el-Yemen under Khusrāu I., and the battle of *Ḍū Qār* with what came before it, are related in more or less detail; but of other topics of Arabian history, as, for instance, of the royal line of Ghassān, the Wars of Basūs and Dāḥis, the Wars of the Fijār, and the like, the Chronicle makes no mention. The fabulous account of the Tubba's of el-Yemen, though entered at some length by *et-Tabari* in his compilation, as well as the legends connected with the birth and boyhood of the Prophet, have been judiciously omitted by the translator as entirely unhistoric. The text from which the translation is made has not yet been published, but may be expected to appear about a year hence.

Et-Tabari's Chronicle, compiled about the commencement of the tenth century of our era, is, so far as it deals with the pre-islamic history of Persia, with one exception the chief surviving representative of the native historical tradition. The great mass of

Pahlavi historical and historico-romantic literature, which began probably with the reign of Khusrāu I. (531–78), and was continued through those of his successors down to the Muslim conquest (637), has utterly perished in its original language and form, having left no survivor except a small romance entitled the *Kārnāmāk*, and relating the adventures of Ardeshir Pāpākān, the founder of the Sasanian dynasty; but its most important volume, the *Khuḍāī-nāmāk*, or *Book of the Kings of Erān*, was, in the early days of the Musalmān domination, rendered into Arabic by the learned convert Ibn el-Muqaffā' (died 760). This translator's work, however, has been lost to us like its originals, and only fragments of it are preserved in the quotations of later historians. Of these *et-Tabari*, who used for his Chronicle an unnamed compilation in which Ibn el-Muqaffā's data were arranged side by side with those of other explorers of Pahlavi literature, and with the traditions, partly of Syrian and Arab origin, handed down by Hishām ibn el-Kelbi (died about 820), has transmitted the most numerous and most important. The other great representative of the same historical tradition, about a century later in date than *et-Tabari*, but independent of him, is Firdausi's *Shāh-nāmāh*, which is a metrical redaction of a now lost prose work of the same name rendered into modern Persian from the Pahlavi of the *Khuḍāī-nāmāk* under the direction of Abu-l-Mansūr Ahmed ibn 'Abd-er-Razzāq, Governor of Tūs in Khurāsān from 945 to 960. In *et-Tabari's* Chronicle, therefore, and in Firdausi's *Shāh-nāmāh* we have in its most complete and satisfactory form almost all that survives of the great body of national tradition which set forth the glories and vicissitudes of the mighty empire which, for upwards of four centuries, stood side by side with Rome in the history of Hither Asia.

Et-Tabari's Chronicle, like much else of the early historical work of el-Islām, is but a compilation in which the traditions respecting each event are set down side by side in detail as they were delivered; we find in it hardly any endeavour to reconcile conflicting accounts such as characterises later histories like those of Ibn el-Athir, Abu-l-Fidā, Ibn Khaldūn, and other writers of the best period of Arabic historical literature. *Et-Tabari* gives the words of his authorities as he found them in his sources, neither noting discrepancies nor attempting to reconcile them, nor even abbreviating except where some subsequent account verbally repeats a preceding one. Such a work, however defective from a literary point of view, is to us far more valuable than its successors, inasmuch as it enables us to estimate the comparative worth of parallel traditions and authorities in a manner which is impossible when all the data are fused into one narrative. In this respect *et-Tabari* stands unequalled, even Firdausi being compelled, in the interests of poetical consistency, to select among the materials before him some one account, or to ignore differences in welding several narratives together, and often embellishing with rhetorical amplifications the barren record of blank reigns. *Et-Tabari* is seldom rhetorical, except where he reproduces textually the passages of the *Khuḍāī-nāmāk* rendered by Ibn el-Muqaffā';

where he finds nothing recorded, he records nothing.

By the side of this national tradition our means of reconstructing the history of pre-Islamic Persia are but scanty. The weightiest are the Syriac chronicles and especially the martyrologies of the Eastern Christians, the Byzantine historians, and the Armenian authorities; but all these deal rather with the external relations than with the inner economy of the empire. In the field of early Christian Syriac literature Prof. Nöldeke is thoroughly at home; the Byzantine writers have likewise been brought under contribution with the most painstaking diligence; for the Armenians he has been obliged to rely on translations, chiefly those of M. Evariste Patkanian in the *Journal Asiatique* of 1866. In addition to these, and especially in respect of chronology, much light has been gathered from recent discoveries in Sasanian numismatics, due for the most part to the elder Mordtmann. All these data have been carefully worked up in elucidation of the text in Prof. Nöldeke's notes, and the work is thus one of the most important contributions to the history of the Sasanians which have appeared of late years.

For the first three centuries of the empire it cannot be said that the historical value of the national tradition handed down by *et-Tabarî*, so far as it stands alone, is great; if we omit the details given regarding Ardeshir I., little more is recorded of a king during this period than the number of years which he reigned, and the names of the cities which he founded. Down to the reign of Kawâd (488–531) anything else that is related is for the most part of a legendary and romantic character, such as the capture of *Hadîr* by Shâpûr I. through a woman's guile: the fables, originally embodied in the Syriac *Romance of Julianus*, regarding the relations between Shâpûr II. and the Emperors Julian and Jovianus: the tragic fate of King Yazdegerd "the Sinner"; and the exploits of the national hero, King Bahrâm Gor. With Khusrau I.'s predecessors, Péroz and Kawâd, we first touch solid ground of history; and it is not until the reign of Anosharwân himself that we find anything like a clear and connected account of the administration of the realm, the conquests of the monarch, and the civilisation of the people. Yet, in the midst of this mass of legend, there is much which, when laid side by side with the concurrent sources of information mentioned above, throws light upon events which would otherwise be dark; and the manner in which this comparison is carried out by Prof. Nöldeke is worthy of all praise. Very striking, for instance, is the conclusion to which he comes, by a comparison of contemporary Syriac texts with the meagre record of *et-Tabarî*, regarding the true character of Yazdegerd *Bazagar*, "the Sinner" (pp. 73, 74), who appears in the former as "the good and merciful King Yazdeger, the Christian, the blessed among kings." The essentially aristocratic and priestly character of the government, the strong feudal type of society, the immense power wielded by the Mobešs and their zealous intolerance, the small account in which the lower classes were held, and even the dispositions of the kings

themselves, oftentimes emerge with unmistakable clearness from the otherwise barren record of genealogies, years of rule, and founding of cities.

The most valuable portion of the work is, in our opinion, that which treats of the reforms of Khusrau Anosharwân, the "Just King" in whose days Mohammed rejoiced that he was born. The fragment embodied in *et-Tabarî* which describes the revenue-system of this pattern of Oriental monarchs is the fullest of all the accounts that have come down to us, and is of the highest interest as exhibiting probably the origin of all the systems of land-revenue settlement which are found in countries either now or formerly ruled by Muslim sovereigns. For it was on Khusrau's settlement that the first Khalifehs worked; its phraseology (*kharâg*, *gezîth*, *garîb*) has been taken up into Mohammedan revenue law; and the likeness between its principles and those carried out in India under Shêr Shâh, Akbar, and their successors is unmistakable. We venture to differ from Prof. Nöldeke when he describes (p. 243, note 3) an addition made to *et-Tabarî*'s account by his Persian paraphraser, from which it would appear that the land under cultivation was to be measured up yearly, as "unsinnig." As we understand the matter, Khusrau's reform consisted in this, that, whereas under former kings a share of the actual produce was taken by the government as land revenue, and the door thereby opened to all manner of waste, abuse, and extortion, under that monarch a fixed rate payable in money for each crop grown was levied. The fact that a cadastral survey was made as a preliminary to the determination of the rates of assessment could not of itself dispense with the necessity for an annual inspection and partial resurvey, for the rates were assessed on crops, not on qualities of land, and the acreage under each crop would naturally vary from year to year. Thus cotton would frequently alternate with wheat, lucerne with grain crops, &c.; as wheat paid one *dirhem* per *garîb*, while lucerne paid seven, and cotton was free from assessment, it would be necessary for the collector to verify the area under each of these staples yearly.

The volume abounds rather immoderately with misprints; many of these are corrected in the table (not itself absolutely free from typical errors) given at pp. 500–3, but the following points seem still to call for amendment or further consideration:—In the Introduction, p. xxi., the date given as that of the death of Eutychius is inconsistent with the other dates in the context. On p. 13, in note 3, read *wâjâr* and *bâzâr*. On p. 22, lines 6–8 are unintelligible; read by the light of note 2 on the same page, it would seem that some words referring to the Aramânians (*Aramânier*), whose king Pâpâ was, have fallen out of the text. On p. 47, it appears necessary to state that the 114 years of rule ascribed by Ibn el-Kelbî to Imra'el-Qeys el-Bed' (unhistoric through they be) are made up of totals for the synchronous Persian kings Hormizd I., Bahrâm I., II., III., and Hormizd II., quite different from those adopted by *et-Tabarî*. To the remarks on p. 41 and p. 166 regarding the cities of Gunde-Shâpûr and New

Antioch may be added what *Hamzeh* (p. 56) relates regarding a town founded by Kawâd after the capture of Amid, and named by him *Beh-az-Âmid-i Kawâd*; if this tradition has any value, it would seem that the rejected etymology for the other two names, *Beh-az-Andêw-i Shâpûr* and *Beh-az-Andêw-i Khusrau*, may have more basis than is admitted; or we may perhaps see in Kawâd's foundation not the name *Âmid*, but some corruption of the same word which has in the other two towns yielded *Andêw*. On p. 317, note 2, line 6, for *Mundhir* read *Nu'mân*. On p. 347, the ascription to Zuheyr in note 1 of the poem (Ahlfwardt, pp. 101, 102) in which en-No'mân is mentioned seems erroneous; the piece is expressly given by el-Azma'î to Sarmeh son of Anas el-Ansârî, and it contains several expressions (as the mention of *Du-l-Qarneyn* and Pharaoh in verse 13) which appear to prove its later origin. On p. 391, in the first line of the notes, 530 should be 630. On p. 455, it should be added that the authority upon which Ibn el-Athîr and Abu-l-Fidâ depend for their account of Mazdak and his followers, and their extermination by Anosharwân, is the passage in the *Aghânî* dealing with the life of the poet Imra'el-Qeys (viii. 63, 64), where the legendary details regarding Mazdak and his relations with Kawâd and his son appear to be derived from Hishâm ibn el-Kelbî.

C. J. LYALL.

NEW NOVELS.

Moths. By Ouida. (Chatto & Windus.)

Her Dignity and Grace. By H. C. (Chapman & Hall.)

The Man of Many Daughters. By the late Mdme. de Chatelain. (Griffith & Farran.)

My Sweetheart when a Boy. By E. Owens Blackburne. (Moxon, Saunders & Co.)

THERE is a popular but entirely mistaken idea that critics are conceited. For our own part, supposing that we had any of this unpleasant quality, it would always be taken straight out of us by a novel of Ouida's. These remarkable productions come upon us with the effect which has been poetically expressed by the statement that men are but flies in summer. We come to business, some to pleasure, take; and, what is more, we vary our business and pleasure pretty often. But Ouida, from the summit of twenty novels, looks down upon us unchanged, and only now and then dexterously increases her altitude by adding another triad of volumes. She is, we say, quite unchanged, but that is not strictly true. She inhabits, indeed, the same impossible and unreal world—the world in which the fleeting fashions and vices of a few fools have been stereotyped and enlarged into a prevailing code of morals. The old chatter about the old subjects is still heard; but though we do not remember to have seen any parallel drawn between Ouida and Wordsworth, there is, at any rate, one striking point of contact between her and the author of *Peter Bell* as his enemy represented him. She is growing duller and duller with a perfectly portentous rapidity. *Ariadne* was dull; *Friendship* was dull; but *Moths* is, perhaps, the most crushingly dull work of fiction that

we have read for some years. It is so appallingly dull that even the queer topsy-turvy pathos which Ouida generally manages to impart fails of its effect—perhaps because the ending is what may be called a happy one. The truth is that, though she valiantly shuts her eyes to the fact, the excellent author of *Chandos*—ah, how one sighs for *Chandos* or *Strapmore* in reading *Moths*!—has about as little faculty of social satire as any human being that ever lived, and that she has of late years given herself up to it. Fastness, frivolity, mammon-worship, tuft-hunting, &c., &c., doubtless, are very bad things, but Ouida has a singularly ineffective method of telling us so. When she stamps her satiric foot and cries, “Are they not shameful, unnatural scoundrels, these men and women of mine?” we reply, “My dear madam, they are certainly unnatural, but perhaps not in your sense; and, what is more, they are dreadful bores.” The plot of *Moths* is highly simple. There is a certain Lady Dolly Vanderdecken, who, with less vulgarity and impecuniosity, is very like Lady Joan in *Friendship*. She has a pure and lovely daughter, and, being much bored with her, she makes her marry a brutal Russian prince, though Ouida, in her customarily graceful manner, hints that there were reasons which would have something more than justified the forbidding of the banns. Thereupon, of course, comes misery, all the more that there was a beautiful marquis and singer in the background, who at the end of the book fortunately comes into the foreground again. So “the ermine” (whom Ouida seems to have unceremoniously borrowed from M. Feuillet) is not so very unhappy after all. On the whole, *Moths* must be pronounced a stupid and dreary book, by no means lightened or sweetened by its occasional suggestions of uncleanness.

No such faults can be found with *Her Dignity and Grace*, though its author is far from being such a practised hand at her craft as Ouida. The interest of a somewhat mysterious death is blended not unhappily with that of a still more mysterious legacy of property by an old woman who has long lived in a lonely cottage all by herself. The scene of the story is laid in Yorkshire at the beginning of the present century, and much of it goes even farther back. As a rule we do not recommend the occupation of large portions of a novel by “narratives” and “papers” and so forth, the equitable interest of the actual story being usually very much marred thereby. *Her Dignity and Grace* is indeed a sufficient instance of this. Moreover, there is a good deal of dialect in it, and, except in the hands of very great masters, dialect is a snare to novelists. On the whole, however, there is more good than harm in the book despite its errors of design. The reader whose manners have been softened and not suffered to be fierce by the ennobling influence of Ouida’s princesses, duchesses, marquises, earls, and what not may feel the society of mere parsons, squires, &c., to be rather a “come down,” but it is something that the heroine of *Her Dignity and Grace* is the last scion of an undoubtedly noble house.

It seems that Mdme. de Chatelain’s book appeared for the first time a quarter of a

century ago in *Reynolds’ Miscellany*. We are inclined to think that its exhumation from that catacomb was not urgently called for. “The man of many daughters” is an impecunious earl, who is left by his father’s extravagance, and, to some extent, by his own, with no less than seven Lady Margarets and Lady Eleanors to dispose of, and with no more than seven hundred a year for all his soup. He is, of course, a rabid aristocrat, and such plot as the book has chiefly turns upon his disappointment in the matter of sons-in-law. In the course of the novel, there is a contrast—not, indeed, very original, but showing some ingenuity—between the different forms which family pride takes, or is by novelists traditionally supposed to take, in French and English nobles; and a certain Breton marquis descends with tremendous effect on the Earl of Sherrydown *à propos* of the first Crusade. If the book now appeared for the first time, and were possessed of a few modern touches, it would be at least equal to the run of three-volume novels, which it rivals in bulk, though it appears bound in a single tome. That it deserves republication is, as we have said, rather more than can be allowed. Sufficient to each day of this century at any rate are the three-volume novels thereof.

Mrs. Blackburne has written, and Messrs. Moxon have published, a very sprightly little novelette to start a new series of such things. Mrs. Blackburne is decidedly good at Irish novelettes, and *My Sweetheart when a Boy* is a pleasant specimen of her powers. We wish she would not write in the present tense, and also that she would keep a little farther aloof from the “common form” of blowsy, beautiful younger sisters or cousins, and jealous, spiteful elder ditto ditto. But, as Mr. Austin Dobson has profoundly observed after Alfred de Musset, “The man who plants cabbages imitates, too,” and therefore why not the man or woman who plants and grows novelettes for human nature’s daily food?

GEORGE SAINTSBURY.

CURRENT LITERATURE.

A Treasury of English Sonnets. Edited from the Original Sources, with Notes and Illustrations, by David M. Main. (Manchester: A. Ireland and Co.) It is difficult to read through a large collection of sonnets, and preserve any great appetite for that form of verse. Mr. Main has collected between six and seven hundred, and of these, as a matter of course, a great many are of more than doubtful value. It is true that the great masters of the sonnet contribute very largely to the collection—Shakspeare with fifty-seven specimens, Milton with seventeen, Wordsworth with seventy-two, and Mrs. Browning with twenty-two; but, although these poems are, almost without exception, interesting and charming, they are already in the possession of every reader who has the least care for poetry. When it is remarked that the Roscoe family contribute eleven sonnets, and the late Mr. Charles Turner thirty-eight, it will be plain to every reader that the selection has been made on the broadest basis, and not from any surpassing sense of poetic fitness. The book, in fact, is huge and unwieldy, and would be much more useful if it were a third of its size. The selection from a few, and those, in most cases, unknown, living authors has also been very injudicious. But the notes display laborious care, and a love of the poetic art which it is unfortunate to see combined with so little

taste or feeling for proportion. Here is a very elegant piece of amorous fancy, which was previously unknown to us, and may be so to our readers. It is by William Browne.

“Fairest, when by the rules of palmistry
You took my hand to try if you could guess,
By lines therein, if any wight there be
Ordained to make me know some happiness,
I wished that those characters could explain
Whom I will never wrong with hope to win;
Or that by them a copy might be seen
By you, O love, what thoughts I have within.
But since the hand of Nature did not set
(As providently loth to have it known)
The means to find that hidden alphabet,
Mine eyes shall be th’ interpreters alone.
By them conceive my thoughts and tell me, fair,
If now you see her that doth love me there!”

Russia and England, from 1876 to 1880: a Protest and an Appeal. By O. K., Author of “Is Russia Wrong?” With a Preface by James Anthony Froude. (Longmans.) This is undoubtedly a very remarkable book. We need not discuss the justice of the cause which it is intended to support, or the correctness of the arguments which its purpose is to render as telling as possible. The discussion of such subjects belongs to the field of political controversy. But we may, as calm outsiders, free from the prejudices of faction, take an interest in a piece of work which is really remarkable on account of the ability with which it has been performed. For a foreigner to write a book in English at all is not an easy task, but for a foreigner to produce so eloquent and vigorous a “protest” and “appeal” couched in such terse, idiomatic language is a feat of which the author may well be proud. Seldom has an alien pen shown more effective command of the English language. Never, indeed, has it done so in the opinion of Mr. Froude, who justly remarks that “O. K. plays with our most complicated idioms, and turns and twists and points her sarcasms with a skill which many an accomplished English authoress might despair of imitating.” Why she half conceals her name does not plainly appear. Mr. Froude, in his Preface, dwells upon the fact that her elder brother is “General Kiréef, now on the staff of the Grand Duke Constantine, and a most active member of the Slavonian Committee.” It is equally well known that her husband’s brother was the Russian ambassador at Vienna, whence he has been lately transferred to Constantinople.

The Elementary School Manager. By Hugo Rice-Wiggin and Alfred Percival Graves. (Isbister and Co.) Two of the Government inspectors of schools—of whom one, Mr. Rice-Wiggin, has recently died, leaving behind him the reputation of one of the ablest, most courageous, and earnest members of the staff—have put together their experiences, and produced this little volume of information and counsels respecting the management of such elementary schools as receive aid from the parliamentary grant. It is not very easy to see why it is called the “School Manager,” since a large number of the particulars into which the authors enter concern the work of inspectors and teachers only. The original design seems to have been to convey to the members of School Boards and managing committees a simple statement of the law affecting their duties, and a clear interpretation of official requirements. But this design has evidently expanded as the authors went on with their work; and they have assumed that the “manager” would also like to know what the interior life of the school is; how it ought to be conducted; how it is annually examined; and what are the rules or tokens by which improvement or deterioration may be most clearly recognised. Both the first design and the after-thought have been well and methodically carried into effect. It is true

that the book, like that of another inspector, Mr. Blakiston, which was noticed in these columns some months ago, gives little or no help as to principles or methods of teaching, and sets before the reader no higher aim than to obey the requirements of the Government Code and to earn a good grant. Books of this kind are calculated to have a somewhat narrowing influence on those whose ideal of education transcends this somewhat humble object; but they have unquestionable value for the average teacher and manager, inasmuch as they show how that object can be fulfilled honestly and sensibly, and with more than average success.

Cetshwayo's Dutchman: being the Private Journal of a White Trader in Zululand during the British Invasion. By Cornelius Vijn. Translated from the Dutch and edited with Preface and Notes by the Right Rev. J. W. Colenso, D.D. (Longmans.) This little book, as the only authentic account by a European eye-witness as to the state of native feeling in Zululand during the late war, possesses exceptional value for those who take any interest in the South African problem. The author, a young Dutch trader, had crossed the Tugela at the commencement of hostilities quite unaware of war having broken out. He was unable to get back into the colony, and was perforce obliged to be a spectator of the whole drama that ended in the utter break-up of the Zulu nation as an independent savage power. He was naturally not looked upon with much favour by the *impis* of Zulu war-bands; and, had it not been for the watchful and humane protection extended to him by Cetshwayo, he most certainly could never have given us this memoir. Indeed, the character of Cetshwayo as exhibited in all his actions which came under the ken of Mr. Vijn shows him as the very opposite of the bloodthirsty and cruel savage painted at the beginning of the war by the High Commissioner in his despatches to the home Government. On the contrary, he must be a very good sort of savage indeed, seeing that he had the magnanimity to refuse to poison the wells from which the British army might drink, saying "he would not fight with the whites in any such inhuman manner, but he would fight in honourable fashion, for he had men enough for that" (p. 31). He seems, too, to have ordered that in case any of the whites were taken alive they should not be hurt, but brought to him that they might be sent home in safety at the close of hostilities. Towards the end of the war Mr. Vijn served as the king's secretary, writing notes in pencil for him to Lord Chelmsford; and after the Battle of Ulundi he was employed by Sir Garnet Wolseley to try and induce the fugitive monarch to come into the British lines and surrender. As might be expected from the author's situation, as well as on account of the generally unsettled state of the country, there were few opportunities given to him of making any observations on the customs, religion, or folk-lore of the Zulus; but as a contribution to South African politics by an apparently dispassionate and unprejudiced observer this book undoubtedly deserves a careful perusal.

The Reader's Handbook of Allusions. By the Rev. E. O. Brewer, LL.D. (Chatto and Windus.) This portly volume may, at the first opening, a little remind the reader of that famous dictionary which Macaulay once proposed, and in which the entries were impartially to include Tom Jones, Davy Jones, and Sir William Jones under the same comprehensive heading. When the oddity of finding a succinct life of Miss Tox, and an accurate topographical description of several Bowers of Bliss entered in a business-like and wholly matter-of-fact manner, has once been got over, it is seen that Dr. Brewer

has performed his task with considerable diligence and judgment, and has been wonderfully liberal in his selection. Thoroughgoing lovers of literature may indeed regret that to the assistance of the existing army of manuals, hand-books, &c., should come this last guide to the blind, or rather the indolent, to enable the latter to dispense with first-hand acquaintance with the originals of such allusions as here find explanation. But the thing was clearly inevitable, and it has been on the whole very well done. We have tested it by looking out for several rather out-of-the-way personages and incidents, and have rarely found Dr. Brewer at a loss or inaccurate, though there is of course ample room for improvement in a second edition.

PROF. W. T. WABB, in his *Martial for English Readers* (Macmillan), gives a translation into verse of some of the more characteristic epigrams. His success in one of the most arduous undertakings to which a translator could well address himself is very mixed; it may fairly be described by the well-known words which Martial used of his own performances, *Sunt bona, sunt quaedam mediocritia*. One of his happiest attempts is x. 40, of which the following may serve as a specimen:—

"Or should the ocean-god obey
Old Aeolus' tempestuous sway,
Your table, from its stores supplied,
Laughs at the stormy billows' pride,
For in the well-stocked tank are fed
Turbot and pike your care has bred:
Choice lampreys there towards you swim;
Tame mullets to the water's brim
And well-grown barbels make their way
Their keeper's summons to obey."

The following sonnet is sufficiently pleasing (vi. 80):—

"Caesar, to thee the land of Nile had sent
Her winter roses with officious care,
Thinking to give thee something new and rare.
But when to Rome the Pharian sailor went,
Soon as he passed within her walls' extent,
Forthwith he scorned his Memphian gardens fair;
Such splendour as of Paestum's fields was there,
Such vernal beauty and such balmy scent.
Where'er around his roaming footsteps stray,
And wheresoe'er his wondering glances bend,
With rose-twined garlands every street was gay.
Then, Egypt, since no more thou canst pretend
To match our Roman winters, hither send
Thy corn; the gift our roses shall repay."

After this it is shocking to find such doggerel as—

"Why, Cinnamus, I do not know,
The name of Cinna you prefer.
Suppose your name were *Roberts*, so
You'd straight become a robber, sir."

The translations, speaking generally, have the merit of faithfulness, and the book may be used with advantage by professed students. But, as a whole, it fails to convey the terseness and finish of language which make Martial so unapproachable.

Legends of Olden Times. By J. M. Callwell. (Newman and Co.) The legends which Mr. Callwell has selected are those of Beowulf, of Wolddietrich, and of the Niblungs in its later form. He has told them well, though perhaps with some sacrifice of their wild beauty and charm, and English children ought to rejoice in them.

ANOTHER book which may be warmly recommended for the young is *The Boy's Froissart*, edited for boys, with an Introduction, by Sidney Lanier (Sampson Low and Co.). The task of abridgment is skilfully done; and if the language has not the charm of Froissart's French or Lord Berners' English, it is yet, at all events, smooth and unaffected. The American origin of the book would be betrayed, if by nothing else, by Mr. Alfred Kappes' excellent woodcuts.

The Boy's Froissart will furnish entertaining and profitable reading for the Easter holidays.

It seems almost hopeless to obtain a really critical estimate of that multifarious compendium called the Talmud. Mr. P. B. Benny, in some extremely well-written papers reprinted from the *Pall Mall Gazette* under the title of *The Criminal Code of the Jews* (Smith, Elder and Co.), reproduces the penal code of the Talmudic treatise Synhedrin. He wishes us to believe that the legal system practically enforced "during the prophetic period and at the time of the second temple of Jerusalem" is to be obtained from the Talmud. Now, without justifying non-Jewish Biblical critics for their slight knowledge (and in most cases ignorance) of the Talmudic literature, popular Jewish writers, like Mr. Benny, cannot be exonerated from the charge of gross want of criticism in representing "the Talmud" as an authority for the times of Christ from "the prophetic period." Scholars, like Jost, Graetz, and Neubauer, know better. The moral is that, however interesting, both ethically and legally, Mr. Benny's compilation may be, it cannot be regarded as a trustworthy source for the early Jewish legal tradition. Dr. Oort, of Leyden, a non-Jewish scholar, is the only writer known to us who has made the slightest attempt, at any rate in a European language, to elicit a genuine early tradition from the late developments embodied in the Talmudic treatises. If we have hurt Mr. Benny's almost religious feeling of reverence for "the Talmud," we are sorry for it, but the interests of truth are superior, in our view, to those of the controversy between Christianity and Judaism. As a readable summary of a treatise of the third century A.D., his work is of great merit.

The Church under Queen Elizabeth. By the Rev. F. G. Lee. In 2 vols. (W. H. Allen and Co.) Dr. Lee's work is a bulky polemical pamphlet, wearing an historical dress. Its object can scarcely be to trace the origin of the Church of England under the pretence of thereby recommending some society for the corporate re-union of Christendom; but Dr. Lee has shown considerable industry in gathering together from every side everything that could blacken the character of Elizabeth, her Ministers, and her bishops, as well as everything that could glorify the Catholics who suffered for their opinions or their conduct during her reign. No virulence of abuse is bad enough for Elizabeth, while Mary of Scotland is called "the saintly Queen." The polemical side of the book, as a coarse attack on the Church of England by one who is a minister of it, is not a subject for discussion in these pages. Historically it is entirely worthless, as its only aim is to show that everyone who took part in creating a schism from the "One True Church" was a base, profligate, self-interested intriguer. Dr. Lee's point of view does not differ from that adopted by a Jesuit pamphleteer of Elizabeth's time, and his book merits just about as much attention. There is not the slightest indication throughout that there were any practical abuses in the "One True Church" which had for centuries excited the attention of earnest men throughout Europe, or that its prelates and priests had ever been other than saints. Social and political considerations are left entirely untouched. The Almighty, according to Dr. Lee, sent plagues and portents upon England, which are duly chronicled, to warn its people against their godless proceedings; but Philip of Spain is not even mentioned, nor are the causes of the failure of his excellent and orthodox intentions towards England explained even on natural, to omit supernatural, grounds. These are no doubt trivial points to one who holds that "man is made for the Church, not the Church for man." The book seems so profoundly disin-

genuous from beginning to end that we are tempted to believe that Dr. Lee has his tongue in his cheek all the while. At all events, we cannot congratulate him on a conciliatory contribution towards the "Corporate Re-union of Christendom." If many people read it, the dormant Protestantism of England will be stirred to just indignation.

Dickens's Dictionary of the Thames from Oxford to the Nore, 1880. An Unconventional Handbook. (*All the Year Round* Office.) Mr. Dickens has recently produced a companion to his excellent *Dictionary of London* which, equally with that little book, is full of carefully collected facts. The lovers of the Thames are so numerous that a cheap compendium of information relating to it cannot fail to command a large number of readers. No class has been forgotten by the compiler; thus the different kinds of fish are described for the benefit of the angler, and the boating man is told all about the clubs, the races, and regattas. The bather, the bird fancier, the botanist, and the geologist each gets his bit of information; and creature comforts in the shape of "cups, cocktails, and grogs" are not overlooked. Although much of the Dictionary is necessarily put in a curt form, there are articles that can be consulted with interest for their own merit, as "Art and the Thames," "Poets and Poetry of the Thames;" and most of the accounts of the towns and villages are excellent reading. Delightful memories are brought up as we turn over the leaves and read the names of well-known pleasant places. There are several useful plans, and the new Rule of the Road, which was published in the *London Gazette* of August 19, 1879, and is to take effect on September 1, 1880, finds its proper place in the alphabet. Surely the reader who cannot find something to interest him in this shilling volume must be difficult to please.

English Municipal Institutions: their Growth and Development. By J. R. Somers Vine. (Waterlow and Sons.) The chief value of this book, which is severely statistical in its methods of treatment, is to correct the popular error that our present system of municipal government is of ancient date. In name, indeed, many of our cities and boroughs can boast of a pre-historic antiquity; but municipal corporations, in the legal sense of the term, did not come into existence until the middle of the fifteenth century. At about that time a popular movement, felt throughout other countries of Europe at least as strongly as in England, led to the granting, by the Crown, of civic charters, with large powers of self-government. But at a later epoch, under the Tudors and, more especially, under the Stuarts, England again participated in the European reaction in favour of a centralised administration. The boroughs lost by force or by fraud nearly all their chartered privileges; and at the beginning of the present century the title of "municipality" was a synonym for corruption and sloth. Municipal institutions, as we now know them, with popular representation and efficient government, are the creatures of the reforming Act of 1835, which we owe to the enthusiasm which carried the great Reform Bill. Before that date, the so-called municipalities covered an area of only 736 square miles, with a little more than two million inhabitants. The estimated area now under municipal government is 1,189 square miles, and the population is more than eight millions. So far as statistics go, Mr. Vine has elaborately explained the importance and meaning of this great change. He has given due prominence to a number of obscure and half-forgotten facts. Our only regret is that he has not explained, so fully as could be wished, the system of municipal administration now in full activity.

Pronouncing Gazetteer of the World, Descriptive and Statistical. (Edinburgh: Oliver and Boyd.) The announcement of this book aroused hopes in us which were destined to be cruelly disappointed. There is, perhaps, no department of geography in a more backward stage than the right spelling and the right pronunciation of names of foreign places. It is understood that the Royal Geographical Society is now engaged upon a comprehensive scheme of orthographical reform, following the main lines laid down by Dr. Hunter for his *Imperial Gazetteer of India*. Scientific transliteration, however, may be called an easy task as compared with right rules of pronunciation. First comes the difficulty of accent, for who could discover for himself that the stress ought to be laid upon the first syllable of "Kabul" and the last syllable of "Hisar"? But almost insuperable obstacles present themselves in the case of a language, such as Burmese, where the written character gives no clue at all to the spoken sound; or even in Arabic, where the vowels are pronounced differently according to the consonant that may happen to follow. But such questions as these, however interesting, find no notice in the book before us, which is of the most popular and unscientific character. We are sorry to cast a doubt even upon the accuracy of the statistical information. Under *Fifeshire*, we read that "the largest and most populous town is Dunfermline;" while on other pages *Kirkcaldy* is shown to have 23,428 inhabitants, and *Dunfermline* only 14,963 at most. We are also greatly irritated at the socialism which substitutes Panjim for Goa on the map of India.

NOTES AND NEWS.

MR. THOROLD ROGERS is engaged in printing a second edition of his *Adam Smith* for the Delegates of the Oxford University Press. This edition will contain an unbroken series of wheat prices by the quarter from 1259 to the present time. No such series has yet been discovered. The table will be an anticipation of this part of Mr. Thorold Rogers' statistics in his forthcoming two volumes of the *History of Prices*.

THE REV. J. STEVENSON is preparing for publication a very interesting memoir by Nau, the secretary of Mary Queen of Scots. It may be regarded as containing in substance the Queen's account of her life, and especially of those parts of it which have been the subject of so much controversy.

THE REV. PROF. WACE'S *Bampton Lectures* for 1879 are in the press, and will be ready very shortly.

MESSRS. W. SKEFFINGTON AND SON propose to issue, early in April, *The Life and Letters of the Late Rev. Richard Waldo Sibthorp, sometime of St. James', Ryde; latterly of St. Barnabas' Cathedral, Nottingham*, by the Rev. John Fowler, M.A. The volume will contain some interesting correspondence with the late Dr. Routh, the President, and with Dr. Bloxam, a Fellow, of Magdalen College, Oxford. Mr. Gladstone also allows some reminiscences of Mr. Sibthorp's preaching, sent by him to the author, to be inserted.

MESSRS. WILLIAM BLACKWOOD AND SONS will publish next week their reprint of Charles Kirkpatrick Sharpe's famous *Ballad Book*, with notes, hitherto unpublished, from the MS. copy in the possession of Sir James Gibson Craig, Bart. Appended to the reprint is a number of MS. notes on ballads by Sir Walter Scott, as well as a few rare ballads selected from the MS. collection made by William Skene, Esq., of Rubislaw. Extracts have also been made from a note book which Mr. Sharpe seems to have used as a commonplace book for notes on Scotch

songs and dramas. The late David Laing was engaged on the editing of the *Ballad Book* at the time of his lamented death.

A POPULAR edition, which will form a third and cheap edition of the *Life of Mr. Gladstone* by Mr. Barnett Smith, is at press, and will be published in a few days by Messrs. Cassell, Petter, Galpin and Co.

WE have been requested to state that applications for membership and all other communications intended for the newly formed Lituianian Society, to which we referred in our Notes and News of last week, may be addressed to Dr. M. Voelkel, the secretary, Tilsit.

WE understand that the Delegates of the Oxford University Press contemplate the issue of a series of volumes on subjects of original research, especially, and in the first place, with the view of communicating to the public such materials as exist in great quantity in the Bodleian and the college libraries. It is known to some that there are large and unsuspected treasures in these depositories, and that great assistance would be given to historical study and philological criticism if use were made of these materials. It would be, moreover, no small satisfaction to Oxford men if the reproach of literary barrenness were removed from the university, and some learning beyond the art of cramming for examinations were encouraged.

The City of Dreadful Night, and Other Poems, by James Thomson ("B.V."), is now in the press for almost immediate publication by Messrs. Reeves and Turner.

PROF. MONTAGU BURROWS is engaged in writing an important work upon the Foreign Policy of Great Britain during the reign of George III. The book will be published by Messrs. Cassell, Petter, Galpin and Co., under the title of *Imperial England*.

THE REV. CANON NORRIS, Vicar of St. Mary Redcliffe, Bristol, and Examining Chaplain to the Bishop of Manchester, will shortly publish with Messrs. Rivington the first volume of a Commentary on the New Testament, containing the Four Gospels. Exposition is chiefly aimed at, as the book is not primarily intended for learned readers.

IN addition to the new volumes of poetry by Mr. J. A. Symonds and Mr. O'Shaughnessy which we have already announced, we hear that the issue of a new volume by Mr. Philip Bourke Marston may be looked for at no very distant date.

MESSRS. CECIL BROOKS AND CO. will publish early next week a pamphlet by Cardinal Manning entitled *The Catholic Church and Modern Society*.

MR. R. HOVENDEN has issued the first part of the *Monumental Inscriptions in the Old Churchyard of St. Mary, Newington*. Some slight delay has been caused in the appearance of the book by the task of annotating the inscriptions. Many of them are of great value for genealogical or biographical purposes, and possess an interest far beyond the limits of the parish. Bishop Horsley enjoyed for many years the rich rectory of Newington, and one of the most elaborate epitaphs records the loss of his wife and his own death a few months afterwards.

WE understand that the Trustees of the British Museum have resolved upon permanently adopting the Siemens system of lighting by electricity which has been in temporary use in the Reading-Room for some months. In order to provide greater security against any sparks of carbon that might fall, a glass tray has been placed under the lamps. The great increase in the number of hours during which readers have been enabled to avail themselves of the

privileges of the Museum has given great satisfaction and been widely appreciated.

THE Library of Cornell University has just received from Mr. W. G. Garrison a valuable collection of autograph letters which were received during the anti-slavery agitation and the years of the Civil War by his father, the late William Lloyd Garrison.

THE Rev. C. E. Moberly, late Assistant-Master in Rugby School, is just about to publish *Romeo and Juliet* as an addition to the series of Rugby School editions of Shakspeare; he has also just ready a new and revised edition of his *Geography of Northern Europe*. Both will be published by Messrs. Rivington.

THE following arrangements have just been made for the lectures at the Royal Institution after Easter:—Tuesdays: Prof. Huxley will deliver two lectures on "Dogs, and the Problems connected with them;" Mr. Robert H. Scott, F.R.S., four lectures on "Wind and Weather;" Mr. John Fiske, three lectures on "American Political Ideas viewed from the Standpoint of Universal History." On Thursdays: Prof. Tyndall will deliver six lectures on "Light as a Mode of Motion;" Mr. T. W. Rhys Davids, three lectures on "The Sacred Books of the Early Buddhists." On Saturdays: Mr. James Sully will deliver three lectures on "Art and Vision;" Prof. Henry Morley, five lectures on "The Dramatists before Shakspeare, from the Origin of the English Drama to the Year of the Death of Marlowe (1593)." The Friday evening meetings will be resumed on April 9, when Prof. Huxley will lecture on "The Coming of Age of the 'Origin of Species.'" Succeeding discourses will probably be given by M. Ernest Renan, Mr. W. H. Pollock, Mr. W. Spottiswoode, Mr. G. J. Romanes, Lord Reay, Mr. H. H. Statham, and Mr. Francis Hueffer.

THE German *Publishers' Journal* has issued statistics concerning the number of periodical publications published in the world. According to them the total number is about 23,000, of which Germany boasts the greatest number, viz., 3,778; England, 2,509; France, 2,000; Italy, 1,226; Austria, 1,200; Russia, 500. Asia produces 387; Africa, 50; America, 9,129; and Australia 100.

THE publication of the draft charter of the Victoria University carries one stage farther this interesting experiment in academical construction. Combining the two types represented by the Scotch universities and the University of London, it is proposed to form four distinct bodies—the University Court, the University Council, the Convocation, and the General Board of Studies. But as the supreme authority in legislation will rest with the University Court, its constitution alone becomes of importance. The number of members will vary according to circumstances; but the representatives of the affiliated colleges must always form a clear majority of the whole. No college is to have less than nine representatives, and none more than nineteen; of the remaining members, twelve are to be nominated by the Government, and only four, ultimately rising to seven, are left to be elected by Convocation or the general body of graduates. The colleges, therefore, which we may assume to be identical with their several professoriates, will possess the entire control of the examination system, subject only to the proviso that one at least of each pair of examiners shall always be taken from outside. In other words, the privilege of conferring degrees is indirectly granted to the teaching staff, while the dangers of such a measure are sought to be obviated by the elaboration of checks and counter-checks. The Owens College and the Yorkshire College of Science may prove themselves worthy of the confidence reposed in them, but none the less

does the principle of the scheme appear to us radically unsound.

Le Livre announces the discovery in the Trèves Library of a French poem entitled *Sainte-Nouna et son Fils Saint-Devy*, composed by Richard Cœur de Lion during his captivity in Tirol.

MESSRS. RIVINGTON will shortly issue *An Essay on the Scriptural Doctrine of Immortality*, by the Rev. James Challis, M.A., F.R.S., &c., Plumian Professor of Astronomy and Experimental Philosophy in the University of Cambridge; and *Some Helps for School-Life: Sermons preached at Clifton College, 1862-1879*, by the Rev. Dr. J. Percival, President of Trinity College, Oxford, and late Head Master of Clifton College.

A SERIES of Histories of the Literatures of the World, composed exclusively by Russian scholars, is announced to appear in St. Petersburg early in the present year. The first part will contain a general Introduction to the series from the pen of the editor, Prof. V. F. Korsh. Among the subjects treated will be Indian Literature by Minaief, Arabic and Persian Literature by Harkavy, and Latin Literature by Modestof.

THE indefatigable Polish author, J. I. Kraszewski, whose jubilee was recently celebrated at Cracow, has just completed a new novel, the title of which is *Dwa Boga—Dwie Drogi* ("Two Gods—Two Ways").

WE have received the first volume of M. Jacques de Rougé's *Inscriptions recueillies à Edfoo* (Paris: Leroux), of which we reserve a detailed notice till the second volume is issued.

MESSRS. GRIFFITH AND FARRAN have in the press a little volume of dialogues by the use of which, as a class reading book, it is believed that children, even under inexperienced teachers, will unconsciously and pleasantly gain some knowledge of the earth's surface and movement. *Glimpses of the Globe*, as the volume is named, is by the author of *The Teacher*, published last year by Messrs. Macmillan and Co.

THE second volume of Herr Philipp Spitta's biography of Johann Sebastian Bach, completing the work, will shortly be published at Leipzig. It will contain upwards of one thousand pages, embracing the career of the composer from his appointment as Cantor at Leipzig in 1723 to his death in 1750.

THE Report of the Nottingham Free Library Committee states that the public interest in the libraries continues to increase. The lending library, however, is in a deplorable condition, and funds are urgently needed to replace worn-out copies of popular works. Among recent donations to the museum is a valuable series of birds from the Fiji Islands presented by Mr. W. Fillingham Parr, now resident at Levuka. The Clothworkers' Company has presented to the library a copy of Dupont-Auberville's *Ornamental Textile Fabrics of all Nations*. The Clumber collection is at present exhibited in the Castle Museum.

M. DE VOGUÉ, the learned Orientalist, is to publish immediately, for the Société de l'Histoire de France, a new edition of the *Mémoires de Villars*. M. de Vogué is the owner of the MSS. which Anquetil used for the first edition. The true text, which was altered by Anquetil, will be restored, and much fresh information will be supplied in notes and appendices.

THE Chair of Political Economy at the Collège de France, vacant by the death of M. Michel Chevalier, is keenly disputed. The candidates are MM. Frédéric Passy, Paul Leroy-Beaulieu, and Garnier (senator), all three members of the Academy of Moral and Political Sciences, and M. Alglave, publicist,

THE nomination of M. Fustel de Coulanges to the direction of the Ecole Normale has occasioned the following changes in the staff of the university:—M. Lavisse succeeds M. Fustel de Coulanges as "professeur suppléant" at the Sorbonne, and M. G. Monod succeeds M. Lavisse as Professor of History at the Ecole Normale.

MESSRS. HACHETTE are about to add to their fine collection of the ancient classics (which already contains M. Weil's *Demosthenes*, M. Tournier's *Sophocles*, and M. Benoist's *Virgil*) a new edition of *Xenophon* by M. Ch. Graux, of the Ecole des Hautes Etudes. This edition will comprise at least six volumes.

AT the meeting of the Clifton Shakspeare Society on February 28 *A Midsummer Night's Dream* was the play for critical consideration. Reports were presented from the following departments:—Sources and History, by Mr. John Williams; Metre and Authorship, by Miss Constance O'Brien; Grammar, by Mr. E. Thelwall; Early Dramatic Representations, by Mr. C. P. Harris; Medicine and Surgery, by Mr. Nelson C. Dobson; Historical References, by Mr. C. P. Harris; Anachronisms, by the Rev. B. S. Tucker; Plants and Animals, by Dr. J. E. Shaw; Demonology and Witchcraft, by Miss Florence O'Brien. Mr. P. A. Daniel's Time Analysis of the play, and Mr. F. J. Furnivall's paper "On Puck's 'Swifter than the Moon's Sphere' (II. i. 7) and Shakspeare's Astronomy" (read before the New Shakspeare Society respectively on November 8, 1878, and November 14, 1879), were brought before the society.

Deaconesses in the Church of England: a Short Essay on the Order as in the Primitive Church, and on their Present Position and Work, dedicated to and revised by the Dean of Chester, will shortly be published by Messrs. Griffith and Farran. The object of the book is to bring the subject of deaconesses before the minds of those who may not hitherto have given sufficient consideration to the movement; to answer the question, What is a deaconess? and to define their function in connexion with church work.

IT has always been asserted that Capell, in 1760, was the first man to attribute the play of *Edward the Third* to Shakspeare; but nearly a hundred years earlier Mr. Furnivall finds, in "An exact and perfect Catalogue of all *Plays* that are Printed," at the end of T[homas] G[off]'s *Careless Shepherdess*, 1556, the entry—

Edward 2 }
Edward 3 } *Shakspear.*
Edward 4 }

And although the attribution of Marlowe's *Edward II.* and Heywood's *Edward IV.* to Shakspeare robs of all value the assignment of *Edward III.* to him, yet the fact that Goff preceded Capell in so assigning it should be known. Neither Goff, nor Kirkman, the better cataloguer who soon followed him, attributes *Arden of Feversham* to Shakspeare.

THE death is announced of Sir John Benjamin Macneill, LL.D., F.R.S., author of *Tables for facilitating the Calculation of Earthworks in Railway Cuttings, &c.*; of Mr. James Lenox, of New York, founder of the Lenox Library; of the Hon. Samuel G. Arnold, the historian of the colony and State of Rhode Island; of August Cranz, author of *Eritis sicut Deus*; and of Dr. Ludwig Moser, Professor of Physics in the University of Königsberg.

MESSRS. A. AND C. BLACK write:—

"Our attention having been drawn to a paragraph in your Saturday's issue announcing Col. Clarke's forthcoming work on Geodesy, and at the same time stating that 'the only adequate treatise on Geodetic Surveys hitherto published in the English language was Sir G. B. Airy's article on "The Figure of the Earth" in the *Encyclopædia Metra-*

poliana, we think it right—to prevent misunderstanding—to remind you that treatises on Geodesy and the Figure of the Earth have recently appeared in the *Encyclopædia Britannica*, ninth edition, both by Col. Clarke."

WE have received *The Odyssey of Homer done into English Prose*, by S. H. Butcher and A. Lang, second edition, revised and corrected, with additional notes (Macmillan); *The Stoics, Epicureans, and Sceptics*, translated from the German by Dr. E. Zeller, by Oswald J. Reichel, new and revised edition (Longmans); *The Gentle Life Series*, new edition (Sampson Low and Co.); *The Ober-Ammergau Passion Play*, by the Rev. Malcolm MacColl, new and revised edition (Rivingtons); *Anthologia Latina*, by the Rev. F. St. John Thackeray, third edition, revised and enlarged (George Bell and Sons); *The Spirit and the Muse*, by Sir Philip Perring, Bart., second edition, enlarged (Longmans); *The Check Journal*, by G. Jackson, fifteenth edition (Effingham Wilson); *La Prusse et la France devant l'Histoire*, par A. Legrelle, nouvelle édition (Paris: Cotillon); *Annual Report of the Comptroller of the Currency*, December 1, 1879 (Washington: Government Printing Office); *With the Armies of the Balkan and at Gallipoli in 1877-78*, by Lieut.-Col. Fife-Cookson, fifth and cheap edition (Cassell, Petter, Galpin and Co.); &c.

AFRICAN EXPLORATION.

THE Royal Geographical Society have just received from Mr. Thomson, Mr. Keith Johnston's successor in command of the East African expedition, a report on the geographical features of the country between Lakes Nyassa and Tanganyika, which he has been the first to explore. Mr. Thomson states that Konde (misnamed Uhungu by the late Capt. Elton), his starting-point at the north-west of Lake Nyassa, occupies a deep triangular indentation in the central plateau, the escarpment of which, rising to 6,000 and 8,000 feet, bounds it on all sides, except the east. Near the lake there is a broad plain of wonderful fertility, with a large population. Proceeding in a north-westerly direction, the expedition under Mr. Thomson left the plain, and entered on an undulating wooded country, drained by the River Jumbaka; at an elevation of 3,000 feet they reached an extremely broken and ridgy country, well suited for grazing purposes, but not for cultivation. Mr. Thomson found that the Konde country was drained by three rivers, the Lufira, Jumbaka, and Lukuviro, and the population consisted of Wakinga, who had emigrated from their own country on account of internal dissensions. He says that Uchungu lies to the south of Konde, the western limit of which he places in E. long. 33° 45' and S. lat. 9° 22'. The steep face of the plateau commences here, ascending from 3,300 feet to 6,600 feet in the country of Nyika. The first two stages were over highlands at an elevation of about 7,000 feet, affording good pasture and well wooded in parts. The highest point reached was on the Munboya Mountains, a range running W.N.W. and E.S.E., where the barometer gave an elevation of 8,180 feet. From this point the ground descended through a woodland country, with few fertile spots, to E. long. 32° 45', where the altitude was only 3,300 feet. The part of Nyika passed through was very broken in its nature, with a small population, and but few goats and cattle. On the west Nyika is bounded by the Chingambo mountains, which, running north and south, rise from 3,300 to 5,000 feet, with a steep face on the east side, but sloping gradually to the west. These mountains are in about E. long. 32° 45', S. lat. 9° 5'. Crossing this range, the expedition entered the Inyamwanga country,

which is covered with trees and has few grassy open spaces. The ground slopes gradually west almost to the boundary stream, Mkaliza, which flows south in about E. long. 32° 20'. Mr. Thomson then came to Mambwe, in which grassy plains alternate with wooded ridges, rising to 5,000 feet at Mulichuchu, Kitimba's capital. The same height was generally maintained to Lake Tanganyika through the hilly country of Ulungu. Northern Mambwe was found to be a great watershed for streams, of which a considerable one—the Wawa—is said to flow to Lake Hikwa. The chief interest of the region, however, centres in a huge spring in an angle of the Ulungu and Mambwe mountains, which is the source of the main tributaries of the Lofu and Juguvu; a quarter of a mile from the spring the latter was five feet deep and twelve feet broad. From enquiries and observations on the spot, Mr. Thomson is of opinion that the rise of Lake Tanganyika is periodical, and due wholly to the rainfall. The Royal Geographical Society have received later intelligence by telegram from Zanzibar, by which they learn that in his northward march Mr. Thomson visited the Lukuga Creek and found it a torrent. He left Ujiji on January 16, intending to march through Uguha and Uhehe, and expected to reach Kilwa on the coast in June.

MAGAZINES AND REVIEWS.

THE *Nineteenth Century*, in addition to a political manifesto of Mr. Gladstone's which is hardly properly to be spoken of in a literary journal, has—beside some less noteworthy contributions—an excellent article by James Payn on "Sham Admiration in Literature," and a very earnest argument by Mr. Kegan Paul for the use, and not the disuse, of "Our City Churches." Mr. Payn's paper, written perhaps with something less than the brilliancy to which he has accustomed us both in his magazine articles and in his witty novels, is practically a protest against conventionality in literary faith. The person who on hearing a fine modern poem—since it was fine it cannot have been one of the productions of our younger and imitative school—exclaimed that it was all very well, but, for his part, he preferred Milton, and who, on being pressed with respect to his preferences for Milton, was fain to avow that it was some time since he last had dipped into that august poet, was a very fair type of the society critic who has been trained to think certain things classical and all the rest second rate. Mr. Payn's protest is vigorous, and the arguments with which he supports it are true as well as ingenious. Mr. Kegan Paul is refreshingly earnest in his appeal to the City clergy to make additional use of the churches in which now, chiefly on Sundays, they perform more or less dreary ministrations. He pleads for the extension of the soothing and restful influence which may be exercised by brief church service in the midst of business days. Everyone, he says, has half-an-hour to spare, and the church, or the pleasant bit of City churchyard, beset with ancient trees still green in the middle of the town, might be made with no great effort a favourite place for mental refreshment. On the aesthetic side of the question he fully recognises Sir Christopher Wren's artistry in regarding each church as part of a scheme of which St. Paul's was the centre, and if a recognition of this fact were more general we should hear less of destruction and of that supremely vicious meddling which is called "restoration." The religious part of Mr. Kegan Paul's argument comes with all the greater strength to those whom he addresses just because he is "not, in their sense, a believer."

THE article by Mr. Lethbridge in the *Con-*

temporary Review on "The Vernacular Press in India" is interesting on several grounds. Apart from official documents and speeches in Parliament, it is the first attempt to enlighten the English public upon a subject of no little importance, and Mr. Lethbridge has special qualifications to be heard. He has himself been intimately connected with the English press in India, and he is at the present moment the official Press Commissioner, though temporarily at home on furlough. The first vernacular newspaper was started in 1822 by the well-known Baptist missionaries of Serampur, though an English newspaper had appeared at Calcutta as early as 1780, in the time of Warren Hastings. For many years the vernacular printing presses limited themselves to the issue of religious polemics, in the interests of Christianity, of the Brahma Samaj, or of orthodox Hinduism. Political discussion has been a comparatively recent growth; and it must be recollected that in India political discussion is identical with criticism, or defence, of the Administration. There are now about two hundred and thirty newspapers regularly published in the various vernaculars, with an estimated total circulation of one hundred and fifty thousand copies; one of these has a circulation considerably over five thousand, and is sold for three-eighths of a penny. Mr. Lethbridge's historical sketch gives much curious information about the past and present condition of this development of literary activity, but his entire article seems to us to be tinged with a pardonable desire to defend the creation of the machinery which it has been his own duty to manipulate. This machinery consists of two parts—first, an office to supply both vernacular and English newspapers with such intelligence as the Government chooses to communicate; and, secondly, a censorship—in fact, if not in name—exercised over the vernacular press only. It is a censorship, though it operates only after publication, because the control is taken from the courts of law and placed in the discretion of the executive, and because the penalty is not personal against the offender, but suppression of the paper and confiscation of the plant.

IN the March number of *Fraser's Magazine* Prof. Paley has an article in which, with his usual learning and acuteness, he seeks to show that writing was not used among the Greeks for literary purposes till the age of Plato. He draws attention to the distinction, which has been too little noticed, between the use of writing for public or State purposes and the use of it for book-making. He insists on "the total absence from the Greek vocabulary of all words and terms connected with pen-and-ink writing till a comparatively late period." He suggests that the great development of sculpture and oratory among the Greeks was mainly due to their having no outlet for their intelligence and genius in literature, and thinks that a passage in the *Frogs* of Aristophanes (1,113) points to books being at that time a novelty. He suggests that the well-known work of Hekataeus may have been handed down orally; at all events, there is no proof that written works of Hekataeus and Hellanikus were in existence. He further disputes the view that Thucydides was acquainted with Herodotus, and notes that Thucydides is either obliged or contented to fall back on inferences, memory, and hearsay for the sources of his history. But he has overlooked one important fact; the inscriptions carved on the colossi at Abu Simbel in the seventh century B.C. imply that writing was even then so widely known and taught in the schools of Asia Minor that military adventurers amused themselves with scribbling when they had nothing better to do. Moreover, it is hardly fair to say that the "sole exception to the absence of ancient writing other than that on stone seems to be certain papyri found in

Egyptian tombs; an immense literature, partly on clay, partly on papyrus, existed in Babylonia and Assyria from a remote period; libraries were established in the chief cities of Chaldea at least as early as B.C. 2000, and education was widely diffused. Writing for literary purposes, moreover, seems to have been practised in Phoenicia in the age of David.

THE CONQUEST OF MEDIA AND BABYLON BY CYRUS.

At the last meeting of the Society of Biblical Archaeology a paper was read by Mr. Pinches of even more historical interest and importance than that on "A Newly Discovered Clay Cylinder of Cyrus the Great" recently communicated by Sir Henry Rawlinson to the *Journal* of the Royal Asiatic Society. The inscription published by Sir Henry Rawlinson gives us an account of the conquest of Babylonia by Cyrus and the line of policy he subsequently adopted toward the Babylonians. Cyrus is presented to us in a new light; he is no longer the stern monotheist, the destroyer of the idols of Babylon, "the anointed one" of the Hebrew prophet; but a shrewd politician, who flatters the Babylonians by paying worship to their deities, by restoring their temples, and humouring the priests. Nor was the conquest of Babylonia effected only after a prolonged struggle and a siege of the capital; on the contrary, the last Babylonian king, Nabonidus, seems to have fled almost without striking a blow, Babylon opened its gates to the conqueror, and the priestly party claim to have been long the secret partisans of the Persian invader in consequence of the sacrilegious conduct of their native sovereign. I much suspect, however, that the Babylonian priests and scribes who drew up the inscription, which can scarcely have been understood, much less read, by Cyrus, have claimed credit for themselves for a course of action which really was pursued by others. It is hardly possible that a priestly party could have carried on intrigues with one of alien race and creed; and it seems more probable that, in order to gain the good-will of their new ruler, and explain the fate which had overtaken their country, the priests have appropriated to themselves the political conduct of the Jews and other exiles in Babylonia. However this may be, the cylinder brought before the public by Sir Henry Rawlinson has been largely supplemented by the fragments of a tablet purchased a few months ago by the British Museum. Though this tablet is chiefly occupied with the annals of the last native king, Nabonidus, it was drawn up after the Persian conquest, and is therefore strongly coloured in favour of the new régime. The history of the first, second, third, sixth, eleventh, and seventeenth years of Nabonidus is in a fragmentary state; that of the seventh, eighth, ninth, and tenth years is almost complete. The following are the most important facts that can be gathered from the fragments:—

In the second year of Nabonidus there was a rising in Hamath, and in the next year the King visited Phoenicia, possibly in consequence of the revolt. The Persians first appear on the scene in the sixth year, in the latter half of which we find Cyrus, King of Ansan or Southern Elam, fighting against Istuvegu, the classical Astyages, King of Agamtanu, or Ekbatana. The army of Astyages, it is stated, revolted against him, and sent him in chains to Cyrus, who entered Ekbatana and spoiled it. Three conclusions may be drawn from the statement. First, that one more blow is given to the historical character of the *Cyropaedia*; secondly, that the etymology which has been in the name of Astyages the Old-Persian *ajdahaka*, the "biting snake," and the later Persian *Zohak*, must be given up; thirdly, that the overthrow of the

Median power took place B.C. 549. Meanwhile, Nabonidus remained inactive in the city of Tevā, which Mr. Pinches believes to have been a quarter of Babylon, while the army was in Accad under the command of the King's son. The King's mother, the Nitokris of Herodotus, was also in the camp, which was stationed on the Euphrates, near Sippara—a fact, by-the-way, which settles the local position of Accad—and here she died, on the 5th of Nisan, in the ninth year of the reign of Nabonidus, and was mourned for three days by the King's son, the army, and the people of Accad, but not, be it observed, by the King himself. About the same time, Cyrus crossed the Tigris below Arbela or Arbabil, in order to attack a local ruler. It must have been at this period that Larissa and Mespila, whose ruins were seen by Xenophon (*Anab.* iii. 4), were destroyed by the Persians. In the following year Cyrus appears for the first time to have marched into Accad itself. It was not, however, till the seventeenth year of Nabonidus that he was able to effect the conquest of Babylonia. The army in Accad had probably checked his advance from the north, and he had therefore adopted a new route for attack from the south-east, after successfully tampering with a certain section of the subjects of the Babylonian monarch. The inhabitants of the coast of the Persian Gulf revolted, and all the efforts made by Nabonidus to propitiate the gods were unavailing. A battle took place in the month Tammuz, or June, at Rutum, perhaps the Rata of Ptolemy, which lay to the south of Babylon. It resulted in the complete victory of Cyrus and the revolt of the people of Accad from Nabonidus. Sippara was taken without fighting by the Persians on the 14th of Tammuz. Nabonidus fled, but was captured by the Persian general, Gobryas, on the 16th of Tammuz, and Babylon was entered without any resistance by Gobryas almost immediately afterwards. The only resistance experienced, indeed, was at the end of the month, when some "rebels of the land of Gutium" or Kurdistan shut themselves up in the temple of Saggil, which Sir H. Rawlinson identifies with the famous temple of Bel, now represented by the mound of Babil; but as they had no weapons they could do nothing. It was not till the 3rd of Marchesvan, or October, that Cyrus entered Babylon, apparently during the night, and appointed Gobryas and others to govern the city. On the 11th of the same month Nabonidus died, which disposes of the story of his appointment to the government of Karamania. Cyrus allowed the people of Accad to mourn for him six days.

The Persian king now commenced his policy of conciliation; the Babylonian gods were restored to their shrines with every mark of religious reverence, and on the 4th of Nisan, the first month of the new year (B.C. 537), Cambyses, the son of Cyrus, took part in the religious ceremonies performed in honour of the various deities.

I need not draw attention to the important bearing this discovery will have upon Biblical investigations. Two remarks, however, must be added; the tablet seems to have been compiled only a short time after the death of Nabonidus, and its compilers were Babylonians whose mode of writing was probably unintelligible to their Persian masters. I say only "probably;" since Cyrus was hereditary king of Ansan, a country where the cuneiform system of writing had been in use from a period possibly earlier than that in which it had been introduced into the plain of Accad, while the correspondence which had been carried on between Cyrus and a certain section of the Babylonians, as well as his participation in the rites of Babylonian worship, may imply his acquaintance with the Babylonian language and mode of writing.

CORRESPONDENCE.

AGE OF THE AJANTA PAINTINGS.

Ajanta Caves: Jan. 31, 1880.

In the *ACADEMY* of December 20, 1879 (p. 450), I observe a brief notice of a meeting of the Royal Asiatic Society, at which a paper was read from Bābu Rājendralāla Mitra "On the Age of the Caves at Ajantā," which would seem to place the famous frescoes here as far back as the Christian era. If the Bābu has actually visited the caves, it is difficult to understand how he could have failed to observe that, almost in the middle of the series, and at a lower level than the rest, are four or five caves of quite a different type of architecture, and evidently of much greater age than the others. Two of these are Chaitya caves, or chapels, and all of them are quite devoid of images—except a few figures, palpable insertions of a later date, outside the smaller Chaitya; the two or three monastic abodes are without shrines, and have stone benches for beds in their cells. In this group are two inscriptions; one of them, from the form of the characters, can hardly date earlier than the second century A.D.; the other may be earlier. But this matters little, for these caves do not contain any of the Bābu's Persian or other foreign figures.

All the other caves at Ajantā are of quite a different type; when they were excavated the severe, plain style of the first group had gone out of fashion, and pillars, pilasters, dāgobas, friezes, &c., are all carved with a luxuriance and variety of the most beautiful ornament that sets description at defiance. Among these are also two

Chaitya caves, equally rich in sculpture with the twenty Vihāras or monastery caves. There can be no doubt that these two styles belong to very different ages, and even to different phases of Buddhism. There is, perhaps, some considerable difference of age, even among the individual members of this second group; but the more important caves are all closely linked together by inscriptions, details of ornament, paintings, &c. On Nos. xvi., xvii., and xxvi. there are inscriptions, undated, it is true, but in an alphabet which—if any dependence can be placed in palaeographic evidence—cannot be ascribed to a date before 500 A.D. I have a copperplate grant of the same dynasty, in exactly the same character; and there are dated inscriptions in the Dekhan which differ so little from these, in the forms of the letters, that we cannot be far wrong in the date we assign to them. Elsewhere we have abundance of Buddhist caves, with inscriptions, to compare with these Ajantā ones; at Junnar, for example, there are about one hundred and forty caves and nearly forty inscriptions, but all of older date than any at Ajantā, except the two in the first-mentioned group; and there we have the old plain style of architecture, with inscriptions of the first to the third, or perhaps the fourth, century A.D. And, again, at Kārle we have nearly thirty inscriptions on a very fine early Chaitya cave; and here parts of several of them have been cut away to make room for the insertion of figures of Buddha after the Ajantā style. At first there were no images at Kārle; there are none in the Junnar, Bhājā, or Bedsā Caves, nor indeed in any of the earlier caves, except such as are manifestly insertions of a later date. The Mahāyāna sect began to excavate Rock Temples about the sixth century, and the second series at Ajantā, all the Aurangābād series, and most, if not all, the Buddhist group of caves at Elurā, were excavated by them. In other places they fell heirs to, or appropriated, the works of older Buddhists, and inserted images in pillars, walls, dāgobas, and wherever they thought fit. I know of no cave of the Mahāyāna sect that can be placed architecturally before 500 A.D.; and all the Ajantā Vihāras, with their shrines containing colossal images of Buddha and attendant figures of Padmapāni, Vajrapāni, &c., are works of this sect. There are no stone beds in the cells of any cave of this sect.

Now, as to the paintings: nearly all that has yet been copied of these most interesting and remarkable frescoes is to be seen in the India Museum at South Kensington; and, both artistically and historically, they are well worthy of a careful study. But it was not known till very lately that there are paintings here of two, or more, different periods and styles, extending probably over four centuries. Two styles are well marked: the oldest—found only in the two early Chaitya caves, and a much later prevalent in the Vihāras Nos. i., ii., vi., xvi., xvii., &c. But little of the oldest remains, and, in places, it has been covered over with a later and quite different style of work. In my *Notes* on these paintings, printed last year by the Government of Bombay, I gave specimens of the figures, costumes, &c., found among these fragments of early Indian art, which show a perfect agreement with the sculptures of the second and third centuries. There is also among them one painted inscription in letters of the third century, and in the same cave (No. x.), on the upper and later style of painting, are other short inscriptions in characters of about the sixth century. Now in the other caves belonging, as I believe, to a later age, there is no evidence of earlier frescoes, and among the paintings on their walls are no figures or costumes at all in the style of these early ones. The paintings differ as much as the style of architecture. And in Nos. ii., xvi.,

xvii., and xxii. there are inscriptions on the paintings—labels in several instances—in characters of the sixth or seventh century, certainly quite as late as those used in the Bādāmi inscription of A.D. 578.

It is in caves i. and xvii. especially that figures in Persian or Sassanian dress appear. The paintings in cave i. can mostly be seen in Mr. Griffiths's admirable copies at Kensington, and, among them, the large scene representing the reception of a Persian embassy by an Indian king, and three panels in the ceiling, supposed by Mr. Fergusson to represent Khusrū Parwiz and the fair Shirin, deserve special attention. There are no inscriptions whatever in cave i., but it is one of the richest in sculpture and painting, and probably one of the latest excavated. Cave xvii. is also rich in remarkable frescoes—unfortunately none of them, except the verandah ceiling, yet copied—but, in general style and execution, they are so like those in Nos. i., ii., xvi., &c., that probably all these caves were painted about the same time. Now, if, as indicated above, the caves were excavated after the year 500 A.D., the wall paintings in them cannot be of earlier date, but later. They may vary a little in age, as do the caves themselves, for Nos. xvi. and xvii. must be placed before Nos. i. and ii.; but, after careful consideration, I feel convinced that all the paintings in the five great Vihāras, Nos. i., ii., vi., xvi., and xvii., were executed in the century between 550 and 650 A.D.

The appearance of foreigners in these paintings is interesting, and the number of figures in Persian costume is far greater than Bābū Rājendralāla has probably any idea of. There are, besides Digambara (naked) Jains, paintings of Mānibhadra, the liturgy of Avalokiteśvara, and other subjects of Mahāyāna mythology, the Jātaka of Sibi Rāja, and other Buddhist stories, &c., &c., still traceable. Unfortunately, the originals are rapidly decaying or being destroyed, and the allowance made by Government for copying them has just been cut down to so small a sum that it will take seven or eight years to accomplish what, with only £200 a year more, could easily be done in three, and both better done and at considerably less total expense. J. BURGESS.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, March 15, 4 p.m. Asiatic.
5 p.m. London Institution: "Hydroid Corals—their Structure and Pedigree," by H. N. Moseley.
8 p.m. Victoria Institute: "On the Evidence of the Later Movements of Elevation and Depression in the British Isles," by Prof. Hughes.
- TUESDAY, March 16, 3 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schöfler.
7.45 p.m. Statistical: "Vital Statistics of Cavalry Horses," by Surg.-Gen. T. Graham Balfour; "A Survey of Offences and Crimes in England and Wales from 1859 to 1878," by Prof. Leone Levi.
8 p.m. Society of Arts: "Transport and Trading Centres for Eastern Equatorial Africa," by Capt. C. E. Foot.
8 p.m. Civil Engineers: Discussion on "The Purification of Gas."
8.30 p.m. Zoological: "Additions to the Menagerie in February 1880," by the Secretary; "List of Birds collected in Northern Peru by Mr. Stolzmann, 1878-79," by L. Taczanowski; "On Some Points in the Anatomy of the Sumatran Rhinoceros," by W. A. Forbes; "On a Collection of Land and Fresh-water Shells made during a Short Expedition to the Usambara Country in Eastern Africa," by A. B. Craven.
- WEDNESDAY, March 17, 7 p.m. Meteorological.
8 p.m. Society of Arts: "The Art of the Silver-smith," by W. Herbert Singer.
8 p.m. Archaeological Association: "Certain Grants of Land in Merida," by T. Morgan; "On the Name of Shakespeare," by Dr. Douglas Lithgow.
8 p.m. Literature.
- THURSDAY, March 18, 3 p.m. Royal Institution: "Recent Chemical Progress," by Prof. Dewar.
7 p.m. London Institution: "English Composers for the Pianoforte," by E. Pauer.
7 p.m. Numismatic.
8 p.m. Linnean: "Remarks on the Indigenous Timber, and on the Plants Introduced into New Zealand," by H. M. Brewer; "On *Lithodes arctica*," by J. T. Carrington.
8 p.m. Chemical.
8.30 p.m. Royal. Antiquaries.

FRIDAY, March 19, 8 p.m. Philological: "On Quantity and Sentence-Stress in English," by H. Sweet; "The Etymology of the Word *Bracket*," by Prof. Skeat.
9 p.m. Royal Institution: "Goethe's Theory of Colours," by Prof. Tyndall.
SATURDAY, March 20, 3 p.m. Royal Institution: "Dryden and his Period," by George Saintsbury.

SCIENCE.

A *Latin Dictionary*, founded on Andrews' edition of Freund's Latin Dictionary, revised, enlarged, and in great part re-written, by Charlton T. Lewis, Ph.D., and Charles Short, LL.D., Professor of Latin in Columbia College, New York. (Oxford: Clarendon Press.)

THE duties of a Latin lexicographer in the present state of Latin scholarship may, for the sake of distinctness, be roughly said to fall under three heads. In the first place he has to cleanse an Augean stable of false references and inaccurate interpretations. These, accumulated from the slow growth of an uncorrected tradition, beset all dictionaries, not even excepting that of Georges—we are speaking of the edition of 1869—which may, on the whole, be pronounced the best Latin lexicon of its size in existence. That its references should be revised and, where necessary, supplemented by the light of the best editions, and that the interpretations offered should be in strict accordance with the references thus corrected, is the most obvious and crying necessity in the case of a new Latin lexicon.

This may be called the negative side of a lexicographer's labour; there is also a positive side. For, in the second place, a Latin lexicon should omit none of the more important additions which recent research has made to Latin scholarship. Foremost among these must, of course, be mentioned the material amassed in the Berlin *Corpus Inscriptionum*, the *Inscriptiones Regni Neapolitani*, and the other recent works on inscriptions. It is a fair question whether proper names, of which inscriptions yield so rich a harvest, should be included in a lexicon at all. De Witt's new edition of Facciolati consistently omits them, and relegates them to a separate *Onomasticon*, but most dictionaries insert a considerable number. Our own opinion is that proper names, being originally nouns, ought to be inserted in a lexicon—only, however, as forms, not as pegs on which to hang historical dissertations. The study of proper names is indispensable to an etymologist, and a lexicon is, in our opinion, the place in which he should be able to find them. The difficulties involved in their total omission are very perplexing; what, for instance, is to be done with such a word as *Iulius* or *Livius*, which can become an adjective in *Iuliae* or *Liviae leges*? Is it to appear twice, once in the body of the lexicon and again in the *Onomasticon*? Insert it in the body of the lexicon, with a summary of its usages, and all difficulty disappears. It will be objected that a dictionary constructed on this principle must be infinite in length. But it is perhaps hardly realised how much space may be gained by the omission of irrelevant matter, such as historical information given under proper names; or disquisition which properly belongs to a dictionary of antiquities, as the long account of the *triclinium* often given under *accumbo*; or essays on the phonetic changes of

letters, such as the work before us gives on the letter *A*. Whether, however, a lexicographer chooses to insert all proper names or only a certain selection, inscriptions are the documents to which he must primarily have recourse; and there are, it need hardly be said, many other uses of inscriptions. There are also special lexicons to some authors, and elaborate indices to a great many, which ought carefully to be consulted. For the benefit of the students of later Latin, it is indispensable that the vast collections of Paucker, though scattered through various pamphlets and indexed in an inconceivably repulsive and difficult form, should be embodied in a lexicon which makes any pretension to completeness. And much useful material may be gathered from the labours of Rönisch and Ott on the *Itala* and the *Vulgate*.

In the third place, the question of etymology has to be considered. It cannot be expected that a Latin lexicographer should turn his work into a dictionary of etymology; but he may fairly be required to expel all obviously false derivations, and to give in a succinct form all that the best authorities are agreed upon as certain; and the amount of this is not inconsiderable.

This is but a rough and insufficient summary of what has to be done; and yet to carry out even this programme requires conditions hardly attainable under the circumstances under which, at the present time, books have too often to be produced. The work of Messrs. Lewis and Short is a real advance on any previous Latin-English dictionary. The orthography has been corrected throughout, a step which, however obvious, easy, and necessary, is of immense practical benefit to Latin scholarship in England, where we have for some time, in books available for school-teaching, been troubled with mere confusion in this matter. A dictionary which presents a fairly correct orthography will do much to popularise right notions on the subject.

It should be added that, on comparing a number of passages in this work with the corresponding passages in the last edition of Riddle and White's lexicon, we find that a fair amount of false references, especially to the standard authors, has been corrected, and a fair number also of new ones inserted.

But a considerable number of errors still lingers which ought to have been swept away. We have found the following among many others under the letter *A*, of which alone we have made a minute examination.

P. 4 n.—(*Ab* is used)

"in indicating a part of the whole, for the more usual *ex of*, *out of*: scuto *ab* novissimis uni militi detracto, Caes. *B. G.* II. xxv. 1; nonnulli *ab* novissimis, *id. ib.*; Cic. *Sest.* 66, 137; *cf. id. ib.* 59 *fin.* a quibus (captivis) ad senatum missus (Regulus)."

If we are not mistaken, the idea that *ab* = *ex* is wholly erroneous. In the passages of Caesar *ab* is rightly taken by Kraner to mean "on the side of," "in the direction of;" and in the passage from the *Pro Sestio* the editions now read a quibus *in*visis ad senatum missus est. We also look in vain, in the article on *ab*, for any notice of the use of this preposition after comparatives, which is so common in later Latin;

P. 21. *Acervus*.—At the end of this article are added the words "Esp. in dialectics, t.t., a *sophism* formed by accumulation; Greek *σωπεῖν*; Cic. *Ac.* II. xvi. 49, Hor. *Epist.* II. i. 47." *Acervus* is never used as = *σωπεῖν*, but always means, in this connexion, the heap of grain which is used to illustrate the *sortes*, and from which the argument derives its name. The true Latin, Cicero's Latin, for *sortes*, is *acervalis argumentatio*.

P. 22. *Acheron*.—There is no mention in this article of the fact that the first syllable is long in the early poets. And why are *Acheron* and *Acheruns* treated in two different articles?

P. 32. *Adduco*.—"Of conducting an army: exercitum, Cic. *Att.* vii. 9: aquam, to lead to, *id. Cael.* 14." In the passage from the *Pro Caelio* the words *adduxi aquam*, put into the mouth of Appius Claudius Caecus, mean "I brought the water to Rome," or "made my aqueduct."

P. 77. *Ago*.—"Subst. *agentes -ium. a.* Under the emperors, a kind of secret police (also called *frumentarii* and *curiosi*), Aur. *Vict. Caes.* 39 *fin.*; *Dig.* i. 12, i. 20, 21, 22, 23, &c.; *Amm.* xv. 3, xiv. 11 *al.*" The references to the Digest are, so far as we can make out, all wrong; indeed, we cannot find any such place as *Dig.* i. 23; and in the passages from Ammianus, as also in several places in the Theodosian Code which might have been quoted, the term in question is not *agentes*, but *agentes in rebus*.

P. 79.—"*Ajūga*: *abiga*: Scrib. 187: *cf. Rhod. Lex.*" This gloss puzzled us for some minutes; but it soon became evident, on reflection, that the curious word *ajūga* in Scribonius Largus is no more than a scribe's error for *abiga*, which was corrupted into *aviga*, and then, by the commonest of mistakes, into *aiuga*. The reference to Scribonius should, therefore, be added to those under the word *abiga*.

Alabanda.—"Sing. form Plin. *Ep.* v. 29." There is no such epistle; the reference should be to Pliny, *Hist. Nat.* v. § 109. "*Alabandeus* (four syll.) -a -um, adj., of *Alabanda*." The form is, we think, equivalent to the Greek Ἀλαβανδεύς, and is not declined like an adjective of the second declension. And if it were, it would be a word, not of four, but of five syllables.

P. 80.—"*Albanum, i, n.*, an estate at Alba, Cic. *Att.* vii. 5; Quint. v. 13, 40; Suet. Aug. 72." The last two references are false. In each of them there is mention of *Albanæ columnæ*, not of *Albanum*; and in the first the words are not Quintilian's but Cicero's.

"*Albedo* . . . only in eccl. Latin; Sev. Sulp. H. *Sacr.* i. 16; Cassiod. *Ep.* xii. 4." We cannot find the word in the Chronicle of Sulpicius, *i. c.*; it occurs in Cassiodorus (not *Epist.* but) *Varia Historia*, xii. 4, and also in the Scholia to Juvenal, ix. 30. It is not, therefore, confined to ecclesiastical Latin.

"*Albesia* (for *albensia*) -ium, n., a large shield used by the Albenses, a people of the Marsian race; Paul. ex Festo, p. 4, Müll." This article should surely have formed part of the article *Albensis*, and have been more accurately worded. *Albensia scuta* means no more than the shields used by the people of Alba on Lake Fucinus. "*Albianus -a -um.* . . . only in Cic." It is to be found

twice in the *Inscriptiones Regni Neapolitani*, 1354, ii. 24, iii. 37.

P. 81.—"*Albo rete* aliquid oppugnare, to attack or seize upon something with a white net, i.e., in a delicate skilful manner; qui hic albo rete aliena oppugnant bona, Plaut. *Pers.* I. ii. 22, so the passage seems to be more simply explained than acc. to the opinion of Gron. qui albo (by the register of the praetor) tamquam rete, which omission of the tamquam is a Horatian but not a Plautinian idiom."

The meaningless reading *albo rete* has long since been expunged from the passage in Plautus, and with it disappears the necessity for this astonishing paragraph. Almost equally astonishing is the following:—

P. 84.—"*Alicaria, a prostitute* (as frequenting the place of the spelt-mills); *alicariae* meretrices appellabantur in Campania (where the best spelt-grits were prepared; Plin. 18 § 109), Paul. ex Festo, p. 7, Müll. *pistorum amicas, reliquas* (wrong for *reliquias*) *alicarias*, Plaut. *Poen.* I. ii. 54." Have lexicographers never heard of the slang use of *molere*?

P. 198.—*Auctor*. In this article there are several errors. Under the meaning of *originator, executor, performer, doer, cause, occasion*, of other things is quoted Sallust *Cat.* iii. 2, *scriptorem et auctorem rerum*; but surely here *actorem* is the right reading. In the passage from the *Jugurtha* next quoted *suam quisque culpam auctores ad negotia transferunt, auctores* seems to mean "those who are responsible in the case." A few lines further down *auctor* in Horace's *non sordidus auctor Naturæ verique* is explained as = *investigator*; it really means *authority in*, as in the phrases *auctor iuris, auctor dicendi*, and the like. Then it is said that *auctor* means "the author of a writing, a writer." Never—or hardly ever! In all the passages quoted in this and other lexicons under this head, *auctor* either means *authority*, as in *bonus auctor, haud spernendus auctor*, and the like; or *the person responsible for a saying or writing*, as in *iocus* or *versus nullo auctore*, an anonymous jest, or anonymous verses. Further on we find two paragraphs that should have been put into one: ii. B 2, *one that gives an account of something, a narrator, reporter, informant*; ii. E, *One that becomes security for something, a voucher, bail, witness*. The instances given under these separate heads really illustrate but one meaning, which is *the authority for a statement or voucher for an alleged fact*. *Fama nuntiabat te esse in Syria: auctor erat nemo*: "report said you were in Syria, but there was no authority for the story;" *se id certis auctoribus comperisse*: "that he had learned that on trustworthy authority." These two instances are taken from the two separate paragraphs in question; but what is the difference between them so far as *auctor* is concerned? In the same way several instances under ii. D should have been quoted under ii. B: *malus auctor Latinitatis, litterarum Graecarum auctorem* are similar to *auctor humani diviniq. iuris*.

These are specimens of blunders taken over from previous lexicons. If it be now asked whether the present work embodies much of the results of modern research, the answer must be in the negative. Some standard works, such as those of Neue, Corssen, and

Vanicek, have no doubt been consulted; but there is no sign that much use has been made of the Berlin *Corpus Inscriptionum*, or that any at all has been made of Paucker's collections. Nor is there any certain indication that Merguet's *Lexicon* to Cicero's *Oratōes* or Gerber and Greef's to Tacitus has been laid under contribution; to say nothing of indices, such as that of Nohl to Vitruvius. Etymological questions are fairly dealt with on the whole; yet here, too, we have lighted on some things which require explanation. *Ab*, for instance (p. 2), is compared with "the Sanskrit *apa* or *ava*." Does this mean that the two are identical? On p. 7 *abies* is said to be "perhaps akin to *ἄλδαινω*;" on p. 9 *abolla* to stand for *ἀμβολή* = *ἀναβολή*; on p. 83 *alibi* to be "contracted from *aliubi*, *alius-ibi*." On p. 80 *albatus* is said to be "from *albus*, as *atratus* from *ater*;" it is rather the passive participle of *albare*, the denominative verb from *albus*.

H. NETTLESHIP.

CURRENT SCIENTIFIC LITERATURE.

The Functions of the Brain: a Popular Essay. By Julius Althaus, M.D. (Longmans.) This essay embodies a lecture delivered before the members of the German Athenaeum in London. It embraces all the most recent developments of Ferrier, Broca, and others, and is admirably illustrated. The author commences by tracing the history of the subject; the detection of the white and gray matter of the brain by Vesalius (1542); the isolation of the nine pairs of nerves which spring from the base of the brain by Willis (1664); the later researches of Malpighi, Leuwenhoek, Petit, von Haller, Gall, Flourens, Fritsche, Hitzig, Ferrier, and Broca. The anatomical structure of the brain is then minutely described, and the functions of each portion of it. The whole is treated in a very masterly manner, and the work will be welcomed alike by the surgeon and the general reader.

A Treatise on Fuel, Scientific and Practical. By Robert Galloway. (Trübner.) The lectures on fuel given by the author before the Royal Dublin Society form the basis of this book. It is intended for the use of both students and manufacturers, and it embodies all the most recent advances of the subject. Fuel substances are first dealt with; then the methods of determining their calorific intensity, and the changes which they undergo during combustion. The newest forms of pyrometer are described, of course among them Siemens' very ingenious electric pyrometer. The technical analysis of coal is discussed in the last chapter. In Appendices the nature of coal and the products of its destructive distillation form the subject of enquiry. The work has been very carefully prepared, and will be welcomed by all who are interested in mining and manufacturing operations involving the consumption of large quantities of fuel.

Cassell's Natural History. Edited by P. Martin Duncan, M.B., F.R.S. Illustrated. (Cassell, Petter, Galpin and Co.) This volume, the third of a well-known natural history, contains an account of the *Ruminantia* by the late Prof. A. H. Garrod; the *Rodentia* by Mr. Dallas; the *Edentata* and *Marsupialia* by the editor; and of *Aves* by Mr. Bowdler Sharpe. The work is fully and admirably illustrated, and continues to furnish complete and accurate information written by eminent naturalists.

Blowpipe Analysis. By G. Landauer. Translated by G. Taylor and W. C. Bay. (Mac-

millan.) A carefully prepared translation from the German of a work which will be useful to all students of practical chemistry.

On the Leads; or, What the Planets Saw. By A. A. Strange Butson. (Griffith and Farran.) The author, long ago fascinated by Hans Christian Andersen's fairy tale, *What the Moon Saw*, has extended the idea to some of the planets and asteroids. A pleasantly written series of little stories for children has been the result. They are written in an easy, animated style, and in a highly imaginative vein. The illustrations are good and sufficient; and the book will undoubtedly prove a welcome birthday gift to many little people.

Easy Lessons in Heat. By C. A. Martineau. Illustrated. (Macmillan.) In sixteen short chapters the author has developed the principal phenomena of the science of heat. The experimental treatment involves the very simplest apparatus conceivable, yet, if properly conducted, it is marvellously effective. The book appears, at first sight, to be more elementary than it is. Some of the latest developments have, however, been discussed, such as the heat-unit, the dissipation of energy, and the nature of heat waves. Indeed, whoever thoroughly masters the little treatise will find himself in possession of no inconsiderable amount of knowledge concerning this branch of science, and we commend the book as a very suitable introduction to the larger treatise of Tyndall.

ARTIFICIAL FORMATION OF THE DIAMOND.

It is not many weeks ago that Mr. Mactear, of Glasgow, announced that he had succeeded in producing diamond in his laboratory. He read a paper before the Philosophical Society of Glasgow on the subject, and sent specimens of his crystals to London. They were examined at the British Museum by Mr. Maskelyne and Dr. Flight, and were found to be wanting in all the characters of the diamond, and to possess others which clearly indicated that they were not the substance sought for. Mr. Mactear then came to London prepared to traverse all the statements made by the British Museum authorities respecting them. He was provided with the fullest means of conducting any experiment, and had, finally, to admit that he had failed in his results; his so-called "diamonds" were soluble in hydrofluoric acid, and consisted almost entirely of silica, alumina, and a small amount of magnesia, as well as a small residue insoluble in hydrofluoric acid.

Another gentleman, also from Glasgow, has now made known the results of his researches, and published a paper at a recent meeting of the Royal Society. There appears to remain no grounds for doubting that he has succeeded in producing diamond. He sent specimens of his products to the British Museum, and the results of the examination of them communicated to the *Times* by Mr. Story Maskelyne show them to be diamond. The gentleman in question is Mr. J. Ballantine Hannay, of Woodbourne, Helensburgh, and Sword Street, Glasgow, a Fellow of the Chemical Society of London. Of the small crystallised particles presenting exactly the appearance of fragments of a broken diamond which Mr. Story Maskelyne received the latter says:—

"In lustre, in a certain lamellar structure on the surfaces of cleavage, in refractive power, they accord so closely with that mineral that it seemed hardly rash to proclaim them even at first sight to be diamond. And they satisfy the characteristic tests of that substance. Like the diamond, they are nearly inert in polarised light, and their hardness is such that they easily scored deep grooves in a polished surface of sapphire, which the diamond alone can do. I was able to measure the angle between the cleavage faces of one of them, notwithstanding that the image from one face was

too incomplete for a very accurate result. But the mean of the angles so measured on the goniometer was $70^{\circ} 29'$, the correct angle on a crystal of the diamond being $70^{\circ} 31' 7''$. Finally, one of the particles, ignited on a foil of platinum, glowed, and gradually disappeared, exactly as mineral diamond would do."

The preliminary notice which Mr. J. B. Hannay has sent to the Royal Society deals only in general terms with the process employed by him to form diamond. It, however, sufficiently indicates the plan adopted to deserve to be noticed in detail. He states that, having noticed that many bodies like silica, alumina, and oxide of zinc, which are insoluble in water at ordinary temperature, dissolve to a very considerable extent when treated with water-gas at a very high pressure, it occurred to him that a solvent might be found for carbon; and as gaseous solution nearly always yields crystalline solid on withdrawing the solvent, or lowering its solvent power, it seemed probable that the carbon might be deposited in the crystalline state. After a number of experiments, it was found that carbon would not dissolve, and that chemical action took the place of solution. A curious reaction was observed which appeared likely to yield carbon in the nascent state, and so allow of its being easily dissolved. When a gas containing carbon and hydrogen is heated under pressure in presence of certain metals, its hydrogen is attracted by the metal and its carbon left free. Hydrogen, it has been found, has at very high temperature a very strong affinity for certain metals, notably magnesium, forming extremely stable compounds with it. When the carbon is set free from the hydrocarbon in presence of a stable compound containing nitrogen, the whole being near a red heat and under a very high pressure, the carbon is so acted upon by the nitrogen compound that it is obtained in the clear transparent form of the diamond. Mr. Hannay states that a great difficulty lies in the construction of an inclosing vessel strong enough to withstand the enormous pressure and high temperature; tubes constructed on the gun-barrel principle, with a wrought-iron coil, of only half-an-inch bore and four inches external diameter, being torn open in nine cases out of ten. He then proceeds to describe the properties of the crystals obtained by this method, crystals which satisfy all the tests that are peculiar to the diamond. They are as hard as natural diamond, they scratch all other crystals, and do not affect polarised light. Some crystals have curved faces, belonging to the octahedral form, and the diamond is the only substance crystallising in this manner. They burn easily on platina foil over a blowpipe flame, leaving no residue; after two days' immersion in hydrofluoric acid they showed no sign of dissolving. A splinter heated in the electric arc turned black—a very characteristic reaction of diamond. Lastly, fourteen milligrammes were burnt in a current of oxygen, and 97.85 per cent. of carbon obtained. The specific gravity, it should have been stated, was found to be 3.5. The apparatus and the analyses are to be described in a future paper.

There seems to be no doubt that Mr. Hannay has solved the problem of producing diamond artificially. His process appears to be a costly and a dangerous one, but it is highly probable that before long he, or some other scientific man, will hit upon a readier mode of accomplishing the reaction. Faraday long ago drew attention to the association of magnesium minerals with the diamond, and it will be seen above that magnesium is the metal specially referred to by Hannay. The spontaneous explosion or rupture of certain diamonds, which has been placed on record, points to pressure as an element of the process by which they have been formed.

NOTES OF TRAVEL.

News has been received that the Rev. C. J. Wilson and Mr. Felkin, whose journey northwards from Lake Victoria we referred to last week, arrived at Khartum on February 18. They travelled from Lado in company with Sig. Gessi, formerly one of Col. Gordon's lieutenants, and brought with them messengers from King Mtesa. Two other members of the Nyanza expedition who had been at Mtesa's capital for a short time—Mr. Stokes and Mr. Copplestone—arrived in safety in Uyui, and the former has since gone down to the coast.

LETTERS have lately reached Berlin from Dr. Oscar Lenz, who has gone to Morocco to explore the Atlas Mountains. Full particulars of his proceedings are promised in the next issue of the German African Society's periodical.

RECENT advices from Zanzibar state that M. Popelin, with the second Belgian expedition, including the remaining elephants, had left Unyanyembe for the Karema station on Lake Tanganyika, where they hoped to arrive before the rainy season. Dr. van der Heuvel remains at a place to the south of Tabora, in order to assist the fourth expedition, under M. Burdo, in getting to the lake as rapidly as possible. It is believed that, when it arrives there, M. Popelin and another European will cross the lake, and march through Uguha to Nyangwe, on the Lualaba. Thence he will endeavour to open communications with Mr. H. M. Stanley.

MM. B. CAPELLO AND R. IVENS have at length reached Lisbon on their return from Western Equatorial Africa, and bring with them numerous observations on the geography and meteorology of the region they have been engaged in exploring, as well as on its fauna and flora.

AMONG several travellers who have just reached Kimberley on their return from the Bamegwato country and the Upper Zambesi is a Mrs. Francis, the first European lady who has ever seen the magnificent Victoria Falls.

THE Rev. J. Chalmers, who, as we have before recorded, some time back founded the most easterly missionary station in New Guinea, has lately visited the Gulf of Papua, the shores of which are still to a large extent unexplored. Mr. Chalmers found the coast of the part he visited lofty and thickly wooded, and having an apparently large population; he discovered several fine rivers, and ascertained that the inhabitants of the Port Moresby district are in the habit of going there periodically for purposes of trade, performing the somewhat dangerous journey in open canoes.

M. RIEDEL, who is known for his researches in Celebes Island and by his works on the Dutch East Indies, has made a journey to the centre of the island of Timor, a feat which has not before been accomplished by any European. Notwithstanding careful enquiry, he was unable to find any confirmation of the report of the existence of the cassowary. During his journey, M. Riedel collected much geographical information, and he has also constructed a map of his route.

THE Australian papers report the performance of a remarkable journey across the continent from north to south. Three Europeans started from Burketown, on the Gulf of Carpentaria, with 200 head of cattle, and have succeeded in bringing them to Adelaide in good condition. They travelled in nearly a straight line from point to point, and occupied six months in the journey.

THE engineers appointed by M. de Lesseps have finished their survey of the Panama isthmus to which we referred a short time back. They have paid special attention to the question of dealing with the River Chagres, and

also to geological investigations, the result being that they have ascertained the depth of earth on the isthmus to be much greater and the rock to be excavated much softer than was previously supposed. These facts will, of course, considerably lessen the estimated cost of cutting an interoceanic ship-canal.

THERE are now about twenty "Klub-hütten" or "Schirnhütten" in the Swiss Alps, erected at the cost of the Swiss Alpine Club. The "Section Uto," which is the Zürich branch of the S. A. Club, has just determined to add to these by erecting a hut in the neighbourhood of the Schlossbergglücke, which is some three hours' distance above Nieder-Suvenen, in the canton of Uri. The projected hut will be of great service to the explorers of the Schlossberg, the Spannörter, and other fields in that district. It is to stand upon the so-called Geissrücken, a rocky platform totally devoid of vegetation, an hour's distance below the Schlossbergglücke. The difficult mountain-route from Erstfelden to Engelberg over the Schlossbergglücke will, no doubt, be much more frequented after the building of the hut.

THE new number of the *Monthly Record of Geography* opens with Mr. G. J. Morrison's accounts of his journeys in the interior of China, from the Yangtze northwards along the Grand Canal and a portion of the Yellow River, and from Hankow to Canton, both of which are illustrated by a map. Dr. Holub follows with the narrative of his journey through Central South Africa to the Upper Zambesi. Among the Geographical Notes we find some information regarding Mr. Stanley's Congo expedition, derived from an official report sent home by Commander Sidney Smith, R.N.; which is followed by some useful observations on the climate of Zanzibar and the neighbouring mainland of Africa, and a sketch of a proposed survey of Southern Africa. The latest intelligence respecting the proceedings of the Samara scientific expedition to Central Asia is also given, together with a résumé of Lieut. R. C. Temple's observations on the distribution of the Afghan tribes about Candahar. The note regarding Mr. G. King's journey in Western China is of interest as dealing with an almost unknown tract of country to the north of Chungking.

SCIENCE NOTES.

The Fauna of Scotland; with special reference to Clydesdale and the Western District. *Mammalia*, by E. R. Alston, F.L.S., F.G.S. (Published by the Natural History Society of Glasgow.) All Scottish sportsmen will welcome the appearance of another part of the description of the Scotch fauna which has been projected by the Natural History Society of Glasgow, more especially when it relates to the mammalia and is due to the careful researches of Mr. Alston. It gives full particulars of distribution, occurrence of rarer animals and the like, and an Appendix is devoted to the fossil and extinct species. In opposition to the general view, Mr. Alston holds that

"the modern park cattle are not wild survivors of the urus, but are the descendants of a race which had escaped from domestication, and had lived a feral life until they were enclosed in the parks and chases of the mediaeval magnates."

As far as we are aware, however, there is no record of any race of British cattle having escaped from domestication, even in legend or poetry; while Sir Robert Sibbald, writing in 1684, describes the *bos silvestris* of Scotland as "colore candidissimo, juba densa et demissa, truculentus et ferus," with more to the same purpose, which well matches all that is known of the wild cattle of Chillingham at present. When Caesar invaded Britain, he notes the

"pecorum magnus numerus," and, in recounting the wild animals of the great Hercynian Forest, describes the *uri* as being "specie et colore et figura tauri." It is more likely that the Chillingham wild cattle, as has been constantly believed hitherto, are their descendants—it may be, in a degraded form—than that speculation can, at the present day, discover their origin. This pamphlet is written in a scholarly and scientific spirit, and makes us long for the appearance of the other parts of this excellent undertaking. Mr. Lumsden's *aves*, for instance, seeing how scarce Gray's *Birds of the West of Scotland* has become, will be peculiarly valuable.

Geology of Colchester.—A pamphlet on the geology of the neighbourhood of Colchester has just been issued by the Geological Survey as an explanatory memoir on the quarter-sheet 48 S.W. of the one-inch survey map. The explanation has been mainly written by Mr. W. H. Dalton, who surveyed almost the entire area, under the superintendence of Mr. W. Whitaker. The geological interest of the district, as pointed out by Mr. Whitaker in his introductory remarks, lies in the post-glacial drift, of which well-known sections are exhibited at Copford and Clacton. It is from these sources that nearly all the fossils of the district have been obtained.

The Effects of Forests on Rainfall and Rivers.—In the year 1873 Dr. Wex, the Director of the Danube works at Vienna, published an elaborate paper on the deleterious influence of the removal of forests, as shown by the diminution of volume of rivers in their upper waters, and the increase in floods in the lower parts of their course. The subject was recommended by the Vienna Academy to all scientific bodies for consideration and report. The views of Dr. Wex have been criticised by some authorities, and accordingly he has published, in the *Zeitschrift d. Oesterr. Ingenieur- und Architekten-Vereins*, a summary of the various opinions on the subject which have been published since the date of his last Report, and a copious store of facts which he has amassed relative to the principal rivers of central Europe. The paper forms a useful contribution to the literature of the important subject of which it treats.

At the last meeting of the Society of Russian Naturalists, held in St. Petersburg, the question of publishing an *Ornithology of the Northern Provinces of Russia* was introduced by M. Bogdanof. The proposal was favourably received, the want of a work of general reference, adapted to the requirements, not only of specialists, but of all interested in the science, having long been felt in Russian zoological literature. As the composition of this work will necessarily occupy a considerable time, the members present recommended that a monograph on the different species, with descriptive tables appended, should, in the first instance, be published with as little delay as possible.

It is proposed to hold in the Walker Art Gallery, Liverpool, during the early part of the present year, a loan exhibition of prehistoric antiquities and ethnography, for the purpose of illustrating the natural history of primitive and uncivilised man and the various developments of culture peculiar to the different races of mankind.

PHILOLOGY NOTES.

THE second part of the third volume of M. Fr. Lenormant's *Etudes Accadiennes* has appeared. At the end is given a glossary of the words occurring in the texts that have been used. The words are here transliterated, but as a reference to the pages upon which they are to be found is added in each instance, the dis-

advantage of not using the cuneiform type is, to some extent, done away with.

THE third livraison of vol. i. of the *Recueil de Travaux relatifs à la Philologie et à l'Archéologie égyptiennes et assyriennes* has just been issued. The first part appeared in 1870. The present number, illustrated with two plates, contains the following articles:—"Le Papyrus de Luynes," by E. Ledrain; "Sur un nouvel Argument chronologique tiré des Réécits datés des Guerres pharaoniques en Syrie et dans les Pays voisins," by M. J. Lieblein (concluded); "Recherches philologiques sur quelques Expressions acadiennes et assyriennes," by Fr. Lenormant; "Un Fonctionnaire de la XIII. Dynastie," by E. Naville; "Des deux Yeux du Disque solaire," by E. Grebant (continued); and various short communications.

UNDER the title *Manuel de la Langue assyrienne*, M. Joachim Ménant has re-issued his Assyrian Syllabary, originally printed in the seventh volume of the first series of the *Mémoires de l'Académie des Inscriptions et Belles-Lettres*. It is much to be regretted that none of the texts from which the signs have been obtained are given in his general list of the Signs of Sumerian Writing, which is of considerable length (fifty pages).

AT the last meeting of the Cambridge Philological Society, Mr. Postgate read a paper on the genuineness of Tibullus iv. 13. Emil Baehrens, in his *Tibullische Blätter* (Jena, 1876), regards Tibullus books iii. and iv. as spurious, with the single exception of iv. 13. He says (p. 46), "The only poem which certainly belongs to Tibullus (as we see from v. 13) is iv. 13. It also bears throughout the impress of Tibullus' poetical art." Against this view there is, first, the fact that it comes in the middle of poems confessedly spurious. Again, Baehrens' argument from v. 13, "nunc licet e caelo mittatur amica Tibullo," is without weight. The shallowest forger would have hit upon this device of making the poet claim the poem as his own; and this use of the proper name when the poet is referring to himself is not in Tibullus' manner but in Propertius', as Prop. iv. (iii.) 9 (10), 15, iii. (ii.) 32 (34), 93. Tibullus i. 3, 55, i. 9, 83, are different. Thirdly, the style is not that of Tibullus or of any poet. It is stiff, rapid, and meagre: see vv. 5, 6, 7, 13, 14, 18. Fourthly, it contains feeble and obvious imitations of Tibullus' genuine poems. Compare, e.g., vv. 13, 14, "nunc licet e caelo mittatur amica Tibullo, mittitur frustra deficietque Venus," with Tib. i. 5, 40, "saepe aliam tenui sed tunc cum gaudia adirem, admonuit dominae deseruitque Venus," and i. 3, 90, "tunc ueniam subito nec quisquam nuntiet ante sed uidear caelo missus adesse tibi." Lastly, there are numerous coincidences (about sixteen) between this poem and various passages of Propertius. The number is out of all proportion to those which occur in the genuine Tibulline poems, and the resemblance is much more striking: e.g., v. 8, "tu mihi sola places," is from Prop. ii. 7, 19, v. 4; "nec iam te praeter in urbe formosast oculis ullapuella meis" from Prop. v. 4, 32, "et formosa oculis arma Sabina meis," v. 8, "qui sapit, in tacto gaudeat ille sinu" from Prop. iii. 20 (ii. 25), 29, 30, "tu tamen . . . in tacto cohibe gaudia clausa sinu." The sum of all these considerations is a very strong circumstantial argument against the poem.

FINE ART.

ART BOOKS.

Handbook of Embroidery. By L. Higgin. Edited by Lady Marian Alford. Published by authority of the Royal School of Art Needlework. (Sampson Low and Co.) This is a very dainty and, at the same time, a severely practical little book, designed for the purpose of giving sound infor-

mation and useful hints to all ladies "who are unable to avail themselves of lessons, and are forced to puzzle over their difficulties without help from a trained and experienced embroiderer." The letterpress is entirely practical, devoted to explaining, in the shortest and simplest way, the different stitches, materials, and methods employed, and is illustrated by little woodcuts of the different stitches, which are not only very clearly figured, but, by their arrangement of needle and thread, are sometimes made to produce a pretty little decorative design. Although the aesthetic side of the subject is not treated in the present book, it is well represented by the Appendix, which consists of sixteen plates of designs for embroidery by such accomplished hands as those of Mr. Burne Jones, Mr. William Morris, Mr. George Aitchison, Mr. Fairfax Wade, and Mr. Walter Crane—designs mostly too elaborate to be worked by those for whom the book is specially designed, but, nevertheless, very useful and encouraging to them as glimpses of the land of beauty towards which they have set their feet. The road between the first steps of the treatise and the goal of the Appendix is, we are glad to learn, to form the subject of a second part, devoted to "design, composition, colour, and the common-sense mode of treating decorative art as applied to wall-hanging, furniture, dress, and the smaller objects of luxury"—a book for which there is, perhaps, greater need even than for the present, in order to control the ill-ordered desire for decoration and the exuberance of ignorant invention which has naturally accompanied the awakening of artistic intelligence in English homes. As Lady Wilton wrote, "this gentle dame, Needlework, is of ancient lineage, of high descent, of courtly habits;" and if it were only for this reason it is a worthy work to rescue her from the degradation to which she had sunk. Even our grandmothers' samplers and Berlin work were noble in comparison with the mechanical reproduction of ugly patterns which recently employed the leisure and artistic faculties of ladies, young and old; and the movement may surely not be wrongly described as of national importance which tends to free their minds from such slavery. Mr. Burne Jones' design of music for a wall panel is, it need scarcely be said, a graceful, refined composition of female figures; but they appear to be dreaming rather than playing, and disposing their limbs rather for producing harmonies of line than harmonies of sound. Of the remaining designs, though all are good, those which please us most are the sofa-back of Mr. William Morris and the table border of Miss Mary Herbert.

The Relationship of Anatomy to the Fine Arts: a Lecture. By S. Messenger Bradley, F.R.C.S. This lecture, delivered in the Royal Institution, Manchester, is admirable, not only for the clearness with which it demonstrates the value of anatomy to artists, but for the strong sympathy it shows with art quite apart from correctness of drawing. His claim for the study of anatomy is that "it is a sort of artistic conscience, which tells the painter when and where and how he errs, and also enables him easily and faithfully to copy nature." This is its true claim, well expressed.

The Influence of Joy on the Workman and his Work. By H. Bendelach Hewetson, M.R.C.S. (Sonnenschein and Allen.) This is a paper read before the Beverley Church Institute, republished with illustrations, two of which are auto-type reproductions of Blake's lovely designs of *The Death of the Good Old Man* and *The Meeting of a Family in Heaven*. The paper itself is a very weak offshoot of Ruskinism. Here is a picture of Adam beholding Eve for the first time. "With a thrill of love Adam started to his feet, and in the purity of that earthly para-

dise he wandered among the orange groves of Eden, singing,

" 'There has fallen a splendid tear
From the passion-flower at the gate;
She is coming, my dove, my dear;
She is coming, my love, my fate.' "

Such then was the first "influence of joy," which not only made Adam quote Tennyson, but sent him wandering about the orange groves singing that his love was coming, when in fact she had already come.

The Pupil Teacher's Handbook of Drawing. By William Walker. (Seeley.) In this little book Mr. Walker has given us another valuable contribution towards the right education of young students in art. It has occurred to him that not only the pupils but the teachers may not be above a few hints from the experience of a master, not only of drawing, but of teaching. We have already spoken very favourably of Mr. Walker's *Handbook of Drawing*, and it is enough commendation to this work to say that it embodies the same sound principles and sets them forth in the same neat unmistakable way. His general precepts as to the education of the artistic faculty from the earliest years, the clear illustrations with which he forces them home, and the simple but adequate drawings with which each lesson is accompanied render the book an example of exact adaptation of means to end which it would be difficult to excel.

The South Kensington Museum. (Sampson Low and Co.) This periodical, the first number of which has just been published, will be of great use and interest to all lovers of art, and especially to art-students. It is published with the sanction of the Science and Art Department, and each number is to contain eight pages of illustrations, and to cost one shilling. The plates, which are very well executed and printed, are lithographic transfers of etchings by art-students in the etching class of the South Kensington schools, and the descriptions appended are based upon those in the valuable catalogues of the Museum. Those, however, in the part before us add sufficient general information respecting the process of manufacture and the history of the class of which its subject is a specimen to make it evident that much care is taken to render the book a valuable means of spreading sound information concerning the decorative arts. We are glad to see that all the plates will be purchasable separately at one penny a-piece, and the only thing to regret at present seems to be an absence of order in the arrangement. The present number contains plates of Mr. Moody's staircase, a cruet of crystal mounted in silver, a sideboard, a chased metal box, a silver-mounted jug, a carved ivory mirror-case, a design for a niche, and Mr. Poynter's fine figure of Apelles. This mixture no doubt adds to the variety of each part, and it would probably have been impossible in a periodical of indeterminate length to adopt any strict order of issue. Something might, however, we think, have been done to reduce the ultimate chaos of each completed volume. If, instead of each of the plates being numbered consecutively in order of issue, without regard to classes, they had been divided into several separately numbered series—one for ivories, one for metal-work, and so on—they might have been arranged into classes before binding, and a good classified index would have made the contents of each volume easy of reference. We hope even now that such an index will be published, so that those who prefer to do so may have the plates bound up as suggested; they will then only need renumbering by hand.

ART SALES.

THE rich collection of prints, including etchings by Méryon and French engravings of the eighteenth century, formed by M. Wasset, of Paris, was sold a few days ago at the Hôtel Drouot. We give first the prices of the principal etchings of Méryon and some notes thereupon—Méryon's etchings having within the last two years or so engaged the attention of a considerable public in England, in addition to that of the few amateurs of art who were previously familiar with them. M. Wasset's collection of Méryons came to him from Méryon himself about twenty years ago, and at the most insignificant prices. They were not like those in certain English collections, carefully selected, but they naturally included a few fine and some rare impressions among their number; and these, it will be seen, fetched high prices at the sale; while what seem extravagant prices were also paid for perfectly ordinary or even very undesirable impressions. The Catalogue of the collection might have been compiled with greater accuracy. Probably its compiler enjoyed but a superficial knowledge of the work to be dealt with, and thus impressions were frequently entered as "superbe" and as "très-belle" which by no means merited such terms; and in several cases the paper—a very important matter in the effect of Méryon's etchings—was misdescribed, as, for instance, in the case of the fine subject of the *Abside*, where "papier verdâtre"—greenish paper—was indicated. We know of no instance in which this masterpiece of Méryon was printed on greenish paper; the best impressions of it are always on "a thin wiry paper, toned a little with age."

The first considerable price of the sale was attained by an impression of the rare etching of the Convent of the Capucines at Athens, which fell for £11 16s. An impression before any letters of the pretty little plate after Nicolle, known as the *Pont Neuf et la Samaritaine*, sold for £10. It had not the sunniness and brightness of the earlier trial proofs exhibited at the Burlington Club, but, like them, was in a rare state. The *Rue Pirouette aux Halles*—an impression with the first title—sold for £6. It is thought by the authorities to be one of the prettiest of the later etchings of Méryon. It is after a drawing by Laurence. An early impression of the *Partie de la Cité de Paris vers la Fin du XVIII^e Siècle* sold for £18; another impression for £9 16s.; the third state for £4 1s. A rare impression of a most undesirable subject—the *Grand Châtelet*—sold for as high a sum as £12 1s. A curious early but rather gritty impression of the *Stryge* fetched £20; the first state, with the verses, £9; a fair impression of the second state £6 8s. *Le Petit Pont* realised £6 16s., while a fair first state of the *Galerie de Notre Dame* fetched £10 16s. A tolerable impression of *La Rue des Mauvais Garçons*—the gloomy and suggestive representation of an infamous house—fetched £10; it was in the second state of the plate. A trial proof of the *Tour de l'Horloge*, all but completed, and not remarkably good as an impression, reached £9 16s.; and another poorer impression of the same subject sold for £6. A fair first state of the *Rue de la Tixeranderie*, with hardly any margin and wanting in much of the richness which, of course, is as much or more to be sought for than clearness of effect, reached £11. A blackish impression of the same sold for £6 4s. A fair first state of the *St.-Etienne du Mont*—one of the finest and most impressive etchings of Méryon, yet, until lately, not one of those most sought for—was sold for £10; an inferior impression, on brown paper, and hard in effect, sold for £6. A very bright early impression of a sometimes over-rated subject—*La Pompe Notre-Dame*—which has comparatively little beauty in it, realised £17 16s.; a somewhat damaged

impression of the same subject, £8 3s.; and a yet poorer one, £3 4s. The only impression of a rare and delicate print—*La Petite Pompe*—appears, by an oversight, to have sold below its value. A bright trial proof of the *Pont Neuf*—sometimes so magnificently rich in a somewhat later state, with the dry point work—reached £10 8s. A hard impression fetched £3 16s.; a very late state, which is generally worthless, with all the background houses lowered, and the chimney of the Mint erased, realised £1 3s. A fine impression of the "first state" of the *Pont au Change*—which has the large balloon, "Speranza"—realised £12. It was on thin, old French paper, of the kind rightly deemed desirable. What was practically a first state of the *Morgue*—a very agreeable impression, though a little wanting in richness for so fine a thing—reached £17; a poor impression of the second state realised £6 8s. A fair second state of the work which is often accounted the capital piece of Méryon—*L'Abside de Notre Dame*—realised £18. Two years ago, finer impressions of the state were sold for four or five pounds. A trial proof of the *Tourelle, dite de Marat*, sold for £8; another for £6 16s. A curious trial proof of the *Rue des Chantres*—which is a late work of the master—realised £14; a first state of the same print fetched £5. A dry first state of the *Rue des Toiles, Bourges*, fetched £5 8s.; and a very fine impression of what is known to be the best state of the plate fell for £4 12s. It is somewhat less rare than the earlier, though very much better. An impression of the *Ancienne Habitation à Bourges* sold for £4 8s.; the rare, but almost worthless, little print of the *Dog's Head* sold for £2 16s. A signed proof of one of the New Zealand subjects fetched £3 8s. *La Vendetta* and the *Rebus on Béranger* were knocked down together for £2 17s. 6d.; the *Rebus, of which the subject is De Morny* (Wedmore, No. 56: "not described by Burty"), fetched £3 16s.; while a later impression of the same curious little plate was sold for something less. The *Vue de l'Ancien Louvre du Côté de la Seine* is not likely to have fetched its high price (£13 8s.) on its merits, which, to tell the truth, are slight, but rather because it bore upon it a most curious note by Méryon, addressed to M. Wasset, and complaining of the trickery to which he imagined it to have been subjected. Two dated proofs of another inferior subject—the *Ministère de la Marine*—fetched £13 and £10 respectively. The prices of the remaining pieces by Méryon are not worth recording. The principal purchasers of Méryon's etchings were Messrs. Goupil, Gosse, Clément, Dowdells, and Thibaudau.

The prices fetched by several of the rarest of the French eighteenth-century prints were at least as remarkable as those realised by the Méryons. Of the prints after Baudouin, *L'Amour à l'Epreuve*—a rare impression, but in very bad condition—fetched £14; the *Carquois épuisé*, an ordinary impression, £6; the pure etching of the *Couche de la Mariée*—the etching being the work of J. M. Moreau—£128 (Morgand); the pure etching of the *Epouse indiscrette*, £44; *Le Soir*, £6 3s. High prices were paid for the inventions of Borel, which make little pretensions to art. After François Boucher, the complete set of thirty-three prints engraved by Laurent Cars sold for £12. The impressions left something to desire. After Boucher also, the *Don Garcie de Navarre*—a rare trial proof of the plate—fetched £16 (Meyer). The ornaments of Ohoffard—*fleurons* and vignettes—sold for extremely high prices, a *fleuron de titre* and four vignettes for the *Saisons* of St.-Lambert fetching £18; and another somewhat similar lot realising £24. The Eisens, of course, commanded high prices, these being esteemed by English as well as by French collectors. A very rare Augustin de St.-Aubin fetched a price which has probably

never before been approached, the pure etching of the plate entitled *Le Concert* (engraved by Duclos) attaining the sum of £248 (Delarogue). Two of his most agreeable and elegant single figure pieces—*Complex sur mes Serments* and *Au moins soyez discret*—sold for £13. Of the noble prints after Watteau—so much greater in subject and more masculine in treatment than those of the French "Little Masters"—there were but few in M. Wasset's collection, and of these some were in bad condition. An impression of the *Embarquement pour Cythère*—the capital work of the painter—was sold for £6 8s. By Bonnet, *Le Déjeuner* and *Le Dîner* sold for £10 4s.; *Les Deux Sœurs* for £6 4s. The collection also included a certain number of caricatures by Rowlandson and Gilray. These fetched prices that may be considered reasonable. The dispersion of some rare illustrated books completed the sale.

THE sale of the valuable and large collection of English water-colour drawings belonging to Mr. C. J. Pooley took place last Saturday at Messrs. Christie's. The drawings sold for good prices, of which we shall speak further in our next week's issue.

NOTES ON ART AND ARCHAEOLOGY.

WE called attention a week or two ago, while announcing Mr. Dalou's resignation, to the desirability of electing to the chair of sculpture at South Kensington some man of acknowledged power and repute, and, if possible, an Englishman. We now learn that all the most distinguished of the young English sculptors were among the candidates for the post, but that their claims were in every case disregarded. The Lords Commissioners have appointed M. Lanteri to succeed Mr. Dalou as Professor of Sculpture, or, as it is technically called, Modelling Master, at South Kensington. This slight paid to native art is the more extraordinary when it is added that M. Lanteri seems to be absolutely unknown as an artist; he has never, we are positively assured, exhibited a single work in London or Paris, and his only claim is that he has worked in the studio of Mr. Boehm to the satisfaction of that gentleman. In the arrangement of these appointments it is understood that Mr. E. J. Poynter acts as artistic adviser to the Commissioners. We consider that the interests of the public demand that he should explain the reasons that led him to this selection.

MR. HENRY WALLIS is engaged on a picture illustrating a phase of literary life in the eighteenth century, which he will send to the forthcoming exhibition of the Society of Painters in Water Colours. The subject was suggested by a passage in Boswell's *Johnson*, though it does not portray an event in the life of the great lexicographer.

WE hear that those interested in the art or humour of Rowlandson, the caricaturist, purpose holding shortly in Liverpool an exhibition of his works.

THE Bristol and Clifton Fine Arts Academy has just opened to the public its annual exhibition, which is, as usual, somewhat extensive. A certain proportion of the best works have, of course, been seen in public before. Of these the *County Cricket Match* by Mr. John Reid—a young Scottish artist whose early promise has passed into performance—is certainly among the chief, and will not fail to attract attention; while Mr. Seymour Lucas' realistic and carefully studied representation of the Lord George Gordon Riots—*The Riots of 'Eighty*—is as deserving of conspicuous place. The graphic *soirée* which introduces the exhibition took place one night early in the week, when, very fittingly, one room was entirely appropriated to the sketches

and finished pictures of a Bristol artist recently deceased—Charles Branwhite—who had during many years produced agreeable and excellent work.

By the new *règlement* of the Salon for the present year, painters on glass, who were formerly excluded, are now permitted to send in works for exhibition. This ancient branch of art reckons many able workers in France, and several of these intend, it is said, to exhibit at the next Salon. A society of glass painters was formed in Paris about three years ago, and is now active in supporting the rights and privileges of its members.

THE *Standard* announces that a sale of duplicate impressions of rare and fine prints in the possession of the British Museum will take place in the month of April, and it is understood that the money gained by the sale will be applied to the purchase of prints not now to be found in the collection at the Print Room. The sale, though it will be a sale by auction, is not to take place in any public auction-room, but rather within the precincts of the Museum itself, the idea probably being to avoid, as far as may be, the risks usually attending public sales. On this occasion it is understood that many of the finest works of the most esteemed original masters of engraving and etching will fall under the hammer.

ANCIENT majolica and Damascus wares of artistic or technical merit have now become so difficult to obtain, and so costly when attainable, that lovers of the potter's art who would possess something more than good examples of the manufactures of the day, and cannot afford to invest a fortune in half-a-dozen plates, would gladly know where the individual ceramic artist, working in his own *bottega*, is really to be found. Doubtless some of the productions of Minton and of Ginori, of Wedgwood and of Sèvres, are excellent representatives of the earlier wares, but they have a flavour of the factory. In France, Pull's copies of the curious works of Palissy stand alone. So also do Deck's imitations and derivations from the Oriental wares. In Italy, at Gubbio, Pesaro, Naples, &c., individual potters have reproduced varieties of majolica, Urbino, and Abruzzi wares; while in Rome Signor Torquato Castellani is a loving worker at this branch of art. Having formerly, and most successfully, copied from Italian wares, he has of late devoted himself to those of a richer and more harmonious colouring, taking the Damascus pottery as his model, and adapting his designs to their harmonic scale of colouring. By modification in the relative composition of the paste and the glaze, he has succeeded in producing examples of a close and fine-grained ware, covered by a rich and brilliant glazing of even surface. The colours used are admirable for fullness of effect and delicacy of tone, vying with those so much admired on the finest examples of Damascus ware. Of such he has lately painted copies hardly to be distinguished from the originals, which form part of the late Mr. Henderson's munificent bequest to the British Museum. Upon others he has painted heads, imaginative portraits, &c., surrounded by borders of bold and effective colouring. Lovers of a high order of decorative ceramics who may be in Rome would do well to visit this true artist-potter—who works for love of his art rather than for lucre—at his studio in the Piazzetta Poli.

By the death of Dr. Alfred Woltmann the *Repertorium für Kunstwissenschaft* has lost an active and able editor, but we hope that this publication will not again be allowed to fall into arrears. The current number contains the continuation of H. Hymans' article on "Rubens and his Latest Biographers;" a study of painting in Palermo in the time of the Renaissance, making known some particulars regarding the

Sicilian master Vincenzo Ainemolo, called, like Giulio Pippi, "Il Romano;" a notice of the late German architect, Gottfried Semper; and a scientific account of the old painted glass in the minster at Strassburg.

THE Society "Arti et Amicitiae" of Amsterdam will open a retrospective exhibition of works in gold and silver next month. The artistic treasures of this kind stored in Holland, both in its ancient churches and in private families, are very great, and it is believed that this exhibition will be one of considerable interest.

THE late M. Walferdin's Fragonards—those of them that remained in his estate after his death—as well as his Greuzes, his Géricaults, and his terra-cottas by Houdon, are to be sold in Paris at the Hôtel Drouot during the second and third weeks in April.

THE Museum of the Louvre has just acquired two vases of large size, and of the utmost importance from the scientific point of view. They were brought from Cervetri by M. Fr. Lenormant, who has generously made them over to the French national collection for the comparatively trifling sum for which he secured them on the spot. They are two Etruscan vases of the earliest period, with paintings in white on a red ground. On one is seen a chariot attacked by a lion—a manifest imitation of Assyrian art—and a naval engagement between two very singularly shaped vessels. The other shows two lions rampant in the Asiatic style, and two Greek myths—the birth of Athena and the boar-hunt of Calydon. It likewise bears an Etruscan inscription, one of the most ancient known. The representations of Hellenic fables had not been previously noticed on remains of Etruscan painted pottery of such early date, for the two vases may be confidently attributed to the eighth or the seventh century B.C. M. Fr. Lenormant will publish a communication on the subject very shortly.

MR. W. H. PATER continues in the *Fortnightly* his "Beginnings of Greek Sculpture," and, having now reached a period where there is a certain amount of ascertained facts, he seems disposed to make good use of them, without, however, throwing overboard, as he might do with advantage, the exercise of a fancy peculiar to himself. In the previous article in the January number of the *Review*, this exercise of fancy appeared in a maximum degree; and, though that was perhaps to be excused from the general scarcity of facts, it may still be doubted whether on some points entire reticence would not have been more in the interest of the subject. For instance, the language which he employed about the antiquities found at Mycenæ might in a way be justified by the exaggerated account of them given by Dr. Schliemann; but a little incredulity, or, what is better, an examination of the things themselves, would have shown him that there is no occasion whatever for the high-sounding phrases which he commits to paper. It is all very well to talk about the aesthetic critic and his way of looking at things; but if that individuality can really find beauty in the antiquities from Mycenæ he must be surprisingly gifted. As we have said, the continuation of Mr. Pater's articles deals largely with facts, and of course presents them in an interesting way. From his point of view it does not much matter that the Apollo of Tenea should be called a bronze statuette, when it is a marble statue of life-size; but such a slip would be regarded seriously by non-aesthetic critics.

THE work of restoring Drontheim Cathedral is making rapid progress. The scaffolding around the so-called King's Gate was taken down before July last. This latter is now seen

to be a fine work in the richest Gothic style, the alternate use of a green-coloured stone and white marble being very effective. Unusual difficulty has been experienced in restoring the southern outer wall, which had come to slope so much in the course of time that, in order to bring it back into position, it was necessary to employ heavy iron clamps.

A STORY of a somewhat remarkable instance of detective intelligence is going the round of the German journals. It is related that a well-known Austrian painter recently exhibited at the *Künstlerhaus* an historical picture in which was seen a very fine head of an old man. Shortly afterwards, a mysterious personage called on the painter and desired to know the name and address of the model who had served him for that splendidly executed head. After some explanation the painter gave the desired information, and the police forthwith proceeded to the lodging of this strikingly handsome old man, in whose portrait the detective had recognised a dangerous criminal who had some time before escaped from prison.

SEVERAL French artists of high position—namely, MM. Delaborde, Guillaume, Paul Dubois, and Meissonier—have lately given evidence before the commission appointed by the French Government to examine the project for the law of artistic proprietorship. M. Meissonier is of opinion that the term of fifty years accorded to the inheritors or proprietors of artistic copyright, dating from the time of the artist's death, might be increased. He maintains also that an artist has a right to make copies of his work, provided he affixes to all such copies a mark to distinguish them from the original; and he thinks that the right of reproduction which is recognised by the proposed law as belonging to the artist should belong to him with regard to the State as well as with regard to private individuals. Both the members of the commission and the artists examined agreed that the right of reproduction did not apply to portraits. These belong exclusively to the proprietor, who is in no way obliged to allow copies of them to be taken.

THE *Times* announces the death, at Padua, of the Marchese Pietro Selvatico Estense, one of the best-known art historians in Italy. Following the bent of a strong inclination, he studied painting under Demin, and became a practical artist. He taught aesthetics and the history of art in the Academy delle Belle Arti, at Venice, and in 1850 was made Director of that institution, to which he rendered great services. Among his best-known works are the pamphlet (1836) on the decayed frescoes of Giotto in the church of the Annunciata dell' Arena at Padua; the splendidly illustrated *Architecture and Sculpture* (Milan, 1847); the *History of the Art of Drawing* (Venice, 1852); and a great work on the History of Architecture, which has not been finished. He was well acquainted with the history and condition of art in other countries, and is also favourably known as the author of some poems. He was in his seventy-seventh year.

THE STAGE.

ANOTHER creditable Shaksperian performance has been given this week at New Sadler's Wells. *Othello* has taken the place of *Macbeth*. But before *Macbeth* was finally withdrawn, the chief male character was performed for a night or two by Herr Martin Eiffe, a German actor from the Meiningen Theatre, of which so much has been heard and so little has been seen. Herr Martin Eiffe has been some time in town, and he has been heard in recitations in private houses. He is an enthusiast and an intelligent man. But his struggles with the difficulties of the pronunciation of our tongue seem necessarily

to engross a good deal of his attention, and the result of the struggles is not wholly satisfactory to sensitive ears. To be brief, the charm of well-spoken English is lacking to Herr Martin Eiffe's performance.

In regard to the Sadler's Wells performance of *Othello*, no such objection is to be made. Mr. H. Talbot's voice is sonorous—his delivery of the lines at all events well rounded. His *Othello*—though somewhat of the order that is styled "stagey"—is impressive to many. Mr. Hermann Vezin's Iago is a performance to see. All Mr. Vezin's readings of Shaksperian or other character are intelligent and individual, and in the character of Iago he has, as it is needless to say, the fullest scope for individual interpretation. To white-wash Iago would be a difficult matter—a feat worthy to engage the ingenuity of a performer most fully in accord with modern propensities. It would probably prove one of those feats whose difficulties are such as to make them impossible. Mr. Hermann Vezin has not attempted the task. But he does appear to emphasise by voice and manner such passages as bear upon Iago's supposition that his wife and *Othello* have been decidedly too intimate. He waxes fiercer than do most Iagos. The ladies engaged in this performance—generally so creditable to Mrs. Bateman's management—are Miss Carlisle and Mrs. Calvert. Miss Carlisle is a gentle Desdemona; possibly even a shade too gentle and impassive; but she reaches towards power in her final scenes. Mrs. Calvert plays Emilia. The part is a great one as far as concerns opportunities for vehement performance. It has more than one great outburst sure of its effect. And Mrs. Calvert is an approved actress, familiar with Shakspeare, and generally with the conscientious rendering of great drama.

The other night, we saw Mr. Charles Kelly as Joseph Surface in *The School for Scandal*—a part which he is now playing at the Vaudeville. Mr. John Clayton, its first representative there, having been called elsewhere. Mr. Kelly's Joseph Surface is an unmistakeable rogue. Joseph Surface is sometimes presented as an agreeable though deceptive fellow—a very fascinating Mephistopheles. Lately, indeed, he has been presented as one in whose deep-laid treachery it would be wholly impossible to believe. But Mr. Kelly represents him as an outwardly disagreeable man. We do not, with his performance before us, doubt in the least the evil of the character; we doubt only the hypocrisy. Such a man would have found no reward in being hypocritical; his hypocrisy would have imposed upon no one. The study—if we do not entirely approve of it—is at least interesting. The delivery of the lines is curiously devoid of traditions. Mr. Kelly's is a most modern performance—seeking the truth of nature—forgetting sometimes, we think, the necessary *op-tique du théâtre* in something of the way in which it is habitually forgotten by that school of actors whose ideal is a charade. From a seat by no means far from the stage we could not hear the end of Joseph Surface's sentences. The quietude gave an air of great naturalness. As a performance to be seen it was excellent; as a performance to be heard it was inadequate. In a word, with the virtues of the modern school there was something of the faults. Mr. Kelly is an actor of such sterling power that he should omit the faults altogether. He should give his natural and realistic touches with full remembrance of the conditions of stage performance—conditions which certain of the weaker followers of the modern school may be presumed to be more content to violate, since they would seem to hold that years of professional life are wisely spent if they result in the careful acquisition of the first faults of the amateur.

MUSIC.

RECENT CONCERTS.

THE performance of the *Eroica* symphony at the Crystal Palace concert last Saturday deserves special mention; it was certainly one of the finest ever given by Mr. Manns' band, and the genuine and hearty applause at the close proved how thoroughly it had been enjoyed and appreciated by the audience. Herr Robert Hausmann made his first appearance at these concerts in a *Concertstück* for violoncello and orchestra by Schumann (op. 129), which has only been heard once before in London, many years ago, at one of the concerts of the Musical Society of London. Schumann was certainly not in an inspired mood when he penned this difficult and ungrateful work. It is lacking in clearness of form; the themes of the first and last movements are not interesting, and their development is very laboured. The second section ("Langsam") is, however, more attractive. The principal theme is full of melody and charm, and forms a pleasing contrast to the rest of the work. Herr Hausmann proved himself an excellent artist. His tone is full and clear, his execution exceedingly neat, and his powers of interpretation of a very high order. M^{me}. Patey was the vocalist.

At the concert of the Albert Hall Choral Society on Thursday, March 4, was performed, for the first time in London, Ferdinand Hiller's *Song of Victory* written to commemorate the German victories in the Franco-Prussian War. The work is very bright and pleasing, but lacks character. The performance was very good. The solo part was effectively sung by Miss Annie Marriott. The programme also included Goetz' 137th Psalm, very carefully rendered, although a little less *forte* in some of the passages would have been an improvement.

On the same evening, the third concert of the Philharmonic Society took place. Herr Joachim was the violinist, and played the Mendelssohn concerto and his own variations on an original theme of which we have already spoken. The programme included Brahms' symphony in D and one novelty—Massenet's overture entitled "Phèdre."

The third concert of the Borough of Hackney Choral Association took place at the Shoreditch Town Hall on Tuesday, March 9. H. Goetz' *Naenia* (poem by Schiller) for chorus was given for the first time in London. It is one of the composer's most characteristic and, we may add, most difficult works. The performance was truly excellent, and the vigour, firmness, and delicacy with which the music was rendered reflected the highest credit on both choir and conductor (Mr. E. Prout). The programme also included Gade's charming cantata, *The Erl-King*. The solo parts in this work, of considerable importance, were unfortunately not rendered in a satisfactory manner; hence the general success of the composition, in spite of the excellent chorus singing, was somewhat marred. We must also add that Eaton Fanning's "Song of the Vikings" and the lively "Market Chorus" from *Masaniello* were given with great spirit, energy, and finish. The instrumental pieces were Mendelssohn's "Hebrides" overture and Gounod's "Funeral March of a Marionette," both admirably performed. Despite a special notice in the programme book that *encores* are forbidden by a fixed rule of the association, the audience were so delighted with the part song of Fanning and the Gounod march that they did their best, but, of course, in vain, to obtain a repetition of both pieces. Mr. E. Prout conducted, with his usual ability, the whole of the concert. J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.

To-night, at 8, a Play, in five acts, and the NEW, *THE OLD LOVE AND THE NEW*. By BROOKS HOWARD and J. ALBERT. Messrs. And all other goods in great variety.
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1863

TARAXACUM and PODOPHYLLIN.—A
fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPE, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins
which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,
and without which none is genuine.
Sold Wholesale by the Proprietors, Worcester;
Drosse & Blackwell, London; and Export Vintners generally
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."
Wordsworth's Chemical Food of Health.
Prepared from the choicest Peruvian Leaf. The New
REMEDY for GENERAL DEBILITY, NERVOUS PROSTRATION,
NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.
Sold in Bottles, 1s. 1½d. and 2s. 9d., post-free.
H. WORDSWORTH & Co., Homoeopathic Chemists, 6, Sloane-
street, and 4, King-street, Kensington, London.

LOCKYER'S SULPHUR HAIR RESTORE.
Large Bottle, 1s. 6d. Restores the Colour to Gray Hair in a few
days. The best, safest, and cheapest. Quite equal to expensive ones.
Sold by Chemists and Hairdressers.

DINNEFORD'S MAGNESIA.
The Medical Profession for over Forty Years have approved
of this pure solution as the BEST REMEDY for
Acidity of the Stomach, Heartburn, Headache,
Gout, and Indigestion,
And as the safest Aperient for Delicate Constitutions, Ladies,
Children, and Infants.
DINNEFORD'S MAGNESIA.

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK

ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are—

1st. The absolutely facsimile nature of the result.

2nd. Its Cheapness for Small Editions of 250, 500, &c.

3rd. The Prints being direct on the Paper there is an absence of all

cockling and that disagreeable effect inherent to all Mounted Prints.

4. For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chefs-d'œuvre of the Art Galleries of Europe, and the Examples of works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN," illustrated by Jane E. Cook, Second Edition (1880). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIORUM." Facsimiles from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE.

The Works, Ealing Dens, Middlesex.

General Manager, W. S. BIRD.

Director of the Works, J. R. SAWYER.

TURE, CHINA, PLATE, PICTURES, &c.—B. SAMUEL, Dealer, 5, Timber-lane, Norwich, sometimes has specimens interesting to Collectors

NEW VOLUME OF POETRY.

8vo, cloth extra, price 6s.

SONGS in EXILE, and other Poems.

By H. E. CLARKE.

"Mr. Clarke is a poet *sans phrase*, and we should not have included him in this *omnium gatherum* of minor singers had it not been for a certain tone of imitation, chiefly of Walt Whitman and Mr. Swinburne, from which in these 'Songs in Exile' he has not known quite how to disembarass himself. But that he is a poet, and not a minor poet, we have but little doubt. Nor do we think that anyone who reads the following poem on 'Age' will have much doubt either. He has some spirited 'rebel songs' and some tuneful agnosticism, of both of which we feel some suspicions as to their sincerity, but none whatever as to their goodness. Altogether, this first book of his is the most interesting of its kind which has been published for some years."—*Academy*.

MARCUS WARD & CO., 67 AND 68, CHANDOS STREET, LONDON, W.C.

HURST & BLACKETT'S NEW WORKS

ROYAL WINDSOR. By W. Hep-

WORTH DIXON. Vols. III. and IV., demy 8vo, 30s. Completing the

Work. Second Edition. "Readers of all classes will feel a genuine regret to think that these volumes contain the last of Mr. Dixon's vivid and lively sketches of English history. His hand retained its cunning to the last, and these volumes show an increase in force and dignity."—*Athenaeum*.

"Mr. Dixon's is the picturesque way of writing history. Scene after scene is brought before us in the most effective way. Moreover, Mr. Dixon has been allowed to explore the castle as it was never explored before; hence his book is not only pleasant reading, but full of information."—*Graphic*.

CONVERSATIONS with DIS-

TINGUISHED PERSONS during the SECOND EMPIRE, (from 1861 to 1863). By the late NASSAU W. SENIOR. Edited by his Daughter, M. C. M. SIMPSON. 2 vols., demy 8vo, 30s.

"Mr. Senior's 'Conversations with M. Thiers, M. Gutzot, &c.', published about a year and a-half ago, were the most interesting volumes of the series which had appeared up to that time, and these new 'Conversations' are hardly, if at all, less welcome and important. A large part of this delightful book is made up of studies by various critics, from diverse points of view, of the character of Louis-Napoleon, of more or less vivid and accurate explanations of his tortuous policy. The work contains a few extremely interesting reports of conversations with M. Thiers. There are some valuable reminiscences of Lamartine, and, among men of a somewhat later day, of Prince Napoleon, Drouyn de Lhuys, Montalembert, Victor Cousin, Rémusat, and the Chevaliers."—*Athenaeum*.

"It is impossible to do justice to these 'Conversations' in a brief notice, so we must be content to refer our readers to volumes which, wherever they are opened, will be found pregnant with interest."—*Times*.

THE VILLAGE of PALACES; or,

Chronicles of Chelsea. By the Rev. A. G. L'ESTRANGE. 2 vols., crown

8vo, 21s. [In the press.]

DIARY of a TOUR in SWEDEN,

NORWAY, and RUSSIA in 1827. By the MARCHIONESS OF WEST-

MINSTER. 8vo, 15s.

LODGE'S PEERAGE and BARON-

ETAGE for 1880. Under the Especial Patronage of HER MAJESTY.

Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the

Arms beautifully engraved, 31s. 6d., bound gilt edges.

THE NEW NOVELS.

FOR HER DEAR SAKE. By Mary

CECIL HAY, Author of "Old Myddleton's Money," &c. 3 vols.

LILY of the VALLEY. By Mrs.

RANDOLPH. Author of "Gentianella," &c. 3 vols.

"A very excellent novel. The plot is marvellously ingenious, and is worked out with wonderful skill. Readers will be amply rewarded by the perusal of its pages."—*Sunday Times*.

A SYLVAN QUEEN. By the

AUTHOR OF "RACHEL'S SECRET," &c. 3 vols.

"A 'Sylvan Queen' is a picturesque and, on the whole, very pleasant story, the principal merit of which consists in its bright little pictures of country life and character."—*Athenaeum*.

"A charming tale; the plot is varied and entertaining."—*Post*.

YOUNG LORD PENRITH. By

JOHN BERTWICK HAWOOD, Author of "Lady Flavia," &c. 3 vols.

"An interesting and well-told story."—*Post*.

IN the SWEET SPRING-TIME.

By Mrs. MACQUOID, Author of "Patty," "Diana," &c. 3 vols.

"A delightful and refreshing book."—*Post*.

"Mrs. Macquoid's new story is a graceful and artistic piece of work pleasantly readable."—*Academy*.

THE GREATEST HEIRESS in

ENGLAND. By Mrs. OLIPHANT. SECOND EDITION. 3 vols.

"The 'Greatest Heiress' is noticeably good among the great number of Mrs. Oliphant's good novels. The story maintains the reader's interest completely throughout."—*Athenaeum*.

THREE RECRUITS, and the

GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON, Author of

"Cruel London," &c. 3 vols. [March 25.]

EASTER PRESENTS.

Each Work complete in 1 vol., price 5s. (any of which can be had separately), elegantly printed and bound, and illustrated by

Sir J. GILBERT, MILLAIS, HUNT, LEECH, POYNTER, FOSTER,

Li's of Marie Antoinette. By Professor C. D. Yonge.

RICHARD BENTLEY & SON'S NEW WORKS.

On March 24th, One Shilling.

THE TEMPLE BAR MAGAZINE.

CONTENTS FOR APRIL.

- I. ADAM and EVE. By the Author of "Dorothy Fox." (Continued.)
- II. WILLIAM WILBERFORCE.
- III. DREAMS.
- IV. "O WAE'S ME."
- V. DOSIA.
- VI. THE BRITISH PEERAGE.
- VII. LETTERS from CONSTANTINOPLE.
- VIII. RECENT MATERIAL for FUTURE MEMOIRS.
- IX. THE REBEL of the FAMILY. By Mrs. E. LYNN LYTTON. (Continued.)

LORD BEACONSFIELD: his Life, Character, and Works. A Critical Study. By GEORGE BRANDES. Translated by Mrs. GEORGE STURGE. Demy 8vo, 10s. 6d.

THE "TIMES."

"A study of a living statesman by a judicious foreigner must be always instructive. Most Englishmen, whether Whig or Tory, will turn with no little interest to the pages of Herr Brandes to see the impression made on an acute and critical German by one of the most remarkable personalities in modern European politics. We have no space to examine in detail the manner in which Herr Brandes has executed his task. It was manifestly congenial to him, and he has not a few qualifications for it. His information is copious and singularly accurate so far as we have tested it; and his literary criticisms at least are sound, penetrating, and genial. As a biography, his work is far more valuable, because more concise and impartial, than any which has appeared in England. As a criticism, it is generally instructive, and often suggestive."

"VANITY FAIR."

"Herr Brandes is the first author who has touched the personality and history of Lord Beaconsfield with anything like scientific critical method. . . . As a rule his work is really remarkable for sound conclusions and calm sense."

PRINCE METTERNICH'S AUTOBIOGRAPHY. Edited by his Son, PRINCE METTERNICH. Translated by ROBERTA NAPIER. With Portrait and Facsimiles. 2 vols., demy 8vo, 36s.

THE OLD RÉGIME: Court, Salons, and Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris," &c. With Portraits of Louis XV., Marie-Antoinette, Rousseau, Voltaire, Madame du Barry, and Mdlle. Clairon. 2 vols., large crown 8vo, 24s.

THE HEART of HOLLAND. By Henry HAYARD, Author of "The Dead Cities of the Zuyder Zee," "Pictorial Holland," &c. Translated by Mrs. CASHEL HOKY. Demy 8vo, with Eight Illustrations, 15s.

"SATURDAY REVIEW."

"The Heart of Holland" stands the best test to which a book of travels can be put. It raises in the reader a strong desire to follow in the footsteps of the author. We had not reached the end of M. Hayard's volume before we had got out our maps, our Bradshaw, and our Baedeker, and planned another trip to Holland."

NEW NOVELS AT ALL LIBRARIES.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE," NO RELATIONS. By Hector Malot. Translated by the Author of "Hogan, M.P.," &c. 3 vols., crown 8vo.

"An extremely fascinating story, written with unflagging force, and as full of genuine pathos as of graceful and delicate descriptions. . . . This novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

TWO WOMEN. By Georgiana M. Craik. 3 vols., crown 8vo.

"Those who have not yet perused this latest story by Miss Craik may be warmly recommended to do so."—*Morning Post*.

NEW NOVEL, BY THE AUTHOR OF "FLITTERS, TATTERS, AND THE COUNSELLOR," CHRISTY CAREW. By the Author of "Hogan, M.P.," "The Hon. Miss Ferrard," &c. 3 vols., crown 8vo.

"Christy Carew" is a very clever book, displaying in many places passages such as one has at present the right to expect from George Eliot alone. The characters are most original in conception and true to nature."—*Morning Post*.

On Monday next.

HONOR CARMICHAEL. By the Author of "Virginia." 2 vols., crown 8vo.

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

C. KEGAN PAUL & CO.'S NEW BOOKS.

Royal 4to, cloth extra, price 50s.; or roxburgh half-morocco, price 52s. 6d.

ANCIENT ROME and its CONNECTION with the CHRISTIAN RELIGION: an Outline of the History of the City from its First Foundation down to the Erection of the Chair of St. Peter, A.D. 42—47. By the Rev. HENRY FORMBY. With numerous Illustrations of Ancient Monuments, Sculpture, and Coinage, and of the Antiquities of the Christian Catacombs.

Demy 8vo, cloth.

PORTUGAL, OLD and NEW. By Oswald CRAWFORD, H.M.'s Consul at Oporto. With Illustrations and Maps. [Immediately.]

Vol. I., price 12s. 6d.

THE PROPHECIES of ISAIAH. Translated, with Critical Notes and Dissertations, by the Rev. T. K. CHRYNE, Fellow of Balliol College, Oxford. 2 vols., demy 8vo, cloth.

Crown 8vo, cloth, price 6s.

THE GENESIS of EVIL, and other SERMONS, mainly Expository. By SAMUEL COX, Author of "Salvator Mundi," and Editor of "The Expositor."

Second Edition, Revised and Enlarged.

THE SUPERNATURAL in NATURE: a Verification by Free Use of Science. By the Rev. J. W. RAYNOLDS, President of Sion College and Vicar of St. Stephen's, Spitalfields. Demy 8vo, cloth, price 14s.

"We have only to add that this volume is prefaced by an admirable table of contents, and completed by a copious index, which both whet the reader's appetite and assist his digestion. We have no hesitation in saying that he will gain both moral and intellectual strength from its perusal."—*Times*.

Large post 8vo, cloth.

THE CHURCH in RELATION to the STATE. By EDWARD MILLER, M.A., Author of "The History and Doctrines of Irvingism," &c. [Immediately.]

Fourteenth and Cheaper Edition.

CHRIST in MODERN LIFE. By the Rev. STOFFORD A. BROOKE. Crown 8vo, cloth, price 5s.

Seventh Edition.

SISTER DORA: a Biography. By Margaret LONSDALE. With Portrait engraved on Steel by C. H. JEENS, and an Illustration. Crown 8vo, cloth, price 6s.

Crown 8vo, cloth, price 3s.

OUTLINES of REDERAFT (LOGIC). With English Wording by WILLIAM BARNES, B.D., Author of "Outlines of Speechcraft," &c.

Small crown 8vo, cloth, price 3s. 6d.

BULGARIA SINCE the WAR: Notes of a Tour in the Autumn of 1879. By JAMES GEORGE MINCHIN.

Small crown 8vo, cloth, price 5s.

MONMOUTH: a Drama, of which the Outline is Historical. Dedicated by permission to Mr. Henry Irving.

"Interesting, skilful in construction, and abounding in nervous lines and effective situations."—*Queen*.

Crown 8vo, cloth.

GINEVRA and the DUKE of GUISE: Two Tragedies. [Immediately.]

Small crown 8vo, cloth, price 3s. 6d.

RECOLLECTIONS of WORKHOUSE VISITING and MANAGEMENT during TWENTY-FIVE YEARS. By LOUISA TWINING. Reprinted from the October Number of the *New Quarterly Magazine*, with Additions.

C. KEGAN PAUL & CO., 1, PATERNOSTER SQUARE.

SAMPSON LOW, MARSTON, & CO.'S NEW BOOKS.

MR. BLACK'S NEW NOVEL.

NOTICE.—In consequence of the large orders which are coming in for Part I. of "SUNRISE," the Publishers have doubled the number they had in preparation. To prevent disappointment, orders should be sent at once.

To be published in 15 Monthly Parts, price 1s. each.

The First Part will be ready March 27.

SUNRISE: a Story of these Times.

By WILLIAM BLACK,

Author of "A Daughter of Heth," &c.

Now ready, 1 vol., 8vo, pp. 422, cloth, 14s.

CRADLE-LAND of ARTS and CREEDS:

OR, NOTHING NEW UNDER THE SUN.

By CHARLES J. STONE,

Barrister-at-Law, Inner Temple; and late Advocate, High Courts, Bombay.

A FOURTH EDITION is ready.

MEMOIRS of MADAME de RÉMUSAT.

Translated by Mrs. CASHEL HOKY and Mr. JOHN LILLIE. 2 vols. demy 8vo, cloth extra, 32s.

VOL. II. is ready.

ART in the MOUNTAINS: the Story of

the Passion Play. By HENRY BLACKBURN, Author of "Artists and Arabs," "Breton Folk," &c. Entirely New and Revised and Cheaper Edition. Crown 8vo, cloth, 10s. 6d. With a New Map of Ronces, a Bird's-Eye View of the Valley of Oberammergau, and the Programme for 1880. With numerous Illustrations and an Appendix for Travellers, giving the Expenses of the Journey, Cost of Living, Routes from England, &c.

GUARDIAN.—"Of the many previous accounts of the play, none, we are disposed to think, recalls that edifying and impressive spectacle with the same clearness and vividness as Mr. Blackburn's volume."

SATURDAY REVIEW.—"He writes in excellent taste, and is interesting from the first page to the last."

PRICE SIXPENCE. A MANUAL FOR ELECTORS.

HAVE I a VOTE? A Handy Book for the

use of the People on the Qualifications conferring the Right of Voting at County and Borough Parliamentary Elections. With Forms and Notes. By T. HANSON LEWIS, Esq., B.A., LL.B.

Just ready, an entirely New Work by JULES VERNE.

THE GREAT NAVIGATORS of the

EIGHTEENTH CENTURY. With numerous Illustrations and Facsimile Copies of Old Engravings, Charts, Maps, &c. Demy 8vo, cloth extra, 12s. 6d.; gilt edges, 14s.

PUBLISHERS' NOTE.—This volume forms the second of three volumes under the general title of CELEBRATED TRAVELS and TRAVELLERS. The first volume, already published, is entitled THE EXPLORATION of the WORLD, and covers a period in the World's History extending from B.C. 345 to the close of the Seventeenth Century. The present volume extends over the Eighteenth Century, and the third volume will give an account of the GREAT EXPLORERS and TRAVELLERS of the NINETEENTH CENTURY.

FIVE YEARS in MINNESOTA. By

MAURICE FARRAR, M.A. Crown 8vo, cloth extra, 6s. [Now ready.]

Now ready, demy 8vo, cloth extra, 10s. 6d.

THE CONFLICT of CHRISTIANITY with

HEATHENISM. By Dr. GERHARD UHLHORN. Edited and Translated from the Third German Edition by G. C. SMYTH and C. J. H. HOPES.

THE SISTERS. By George Ebers. 2 vols.,

limp cloth, 2s. each.

THE NEW ADDITION to LOW'S STANDARD SIX-SHILLING NOVELS IS

THE AFGHAN KNIFE: a Novel. By

ROBERT ARMITAGE STERNDALE, Author of "Scorce." Small post 8vo, cloth extra, 6s.

LONDON:

SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,
Crown-buildings, 188, Fleet-street, E.C.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

NOTICE.

Next Friday being Good Friday, THE ACADEMY will be published on Thursday Morning. All Advertisements must reach the Office, 52 CAREY STREET, by four o'clock on Wednesday, the 24th.

LITERATURE.

Memoirs of Madame de Rémusat, 1802-8.
Published by her grandson, M. Paul de Rémusat. Translated from the French by Mrs. Cashe Hoey and Mr. John Lillie. Vol. I. (Sampson Low & Co.)

[First Notice.]

MDME. DE RÉMUSAT'S Memoirs have been translated into English without loss of time, and the translation is well done. The book will doubtless find many readers in every European language. Its publication has long been expected with curiosity. Everybody must respect the motives from which the publication has been delayed; and yet a certain regret must be expressed that the feelings of individuals should have demanded such tender consideration when it is remembered that, if the picture of Napoleon here faithfully drawn had been exhibited to the public forty years ago, France might have been saved the Second Empire.

When Mr. Carlyle, many years ago, proposed writing an essay on Napoleon, with a view to forming "an intelligible picture of him, both as a biographical and an historical figure, in both of which senses he is our chief contemporary wonder, and in some sort the epitome of his age," he expressed a belief that it would be long before the character of Napoleon was understood. This was in 1830, and many attempts to understand the enigma have been made since then, while these Memoirs, which would have thrown so much light upon it, were lying locked up in the safe keeping of Mdme. de Rémusat's son. The revelation, now that the time is judged to have come for giving them to the world, is much less of a surprise than it would have been if they had been published before M. Lanfrey's *Life of Napoleon*. It is his realistic view of Napoleon's character that they in every respect confirm, and not the more idealised character drawn by M. Thiers.

Mdme. de Rémusat confirms everything that M. Lanfrey has said about Napoleon's incessant craft, his art of dissembling in small things as well as great, his entire want of magnanimity, his subordination of everything, except his own vainglory, to what he called his policy. I do not know whether M. Lanfrey had access to Mdme. de Rémusat's Memoirs, but he writes as if he had. Not a trait that she has remarked has escaped him. "A woman," she says, "cannot be expected to relate the political life of Bonaparte." "Persons in the next room to him were often ignorant of events which they would indeed learn by going to Paris, but could only comprehend fully by transporting themselves out of France." Napoleon never had a confidant,

and Mdme. de Rémusat, though she lived near him for several years and was often favoured with his conversation, does not pretend to have been admitted more deeply into his confidence than other people. She undertakes to record only "what she saw, or thought she saw." Her only advantage is that she had exceptional opportunities of seeing. Her mother chanced to make the acquaintance of the Empress Josephine when she was Mdme. Beauharnais, and in 1802, when Napoleon had himself made First Consul for life and conceived the idea of surrounding himself with the ceremony of a Court and attracting to it the higher society in France, she and her husband were taken into the service of the Palace. Her husband was appointed Prefect of the Palace and Keeper of the Robes, and she received the appointment of Lady in Waiting to Mdme. Bonaparte. Their good birth, their acquaintance with the usages of society, M. de Rémusat's natural tact in ordering matters of ceremonial and etiquette, made them indispensable to the First Consul when he resolved to depart from Republican simplicity and revive the splendour of the Court of Louis XIV. They saw the gradual expansion of the ceremonial edifice, and, as the cherished companion of Josephine, Mdme. de Rémusat saw much of the inner life of the great man as he appeared in his wife's drawing-room and in intercourse with other members of his family.

M. Lanfrey has anticipated so much of Mdme. de Rémusat's reminiscences that additional regret must be felt that they are only reminiscences and not memoirs committed to paper at the moment when her impressions were still fresh. She had originally, it appears, a daily record of incidents and reflections, written down from day to day in the form of letters to an imaginary correspondent, describing her life in the Palace, but she destroyed these invaluable documents in a moment of panic, upon the Emperor's sudden return from Elba with threats of vengeance against all who had made terms with his enemies during his enforced absence. Mdme. de Rémusat's reminiscences must still be reckoned the most important materials that exist for the biography of Napoleon, but it is needless to say that they are immeasurably less valuable than her diary would have been as furnishing the means for understanding, if it is possible to understand, the secret of Napoleon's fascination. Mdme. de Rémusat was disenchanted when she wrote her reminiscences; she regarded the Emperor as "the ruthless destroyer of all worth;" she looked back upon her Palace life as a slave might look back upon the galleys when his term of service had expired. She was full of enthusiasm and homage when she began her diary, and it would have shown us, as no reminiscences can possibly do, by what steps she passed from this charmed feeling to loathing and abhorrence. Mdme. de Rémusat is transparently sincere and honest; she did her utmost to live her old life over again that she might do full justice to the man who had captured her wonder-loving imagination and lost his hold over it only by slow degrees; and she believed that she had succeeded. But her reminiscences—and she gives another

evidence of her trustworthiness in confessing the fact—are inevitably coloured by her mature judgment of the man. She would have been more than human if she had not remembered chiefly what agreed with her later conception of him, and we must believe that she has forgotten many incidents that might have softened the picture. So that the monster Bonaparte remains a monster still, exactly as M. Lanfrey, in a spirit of keen criminal investigation, has painted him.

We owe it to Mdme. de Rémusat's candour that we know who chiefly inspired her conception of Napoleon. She often talked him over with M. de Talleyrand, and it is not difficult to discover that sharp and cynical observer's conclusions piercing through the olive and myrtle in which the woman's gentler nature has wrapped them. In Mdme. de Rémusat's Memoirs the ex-Foreign Minister of Napoleon has his revenge for all the indignities to which the Emperor's despotic temper and ill-breeding subjected him.

Bonaparte showed different sides to different people, and there is no doubt that he showed his worst side to Talleyrand. He knew perfectly well that the ex-bishop would not give him any credit for generous motives, and would be likely to despise disinterested sentiment as a weakness; and his insatiable passion for superiority prompted him to surpass the man of the world in his own vein. "I can never see one seat higher than the others without wishing to place myself in it," he said to Cobentzel at Campo Formio; and he could not bear that Talleyrand should occupy a higher seat as a scorner than himself. When his nephew Louis, whom Mdme. de Rémusat says he really seemed to love, suddenly died, and word of his death was brought to Bonaparte, he seemed so little affected that Talleyrand remarked to him, "You forget that a death has occurred in your family, and that you ought to look serious." Bonaparte was a monster, but we need not suppose that he was so inhuman as might be inferred from his reply, "I do not amuse myself by thinking of dead people." His touching letter to his wife on this occasion is at least as likely to have been a genuine expression of his feelings. Mdme. de Rémusat also makes too much of an evidence of complete want of magnanimity of his rejection of Talleyrand's advice to withdraw his troops from Spain and leave the Spaniards to their own King Ferdinand. "Such an avowal," Talleyrand said, "made in a lofty tone, and when the enemy are still hesitating on your frontier, can only do you honour, and you are still too strong for it to be regarded as a cowardly act." Whereupon Bonaparte rejoined:—

"A cowardly act! what does that matter to me? Understand that I should not fail to commit one if it were useful to me. In reality, there is nothing really noble or base in this world. I have in my character all that can contribute to secure my power and to deceive those who think they know me. Frankly, I am base, essentially base. I give you my word that I should feel no repugnance to commit what would be called by the world a dishonourable action; my secret tendencies, which are, after all, those of nature, apart from certain affectations of greatness which I have to assume, give me infinite resources with which to baffle everyone. Therefore, all I have to do now is

to consider whether your advice agrees with my present policy; and to try and find out besides," added he, with a satanic smile, "whether you have not some private interest in urging me to take this step."

There was quite as much magnanimity in making this avowal as there would have been in acting on Talleyrand's advice; perhaps more. Another incident which M^{de}. de Rémusat relates to prove Napoleon's want of generosity admits of a similar interpretation. At a momentous crisis in his life, Talleyrand lent him some money. He afterwards repaid it, but begged the lender to tell him what motive he had for making the loan. Bonaparte had been on the point of starting for Egypt, not a little doubtful whether he would ever return to France, when he received the accommodation from a man not generally supposed to be guilty of disinterested motives, and he probably expected to be told that Talleyrand felt confident even then of his future greatness. Perhaps he wondered how other people had looked at him, and whether so shrewd a judge of men as Talleyrand had expected him to rise to still greater things. He was, in short, one may suppose, fishing for a compliment. But Talleyrand disappointed him, protesting that he had no motive whatever; that he rendered the service without any after-thought. Then Bonaparte turned round upon him and said that if he really lent the money without any design he played the part of a dupe. It was not a polite saying, and he might have shown some decent gratitude for the favour; but it probably meant nothing more than that Bonaparte was nettled, and triumphed in the opportunity of telling so astute a diplomatist that he had played the fool.

WILLIAM MINTO.

"ENGLISH MEN OF LETTERS."

Chaucer. By A. W. Ward. (Macmillan.)

AN enjoyable and excellent little book is this of Prof. Ward's; far away the best connected account of Chaucer and his work to be found in English. And it is especially welcome now, when Mr. Arthur Gilman has just brought out his fresh edition of Chaucer's works in the United States. Neither book is all that one could wish, but each is one that every Chaucer-lover must be grateful for; and I think with pleasure of the numbers of English-reading men and women whom Prof. Ward's criticisms will lead to a fuller knowledge of the morning-star of English verse.

Mr. Ward does not know Chaucer's England as the French Chaucerian, Dr. Jules Jusserand, knows it. There is no touch in his work giving evidence of months of search at the Record Office and the Museum, of analysis of Rolls of Parliament, Bishops' and Archdeacons' Court-Registers, &c. Mr. Ward does not know Chaucer's English as the German Chaucerians, Ten Brink and Koch, know it, much less as the English Bradshaw and Skeat do. He cannot see what the originally Northern rymes of the *Romaunt of the Rose* mean as to Chaucer's non-authorship of the poem; and he does not know the Barbour Troy-Book parallel to the double version of the translation that Mr. Bradshaw has found. He has not cared to work at the

Troilus to find out what of it is Chaucer's own and what only englished from Boccaccio. The educated public of England, also, has been too stingy of its money to let me print in time Mr. Wm. Rossetti's ten-year-old MS. of the parallel-text of the *Troilus* and englished *Filostrato* to save Mr. Ward from mistakes.* He has not even, in one instance—Chaucer's beautiful *Truth*—taken the trouble to get the right text of a poem, though I printed it in 1867 and it has been for several years in Dr. Morris's revised Aldine edition. In another case, he quietly quotes, as Chaucer's own, Caxton's spurious ending to the *House of Fame* of which I gave public notice some two years ago.† So, too, he has not taken the trouble to refer to the French *Melibée et Prudence*, and assure himself that Chaucer's *Melibée* is from it. It is clear, also, that Prof. Ward has not yet a firm hold of Chaucer's poetic development, or the doubt (on p. 94) of whether the *Troilus* came before the *Fame* or not, of whether such poems as the *Fortune*, *Steadfastness*, and *Purse*, show declining powers or not (p. 103), would have been hardly possible to him. He has, too, missed the fact that the "Shipman's Tale" was originally written for a woman, and therefore does not even in subject suit its narrator. But notwithstanding such shortcomings as these—and plenty of others might be cited—Prof. Ward's little book is a genuine gain to Chaucer students, as well as the general literary public. He has a real eye for Chaucer himself and the best points of his work, and is the first critic who has done justice to the wonderful dramatic power of the poet, which has, oddly enough, been lately denied him by a critic of some reputation. So far as I know Prof. Ward's work, his chapter on "The Characteristics of Chaucer and his Poetry" is the best thing he has done, as it is the best thing I have seen on its subject. Notwithstanding his delusions that the poor abruptness of the end of the *Blanche* (about which he snubs me) is a fine instance of dramatic power, and that Chaucer's love of the daisy "is of course a mere poetical figure," I welcome his book warmly as a real help to the understanding of his master and mine, and I cordially recommend it to every English man and woman with half-a-crown to spare. Let there be no mere mean reading of the book in "library" copies.

F. J. FURNIVALL.

* Ward, p. 153, gives an instance of Chaucer's "careful study of women's ways, with which he now and then betrays that curiously intimate acquaintance to which we are accustomed in a Richardson or a Balzac. How wonderfully natural is the description of Cressid's bevy of lady visitors, attracted by the news that she is shortly to be surrendered to the Greeks, and of the 'nice vanity'—i.e., foolish emptiness—of their consolatory gossip," and so on! William M. Rossetti, *Troilus and Filostrato*, p. 195, on the same scene: "All this passage about the visiting ladies looks especially Chaucerian in the *Troilus*; one is surprised to find how entirely he is indebted to Boccaccio for it," as the Parallel Texts prove. Had but Prof. Ward helped the Chaucer Society as Prof. Child has done, he would have had these texts long since.

† The Parallel Texts of the *Fame* I issued last year.

Buddha Gaya, the Hermitage of Sakya Muni.
By Rajendralála Mitra, LL.D., C.I.E.
(Calcutta: Bengal Secretariat Press.)

THIS is one of the portly volumes of archaeological lore which are issued from time to time by the Government of India and its subordinate provinces in all the *luxé* of typography and photography, and combining a vast amount of learning and patient study with not a little of daring hypothesis and unduly arrogant assertion, which is the more to be noticed, as the author of each work tilts against the favourite hobbies of his predecessor, and is himself the subject of subsequent bitter criticism. The author is a native of Bengal, most favourably known, who wields the weapons of his science with great skill, and whose English style is as pure and irreproachable as that of any English author. It is encouraging to those interested in the education of British India to think that, among the first generation of scholars, such great ability, such acuteness of argument, and such soundness of judgment should have been developed. Nor is the volume before us the only one which has proceeded from his pen.

The subject is a description of one of the holiest places in India, and round which the most ancient legends have clustered, viz., the Hermitage of Sakya Muni, known as Buddha Gaya, a few miles distant from the celebrated city of that name in the western portion of the provinces under the Lieutenant-Governor of Bengal. The cloud that for so many centuries hung over the history of Sakya Muni has during the last quarter of a century been raised up by the industry of a score of illustrious scholars and archaeologists; and it may now be accepted as a fact that Sakya Muni, than whom no man has left a deeper impression upon the religious convictions of the human race, was born about the fifth century B.C. at Kapilavastu, accomplished his six years' penance, and became "enlightened," or Buddha, under the sacred Bodhidrum or Pipal tree at Buddha Gaya, and died or obtained Nirvana at Kusi. For fifteen hundred years from the date of his death the Hermitage of Buddha was as Jerusalem or Mecca to the Buddhists of India, and of the countries beyond, to which his religion had been peacefully, and by force of argument, extended. And when in course of time that religion, by a process of the details of which we have no knowledge, died out of the country of its birth, and its sacred places and images were occupied and appropriated by rival religionists, still travellers from distant regions found their way as pilgrims to the sacred spots. The accounts of the visits of the Chinese pilgrims in the fifth and seventh century A.D., when the glory of the Buddhist had begun to wane, have been preserved to us in the Chinese annals; and it was in consequence of a visit of the emissaries of the King of Burma, who were deputed to repair the breaches of the Ancient Temple of Buddha Gaya in 1876, that we are indebted to the Government of Bengal for this noble volume.

Restorers of ancient buildings have proverbially a bad name both in Europe and Asia. Some of the cathedrals of England have suffered much in the same way as these

ancient ruins seem to have suffered at the hands of these well-intentioned, pious Burmese, who were totally devoid of architectural, archaeological, or historical knowledge. Powerless to save, the Lieutenant-Governor of Bengal deputed our author, who was previously acquainted with the place and the subject, to proceed in 1877 to the holy site, inspect the work, and the remains, which had been brought to light in the course of the repairs, and advise the Government as to the mode in which the operations of the excavators should be controlled. In his Report, the author distinctly admits that he is only a gleaner in a field of enquiry where many distinguished archaeologists had already garnered in rich harvests; he modestly limits his own labour to the task of following their footsteps, elucidating questions left doubtful by them, filling up *lacunae*, and summarising all that is worth knowing. It may be added that, though he had been preceded by the two greatest authorities in British India on subjects of archaeology and architecture respectively, General Alexander Cunningham, and Mr. James Fergusson, no such ripe scholar of Sanskrit and Buddhist lore as the author had had the opportunity of personally inspecting the locality and interpreting the original inscriptions.

There is a romantic charm surrounding the whole volume. In the six chapters into which the author divides his work, he deals in order with the salient features of the subject, as they come before the mind. In his first chapter he tells us of the modern villages, the shapeless mounds, the Hindu places of worship, that from one point of view have smothered, from another have tenderly preserved to our days, these precious relics. Here we have the precise analogue of the mode in which the ruins of ancient Rome have been preserved to us by the mound of accumulated rubbish, the vineyard surrounding the village, and the Christian chapel, which has insinuated itself into the Pagan temple. In his second chapter, with that abundance of knowledge with which a study of the original MSS., preserved to us in Nepal, has supplied him, the author tells us the story of the great penance performed by Sakya Muni at this place. A tree must have existed in full luxuriance at that time, the ancestor by successive replantings, or dropping of seeds into the decaying limbs, of the Pipal, which still flourishes on presumably the same spot. The consistency of the legend is testified to by the Sanskrit, the Chinese, and the Pali books, the representations on railings and walls, on countless stupas and viharas in different parts of India. That the great founder of the Buddhist faith did pass some portion of his mortal career at this spot may be accepted with as much reasonable belief as any other well-accepted historical fact. Credulous religionists, lying chroniclers, poetic dreamers, have flung round the spot a garland of fiction of the grossest and most material character; and a safe medium must be sought for betwixt the weakness of the simple-minded believer and the wholesale destructiveness of the scoffer. The third chapter is devoted to a description of the architectural remains which have survived the lapse of years, the assaults of Hindus and Mahomedans, the craving for building materials on the part

of the villagers, and, lastly, the repairs of the Burmese. The chief feature is the Great Temple, of which photographs are supplied, as well as a most careful description, and the platform in which the sacred tree is imbedded. The tree is spoken of much as a Pope, or Great Lama, being chosen to succeed to the office in almost the same fortuitous way, and liable to the same mortal change. The present occupant of the Bodhimanda was installed there in 1863.

In the fourth chapter the author treats at very great length, and with great learning—perhaps rather ostentatiously displayed by the use of words not in ordinary parlance—on the sculptures which exist in the form of statues, reliefs, architectural ornaments, and footprints on stones. The notion of expressing historical events and religious ideas by stone carvings and symbols had attained a very high development in this, as in other Buddhistic remains. The story, as related in the sacred books, preserved for many centuries beyond the limits of India, is confirmed by the sculptured effigies which have remained for centuries buried under the mound of rubbish; and on some occasions the obscurity of the meaning of the written narrative is cleared up by the unmistakable evidence of the stone, assisted by an inscription. Though not so much talked about as their more favoured rivals of Egypt and Mesopotamia, the discovery and interpretation of the written and lithic monuments of the forgotten period of Buddhist history must be considered as one of the greatest triumphs of this century of great achievements.

In the fifth chapter the author deals with a subject more peculiarly his own—that of inscriptions. The number discovered is exceedingly small. It must be remembered that this sacred spot was visited by the Chinese pilgrim, Fa Hsien, in the fifth century, and by Hsuan Tsang in the seventh. Of the numerous inscriptions noticed by the latter none have survived entire, and of those fragments that have escaped none are *dedicatory*, and the same regrettable deficiency is noticeable at the other celebrated Buddhist ruins in India. There must have been a systematic destruction of such records at the time when the buildings were converted to the use of the rival and dominant Hindu priesthood. Still there are well-preserved lapidary monuments, to the earliest of which an age is assigned of not less, certainly, than two centuries before the Christian era. These are in the famous Asoka or Lāt characters, and the date is ascertained on well-understood palaeographical grounds. To these succeed inscriptions in the Gupta and Kutila script, followed by others in the older and modern forms of the Burmese character. In this branch of the subject our author is one of the best authorities.

The last chapter is devoted to chronology, and contains the author's hypothesis as to the date of the buildings. Here we leave the hard ground of facts and enter into a sea of doubt and controversy. By a chain of argument, based upon the facts described in his previous chapters, he places the date of the present building at the beginning of the first century before the Christian era. Mr. James Fergusson places that date in the fourteenth century after the Christian era. No less than fifteen centuries, therefore, represent the dif-

ference in the conclusions of these two esteemed authorities.

The volume before us is fascinating, suggestive, and instructive, and is not likely to be superseded by any memorial work on the same subject-matter; but many of the conclusions of the author's will not be accepted until a greater *consensus* of authorities has confirmed his individual and, up to the present moment, unsupported opinions. It may be questioned whether a work published at the cost of the State, under the orders of the local Government, and distributed gratuitously to all the scholars and libraries of Europe, should be permitted to be the vehicle of so much controversial matter, and such attacks, direct or implied, on highly esteemed authors who have previously worked in the same field, and are still among us. Our author has shown a wonderful power of adapting himself to the style of argument of the period, and is an antagonist with whom any scholar might be proud to break a lance; but he has not learnt one lesson from the study of the works of his contemporaries and predecessors, that the greater and more profound the knowledge of the scholar, the greater also will be the mistrust of his own judgment, and the deference that he pays to the expressed and deliberate opinions of his esteemed fellow-labourers. To carry conviction to the reader it is not sufficient to enunciate that such a one is entirely wrong, and that the writer has made the true discovery. Such recondite questions as the knowledge of the Hindus of the Arch, the copying of stone forms from wooden models, the non-existence of sculpture and stone buildings in India before the time of Alexander the Great, the date of the great Temple of Buddha Gaya, the peculiarities of architecture, the authenticity of particular inscriptions, are matters on which the learned world is not able as yet to arrive at any absolute conclusion, and, suspending our judgment, we weigh the value of the arguments of rival authorities. The soil of India has not yet completed its new duty of giving up the buried treasures of the past. Some new excavations may suddenly stultify the fine-spun theories of the archaeologist. Our author, at p. 167, writes:—"The city of Palibothra was found by Megasthenes surrounded with a ditch. The walls were adorned with 570 towers and 64 gates." This quotation is brought forward to show that stone architecture *did* exist before the time of Asoka; and yet, on turning to p. 66 of McCrindle's *Megasthenes and Arrian*, the following passage from Strabo strikes the eye:—"According to Megasthenes, Palibothra is girded with a wooden wall, pierced with loopholes for the discharge of arrows." It is not pretended that either quotation is decisive of the point at issue, but it indicates that a reference to the Greek originals is necessary before a *cardinal fact* of so great an authority as Mr. James Fergusson on Indian architecture can be so lightly swept away.

ROBERT CURT.

Money in its Relations to Trade and Industry. By Francis A. Walker, Professor of Political Economy in Yale College, United States. (Macmillan.)

SOME of the questions discussed in Mr. Walker's treatise have much less practical

importance for English than for American readers. Since the resumption of cash payments after the war with France, there has been no controversy here like that between the advocates of hard and soft money in the United States, where it formed the main issue at the last elections; "the orators and the newspapers of the hard-money party taking the ground that the inconvertible legal tender notes issued by the Government were not money." Some of the aspects in which Mr. Walker examines the effects of a depreciated currency are, nevertheless, of great and general interest. He inclines to the view that a natural fall in the value of money brought about by an increased abundance of the precious metals is a help to industrial progress; and his reasoning on the point contains a description of the economic development of American society which will be new to many persons in England, who had been accustomed to think of America as a country where every man is engaged in business, and where there is no unemployed class of owners of inherited wealth, at least of the male sex. A change in this respect has, however, begun to show itself, which Mr. Walker ascribes chiefly to the natural course of industrial and commercial evolution. The immense scale on which modern business is carried on; the continual changes in the processes of production, in the channels of trade, and in the demand of consumers; the violent fluctuations of credit and prices; the oscillation from sanguine speculation to despondency and panic; the recurrence of disastrous crises—combine to make the conduct of industrial and commercial enterprises too arduous an occupation for men of average energy and powers. The ownership of capital accordingly no longer constitutes a sufficient qualification for the management of business, and it tends to fall under the control of a special class.

"The employing class becomes a comparatively small and highly select body of men, who control the destinies of capital quite as arbitrarily as they do the destinies of labour. That class becomes select, not by the choice of any constituency, whether of labourers or of capitalists; not by any rigid requirements upon entrance—all are in theory free to enter—but the number of those who venture is restricted by the known severity of the conditions of business, while those who undertake the risks and responsibilities of production are continually shifted by pressures and panics. From these conditions it results that but a small proportion of the capitalist class are personally engaged in business."

Thus what in America is a new class, though in Europe it is an old one, is evolved; and Mr. Walker includes among owners of capital which they do not employ "those who, from dignity and love of leisure, as is especially apt to be the case with men who have inherited wealth, are indisposed to increase their store by active exertion." The change is doubtless due in part to the influence of European notions and habits. The Old World is not merely a passive recipient of ideas from the New; it gives as well as takes; the main cause, however, is the one to which Mr. Walker refers. The latest phase of industrial development is thus reproducing in America one of the leading features of a phase of society which in Europe itself is passing away.

The chief point of view from which Mr. Walker examines this new feature of modern economy is that production tends more and more to be carried on by means of borrowed capital—the owners of capital becoming a creditor, the active conductors of business a debtor, class. A fall in the purchasing power of money accordingly lightens the burden of debt on the latter, and in his opinion is favourable to industrial and commercial progress. As his own pages show, this doctrine is not without its danger in a country that for several years has had an inconvertible currency which the State could enlarge at discretion; but Mr. Walker seems to have in view, in speaking of the beneficial effects of a depreciation of money, one—like that following the influx of the precious metals into Europe from the mines of the New World in the second half of the sixteenth century—produced by natural causes.

It should be observed that it is far from being true that money sank in Europe to about a fifth of its former value in the period from 1545 to 1640, for prices were very unequally and irregularly affected in different countries and different localities, and in some remote and backward districts were not affected at all. Both on this point and in relation to the revolution in English husbandry which attended the change from mediaeval to modern economy, Mr. Walker has been somewhat misled by preceding writers, from Adam Smith to Mr. Jacob and Mr. Cairnes. In illustration of the proposition that prices tend not only to rise faster than wages, but to rise irregularly under an increasing money supply, he observes:—

"A fact of this nature added immensely to the evils of England in the later part of the sixteenth and the earlier part of the seventeenth century. Woollen goods received an undue share of the new demand both in England and on the continent of Europe. Hence arose a demand for the wool of England, which caused an extensive change of agriculture within the island. Everywhere, in spite of complaints and prohibitory laws, arable land was converted into sheep-walks, greatly reducing the employment afforded by the cultivation of the soil. . . . Such was the condition of things in which originated the pauper system of England. Mr. Jacob and Prof. Cairnes are agreed in attributing the Poor Law of Elizabeth to the changes of productive enterprise which followed the flood of new metal from the Spanish-American mines."

Dr. von Ochenkowski's recent treatise on the economic development of England at the close of the middle ages (*England's wirtschaftliche Entwicklung im Ausgange des Mittelalters*) shows that the cry against enclosures, with the consequent conversion of arable land into pasture and destruction of villages and hamlets, was already loud in 1449, or more than a century before any silver from the mines of Potosi could have actually reached England. The mediaeval system of joint husbandry would have broken down, the process of enclosing common land would have been rapaciously and inequitably effected, and the Poor Law of Elizabeth would doubtless have been enacted though America had never been discovered.

Mr. Walker's definition of money as "that which passes freely from hand to hand through-

out the community in final discharge of debts and full payment for commodities" seems sufficiently strict and exact; but it does not follow, as he infers, that a bank-note, as such, is necessarily money. There are bank-notes and bank-notes. Were the issue of bank-notes open to all comers and unrestricted, the notes of some banks might have only a local circulation; those of many more might by no means pass freely from hand to hand, or be accepted in final discharge of debts or full payment for commodities during a crisis or a panic. On the whole, however, Mr. Walker's exposition will give satisfaction to those who, like ourselves, are for confining the term "Money" to that part of the circulation which, according to Mr. Huskisson's definition, is "not only the common measure and common representative of all other commodities, but also the common and universal equivalent." Cheques, bills of exchange, and bank-notes with only a local circulation or not being legal tender act as instruments of exchange, but are not the "common" or universal medium. A special term for the part of the circulation which fulfils this function is much needed, and the best term for the purpose is "Money."

Mr. Walker's treatise is an excellent companion to that of Mr. Jevons and Mr. Bagebot's *Lombard Street*. The student who has thoroughly mastered all three will seldom be puzzled by any question on currency.

T. E. C. LESLIE.

John Keats: a Study. By F. M. Owen. (C. Kegan Paul & Co.)

Mrs. OWEN presents herself as an enthusiastic and instructed guide for persons of poetic temperament about to enter upon the study of Keats. She is very particular to explain that she offers nothing that will be new or striking to professed lovers of the poet; and, indeed, it must be ceded that she adds no very extraordinary data to the gathering mass of criticism that is surrounding the name of the author of *Hyperion*. Perhaps even in an essay so purposely simple and elementary some side-lights from other fields of literature might have been admitted. For instance, it must have been difficult to Mrs. Owen to discuss minutely the early *Epistles*, and say nothing about Reynolds and Leigh Hunt, and to deny herself all mention of John Fletcher in criticising the versification of *Endymion*; but doubtless she regarded such speculation as likely to bring her neophyte reader too far upon unfamiliar paths of thought. As it is, she has preferred to go through the various works in order, analysing the story and giving long quotations, so as to tempt the novice, by these charming fragments, to essay an independent journey for himself through the melodious Latman mazes.

The mode in which she has performed the task so set before her would call for unqualified praise if she had not somewhat rashly attempted to find a spiritual and allegorical meaning underlying the physical and plastic art of Keats. This tendency is the most dangerous of all the pitfalls that lie in wait for the critic of poetry, and it is precisely this that led Théophile Gautier to say in his haste that the critic was the converse of the poet, and by nature his implacable enemy. That this

was an exaggeration the delightful author of *Les Grotesques* lived to prove in his own person; but we never can cease to wonder, with him, that the critic must always refuse to take a walk in the garden of poetry without dictating a serious lesson to those nine *odalisques* that inhabit it. For instance, Mrs. Owen is not content to enjoy the tangled foliage, the coloured light, the savage sweets and odours of *Endymion* without coming to the conclusion that these are not sufficient reasons for the existence of the poem, and that Keats was expressing "a vast idea" in it, Imagination searching for the Eternal Unity of Beauty, and other things merely to have thought of which would have cost Keats a headache. She is, indeed, so far conscious that her speculation has led her away from the truth that she admits that the poet very probably was not conscious of any such teaching. Yet she persists in her interpretation, and when we reach *Hyperion* she presents to us a similar thesis of an equally disenchanting kind.

In criticising a book of criticism it is hard to abstain from the appearance of fault-finding. Mrs. Owen must not consider that I impugn the general merit of her volume if I strongly appeal from her judgment upon one point. She says that "the tragedy of *Otho* is so obviously not the spontaneous work of Keats that we can gather nothing of his individuality from it." I should, on the contrary be inclined to assert that scarcely one page of *Otho the Great*—undramatic and faulty as it is as a composition—is not thoroughly tinged with the genius of Keats and contains lines or phrases that only he could have conceived. The amorous raptures of Ludolph, in particular, are closely allied to the *Odes* in style and cadence. Here is one of them, which recalls in every clause the more familiar lyric movements of the poet:—

"O unbenignest Love, why wilt thou let
Darkness steal out upon the sleepy world
So wearily, as if Night's chariot-wheels
Were clogged in some thick cloud? O changeful
Love,
Let not her steeds with drowy-footed pace
Pass the high stars, before sweet embassy
Comes from the pillow'd beauty of that fair
Completion of all-delicate Nature's wit!
Pout her faint lips anew with rubious health;
And, with thine infant fingers, lift the fringe
Of her sick eye-lids; that those eyes may glow
With wooing light upon me, ere the morn
Peers with disrelish, grey, barren and cold."

Mrs. Owen's pretty little volume will do good work if it attracts to the study of Keats those whom more elaborate analysis would leave still outside the circle of his magic charm; readers who have advanced farther will continue to look forward with unusual hope and expectation to Mr. Matthew Arnold's promised essay on the same poet.

EDMUND W. GOSSE.

A Lady's Life in the Rocky Mountains. By Isabella L. Bird. (Murray.)

THE reader who has made Miss Bird's acquaintance in Hawaii will be glad to renew it in Colorado. Our countrywoman has all the accomplishments which a tourist who essays print ought to possess. She has seen enough of the world not to imagine that

what is not English in America is peculiar to it; while her familiarity with the United States at large saves her from the equally common blunder of classing as characteristic of the Rocky Mountain region what is a general feature of the Great Republic. Her descriptions, in the informal shape of letters to friends at home, though, doubtless, like Pope's, dressed up a little for public perusal, are models of unaffected, clear, forcible writing, which convey to the reader about as nearly as any pen-pictures can the author's impressions of the places and people she has seen. It is a common complaint that when a strange country is visited it is often found to be widely different from the preconceived ideas of it derived from books. Hence a very uncomplimentary, or even uncharitable, conclusion is drawn. In reality, the writers have told no traveller's tales, but endeavoured, to the best of their ability, to describe what they saw. But they failed. On the other hand, conscious of his inability to convey to the reader's mind what he himself experienced, an unskilful writer, by daubing on the colours with too large a brush, lays himself open to the charge of exaggeration. In either case the result is the same.

Miss Bird is too skilful a limner to paint after any such 'prentice fashion. Her sketches of mountain scenery in summer bring with them the scent of pine forests and brawling "creeks," while the snowy valleys of Colorado are in her pages equally true to nature. The rough and the smooth—and especially the rough—appear in all their reality. Her American ladies do not "sit, and sit," at Denver Balls, "like blue grouse on pine logs until they have tuk root," nor are her Americans stage Yankees, who, habitually chew tobacco and whittle the furniture with their bowie knives. Her outlying settlers are sketched in all their natural unkeptness, without the faintest dash of the picturesque; while her thorough-paced ruffians have rarely blonde hair, blue eyes, and the manners of Lothair. Most extraordinary of all, in this perfectly unconventional book on the Rocky Mountain country, though the authoress travelled farther a-field and saw infinitely more than half of her male predecessors combined, she does not once mention, from the first page to the last, either "scalping," "the war path," or "the Great Spirit:" all of which is as novel as it is pleasant, and proves Miss Bird to be a lady emphatically "without any nonsense in her." She does what seemeth good in her own eyes, and after she has done it, and told us all about doing it, we are not shocked, but surprised that we should have read twice over in the table of contents the announcement of the fact. A highly cultivated gentlewoman, she rides in a dress of her own invention, after the fashion of Fatima, the Kurdish Princess, to the admiration of the Western plainsmen. Unescorted even by one of her own sex, she goes everywhere, and, being endued with abundant courage—moral and otherwise—sees and experiences much, at a cost to her purse which the ordinary tourist, with his wagons, "broncos," "guides," and so forth, never demeans his imagination to. Her movements were heralded in the "per-

sonals" of the local papers, and wherever she went she was sure to find the account of the "English lady" in the *Denver News* sufficient introduction to the most remote pioneers, who, it may be remarked, are, contrary to the common belief, as reservedly suspicious of a "foreigner" as the most uncouth pitman who ever "heaved" the inhospitable "half brick" at the stranger's head. Storm-stayed in the mountain, she shared a log cabin with two young men for a month, and they parted on terms of mutual respect. "They could have gone on in this way for a year." One of her friends was the notorious "Rocky Mountain Jim," an Irish-American desperado of the deepest dye, but "a perfect gentleman when sober," which—unhappily—was but seldom. On another occasion she was riding over a solitary mountain path when a horseman joined her, got her a fresh animal, and accompanied her for ten miles. He was a pleasant-faced youth—fair haired, blue eyed, and ruddy complexioned, with curls hanging nearly to his waist. "There was nothing sombre in his expression, and his manner was respectful and frank"—albeit, this picturesque individual was a riding armoury of lethal weapons, pistols, revolvers, bowie knives, and carbines, while his saddle, dress, and accoutrements were in keeping. Miss Bird found him "what is termed good company," and they parted with regret. She was afterwards not a little astonished to find that her pleasant *compagnon de voyage* was "Comanche Bill—a real gentleman"—when not engaged in slaughtering Indians, to the pursuit and extermination of whom this be-curbed and be-revolvered Bayard devoted his well-spent life. Yet from men of this stamp there is little danger to any woman, for in Western America there is, except among the rudest of "the half-horse, half-alligator" type of settlers, an almost exaggerated courtesy paid to what is not, in Colorado at least, always the "weaker sex."

The only people from whom she had some difficulty in extracting civility were the remote settlers of the class described on pp. 44, 52, 53, 57, 58, and 59, who, though a most unpleasing group, are—we speak from long experience of the same class of people—sketched with painful fidelity. Miss Bird has, indeed, no Utopian pictures of frontier life for us. Childhood is extinct in the western territories:—

"I have never seen any children, only debased imitations of men and women, cankered by greed and selfishness, and asserting and gaining complete independence of their parents at ten years old. The atmosphere in which they are brought up is one of greed, godlessness, and frequently of profanity. Consequently, these sweet things seem like flowers in a desert" (p. 77).

She has an equally low opinion—unfortunately a not unjust one—of public morality in these regions, a conclusion which, in Miss Bird's case, is that of a keen observer, not prejudiced against the Americans, but, on the contrary, very well disposed towards them and their country. The kind of settlers who come now and then from England is exemplified in the case of a "Dr. H.," whose experiences she relates:—

"Except for love, which here, as everywhere,

raises life into the ideal, this is a wretched existence. The poor crops have been destroyed by grasshoppers over and over again, and that talent, deified here under the name of 'smartness,' has taken advantage of Dr. H. in all his bargains, leaving him with little except food for his children."

And no wonder! "Both"—the doctor's wife and himself—"are fitted to shine in any society, but neither had the slightest knowledge of domestic and farming details. Dr. H. did not know how to saddle or harness a horse; Mrs. H. did not know whether you should put an egg into cold or hot water when you meant to boil it." Yet this cockney pair, hearing in an evil hour of Colorado, with its "unrivalled climate, boundless resources," &c., &c., and "fascinated, not only by these material advantages, but by the notion of being able to found or reform society on advanced social theories of their own," arrived at Longmount and bought up a "claim rather for the beauty of the scenery than for any substantial advantages"—in a brief time to be swindled in land, goods, oxen, everything; and, to the discredit of those children of nature, the neighbouring settlers, seemed to be regarded as fair game. The arrival of a "managing woman" like Miss Bird brought something like order out of the chaos into which such a family was sure to have got.

"I had a large 'wash' of my own, but a clothes-wringer which screws on to the side of the tub is a great assistance. . . . After baking the bread, and thoroughly cleaning the churn and pails, I began upon the tins and pans, the cleaning of which had fallen into arrears, and was hard at work, very greasy and grimy, when a man came in to know where to ford the river with his ox-team, and, as I was showing him, he looked pityingly at me, saying, 'Be you the new hired girl? Bless me, you're awful small!' Yesterday we saved three cwt of tomatoes for winter use, and about two tons of squash and pumpkin for the cattle, two of the former weighing 140 lbs. I pulled nearly a quarter of an acre of maize, but it was a scanty crop, and the husks were poorly filled. I much prefer field work to the scouring of greasy pans and to the wash-tub, and both to either sewing or writing. This is not Arcadia"—

not unless there were in Arcadia much toiling and mowing, many wash-tubs and greasy pots, as most probably there were.

Descriptions of these "new countries" require to be often revised, for, though the scenery, except when the miner and the agriculturist have been scarring its fair face, remains much the same, the men and their surroundings change. Indeed, Miss Bird's own book is a little out of date. For instance, there is now a road, and a stage-coach to Estes Park, and an hotel has taken the place of Griff Evans' Ranch as the place where visitors are "taken in." In fact, though there is no direct clue as to the date of her visit, it may in general terms be said, as in the plays, that "two years are supposed to intervene" between that event and the publication of the book. Denver is no longer the Denver of Hepworth Dixon. A shooting affray in the street is as rare there as in San Francisco, and the visitor no longer sees men dangling to the lamp posts when he looks out in the morning. But it is a wild town nevertheless. Hither come miners, teamsters, loggers, herdsmen, and trappers to

waste in mad revelry the earnings of months. "Comanche Bill," "Buffalo Jack," and "Mountain Jim" find here the notoriety which they seek, even though it compels them "to kill a man every time" they come to Denver. Women are scarce in the winter,

"I only saw five the whole day. There were men in every rig: hunters and trappers in buckskin clothing; men of the plains with belts and revolvers, in great blue cloaks, relics of the war; teamsters in leathern suits; horsemen in fur coats and caps, and buffalo hide boots with the hair outside, and camping blankets behind their huge Mexican saddles; Broadway dandies in light kid gloves; rich English sporting tourists, clean, comely, and supercilious looking; and hundreds of Indians on their small ponies, the men wearing buckskin suits sewn with beads and red blankets, with faces painted vermilion, and hair hanging lank and straight, and squaws, much bundled up, riding astride with furs over their saddles."

In these pleasant pages we have lively, easy, unlaboured accounts of the glories of Colorado scenery, the lovely "parks" in their summer gaiety and winter grandeur, the half-mad desperado, the silly exclusive English tourist who, for his country's credit, ought to be kept at home; just as Miss Bird, for exactly the same reason, ought to be sent abroad; the "temperance settlement" of Greeley (where, however, water is scarce), and the "rowdy" towns of the frontier. Here, for instance, is a picture in a few words of Truckee, a Californian town where "people do as they like." It

"was at the height of its evening revelries—fires blazing out of doors, bar-rooms and saloons crammed, lights glaring, gaming tables thronged, fiddle and banjo in frightful discord, and the air ringing with ribaldry and profanity" (p. 24).

Cheyenne is described as "a God-forsaken place"—a pandemonium of "rowdies" whom the decent towns of older America had spewed out, the scum which advancing civilisation had pushed before it; and pistol affrays were of almost hourly occurrence. But, under the moralising influences of Judge Lynch and a coil of rope, it is "now as safe as Hilo." But still piety is not its *forte*. The roads resound with atrocious profanity, and the savagery of the saloons and bar-rooms is repressed, not extirpated.

But were we to select all the choice passages in Miss Bird's book, the injustice would be done her of reprinting the most of it. Altogether, she gives a favourable picture of Colorado, but it is mainly because of its fine scenery and as an asylum for consumptives. In her volume the scientific enthusiast need expect no new lights on Colorado geology or natural history, though the account of Long's Peak may excite a languid interest in the minds of the superior persons who despise Mont Blanc and live only to climb something loftier. But for common-sense people who seek a faithful reflection of Colorado and its inhabitants, there is no book with which we are acquainted half so good. To a writer who has read and reviewed, according to his lights, a shelf-full of volumes on the "Far West" it comes as a gleam of better things. It recalls a fast fleeting faith in the final purpose of Pullman Cars and the Pacific Railroad. It almost conjures back a

vanishing trust that Providence has not permitted even tourists and their publishers to exist in vain.

ROBERT BROWN.

CURRENT LITERATURE.

The Old Régime. By Lady Jackson. (Bentley and Son.) Lady Jackson's previous work will have prepared readers for her present one. If anybody cares to read a collection of anecdotes and personal traits strung together in a kind of historical order, *The Old Régime* will suit him very well. Dealing with its subject it could hardly fail to be amusing after a fashion. But we must frankly confess that whatever praise we can find for the book must be for the subject and not for the treatment. Lady Jackson is not a good writer, and, even if she were, she would make her writing nearly intolerable by adopting the extraordinary hybrid jargon which distinguishes this book. "It was the *salon* of M^{me}. de Lambert, *une grande dame* of the *vieille cour*," would be capital on the stage and intended as a burlesque; but in a book, and recurring constantly, is neither more nor less than unbearable. Suppose we were to review Lady Jackson by saying that her book is a *commémoration* not of the most *attractants* and hopelessly *badigeonné* with *brides* of French? It is unlucky, too, that the author has apparently no qualification for the discussion of her subject except a fancy for some of its lighter features. Her historical and political remarks are almost always hackneyed, and occasionally, as in her sketch of Law, by no means in accordance with the best and most recent authorities. Of really luminous illustrations of the social aspects of the time we can find none. But worst of all, perhaps, are her literary criticisms. Whether Lady Jackson has evolved these out of her own brain and readings, or has got them from respectable critics of the Villemain type, we cannot pretend to say. But when we find an author accusing M^{me}. de la Fayette, who was more the foundress of the modern novel than any other single person, of being good for nothing but sickly sentimentality, it is excusable to shake the head. Even head-shaking becomes superfluous when we come to the remarkable judgments which follow at intervals. Marivaux, we are told, is "bombastic;" and, while we are wondering whether it would be possible to discover a more hopelessly inappropriate epithet, we come upon the statement that Piron wrote "platitudes." Diderot's writings are, it seems, "as repelling as he himself was coarse and repulsive;" Prévost's works—shade of Manon forgive an erring sister!—are "nightmare romances;" *La Nouvelle Héloïse* is "repellingly dreary." Indeed, "repelling" is a favourite word of Lady Jackson's. We shall hope, for her sake, that the books she criticises have repelled her so much that she has not read them. Perhaps no century requires for comprehension of its political and social side so thorough a knowledge of its literature as the eighteenth century in France. It is not surprising, therefore, that these volumes should be nearly valueless regarded as anything else than a collection of ill-told stories and ill-written description.

Travel and Trout in the Antipodes. By W. Senior. (Chatto and Windus.) The chief interest of this book consists in its bright sketches of New Zealand and Tasmanian scenery. Mr. Senior (better known to angling fame as "Red Spinner") took a holiday trip from Queensland mainly to catch trout, and naturally avoided politics, commerce, and statistics. He who desires to know the present aspect of these countries and can content himself with the flying impressions which the author gained of Launceston and Hobart Town,

and the extremely English character of the country districts of Tasmania, will here find them very pleasantly recorded. Crossing to the Bay of Islands he passes through the two larger islands of New Zealand, briefly describing their chief towns. The account of Auckland, with our own blackbirds, larks, and finches singing among English shrubs, also imported, and Mount Eden rising over the Isthmus City, should go far towards stopping *Heimweh* among its colonists; while the young Maori belle, dressed in a fashionably cut sky-blue silk dress, with duchess hat and feather, and parasol to match, whom Mr. Senior saw reclining in a well-horsed buggy, but smoking a short black pipe, may perhaps dispose a stay-at-home Englishman to look with more equanimity upon the "faster" specimens of his own womankind. Perhaps the less said about the trout-fishing which Mr. Senior obtained the better. He vouches for a trout of fifteen pounds, and several of four, five, eight, and nine pounds being killed in Tasmania, while in the New Zealand Avon they seem to run even larger; but he caught no monster himself, and, after the manner of his fraternity, was supremely contented with two brace of fish, or two-and-a-half per day. Many days he was not so successful as this, and usefully proclaims that, with all its drawbacks, no country is so charming as England to the fly-fisher; but he apparently forgets the trout-fishing of the Adirondacks and the Bangle Lake in Maine. It is as yet premature to take a fishing tour to the Antipodes. Much honour, however, is due to the acclimatizers of trout and salmon for the results they have already achieved in the islands of the Pacific. Thanks to Mr. Youl's perseverance, trout and salmon were successfully introduced into Tasmania in 1864, colonial fly-fishers having previously been obliged to solace themselves with a kind of small and migratory grayling (*thymallus Australis*). In rivers of such piscatorial names as Clyde and Shannon, it seems almost a necessity that, as has really happened, trout should thrive apace. As they grow large, however, they develop the bad habit of refusing to rise, to which the abundance of grasshoppers and other insects greatly contributes. Tasmanian salmon have been shrewdly suspected to be only salmon trout; but, as we write, Mr. Youl vouches that a real *salmo salar* of the magnificent weight of three and a-quarter pounds has been caught in October, 1879, in the Derwent. Trout from the well-known breeds of Wycombe and Alton were first hatched in the south island of New Zealand three years later. They appear to grow and propagate even more marvellously than those in Tasmania. Some eight years ago, twenty-five trout were put into the little River Oust, near Dunedin, and in four years the water was fit for fishing. Excellent trout may also be taken in the Avon. Few rivers are at present, as is only wise, open for fishing. "In the course of a year or two, however," says "Red Spinner," "New Zealand should be a magnificent island for the trout fisher." It is a pity that a volume of considerable interest should be marred by several pages of fine writing. A bush fire has thus proved a great snare to Mr. Senior, while he altogether loses control over his pen among the wonders of the volcanic district of Lake Tarawera. Still, this book is a distinct advance on Mr. Senior's last. His lavish use of Scripture texts on any ordinary subject is another blemish, and there is no possible need for him to call a blacksmith's apprentice "a horny-handed young Vulcan."

Debrett's Peerage, Baronage, and Knighthood for 1880. (Dean and Son.) Debrett has always been distinguished for accuracy and fullness of information, and in the present issue these features are especially conspicuous. Confining itself wholly to the living and avoiding

the intricacies of genealogical descents, it is able to give minuter details respecting the titled classes than are to be found in any other kindred book. Dr. Mair in his Preface has some sensible remarks on the question of precedence, and, in spite of the dictum of the *Heralds' College*, is disposed to place the sheriff, when discharging his office, before the lord lieutenant. It is rather remarkable that in the past year the ranks of the peerage and of the baronetage received no additions, and the number of deaths in these two orders was below the average. These circumstances may have lightened the labours of the editor, but it is obvious that he has spared no pains to maintain *Debrett* at its previously high standard, and to increase its advantages as a book of reference.

Memoir of Henry Armit Brown. Edited by J. M. Hoppin. (Lippincott and Co.) This beautifully printed volume is not likely to be extensively sought by the English public, to whom the name of its subject was generally unknown, but it will be cordially welcomed by the select few whose acquaintance he made during his occasional visits, who remember him as one of the most promising young Americans whom it was ever their fortune to meet. Such was the verdict passed upon him here, while at home he was beloved by a more extensive circle of personal friends, and his untimely death lamented by the general public, from whom his brilliant talents and irreproachable character had won an uncommon measure of admiration. There are not usually, in the history of a young man who dies at the age of thirty-three, many events by which his memory may be kept green beyond the limits of his own family, and Armit Brown's future fame will rest mainly upon the extraordinary efforts of his genius in the shape of four popular orations which have been wisely reproduced in this volume. As specimens of American oratory they have probably not been equalled, certainly not rivalled, since the days of Daniel Webster; and it is the indications which they afford of what he might have become, as a barrister and a statesman, that will impress the reader with the loss his country has sustained. The biography is evidently the work of someone who loved and was closely related to him, and hardly needed the editorial supervision of Prof. Hoppin to secure its cordial reception, but we should be sorry to have missed the prefatory note by the latter, which is in itself a profound and perfect epitaph. The portrait prefixed to the volume is one of the most life-like and artistically executed imaginable, and to those who, like the writer of this paragraph, knew and esteemed its living subject it will be a priceless treasure.

My Son, give me thine Heart. Sermons preached before the Universities of Oxford and Cambridge, 1876-78, by C. J. Vaughan, D.D. (Macmillan.) *Disciples in Doubt.* Five sermons preached before the University of Cambridge by J. B. Pearson, LL.D. (Cambridge: Deighton, Bell and Co.) *Movements in Religious Thought: I. Romanism, II. Protestantism, III. Agnosticism.* Three sermons preached before the University of Cambridge in the Lent term, 1879, by E. H. Plumptre, D.D. (Macmillan.) We have before us three volumes of university sermons. The Master of the Temple is a preacher of inexhaustible fertility. Few indeed of his discourses are likely to be a permanent addition to our homiletic literature; very few of them touch the religious problems and perplexities of our day or are marked by much depth of thought, but they are always earnest, devout, and practical, and, if rarely eloquent, are never dull. The sermons before us present to us the preacher speaking with the younger part of his audience mainly in view, and reminds us of one of the earliest and best of his many volumes — *Memorials of*

Harrow. Of a different order are the volumes of Dr. Pearson and Prof. Plumptre. In Dr. Pearson's earlier sermons we have discussions of subjects suggested by J. S. Mill's *Three Essays on Religion*. The sermons are of the apologetic cast so commonly characteristic of the university pulpit. Dr. Pearson gladly avails himself of Mill's fierce attack on "Sentimental Theism," and adds, in an effective passage,

"The phrases of admiration that have been heaped upon Nature seem to me to express a kind of sentiment that may almost serve instead of a religion so long as a man has good health, an ample income, a pleasant home in a pretty country, and feels no anxiety about the woes and sorrows of his brethren that is not sufficiently met by an annual subscription to the county hospital."

Prof. Plumptre's three sermons possess merits of a much higher order than is common. Every page bears marks of a sound judgment, a hopeful and courageous heart, and a wide and varied culture. Throughout we find a generous appreciation of the merits of systems and men from whom he differs that is far from being the ordinary characteristic of the so-called "Broad" school in the Church of England. We do not know anywhere a juster estimate of the more important of the contemporary "movements in religious thought" in England.

Joan of Arc, by Janet Tucker, forms the latest volume of the "New Plutarch" which is being published by Messrs. Marcus Ward and Co. Miss Tuckey has done her work well; she has mastered the latest authorities, and has written her book with fervour and full sympathy with her subject. We might have wished for a little more reserve in style; and we fear that Miss Tuckey was not educated on the severe principle by which most writers would confess that they had greatly benefited—"After you have written anything, read it over calmly, and strike out all the epithets." This does not, however, affect the general character of the book, which is sound, scholarly, and free from exaggeration, though aiming too much at becoming pictorial.

NOTES AND NEWS.

A WORK of great interest, viz., Mr. Jefferson Davis's *Memoirs of the Civil War*, will be published in the autumn by Messrs. Appleton and Co., of New York. Mr. Davis is now busily engaged in completing this historical narrative, which will appear in two large volumes, illustrated with views and portraits.

IN Messrs. Hatchards' forthcoming list will be found the announcement of a short volume on the history of the parish of St. George-in-the-East, entitled *An East End Chronicle*, by the Rev. R. H. Hadden, B.A., late of Merton College, Oxford, curate of the parish, with an Introduction by the rector, the Rev. Harry Jones, M.A.

M. ERNEST RENAN will lecture on "Marcus Aurelius" at the Royal Institution on Friday evening, April 16.

WE understand that Mr. Edgar Vincent, of the Coldstream Guards, whose *Handbook to Modern Greek* we reviewed favourably some weeks ago, has now in preparation an edition of the Acts of the Apostles in the Ancient and Modern Greek versions, printed parallel, and with notes pointing out the differences in language. The Greek of the New Testament is specially appropriate for such treatment, as holding an intermediate place between the strictly classical and the modern language. The book will, therefore, be very instructive to those who wish to make acquaintance with Modern Greek, and its subject being so universally familiar is likely to widen considerably

the interest taken in the language among Englishmen.

THE volume of essays by the late Mr. Bayard Taylor, which will be issued almost immediately, contains critical papers on Tennyson, George Eliot, and Thackeray.

MR. H. BADEN PRITCHARD'S new novel, *George Vanbrugh's Mistake*, will be published shortly by Messrs. Sampson Low and Co.

MR. HARDY, author of *The Return of the Native*, will contribute a story entitled "Fellow Townsmen" to the April number of the *New Quarterly Magazine*, which will also contain, among other articles, one on Marlborough, in continuation of the series of monographs by public school men which have recently been devoted to "Our Public Schools."

FOR the coming elections, Mr. Stanford has published Miss Shaw Lefevre's political maps uncoloured, so that, as the results of the elections become known, the colours can be added, and the state of the parties seen at a glance.

MESSRS. HURST AND BLACKETT have in the press in two volumes a new work entitled *The Village of Palaces; or, Chronicles of Chelsea*, by the Rev. A. G. L'Estrange, author of *The Life of the Rev. W. Harness*, &c. Mr. L'Estrange has made a complete study of every point of interest, historical and topographical, relating to this popular suburb, and his pages will also contain a series of biographical sketches of the distinguished persons who have been among its principal inhabitants, from early times to the present day. Mr. L'Estrange has been at great pains to identify the sites of the many remarkable buildings which formerly caused Chelsea to be called "The Village of Palaces."

IT is said that Victor Hugo has completed a new drama entitled *Les Jumeaux*, of which Louis XIV. and the Man with the Iron Mask are the heroes.

PROF. MINAYEFF, a distinguished Russian scholar, is at present staying at Bombay with a view of collecting Sanskrit MSS. bearing on the Buddhist religion.

THE *Indian Spectator*, published in Bombay, in general a great admirer and no unworthy rival of its London namesake, reads the latter a severe lesson on its review of *The Sacred Books of the East*, which it characterises as "simply antediluvian."

MR. EDWARD MAWLEY, F.M.S., has in the press a pamphlet on the weather of 1879 as observed in the neighbourhood of London, and compared in all respects with that of an average year, with meteorological tables and a diagram. It will be published by Messrs. Bemrose and Sons.

A VALUABLE donation has lately been made to the Lambeth Palace Library by Mr. John Henry Parker, O.B., who has given many of his works on Roman and English archaeology, as well as others of a suitable nature. The architectural drawings by the late Edward Blore, F.S.A., of Lambeth Palace as restored and enlarged by him about 1830, have also been presented by the Rev. E. W. Blore, of Trinity College, Cambridge.

THE *Geography* which was left in Mr. Stanford's hands by the late Mr. Keith Johnston will be published about the first week in April.

UNDER the title of *The Iron Roads Dictionary and Railway Travellers' Illustrated Companion*, Messrs. Waterlow and Sons (Limited) are preparing, with official sanction and assistance, a complete handbook of the English railways. The compiler is Mr. J. B. Somers Vine, author of several works of reference published by the same firm.

THE *Calcutta Englishman* states that Dr.

Bellew has placed in the hands of Messrs. Thacker, Spink and Co. a work on *The Races of Afghanistan*, which will contain much new information.

MESSRS. HURST AND BLACKETT will publish next week a new novel by Mr. Joseph Hatton, entitled *Three Recruits, and the Girls they left behind them*, in three volumes, and, early in April, *Poet and Peer*, a novel by Hamilton Aidé, in three volumes.

MR. J. E. BAILEY has made an interesting discovery respecting Richard de Bury, the author of the *Philobiblon*. In his appointment as Dean of Wells, in 1322, he is described as "Richard de Bury alias de Sancto Edmundo," and the latter is the name found on the roll of the chamberlains of Chester for the year 1321; but neither Sir Peter Leycester nor his subsequent editors had any suspicion of the identity of the chamberlain with the man who was then tutor to the Prince of Wales, afterwards Edward III., who made him Lord Treasurer of England and Count Bishop of Durham. It was customary for priests, when they filled offices of importance, to employ the name of their birthplace as a surname; and hence the author of *Philobiblon*, known first as Richard d'Aungerville, then as De Saint Edmunds (perhaps from the monastery), was, in his later years, known as Richard de Bury (now Bury St. Edmunds), where he was born.

THE *Anchor* is the title of a new religious weekly which will make its appearance in London in the course of the next few weeks. Like the *Rock*, its principles will be of an ultra-Protestant character.

THE King of Portugal, who has successfully translated several of Shakspeare's plays, will shortly issue a Portuguese version of *The Merchant of Venice*.

M. GOOVAERTS has published at Antwerp a book on the origin of gazettes and periodical newspapers; in which he claims to have proved that Abraham Verhoeven (born at Antwerp, June 22, 1580) was "not only the first gazetteer of Europe, but also the inventor of the illustrated paper." The first number of his venture which has fallen into M. Goovaert's hands contains an account of the Battle of Eeckeren, fought May 17, 1605. From the number for April 14, 1609, it appears that the price was two sous per copy. After 1611 the publication of Verhoeven's paper was more systematic and regular, and, in 1622, 179 numbers were published in all. In 1629 it became a weekly journal under the title of the *Wekelyke Tydinghe*. In 1637 Verhoeven recognised its financial failure, and made it over to the publishing firm of Verdussen. An interesting review of the work from the competent pen of M. C. Ruelens appears in the *Athenaeum Belge* of the 15th inst.

A NEW Socialistic organ has appeared at Zürich, under the title of *L'Ordre Social*. Although its scope does not exclude the natural sciences, philosophy, statistics, criticism, or literature, its aim is distinctly Socialistic.

M. V. BOUTON, of 41 Rue Saint-Jean, Brussels, is preparing a *facsimile* of the *Armorial* of one Gelre, a Herald of Arms, A.D. 1334-90, and has printed a list of the names contained in his collection, in order to get any information that he can about the men and families mentioned in this early *Armorial*. The second name in it is that of John Abbernethe—a namesake of our famous surgeon—and among its followers are the names of Cobham, Courtenay, Cromwell, Latimer, Lenox, Morley, Murray, Nevill, Ramsay, Salisbury, Wye, Wyld, &c. He asks help from English antiquaries.

WE learn from the *Revue Critique* that M. Amédée Tardieu has just brought out the third and concluding volume of his translation of

Strabo.—M. Delpech, author of the well-known study on the Battle of Muret, is engaged on a similar work on the Battle of Bouvines.—M. Cavvadia has been appointed Professor of Archaeology in the University of Athens.—M. M. Deffner proposes to edit a fortnightly journal dealing with Neo-Greek literature.

LOVERS of Italian literature will welcome a bibliographical work which, under the title of *Opere della Biblioteca Nazionale pubblicate dal Cav. Felice le Monnier e Successori, descritte ed illustrate da Camillo Raineri Bischia*, has just been published by Signor Vigo, of Leghorn. The compiler has not given the world a mere cut-and-dry bookseller's catalogue. A carefully detailed bibliographical description of each book in the list is accompanied by a critical appreciation of its author, while the monotony is agreeably broken now and then by "Novelle," reprinted from scarce works in most instances, and intended to give the general reader some idea of the greater masters of Italian fiction. The book is handsomely got up and printed, although the paper would not compare favourably with that on which are printed the *éditions de luxe* to which we have grown familiar bearing the names of such publishers as Lemerre or Quantin.

MESSRS. LOESCHER, of Rome and Turin, have in the press the second and last volume of the *Biblioteca Arabo-Sicula*, a collection of Arabic texts on the geography, history, biography, and bibliography of Sicily selected and translated into Italian by the historian Michele Amari. They are also bringing out a folio edition of the same work (as a continuation of Muratori's *Rerum Italicarum Scriptores*), of which the first number has already appeared.

AN interesting report has been drawn up by Mr. John Fryer on the department for the translation of foreign books at the Kiangnan Arsenal, Shanghai, in which, after giving an account of its history, he furnishes a detailed explanation of its system of working. The department has been at work, as far as publication is concerned, since 1871, and in this period works have been prepared dealing with the following subjects:—Mathematics, surveying, &c., engineering, chemistry, geography, geology, mining, &c., astronomy and navigation, physical science, medicine, arts and manufactures, naval and military science, chronology, naval architecture, history, and international law. Ninety-eight complete works have been published, forty-five have been translated and are in various stages of preparation, and thirteen are now in course of translation.

SIGNOR CARRARA, of Milan, has brought out a second edition, enlarged by many hitherto unpublished verses, of the poems of Emilia Fua-Fusinato.

AN Italian edition of Thackeray's *Vanity Fair* will shortly appear in Rome, translated and carefully edited by Signor G. B. Martelli.

PROF. CRANE, of Cornell University, is preparing for publication a work on the Folk-Tales of Italy which is likely to prove as interesting to the general reader as it will be valuable to specialists. That he is well qualified for the task he has undertaken is shown by the fact that articles of his upon Italian folk-lore, which have appeared in the *North American Review* and *Lippincott's Magazine*, have been translated into Italian by Signor Pollacci Nuccio, Director of the Archives of the Senate of Palermo, and published in the *Giornale di Sicilia* and the *Effemeridi Siciliani*.

MESSRS. MACNIVEN AND WALLACE, of Edinburgh, announce for publication a series of works by well-known religious writers, to be entitled *The Household Library of Exposition*, and to consist of expository lectures on the short books and connected passages of Scripture,

The first volume, by the Rev. Dr. Maclaren, of Manchester, will be published in April.

MESSRS. CASSELL, PETER, GALPIN AND Co. will publish in a few days a work entitled *Political and Legal Remedies for War*, by Sheldon Amos, M.A., late Professor of Jurisprudence in University College, London.

A NEW novel by Mr. Charles Gibbon, entitled "Fancy Free," will be commenced in the *Glasgow Weekly Mail* early next month. The principal action of the story takes place on the Grampian Hills and in Yorkshire.

NEW MSS. IN THE BRITISH MUSEUM.

SINCE our last notice of MSS. purchased for the British Museum, the following additions to the collections have been made. The most important historical papers are those of the Family of Nicholas, the main part of which are the official and other correspondence and papers of Sir Edward Nicholas, Secretary of State under Charles the First. Among them are some valuable documents relating to the *Eikon Basilike*; the arrest of the Five Members; the negotiation of Montreuil, the French ambassador in Scotland, with Charles for his surrender to the Scotch army; and letters of Elizabeth Queen of Bohemia. Of the same period is a nearly contemporary copy of a journal of proceedings in the House of Commons kept from 1642 to 1647 by Lawrence Whitacre, member for Okehampton. Mr. S. R. Gardiner has presented transcripts of State Papers at Simancas and in other foreign archives concerning the reign of James the First. There is also a volume of Exchequer Papers of the years 1570-1799; another of documents relating to the Mint of 1599-1677; and some papers relating to the accusation brought against Francis Creswicke of complicity in Monmouth's rebellion. Of some rarity is an assessment-roll for levying Peter's Pence in the county of Leicester in the fifteenth century; as well as the book of "Police et Discipline" of the Walloon Church of Norwich, drawn up in 1589. A copy of Dante's *Divina Commedia* having marginal notes and bearing the date of 1379 came from the library of Sir Anthony Panizzi. A very valuable MS. has also been purchased, containing poems and romances in English of the fifteenth century collected by R. Thornton; and also Wycliffe's version of the Psalms and poetical books of the Old Testament of the fifteenth century. The Welsh language is well represented in a collection of poems of the seventeenth century, in seven volumes; and in a series of transcripts of poems made in the last and present centuries, in forty-nine volumes, the gift of Miss Maurice, of Highgate. Among the miscellaneous volumes are *Tractatus de Sphaera et de Algorismo*, fifteenth century; papers collected by Sir Anthony Panizzi relating to Boniface VIII. and the Templars; *Ricordi politici* of Lelio Marretti, seventeenth century; autograph letters of Cardinal Alberoni, 1718; Louis-Philippe, 1841; of George Ellis, W. Giffard, James Hogg, J. H. Frere, and others addressed to W. S. Rose; and of Daniel O'Connell, 1834; letters and memoranda of William Cobbett, with some of his contributions to the *Political Register*; a tour in Iceland in 1818; and anecdotes of the Franco-German War, the French Commune and Republic, to 1873. Many volumes of music have been added, viz.:—Madrigals arranged in score by E. P. Warren, in two volumes; and compositions of Paganini, F. Commer, F. S. von Wartensee, J. André, G. B. Casali, F. Dentici, S. Neukomm, C. S. Binder, C. H. Graun, C. F. A. Billert, N. Piccini, and V. Novello.

ST.-SIMON'S PAPERS.

THE Duc de St.-Simon, the famous author of the Memoirs relating to the reign of Louis XIV. and Louis XV., was not only a writer of genius, but likewise an amateur and a politician. As an amateur, he was the owner of a collection of MSS. containing some very rare documents, and particularly some appendices to his Memoirs; as a politician he played an important part, more especially as ambassador to Spain, in 1721. In the latter capacity he kept in his own hands a number of curious documents concerning his own personal history as well as that of the foreign relations of France. M. de Boilisle, the new editor of the Memoirs (the MS. of which is now the property of the firm of Hachette), has hitherto sought in vain for permission to consult the MSS. belonging to St.-Simon which are preserved in the *Dépôt des Affaires Etrangères*. One of the first acts of the new Administration, the establishment of which we have recently announced, was to allow access to the papers of this illustrious writer. M. de Boilisle will henceforward be able to work undisturbed at a complete edition of the Memoirs, the appendices included; and M. Drumont will be enabled to study the Spanish embassy, which is his special subject. It is said that this liberality, which contrasts so favourably with the former proceedings with regard to the archives, is due to the personal intervention of M. de Freycinet, Minister for Foreign Affairs. He has earned thereby the gratitude of the literary world.

MAGAZINES AND REVIEWS.

THE *Deutsche Rundschau* for March has the beginning of a paper, by Georg Brandes, on "Prosper Mérimée," whom the writer regards as a romanticist who was struggling to gain the purity and restraint of classicism. Herr Steub writes a pleasant article on "Tyrolean Culture and Society." Karl Hillebrand contributes an article, marked by his usual vivacity, on "Metternich," in reference to the recently published Memoirs. His general conclusions are thus summarised:—"There were two Metternichs, one before and one after 1815. Metternich the practical statesman became Metternich the theorist. It is a pity that the latter wrote the history of the former."

In the *Revue Historique* M. Lallier writes a careful article on "The Trial of C. Rabirius." He takes the view that the election of Cicero to the consulship marked a re-organisation of the Optimates party which Caesar was anxious to overthrow. Cicero, in his desire to identify the cause of the Senate with that of the Republic, was willing to sacrifice his own past. His intervention in the case of Rabirius was due to a wish to set forth the advantages of a union of the two orders, and so to express clearly his political position. M. Bréard's extracts from the "Memoirs of Jean Doublet of Honfleur" continue to be interesting in their relation with English affairs. The Norman Corsair gives much interesting information on the naval war of France and England from 1690 to 1695. Especially curious is his account of carrying to Leith in 1691 an engineer to aid the Duke of Gordon in his attempt to hold Edinburgh Castle for James II. Prof. Stern makes a useful contribution to historical bibliography by an account of works published in Germany since 1877 dealing with the history of the Reformation. Prof. Stern also contributes an appreciative notice of Seeley's "Life of Stein."

THE *Bibliothèque Universelle et Revue Suisse* has an article, by M. Rambert, on "The Swiss Flora and its Origin" which gives an excellent *résumé* of knowledge that would interest tourists in Switzerland. M. Leger

writes on the "Literary Renaissance in Bulgaria," which began chiefly in the present century. The quotations which M. Leger gives from Bulgarian writers present the most melancholy picture of the deadening results of the tyranny under which they laboured.

Le Livre for March contains an article on the British Museum Reading Room which is pretty well confined to a simple enumeration of the rules and arrangements of that very admirable institution. A paper on the "Incunabula" of the Paris Arsenal Library busies itself for the most part with the Bibles and theological works of the collection which the name of Nodier, no less than its literary riches, has endeared to lovers of books. A well-deserved notice is given to J. C. Brunet under the title of "Un Grand Bibliographe." On the whole, the section of "Bibliographie Ancienne" is perhaps inferior to the contents of the first two numbers. It is, however, enriched by an unpublished portrait of Rousseau which represents him as much less "woe-struck and minatory" than the usual specimens of his iconography. The portion of the periodical which is devoted to current events keeps up its value. We may notice in particular an admirable review of *Nana* by M. Louis Ulbach, in which the literary shortcomings of M. Zola's last *pièce de conviction* are indicated in a fashion which could hardly be surpassed. Not the least attraction of the Review to students and book-lovers is to be found in the advertisements, where notice of not a few curiosities and novelties is to be found. The modern French fashion of very limited issues naturally results in speedy exhaustion of editions, and not unfrequently a student only hears of a reprint to find that it has become *introuvable*, except, according to a habit of French publishers which is not so much to be praised as some other of their customs, at a much higher price than the published price. Diligent observation of the "Chronique" and the advertising columns of *Le Livre* ought to prevent disappointments of this kind.

LIEUT. PALANDER'S "Narrative" in *Blackwood's Magazine* is the most complete account of the accomplishment of the North-East Passage hitherto published in England. The author, who had command of the exploring vessel, does not speak very confidently of being able to accomplish the whole passage every year. The explorers experienced their greatest difficulty, not in rounding the extreme northern point of Asia, as might have been expected, but farther east, on approaching Behring Strait. Lieut. Palander thinks, however, that the condition of the ice in 1878 was peculiarly unfavourable, and that the strait between Northern Siberia and Wrangel Land can in most years be navigated from the middle of August to the end of September. As the Ob and Yenisei can be reached every season from the West, while the Lena is rendered accessible through Behring Strait, the great rivers of Siberia are thus opened to the world's maritime commerce. Trading vessels, however, will do well not to depend upon finding the condition of the ice around Taymir and Cape Chelyuskin as favourable as the Swedish explorers did, as its position depends altogether upon the wind, and there are no voluminous rivers to carry it away from the shore.

OBITUARY.

MR. THOMAS BELL.

It is with much regret that we see the announcement of the death of Prof. Thomas Bell, at one time secretary to the Royal Society, and afterwards president of the Linnean Society. Mr. Bell, in the midst of his large practice as a dentist, found time to study natural science

with such effect that he attained to great eminence in that line, and his three important works are each the best of its kind. It is now more than forty years since he brought out, in Van Voorst's series, his *Histories of British Quadrupeds and of British Reptiles*. When more than eighty-four years old he published his edition of Gilbert White's *Natural History of Selborne*. This is a model of what careful and unobtrusive editing should be; it contains much new matter, and is acknowledged to be the best of the many editions which have continually appeared since the author's death. Mr. Bell was long Professor of Zoology in King's College, London, and corresponding member of several foreign learned societies.

When verging on seventy he gave up practice and retired to the Wakes at Selborne, formerly Gilbert White's, from whose great-nieces he had purchased it. No worthier successor to the naturalist of Selborne could have been found, and here in White's own village he carried on with the same accuracy and acumen the observations which have made White famous. He delighted in collecting every relic and memorial of his predecessor, and his house and grounds were always open to the lovers of White's fascinating work.

A more peaceful, happy, and useful old age was never seen. In the enjoyment of robust health till within two or three years of his death, he was surrounded by friends of all ages, for he had the happy faculty of gaining the confidence and affection of the young. He took an active part in the duties and business of his parish, and was a constant friend to the poor, who resorted to him to profit by his medical knowledge and experience. His memory was prodigious, and hardly failed even to the last. His information was varied and extensive, and he himself is a remarkable instance of the value of a pursuit beyond and in addition to a professional one; he never, after he gave up his profession, seemed to feel a regret for the loss of it, or to have a moment unemployed.

THE death is also announced of Dr. Wilibald Artus, Professor of Philosophy at Jena; and of Signor Palumbo, author of *Maria Carolina Regina delle Due Sicilie, suo Carteggio con Lady Emma Hamilton*.

SELECTED BOOKS.

CORRESPONDENCE.

SIR R. SIBBALD AND THE "WILD CATTLE."

14 Maddox Street, W.: March 13, 1880.

Will you allow me to point out that the writer of the very kind notice of the *Fauna of Scotland* in this week's ACADEMY is in error in stating that Sir Robert Sibbald attests the existence of maned white wild cattle in Scotland? The passage quoted in your notice is not from the pen of that excellent observer, but from the history of Bishop Leslie (1578, *De Orig., &c., Scot.*, p. 19), who copies almost verbally from Boethius (1526, *Scot. Hist.*, fol. xi.). Sibbald, after quoting the older chroniclers, observed that their statements required confirmation, that the wild cattle then existing in certain parts of Scotland were white, but neither fierce nor different in form from domestic animals, and adds, "*an jubati Bizontes nunc extant nescio*" (*Scot. Illust., Hist. An.*, p. 7). There is abundance of evidence that the so-called "wild cattle" were confined to parks long before Sibbald's day.

EDWARD R. ALSTON.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, March 22, 8.30 p.m. Geographical: "Notes of an Ascent of the River Binuë in August 1879, with Remarks on the Systems of the Rivers Shari and Binuë," by E. Hutchinson.
 TUESDAY, March 23, 1 p.m. Horticultural.
 8 p.m. Civil Engineers: "Explosive Agents applied to Industrial Purposes," by Prof. Abel.
 8 p.m. Anthropological Institute: "On Niobarese Ideographs," by V. Ball; "On a New Method of Expressing Degree of Changes of Specific Form in the Organic World," by A. Taylor.
 8 p.m. Spelling Reform Association: "On Dimidian Spelling," by A. J. Ellis.
 8 p.m. Colonial Institute: "South Australia, her Land Laws and Recent Industrial Progress," by Sir Arthur Blyth.
 WEDNESDAY, March 24, 8 p.m. Geological.
 8 p.m. Telegraph Engineers: "Some Recent Improvements in Electric Light Apparatus," by A. Siemens.
 SATURDAY, March 27, 8.45 p.m. Botanic.

SCIENCE.

The Field Naturalist's Handbook. By the Rev. J. G. Wood and Theodore Wood. (Cassell, Petter, Galpin & Co.)

Most natural history observers in England have used with profit *The Naturalists' Calendar*, compiled by Gilbert White and Markwick. It assigns natural phenomena of very varied kinds to almost every day throughout the year in regular order, together

with approximate dates to each; the English climate, as the most superficial observation shows, being apt to produce these phenomena but irregularly, varying with different seasons. The book before us still further extends these limits, and adds to the phenomena, but reverses their order. It groups under each month of the year an exhaustive list of the butterflies and moths which may then be captured, and at the same time gives the names and localities of the different flowering plants. It may thus be described as a handbook for the practical entomologist and botanist. A catalogue of British birds, their stay in England, the situations in which their nests are placed, and the number of eggs which they lay is appended at the end of the volume. It would have been better to add to each month the times of arrival and departure for our migratory birds, as these dates are wonderfully constant. Markwick, for instance, assigns April 7-27 to the return of the chimney swallow. Taking three recent years at random, 1866, 1869, and 1878, we noted its appearance respectively on April 14, 11, and 15. Mr. Wood only gives its stay in England as ranging "April-October." An excellent chapter of useful hints for the moth and plant collector is prefixed to each month, and the book thus becomes a valuable guide to the field naturalist. He must find the eyes, and Mr. Wood will then point out what to notice.

The arrangement here adopted, if useful to the field naturalist, possesses some inconveniences. Thus, taking the present month, March; the collector is bidden to look out for a page and a-half of butterflies and moths ordinarily on the wing at this time, and for a page of flowering plants. Advancing, however, to June and July, he finds himself embarrassed with no less than ten and nine pages respectively of insects, and ten and fourteen of flowers then in perfection; that is, with many hundreds of insects and little short of a whole flora. Many of these plants and animals are repeated, which adds to the bulk of the book; and a scientific instead of an alphabetical arrangement is adopted, so that a tyro is hopelessly at sea. Even the general index of insects at the end of the book follows Doubleday's system, while there is no index at all for plants. Supposing, therefore, that the botanist wishes to know in what month and where he must look for the rare *epipactis palustris*, he is compelled to run his eye through month after month until, by a great expenditure of patience, he lights upon the name by good hap in July, and is there told, rightly enough, to search for it in "marshy pastures." Human life not being patriarchal in these days, we are inclined to attach a greater value to the hints appended to each month, and these are really good, brief, and to the point. We should not recommend the egg-seeker, however, to protect small and delicate eggs, such as those of the golden-crested wren and the bottle-tit, before blowing them by rolling a few layers of tissue-paper round them, steeped in gum, which Mr. Wood advises, adding that the paper can be soaked off when the egg is finished. No surer mode of breaking them could be devised. It is much better to blow them over a cup of water, when if they slip from the fingers they

sustain no harm. "When quite dry," says the author again, "the eggs should be fastened on stout white cardboard by a little patch of coaguline just by the hole. The egg will then appear as perfect as if it had never been touched." We trust that egg-collectors will not follow this advice; the least shake or unwary touch will infallibly break all eggs so treated.

Turning to particulars, the authors do not insert the marsh marigold (*caltha palustris*) as a flowering plant until May. It commonly flowers in the two previous months, and continues to bloom later. Similarly, furze (*ulex europæus*) is assigned to February. The lovers' adage is more correct which suggests that its blossoms may be found in every month through the year. These are venial faults, however, as every botanist will allow as he thankfully acknowledges the large amount of information with which the authors furnish his craft. The entomologist will find that the latest researches have been embodied here for his benefit. Of the *eupitheciæ* (pug moths), for instance, the studies of the Rev. H. Harpur Crewe allow no less than forty-eight species to be characterised. Newman gives forty-seven, and Morris only forty-three of these. Among the curiosities of the science, Mr. Wood does not forget to notice the gipsy moth (*liparis dispar*). Collectors have ceased to find it at large, and it is now apparently only to be procured, like the silk-worm in England, from eggs laid in captivity. It is fast following the extinct *lycaena dispar* of the Fen district. The expedients here given for catching and preserving moths will be welcome to many an entomologist, and contain the newest lights on the subject. The important device of "treaching" for moths is very fully explained, and its superiority to the old plan of "sugaring" made manifest. In the hints for May, again, the whole mystery of "sembling" is lucidly detailed; and (what the young insect-hunter will appreciate) a simple and inexpensive mode of constructing a moth-trap is described, which will answer its purpose equally well with the much more costly American moth-trap. In short, this handbook may, with confidence, be recommended to all enthusiastic moth-collectors, as Mr. Wood never tires of imparting useful hints or ingenious suggestions in the most terse and practical language. It is a pity that its size is somewhat awkward for a book which will insist on becoming a pocket companion when a naturalist has once made its acquaintance. Nor do the authors forget the collector's difficulties when his specimens are arranged. An effective treatment of them with corrosive sublimate, together with the right proportions of the solution, is given, which will set his anxieties at rest concerning their preservation. What young entomologist has not been filled with despair as he watched some splendid purple emperor flitting over his head among the oak-trees provokingly out of his reach? We shall leave our authors to divulge to him the secret of capturing it. In spite of its want of alphabetical indexes, this book is full of information for all working botanists and entomologists, and will much enhance Mr. Wood's reputation as a skilful provider of practical knowledge to naturalists. Fisher-

men are often upbraid with insensibility to the sufferings of their quarry, and the kindly words of Walton on impaling a frog quoted in proof. They can effectively retort upon the entomologist in Mr. Wood's remarks upon killing insects. After suggesting, and that with the most humane intentions, that the movements of an insect "from which the whole of the vital organs have been removed, and the whole of whose tissues, internal and external, have been saturated with poison, cannot betoken life, much less pain," he proceeds to add benevolently, but with what seems to all but scientific entomologists a somewhat cold-blooded disregard of insect perception of pain—

"A very little benzine applied to the under surface of the abdomen will generally kill a moth instantly, but has the disadvantage of stiffening it so that it can hardly be set. The best plan with an obstinate moth is to set it first, and then apply the benzine to the lower part of the thorax, just where the pin passes through it."

M. G. WATKINS.

NOTES OF TRAVEL.

THE German African Association is steadily pursuing the work it has undertaken. Rohlf's map of the Oasis of Kufra has just been published in the *Mittheilungen* of the association. It is an important contribution to African cartography, for, until Rohlf's exploration, our knowledge of this oasis was limited to a few details collected from native travellers. It results from the boiling-point and aneroid observations made by Dr. Strecker that Anjila and Jalo lie at a small elevation above the sea-level, and not below it, as stated by Rohlf in 1869. There is some hope of the Turkish Government paying some compensation for the losses sustained by the expedition in Kufra. Dr. Strecker, at all events, is to have another chance of penetrating from Bornu into the unexplored countries lying between the Rivers Shari, Benue, Congo, and Ogowe. This time, however, he will proceed by the usual caravan road to Kuka in Bornu.

DR. BUCHNER is reported to have left Kimbundo for Musumba on the 22nd of September. It is proposed to despatch another expedition to Musumba, under the leadership of Dr. Pogge, who is to be accompanied by an officer, as surveyor, and by a naturalist. In this way the exploration of Lunda and of the southern tributaries of the Congo is likely to make steady progress.

THE "scientific station" to be established by the association in Eastern Africa will be placed under the direction of Capt. von Schöler, assisted by Dr. Boehm as zoologist, and by Dr. G. A. Fischer, whose recent explorations on the Zanzibar coast have been noticed by us. The French will establish one station under Capt. Bloyet, in Eastern Africa, probably in Usagara, and another, under Savorgnan de Brazza, on the Upper Ogowe.

GUIDO CORA's *Cosmos* contains an interesting map of the region of the White and Blue Niles between Sennar and the Sobat, designed to illustrate the explorations of De Bono, Gessi, Matteucci and other Italian explorers. An accompanying article supplies some useful information on the achievements of these African travellers, whose labours have in an appreciable manner extended our knowledge of the Sobat and the district around Fadasi.

BISHOP MASSATA, after a residence of thirty years in southern Abyssinia, during which he collected a considerable amount of information on the Galla countries, has been expelled by

John Kassa, the present emperor. His departure is likely to prove detrimental to the interests of the Italian explorers at present in Shoa.

SIGNOR G. M. GIULIETTI announces his arrival at Harar in November last. He spent only eight days on the road from Zeyla, and promises to forward his itineraries to the Italian Geographical Society. The last *Bollettino* of that scientific body publishes a few sketches by Signor S. Martini, of the Italian mission in Africa.

WE understand that Mr. Robert L. Jack, a surveyor in the employ of the Queensland Government, has recently completed a series of explorations in Cape York peninsula which will materially alter the present blank appearance of the map of that region. Mr. Jack had not been able to complete his report on the results of his labours, as he had been despatched on special service last December to the Peach River gold-fields. This river has never yet been followed down to the sea, but Mr. Jack has formed a strong opinion that it is identical with the Archer River of the Messrs. Jardine, which empties into the Gulf of Carpentaria. A map of the peninsula, with Mr. Jack's important additions, is in preparation, and, it is hoped, will shortly be ready for issue.

MR. JAMES BONWICK, one of the exploring party engaged last year in the flying survey for a trans-continental railway to Port Darwin, states that an important discovery was made along the Queensland border. Instead of being a hopeless desert, as has sometimes been supposed, it was found that a vast region, several hundred miles in length, both in western Queensland and the northern territory, is composed of rich black earth, covered with luxuriant grass, and, what is most important, it is well watered by numerous streams.

THE success achieved by Major Serpa Pinto in the field of African exploration is seemingly not to remain unchallenged by his own countrymen, though, so far as we are aware, geographers of other countries freely admit the important services which he has rendered to science in more than one branch. Senhor Manuel Ferreiro Ribeiro, however, is clearly not at one with them, and he has published (Lisbon: Typographia Nova Minerva), in a ponderous volume of nine hundred pages, what he terms an "estudo critico et documentado," entitled *As Conferencias e o Itinerario do Viajante Serpa Pinto atravez da Africa Austral nos limites das provincias de Angola e Moçambique*.

IN the attempt which he made to explore Kafiristan last year, and which he was compelled by illness to abandon, Major Tanner got some distance to the north of Jellalabad, as far indeed as the beautiful Chugani valley of Aret. This valley appears, from his description, to be singularly picturesque; there was foaming and rushing water everywhere, creepers and ferns grew in the crevices of the rocks, and oaks and wild olive on the flatter parts of the craggy spurs. Up the valley, past walnut groves, terraces, and hamlets, the round snow-covered peaks of Kund could just be seen rising out of the black pine forests that clothe the mountains from 7,000 feet to about 11,000 feet above the sea, while below were groves, scattered houses, and the roaring torrent fed by the snows of Kund. The Chugani inhabitants of the valley are, in Major Tanner's opinion, converted Kafirs, and in many respects they resemble the people of Kafiristan; they are quiet, faithful to their masters, and true to their engagements. Their young women have handsome and even beautiful features, a well-known characteristic of the Kafir race.

By the last mail from India we learn that the survey officers with the Lughman Valley

expedition under General Bright have fixed the confluence of the Alishang and Alinghar rivers, to which point Major Tanner and Capt. Leach, we believe, made a fair survey of the Lughman valley last year from the Daronta, though the results of their work have not yet been published. It is expected that the present expedition will add greatly to our geographical knowledge in the Lughman valley and neighbourhood, and may not impossibly yield results of great interest from an antiquarian point of view.

SCIENCE NOTES.

A New Telegraphic Reporting Station for the Meteorological Office.—We learn from a letter in the *Times* that Sir James Ramsden has with great liberality proposed to establish and maintain at his own cost a telegraphing reporting station at Barrow-in-Furness, which will be an important addition to the system of the Meteorological Office, as that possesses no telegraphic station on the West coast of Great Britain between Liverpool and Ardrossan. Barrow is also very near the new high-level station at Hawes Junction, at the elevation of about 1,100 feet, so that the mutual comparison of the reports cannot fail to be interesting. It need scarcely be said that the council have most gladly accepted Sir J. Ramsden's very generous proposal.

The Rainfall of the Austrian Empire.—Dr. Hann has undertaken a discussion of all the existing rain records from the entire region covered by his *Jahrbuch*, and has published in the *Sitzungsberichte* of the Vienna Academy for October 16, 1879, the first part of the work, relating to the seasonal distribution of the fall. The second part, relating to the variability of fall, has also been laid before the Academy, and we may expect to have it in a few days. The value of such a research will be seen when we remember that the immense area which it embraces comprises every gradation in distribution of fall, from decided summer rain to the regular winter rains, and the period available is considerable. There are 181 stations in all, of which 145 have more than ten years' record, and five extend over more than half-a-century. This paper, with Raulin's on the rainfall in the Alps, from Vienna to Marseilles, published in the *Austrian Zeitschrift*, vol. xiv. (1879), p. 233, gives an immensity of information as to the amount of precipitation in Central and Southern Europe.

The Great Southern Comet.—Some preliminary reports received from the Cape and from Monte Video contain sufficient information to explain why the great comet, the appearance of which was announced early in February by telegram from Buenos Ayres, has not become visible in Europe. It appears that the tail of the comet was first seen on February 1, when the head was already below the horizon, and that for a whole week Southern observers were baffled in finding the head before its setting, and had to content themselves with fixing the outline of the magnificent tail. Not before February 8 was a nebulous nucleus, with no well-defined point, picked up, and regular observations do not seem to have been feasible before February 10.

Prehistoric Archaeology.—A new scheme of nomenclature has been introduced to the notice of students of prehistoric archaeology by M. Edouard Piette in a pamphlet recently published at Laon. He divides *anthropic* or prehistoric times into two ages—the *agrestique*, or age of hunting, and the *géorgique*, or age of agriculture. The former is sub-divided into, first, the *barylithic* period, a period in which heavy stones were used for weapons, and comprising the *acheulian* and *moustérian* epochs of Mortillet; and,

secondly, the *leptolithic* period, a period in which implements of thin stones were employed, and comprising the *soluterian* and *magdalenian* epochs. M. Piette's second age is sub-divided into the *neolithic*, or newer stone period; the *chalcitic*, or bronze period; and the *protosideric*, or primitive iron period, which corresponds with the early Gaulish epoch.

THE Madras papers announce the death on February 5 of Chintamanay Raghunatha Charry, head assistant in the Madras Observatory for the last seventeen years. He is stated to have been the first and only native of India who can claim the rank of a discoverer, having detected two new variable stars—R. Reticuli and V. Cephei. He wrote his first paper for the Royal Astronomical Society in 1859, and was elected a fellow of that body in 1872.

PHILOLOGY NOTES.

A PAPER by the late G. H. Damant, Political Officer in the Naga Hills, which was written and despatched very shortly before his assassination, will appear in the forthcoming part of the *Journal* of the Royal Asiatic Society. Mr. Damant had previously shown, by his papers in the *Indian Antiquary* and the *Journal* of the Bengal Asiatic Society, that he was a competent philologist and a close and careful observer; and it is satisfactory to know that the results of his researches into the languages of the wild and little-explored country where his official duty had placed him have not been entirely lost, although the greater part of his papers were, we understand, burnt during the siege to which his residence was afterwards subjected. The article about to appear in the Asiatic Society's *Journal* is entitled "Notes on the Locality and Population of the Tribes dwelling between the Brahmaputra and Ningthi Rivers," the latter being the great western branch of the Irrawaddy. Its object is to indicate the districts inhabited by each tribe, the numbers of the tribe, its principal villages, and the names by which it is known to its own people and to the people of the plains; and to classify the different dialects philologically, noting and giving specimens of the different characters where they exist, and appending a list of thirty test words in most of the languages referred to, collected by Mr. Damant himself. Between the two great rivers there are members of the Tibeto-Burman, Tai, and Khási families, the first being the great majority. The subdivision of these families is a matter of considerable difficulty—e.g., of the Nágas alone there are at least thirty different tribes, all speaking different languages, each unintelligible to the others. Mr. Damant divides the Nágas into three sub-families, the western, central, and eastern, each of which embraces numerous tribes. The western is already fairly well known; but the eastern sub-family is involved in dire confusion, from which Mr. Damant seeks to extricate it. Beside the Nágas, the writer arranges the Kuki (including under this head the Manipúris, which are generally regarded as Naga) and the Kachari sub-families of the Tibeto-Burman group; and the Tai family. Of the Khási he has nothing new to say. The paper is full of information, and bears the stamp of personal research.

PROF. COSIJN, of Leiden, is preparing a grammar of early West-Saxon as preserved in three contemporary texts:—(1) The Parker MS. of the Chronicle in the library of Corpus Christi College at Cambridge, published both in Thorpe's and in Earle's edition; (2) Alfred's translation of the Cura Pastoralis, edited by Mr. H. Sweet for the Early-English Text Society; and (3) The Lauderdale MS. of Alfred's translation of Orosius's History of the World, now printing for the Early-English Text

Society under the editorship of Mr. Sweet. Mr. Sweet has himself prepared full verbal indexes—exhaustive for all but the commonest words—to all these texts, which will be published on the completion of his edition of Orosius, but it is uncertain in what form they will appear, as Mr. Sweet naturally wishes to avoid unnecessary rivalry with Prof. Cosijn.

DR. K. F. SÖDERWALL's dictionary of Old Swedish, which he undertook several years ago under the direction of the committee of the Old-Swedish Text Society, is now almost complete in MS., and the author has printed a specimen of the work under the title of *Några Svenska Medeltidsord förklarade af K. G. Söderwall* (Lund: Berling). The complete dictionary is intended to include all the words that occur in the publications of the above-mentioned society, and also many from the rest of the printed literature, with the exception of the laws, for which we have the very full and careful lexicon of Schlyter.

MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, March 4.)

M. H. BLOXAM, Esq., in the Chair.—Mr. W. Thompson Watkin communicated a paper on Roman inscriptions discovered in Britain in 1879, which included notices of several in South Wales, two *Tabulae Honestae Missionis* from "Cilurnum" on Hadrian's Wall, and inscriptions from Bath, Lincoln, Durham, Newcastle-on-Tyne, and other places. It appears that the past year has been rich in "re-discoveries." This is attributable to the gross carelessness of the *dilettanti* of the last century—a neglect which Mr. Watkin seems to be rapidly and earnestly remedying.—The Chairman read a paper on a monumental effigy in Lutterworth Church of a knight of the latter part of the fifteenth century, clad in armour, and wearing over it a long civilian's gown, belted round the waist, and having loose sleeves to the elbows, displaying the vambraces and elbow-pieces. This garment was described as "neither a surcoat, nor a cyclas, nor a jupon, nor a tabard," but distinctly a layman's gown; and it exhibited a peculiarity in costume that the author had never met with elsewhere. In the same church, and on the same high tomb, is a figure of a lady habited in a long gown and a mantle, and wearing a *par precum*, or set of praying beads, by no means a common feature in a monumental effigy.—Mr. E. M. Dewing exhibited two small terra-cotta figures of women lately found near Bury St. Edmunds in a large vase, together with iron nails. Similar figures have been found, under different circumstances, at Colchester.—Mr. Utting sent a steel casket, early eighteenth-century work, not unlike Milanese art of an earlier period.—The Rev. R. D. Rawnsley exhibited an Egyptian bronze head of a staff of office of a very unusual character.—It was announced that the Bishop of Lincoln had accepted the presidency of the meeting of the Institute at Lincoln, which will take place on July 27.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, March 9.)

FRANCIS GALTON, Esq., F.R.S., V.-P., in the Chair.—Mr. Francis Galton described the curious psychological fact on which he wrote a preliminary memoir in *Nature* of January 15. He found that about one in every thirty adult males and one in every fifteen females not only see numerals in a vivid mental picture whenever they think of them, but that each number is always seen in the same definite position in their mental field of view. Consequently, when they think of a series of numerals, 1, 2, 3, 4, 5, 6, &c., they are always mentally seen as if ranged in a regular pattern or form. These forms are invariable in the same individual; they date in all cases farther back than recollection extends; they are very vivid and quite independent of the will. They are of fantastic shapes, but no clue can be suggested as to their precise origin; they differ extremely in different people. Mr. Galton exhibited a collection of nearly sixty of these forms

furnished to him by friends and correspondents, whose descriptions of their general characters were curiously consistent and corroborated one another. All this is difficult to understand for the great majority of persons, who cannot visualise; but these should never assume that others cannot have a mental habit in which they themselves are deficient. Several of Mr. Galton's correspondents testified to their respective forms—viz., Mr. George Bidder, Q.C., the Rev. G. Henslow, Mr. Schuster, F.R.S., Mr. Roget, Mr. B. Woodd Smith, and Col. Yule, C.B. Mr. Henslow and Mr. Schuster saw their forms objectively, and could point to the direction and specify the apparent distance at which they saw them; but they appeared to the other gentlemen as it were in dreamland, without relation to external space. Mr. Galton showed that these forms were survivals of the mental processes of the child before the time when he could read, and connected their lines with those which govern handwriting and gesture, architecture of animals, and their characteristic movements. He also showed how marked were the traces of the mental conflict in the child between the verbal and visual system of arithmetic between ten and twenty. What the ear perceives at "ten," "eleven," &c., the eye reads as "one-nought," "one-one," &c. Accordingly the forms twist and bend at the tens and twelves, and are further modified at the teens. He thought from trials on his own mind that this conflict existed throughout life, and believed that our barbarous nomenclature was a serious bar to the ready acceptance of a decimal system of weights and measures. This habit of seeing numerals in forms is strongly hereditary.

FOLK-LORE SOCIETY.—(Tuesday, March 9.)

H. C. COOTE, Esq., F.S.A., in the Chair.—Mr. A. Nutt read a paper entitled "Critical Notes on Celtic Folk Tales and Heldensage Tales." He pointed out the special importance of the Celtic folk tale, and criticised the existing schemes of the classification of *Märchen*. Then showing the necessity of a new system, Mr. Nutt classified Campbell's collection of West Highland tales according to his new system, and gave a detailed criticism of all the leading tales and compared them with allied tales in other collections. Then Heldensage tales were dealt with in the same way, and a comparison made between Celtic and other European tales.

SOCIETY OF ANTIQUARIES.—(Thursday, March 11.) F. OUVRY, Esq., V.-P., in the Chair.—The Rev. W. C. Lukis exhibited a collection of plans and drawings of stone monuments in Cornwall and on Dartmoor, which he had surveyed during the past summer in company with Mr. W. C. Borlase, of Penzance. These objects in Cornwall include:—Monoliths, single or in pairs, which are always sepulchral, some being of the Romano-British period; straight lines of monoliths, which are probably sepulchral, but it is difficult in most cases to determine how much of the original arrangement remains; stone circles, of various diameters, from 36 feet to 112 feet, the size of one at Lisburn; barrow cairns, including cromlechs and cists, which show no distinct evidence of belonging to a non-metallic age; holed stones, of which some, as at St. Gurrian, have holes barely large enough to admit the hand, while at Constantine there is one large enough for a man to pass through. These were supposed to possess curative powers. Of the dwelling enclosures, some consist of several circular huts, and others are apparently houses with several rooms. Of the caves there is an account in the *Proceedings* of the society in January 1869. Dartmoor possesses several cisted barrows, lines of stones leading to cairns, stone circles, and huts. All these are usually made of much smaller stones than were employed in Cornwall. Mr. Lukis also read a paper comparing the monoliths of Western Europe with those in Egypt. At Locomariaker, in Brittany, there is a granite monolith, now fallen, which is of nearly the same size as Cleopatra's needle, viz., 67 feet in length, 13 feet wide, 7 feet 6 inches thick, and weighing about 260 tons. At Plouarzel, near Brest, there is one erect, which measures 35 feet from the ground; and there are two others in Brittany, measuring 36 feet and 20 feet, which now have crosses placed on the summit. Forty years ago a similar stone stood on

Belleisle, which must have been transported over ten miles of sea, and others once existed in the Islands of Hoedic and Honat. Few of these monoliths bear tool marks, and the only inscriptions are cup markings. They are all associated with grave-mounds, and in a tomb near one of these monuments there is a sculptured figure of an axe, which may have been an ensign of royalty. In Egypt obelisks were originally sepulchral, and subsequently were used to adorn temples and to commemorate triumphs. It is probable that these in Brittany were solely sepulchral, otherwise they would have been destroyed after the spread of Christianity, in accordance with the decrees of various Councils, which condemned stones that were connected with the idolatrous rites of paganism.—Lord Carnarvon joined the meeting in the course of the evening, and gave an account of the reference of the Ancient Monuments Bill by the House of Lords to a select committee, which will prevent the Bill being passed by the present Parliament—a matter of great regret considering the trouble that has been taken in getting it through the House of Commons.

ROYAL ASIATIC SOCIETY.—(Monday, March 15.)

SIR H. C. RAWLINSON, K.C.B., President, in the Chair.—A paper was read, contributed by Capt. Durand, giving an account of his recent researches in the "Islands of Bahrein in the Persian Gulf," where he had found the remains of a vast number of tombs and, possibly, of temples, and a remarkable black stone bearing a very early cuneiform inscription. Sir Henry Rawlinson called attention to the great value of these excavations as throwing additional light on what has been already gained from the interpretation of the legends of Southern Babylonia. The Babylonians, he added, who were mainly instrumental in imparting civilisation to Western Asia, admitted having received all their knowledge from the mysterious islanders of the Persian Gulf, agreeably with the tradition preserved by Berosus of Oannes, the Fish-god. The inscription on the black stone he translated, "The palace of Rimugas, the servant of Mercury, of the tribe of Ogyr."

FINE ART.

George Paul Chalmers, R.S.A. (Edinburgh: David Douglas.)

THAT gradual and peaceable subjugation of England by the Scotch, which, so far as the high places of English art and literature are concerned, has resulted in the filling by Scotchmen of at least one place out of every three, has yet, it is worth notice, left Scotland unexhausted of eminent men in letters and the arts and Edinburgh in possession of much individual talent and energy to which we are yet strangers. In literature, of course, the wealth peculiar to Edinburgh is less marked, since diffusion is inevitable in literature; and in art its tendency is likewise towards diminution, though several names beside George Reid's could be mentioned as holding high rank justly in Scotland, while in London but little known. Sir George Harvey, almost popular, it is true, in England at one time through his pathetic pictures of the lives and troubles of the Covenanters, is yet not known at all—and is now perhaps hardly likely to be—by those abstracts of Scottish landscape which engaged his later years; yet, whatever were the unavoidable faults of his art, or those other faults which perhaps a more severe early training might have permitted him to be clear of, his landscape work caught the essentials of Highland scenery in a way, as Scotchmen no doubt truly tell us, which we must find it difficult to understand. And Paul Chalmers, the subject of the exquisitely

issued memorial volume now under our eyes, was a Scotch painter who only at the very end of his too brief life was beginning to be known beyond the Scottish border. Even in Edinburgh itself the recognition of his ability was slow; his powers were not of a kind to make early assertion of their claim to be valued. His work was often too tentative, too full of various and laborious effort, to win a popular success, or to gain the particular regard of those *connoisseurs* who exact a perfect achievement, and take note of no other. Yet, latterly, he had done a good deal to justify the great opinion of his friends. In landscape, in portraiture, and in pathetic genre pictures he had made his mark.

In his life itself there is little to chronicle. He was born in 1833 at Montrose, the little sea-board town of which the humble houses and rare towers lie packed together in a wide flat land and under a spacious sky. He died in 1878 in a public hospital, the victim of unexplained accident, at midnight, in the streets of Edinburgh. The dates are separated by forty-five years, during which hardly anything of outward incident is to be recorded, partly because he left nothing in the way of letters and papers that was at all revealing, and partly because his life was really as barren of outward events as it was full of devotion to the art which, for its own sake, and with hardly any heed either of pecuniary recompense or social success, he enthusiastically pursued. It was not so much this or that event of which the biographer can present a striking picture, as the softening and cultivating influences of every day, acting upon a mind instantly sensitive to cultivation, that wrought the change in him from the impetuous youth sick of the ship chandler's shop at Montrose and flinging a broom at the scolding chandler in token of final rupture with him, and the genial, refined, gracious, but most simple man whom those of us remember who have seen him, a little, in his last years at Edinburgh. The story is really one not of events at all, but of a character's slow and subtle development; and all that a biographer, all that a sympathetic analyst, could do with the subject has been done lovingly, yet with extreme fairness and with tasteful reticence, by Mr. Alexander Gibson in that section of the memorial volume which treats of the man himself rather than of his work. To say roughly and briefly what Mr. Gibson has said so carefully and, as far as the circumstances allow him, so completely, is not at all our object. The book itself must be gone to to judge fairly the character and the order of work. One extract, however, from Mr. Gibson's writing will show something of the characteristics of the subject as well as the delicacy of its treatment. He has been speaking of Chalmers's peculiar, nay, almost childlike or womanly, care to live in a society in which he was instinctively appreciated rather than either elaborately criticised or empty praised.

"Perhaps a great deal of that necessity for sympathy arose from the constant fits of depression which were inseparable from his nervous, excitable nature. These periods of reaction were constant and occasionally very deep, especially when he had some worry on hand, or when his work was not going on well with him. At these times he sat disconsolate

in his studio, or sometimes fairly burrowed in his house, and had to be dug out and comforted until his natural elasticity brought him up again. Those who only saw him in his sunny moods in society were apt to look upon him as an altogether bright, cheerful creature, and had no idea of the brooding, struggling existence in which much of his life was passed. The want of distinct intellectual purpose, and of resources apart from his art, left him very much at the mercy of the dominant feeling and the present time; and when these seemed unfavourable, he had not that power of disavowing the future from the present feeling which helps most men through their periods of depression. His strength lay, not in his will, but in his intensity of feeling and his capacity for enjoyment; and, when these failed him, he was helpless. In one sense he was apt to drift through life, for he had not the faculty of looking clearly round him or before him, but was always at the mercy of his feelings; but, on the other hand, few men could be more consistent, for these guiding feelings were limited, pure, and strong. An almost necessary trait of such a character was the want of ambition, in the vulgar sense of it. What ambition he had was limited to high mastery of his art, without much regard for its popular recognition, or what fame or wealth might follow. He was singularly careless of the ordinary means which men take for the due recognition of their merits. When the recognition came in his way it pleased him, but he never stepped aside for it, and never envied it in those whom, if strongly pressed, he would have been compelled to call his inferiors. Apparently he never thought of leaving the narrow sphere of Edinburgh life, never even sent a picture to the Royal Academy, the one or two pictures that ever appeared there being sent by his friends, who always cared a great deal more for Chalmers's reputation than he did himself."

Of Paul Chalmers's pictures, my own knowledge is so fragmentary and scrappy that I am much more in a position to be instructed than to be critical in reading the account given of them by Mr. J. F. White, to whose writing on this purely artistic theme the second part of the volume is devoted. But it is obvious at once that it is thoughtful work, patiently making estimate of the art with which it has to deal. Especially interesting and thorough is the description of *The Legend*—a picture representative of Chalmers's highest labour, a *genre* picture of children, "drawn up in rude semicircle, facing the old woman, who, with uplifted hand, is telling her thrilling story." Mr. White not only brings the picture quite vividly before us, and shows us how in this and in that feature of it the painter was influenced by the artists he had most studied, but he makes it the occasion for insistence on Chalmers's pre-occupation with colour. It was colour, we remember, from Mr. Gibson's essay, of which he was wont to talk:—"His friend Pettie tells how he used to visit him at his lodgings"—this was in the days of his youth—"and stay talking with him until he had to remain for the night, still talking till they fell asleep, and their talk was all about colour." Outlines, Mr. White tells us, scarcely existed for Chalmers's eye: "it was the solidity, the roundness, of the object that struck him." Rembrandt and Velasquez were accordingly his masters. As years passed, though the pre-occupation with colour remained, the colours on the palette were fewer and simpler, and the effects he wrought

with these were more delicate and harmonious. "The variations of local colour under the action of light as it fell on different curves and planes, on projections and depressions, became a constant study to him." Work of detail, fitter, he thought, for pictures where they could be "smelt" instead of "looked at," was never welcome to Chalmers, but the avoidance of small detail never meant with him an avoidance of labour; and indeed he is set apart both from mediocre painters and from the greatest by the seemingly useless repetitions of his toils. He rarely knew where to stop; or rather, it was a temptation he could rarely resist to alter so much that practically it was a new beginning that was made. The pictures of his which we know are only too often "the toms" of the pictures which only he knew; and so much was this hesitation, dissatisfaction, and recommencement characteristic of his temperament and of his work that a peculiar significance—a pathos almost—belongs to the clever little print, one of several which add interest and prettiness to this work—the print recording the aspect of the back room piled with canvases waiting or canvases abandoned.

In Mr. White's criticism, apart of course from the direct reference to Chalmers, there is much that might provoke discussion. But for such discussion this is neither the place nor the occasion. It may be enough to name one point alone—the presumed capacity of the figure painter to deal with landscape without, as we understand it, the special training which he who is landscape painter alone has time to receive. Prosper Mérimée said, and Mr. White quotes the saying with no qualification, "On sait que tous les peintres qui ont excellé à représenter la figure humaine ont été les grands paysagistes lorsqu'ils ont voulu l'être." Prosper Mérimée uttered the opinion with easy grace; it was founded on an acquaintance chiefly with ancient landscape art, the art of a time when imaginative effort in landscape was less supported than it has since been by the accurate knowledge of natural fact and phenomena; and the opinion hardly commends itself to those who feel the supremacy of Turner, and see that it was the concentration of his labour upon one order of art which allowed to his knowledge and to the labour of his imagination such splendid results.

FREDERICK WEDMORE.

MINIATURES IN NEW BOND STREET.

THE Collection of Miniatures and Enamels now on view at the Dickinson Gallery, at 114 New Bond Street, contains some fine specimens of this beautiful and, alas! almost extinct art. Though not equal to the exceptionally fine gathering in the rooms of the Royal Academy last year, it is one which will repay more than one visit from anyone with tastes either historical or artistic. The contributions of the Duke of Beaufort, Lady Burdett-Coutts, and Mr. J. G. Fanshawe would of themselves constitute an exhibition of much attraction. The first-named sends a number of jewelled snuff-boxes decorated with miniatures, among which may be mentioned those of Cardinal Richelieu, La Marquise du Deffand, and Mdlle. Fontanges, all by Petitot. Beside a brilliant little collection by the same master, including portraits of Charles I., Charles II., and James II. (when Duke of York), Lady Burdett-Coutts contributes

several beautiful and important works by Peter Oliver. In these the lovely Venetia Lady Digby occurs frequently, but the most interesting of them is one of the hapless Lady Arabella Stuart, unfortunately much damaged, but full of strange, sweet charm. Of much historical interest are her portraits of two short-lived Princes of Wales—Prince Arthur (eldest son of Henry VII.) and Prince Henry (eldest son of James I.). Mr. Fanshawe also sends a miniature of this Prince Henry, as well as one of Prince Frederick (eldest son of George II.). The latter is part of an interesting group of portraits, printed on Battersea enamel, which includes one of George II. and another of the famous Elizabeth Gunning (Duchess of Hamilton). The most interesting of Mr. Fanshawe's miniatures is that of Elizabeth Cromwell, the mother of the Protector, whose fine face and firm expression seem to account for her son's power and will, but not for any of his unattractive qualities either of face or mind. One is inclined to say (after Talleyrand), "It must have been his father who was ugly." Of little less interest is a portrait of John Hampden and another of Milton, the latter by S. Cooper. Mr. Fanshawe's Cosways include a "Perdita," a charming portrait of Mrs. Fitzherbert and several of the Stanley family, one of which, representing the thirteenth Earl of Derby and his sister when children as Amorini, is especially beautiful. Like most of the portraits of Mary Queen of Scots, the miniature lent by the Hon. B. O. Herbert does not help us to realise her powers of fascination. A portrait of James II. (*actat. nineteen*), lent by Mr. Safe, shows quite a pleasant face, and should be compared with Lady Burdett-Coutts' miniature, above alluded to, where it is already beginning to harden. Lovers of Cosway should not fail to look at the Earl of Charlemont's lovely Elizabeth Marchioness of Conyngham or Sir T. Blomefield's little boy in a blue hat. Mr. Butler's three examples of Nicholas Hilliard are interesting and in a good state of preservation, showing the fresh bright colours and minute detail characteristic of the master; but the most important work in the collection, from an art point of view, is the very large miniature (if we may be allowed such a paradoxical expression) by Isaac Oliver, representing Anthony Maria Browne second Viscount Montague, and his brothers, John and William, attended by a serving man. The three brothers are in black satin, the servant in white. They are all full-lengths, most carefully drawn and delicately painted. One peculiarity of the picture is the resemblance between the brothers; another, the sombre colours employed. It is what Mr. Whistler might call an arrangement in black and gray. Every advantage is taken of the sheeny texture of the brothers' garments to lighten the general effect. This most remarkable work is the property of the Marquis of Exeter. Of the later painters, Lord Charlemont's enamels by Bone, the Hon. Mrs. William Herbert's portrait of Mrs. Milbank by Sir William Ross, and Mr. Jemmett Browne's Lady Charlotte Bury by the same artist are good examples; and the portraits of Lady Wolverton and the Duchesses of Manchester by Thorburn make one regret more than ever that this artist should have ever essayed a larger style. Among the curiosities of the exhibition are two fancy figures in bright coloured chalks executed by Sir Thomas Lawrence when sixteen years old.

COSMO MONKHOUSE.

OBITUARY.

HENRY O'NEIL, A.R.A.

HENRY O'NEIL, the painter of *Eastward Ho!* and of *Home Again*, and of many other pictures at least as ambitious but not so successful, died on Saturday, the 13th. Of late years his

name has slipped out of notice, but the celebrity achieved by him more than twenty years ago was not wholly an accident, and it is likely that his best works will one day revive some interest in his career. He was born out of England, though of British parents, in 1817, and it is stated that he entered the schools of the Academy at the age of sixteen, in the year 1833, and that he subsequently became much associated with Alfred Elmore. In 1840 these two artists travelled together in Italy, and the painting of historical pictures engaged the attention of Henry O'Neil. He was a successful exhibitor, but it was not for many years that he did anything to give him a front place in popular favour. Before the end of the period of the Crimean War, or of the Indian Mutiny—we really forget which it was, for either would have served the occasion—Henry O'Neil painted *Eastward Ho!* and followed up its immediate triumph with *Home Again!* These were pictures of sterling merit as well as of sensational success. The first of them was full of character and pathos. It belongs to the order of historical pictures, and, in spite of its faults, it must some day be admitted to be historical. For it depicts vividly, with observation and with sympathy, an event scarcely less than national—the embarkation of our troops and the parting with kindred and with womenkind. Beyond the point reached by these quite remarkable though doubtless very faulty pictures, Henry O'Neil did not go. He subsequently painted the *Wreck of the Royal Charter*, a work we cannot remember, but which Mr. Anthony Trollope speaks of as his best, and *Canute*, which we remember unpleasantly. He painted likewise the *Death of Rafael*, with more attention to romantic feeling than command of the instruments of the painter. Gradually he fell into the commonplace, the mediocre, and thence into work with which criticism hardly cared to deal. Little is to be said for his landscape and his portraiture. Mr. O'Neil was a cultivated man, an amateur musician of some mark, happy with his violin. And latterly he was minded to be a writer. It is now indeed several years since he produced a pamphlet on French and English art, in which he displayed the painter's only too frequent inability to take any count of schools of art and methods of practice with which he is not himself chiefly in sympathy. His literary work in criticism was the work of a painter—it was not an appreciation, but an *ex parte* statement. Such writing, though it comes into the world with the advantage of having attached to it an eminent painter's name, does not last long. Mr. O'Neil's literary efforts are already well-nigh forgotten. *Eastward Ho!* will yet be remembered. And again, personal memories of the now departed artist are favourable and affectionate. He would probably have done more in life if he had spent himself less variously. But he was, after all, a considerable artist and a praiseworthy man.

DRAWINGS AT CHRISTIE'S.

MR. C. J. POOLEY'S large and important collection of water-colour drawings was sold lately at Messrs. Christie, Manson and Woods'. It consisted for the most part of examples of the English water-colour art of two generations illustrious in water-colour—the generation of Girtin and Cozens, and that of David Cox and Dewint. A comparison, not without interest, is that which may be made between the prices fetched by the examples of David Cox occurring in this sale and those realised by the very same sketches, two years since, in the Stone Ellis sale—many of Mr. Pooley's drawings by Cox having come from that unique collection, the dispersion of which excited so much interest at the time. At the Stone Ellis sale the prices realised by the pure sketches of David Cox

were high beyond precedent, and it was pretty confidently predicted that they would never again be attained, many persons, unable to appreciate the genuine and potent genius of the master in his later time, having seen in the great value set upon his slighter works a merely temporary fashion. The prediction, it appears, has been falsified. Hardly more than a single drawing by Cox appearing at the recent Pooley sale sold for a less sum than it had commanded two years since at the Stone Ellis sale. In most cases the prices seem to have increased. In some they have, within this short time, actually doubled. It should be said that these Haddon sketches—executed in the year 1845 when Cox was already more than middle-aged, and was within fourteen years of his death—are, in point of date, the first great group of his works in which his genius was fully manifested. With them may be said to have begun his third and latest style—the style in which, for the first time, he manifested a potent individuality. As time progresses, and as the qualities which make artistic work really valuable get to be better understood, there is no doubt whatever that a yet further relative importance will be given to the work of Cox's later time over that of his earlier. His early work, finished and detailed; has its merit lying upon the surface; complete and somewhat petty in its realisation, it affords at once all the pleasure it is capable of affording. His later work, swift and summary—often marvellously slight, with a boldness which his absolute command of his subject justified—is a constantly enjoyable evidence of power to see and power to select. The touches are so few that they are to be counted; but each touch is priceless.

The drawing of *The Terrace*, Haddon, sold on Saturday for £59 17s. We are, for the moment, without the means of absolutely identifying it, but it was one of two drawings in the Stone Ellis sale the first of which sold for twenty-five guineas and the second for forty-one. It was probably the second, in which case a rise in value of about fifty per cent. has to be noted; in the other case the rise would be of more than one hundred per cent., but the former is, for several reasons, the more probable. The drawing of *The Garden Steps*, Haddon, sold for £52 10s. on Saturday week. It had fetched forty-six guineas at the Stone Ellis auction. *The Courtyard*, Haddon, reached £49 7s. at the recent sale. It had been sold for twenty-six guineas in the Stone Ellis collection. *Haddon, from the Bridge*, fetched £57 15s. the other day. We cannot quite certainly identify it in the Stone Ellis catalogue. *The Peacock Inn, Rowley*, fetched £54 12s. *The Mill Head, Rowley*, sold for £37 16s. It sold for thirty-one guineas on its former appearance. *The Monk's Walk*, Haddon, sold for £73 10s. Of David Coxes apparently not in the Stone Ellis sale we note *The Lost Path*, £69 6s.; *Harlech Castle*, £61 19s.; *A Scene in Wales*, £38 17s.; *Lamb bleating over Dying Ewe*, £110 15s. ("David Cox," says the Catalogue, "called this his cartoon"); *Evening*, a landscape with shepherd and sheep returning home, £126; *Oader Idria*, £74 11s.; *Snowdon*, £64; *Bettwys Old Church*, £204 15s.; *Rhyl Sands*, £168; *Driving to the Pasture*, £246; and *Take the Left Road*, £278 5s.

By J. M. W. Turner there were to be noted at this sale the *Valley of the St. Gothard*, £63; *The Val d'Aosta*, £78 15s.; *Battle Old Church* (from the Heugh collection), £91 7s.; *Cussibury, House and Park* (from the Mendel collection), £504; *Fonthill* (from the Heugh collection and from Fonthill), £525. The drawings by Girtin did not appear to be, on the whole, of the first quality, and hardly one of them reached prices which are commanded by his finer work. We note only among Girtin's works *St. Agatha's Abbey*, £19 19s.; *Norwich*, £21 10s. 6d.; *Valle Crucis Abbey*, £19 19s.; *Jedburgh Abbey* (from the

Heugh collection), £27 6s.; *Norham Castle*—a favourite subject with Turner—£36 15s.; *Guisborough*, £36 15s.; *Lincoln Cathedral*, £63; and *Richmond, Yorkshire*, £78. By Cozens there were no examples, or, at all events, hardly any, of the first quality, save perhaps *Rome*, £34. By H. Edridge we note the *Prison of the Conciergerie, Paris*, £45 3s.; by John Varley a *View near Eton*, £17 17s.; *Harlech Castle*, £35 14s.; and a *Grand Classical Landscape* of the kind that engaged Varley's attention after his earlier days, £73 2s. By J. Glover, *The Bass Rock*, £25 4s., and *Friars' Crag, Derwentwater*, £50 8s. By F. Nicholson, *Chester*, £34 13s. By R. P. Bonington—an artist sometimes over-rated, and as devoid of sentiment as was William Müller—a *Street in Verona*, £19 8s. 6d. By William Hunt there seemed specially noteworthy one of his rare town views; simple and masterly drawings, often far more interesting than his most successfully laboured representations of flowers and fruits, or of the rustics of his choice. This drawing was one of *St. Martin's Church, Trafalgar Square*; it had been, if we mistake not, recently seen at an exhibition in Bond Street. It fetched in the late sale £74 11s. The drawings by John Sell Cotman did not include any of the very best of that admirable master of the Norwich School. One of *Evening*, rooks returning home, sold for £29 8s. By David Roberts there was an *Approach to Mount Sinai*, stated to be from Lord Ellesmere's collection, which fetched £52 10s. By Luke Clennell, the *Highland Ferry Boat*—a favourable example of the work of a very gifted artist never, perhaps, fully appreciated by the public—£67 4s. George Barrett was represented by some notable landscapes of highly finished evening effects, such as it was his wont to execute. For example, *Sunset*, £126; the *Return from Labour*, £52 10s.; *The Gondola*, £141 15s.; *The Undercliff, Isle of Wight*, £94 10s. A Cattermole—*Colonel Pride's Purge*—from the Quilter collection, realised £162 15s.; and another, *The Farewell*, from the Gillott collection, fetched £147. By Samuel Prout there was the drawing of *Albert Dürer's Well at Nuremberg*, which realised £89 5s.; an *Old Church at Tours*, £90 8s.; *Portsmouth*, £120 15s.; *Chartres Cathedral*, £74; and *The Temple of Mars, Rome*, £96 12s. By William Müller, a clever drawing of *Gillingham*, from the collection of Mr. Constable, of Arundel, £60 18s. By George Fennell Robson—a very sterling, if not always a very attractive and individual, artist in water-colour painting—there appeared the fine drawing of *Ely*, a large work from the Leaf collection, and exhibited at the Manchester Art Treasures Exhibition. It fetched on this occasion £194 5s. Copley Fielding was well represented by *Dartmouth* and by the *Sussex Downs*, the former of which reached £111 and the latter £74 11s. Sir Augustus Calcott was probably best represented by a *River Scene in Devon*, which sold for £117 12s. There were a fair number of drawings by Peter Dewint, of which some were notable examples of his broad manner and easy mastery of his themes. *A Barge on the Thames* by this artist fetched £63 5s.; *Old Houses in Lincoln*, £73 10s.; *Borrowdale*, £86 2s.; a *Coast Scene on the Mediterranean*, "from Mrs. Tatlock's sale," £46 4s.; *The Haweswater Mountains*, from the western terrace, Lowther Castle, £94 10s.; *Kenilworth*, £88 4s.; and *The Hayfield*, £178 10s.

The entire sum realised by the sale of Mr. Pooley's collection of drawings was £8,937 12s., and the sale was attended by many of the principal English amateurs and dealers. Among the chief purchasers the priced Catalogue will be found to include the names of Messrs. Agnew, Vokins, Hogarth, Maclean, White, Grundy and Smith, Grindlay, Radley, Hallett, Wertheimer, the "Fine Art Society," Palsor, Corbett, and others. No sale of English water-colours of equal importance has occurred for a

considerable period, and a general review of the prices certainly shows no diminution in the value of drawings by the greater men of the last generation and of the last but one. It would appear from other sales that it is the works of living artists not admittedly of the first rank which are this year, and which have been for the last year or two, suffering most in value when offered to public competition.

NOTES ON ART AND ARCHAEOLOGY.

MR. HENRY LEMON, the well-known engraver of *Harvey showing the Circulation of the Blood* and some of Webster's famous pictures, has lately completed a large-sized line-engraving of the Beaconsfield Cabinet, comprising twelve figures. The work has occupied Mr. Lemon for four years, and is taken from the painting by Mr. Charles Mercier. The engraving is published by Messrs. Colnaghi of Pall Mall.

MR. ERNEST CROFTS, A.R.A., contemplates contributing to the forthcoming Royal Academy a large work measuring seven by four feet of the Duke of Marlborough after the Battle of Ramillies. The Duke, followed by several officers and a body of cavalry, is just riding up to the French position over a slight hillock, while the troops rush from their bivouac fires to cheer him. On the Duke's right are the battered and smouldering ruins of the village.

THE picture of the *Chinese Lady*, which is the first of the kind ever painted by a European artist, and which was inspected last season by the Queen at Windsor, is now on view in the saloon of the Folly Theatre, where it attracts considerable notice by the frequenters of the theatre. The work is from the brush of Mr. Walter Goodman, whose portrait of the Chinese ambassador was exhibited at the Royal Academy. Mr. Goodman is at present engaged upon a portrait of Mr. Wilkie Collins. This distinguished writer has never sat to any artist since he was quite a young man.

MR. J. D. LINTON, whose first public experiment in oil-painting was made only two years ago, will exhibit at the Grosvenor Gallery a large and important work in oil—the first completed of a projected series of six destined for the decoration of a large house. The six scenes will represent incidents in the life of a soldier—"incidents," we say advisedly, rather than the career—for they will be painted in accordance with what is pretty well known to be the creed of Mr. Linton in regard to pictorial art: that the execution must count for more than the subject, and that a painting must be picturesque and pleasant to the eye, whether or no it has, at the same time, an interest, literary or historical. There is therefore nothing remarkable in the artist having decided to begin his series with a painting which will not finally take its place as the first of the set, but rather as the fourth. Without regard to what may come before or what may follow after, the soldier is here seen in young middle-life—say, at the age of six or eight and thirty—and on an occasion of triumph. Returning from war, in which he has been victorious, the soldier, a young general, is introduced to the Court, accompanied by a swarthy captive and by many rich spoils. The king and queen sit on their thrones on a dais to the left of the design. The middle of the picture is occupied by the figures of the general and of the captive as they stand out in the large and stately audience chamber, hung with banners and carpeted with Eastern fabrics; while the right side of the picture is filled with a group of the followers of the warrior—his captains and lieutenants. As the picture is not yet quite finished, the present is not the time—nor, indeed, is this the place—in which to criticise as well as to describe it. The scheme is so large, the amount of subject

forced upon the painter by the incident depicted necessarily so great, that it is conceivable that the simple charm and glory of colour which the artist has often sought for in his work in water-colour will be here less apparent than in certain of his other productions. The complexity of detail will at all events render it more difficult for the chief interest of the work to consist in the display of qualities which are wholly those of the painter. The interest of character cannot fail to be introduced, and something of the interest of a story, and the artist will be forced to make more of these than he has sometimes been accustomed to do when the fascination of colour and line were found sufficient, and when, indeed, some agreeable arrangement of hue or of form constituted the chief motive of the picture.

WE understand that a new and thoroughly revised edition of Miss Kate Thompson's *Handbook to the Public Picture Galleries of Europe* will be published by Messrs. Macmillan and Co. before Easter. A new and, it is hoped, useful feature in this edition is the insertion of about two hundred outline illustrations of some of the most typical pictures of the Great Masters, accurately drawn from the originals and reproduced most faithfully by the Typographic Etching Company. Though necessarily on a small scale, it is hoped that the drawings may serve to recal the details of each composition to those who have seen the pictures, and enable the visitors to the different galleries to recognise at once the chief pictures mentioned in the text.

CONSIDERED as a composition, M. de Neuville's picture of *The Defence of Rorke's Drift*, now on view at the Fine Art Society's gallery in New Bond Street, is in many parts skilful, and it is certainly spirited. The line of figures carrying the sick from the blazing hospital is well conceived, and the foremost, a stalwart sailor, strikes us as excellent, both as regards figure and face. The attitude of the chaplain, the Rev. G. Smith, who, as the printed description of the picture tells us, was "ready to administer cartridges as well as spiritual consolation," is easy and probably life-like. He is for the moment devoting himself to the former branch of duty, and, although a keen sense of propriety has prevented him from divesting himself of his inconveniently long clerical coat, he is energetically exploring the recesses of his unclerical haversack in which the cartridges are stored. At the same time he is "administering" some consolation of the non-spiritual kind to one of the gallant defenders of the barricade, who, by-the-way, unless he alters the direction of his outstretched hand, is not likely to grasp the cartridges. Commissary Dalton's face is carefully painted, but, unless his legs are abnormal, considerable injustice is done to them by the painter. Many of the other figures are drawn with vigour, but the countenances are rather devoid of expression—a remark, however, which certainly is not applicable to the diabolical looking "mounted" Zulu in the distance. The smoke from the burning roof of the hospital is singularly flat and woolly, and distributes itself in the atmosphere in a somewhat erratic manner. The hillside to the left, Oscarberg Hill—stated to be only four hundred yards from the buildings—is painted as uncertainly as if it were miles off, and we have failed to find any traces of the caves indicated in the pen-and-ink sketch which hangs in another part of the room. We are not satisfied that all the lights in the picture are rightly placed, and there seems to us to be a lack of concentration in this and other respects. The scarlet in some of the soldiers' coats strikes us as crude, but in other respects the colouring is not garish; there is plenty of life and movement in the picture, and it will doubtless attain considerable popularity.

THERE is an important project now before

the Manchester public. The "Royal Institution for the Promotion of Literature, Science, and Art" is the property of a body of shareholders who are precluded by its constitution from ever reaping any pecuniary advantages even from its dissolution. The council have recommended that it should be offered to the city as an art gallery on condition that the town council provide an endowment fund of £50,000 in order that £2,000 yearly may be spent in the purchase of works of art. The Royal Institution site and building, which is one of Barry's best, is, with its small permanent gallery, probably worth £100,000. This scheme has still to receive the sanction of the shareholders and of the city council. The pictures belonging to the institution include two very fine Etty's, a considerable number of more or less genuine Old Masters, and a few modern works of interest and value. Manchester has long needed an art gallery, and it is a matter of surprise that none of her merchant princes have imitated the example of Sir William Brown and Mr. Joseph Mayer, of Liverpool.

THE *Journal* of the Society of Arts contains a very interesting paper read by Mr. John Sparkes, head-master of the classes at South Kensington, at the meeting of the society on the 10th inst., "On the Further Development of the Fine Art Section of the Lambeth Pottery," in which he gives a clear and concise account of the history of Doulton ware from its commencement till the present day, noting particularly the beautiful recent introductions of new bodies and processes, such as the glazeless "jasper," Lambeth "faience," *pâte-sur-pâte*, and "impasto painting." The paper is illustrated with woodcuts of choice examples and the monograms of the clever band of artists which Mr. Henry Doulton has been so judicious and successful in encouraging. No one can be better entitled to speak of the distinctive merits of these artists than Mr. Sparkes, so long the master of the Lambeth School of Art, where nearly all of them received their education. His paper is a chapter of the history of art in England of which the nation may well be proud. The beautiful collection of Doulton ware exhibited at the meeting was on view in the society's rooms on Friday, the 12th inst., and Saturday and Monday last.

A MOVEMENT has been set on foot by the classical professors at King's and University Colleges, in conjunction with the committee of the King's College Lectures to Ladies, to provide for instruction in Greek art, and to utilise the collections of the British Museum with that object. Mr. C. T. Newton, C.B., has undertaken to deliver the first course, consisting of eight lectures on Greek Sculpture and Painting, at the Botanical Theatre, University College, during the months of May and June next, commencing May 5. The lectures will be accompanied by visits to the British Museum, and will have special reference to the works of art which can be studied there. The co-operation of the principal colleges and schools in and near London will be invited; and, if the present movement is well supported, it is hoped that much may be done thereby to facilitate the systematic study of Greek art as a branch of classical education, which has recently been so strongly advocated in several quarters. Prospectuses may be obtained from Prof. G. C. Warr, King's College, Strand; from Prof. A. Goodwin, University College, Gower Street; or from Miss Schmitz, secretary to the King's College Lectures to Ladies, 5 Observatory Avenue, Kensington, W.

THE annual exhibition of the "Impressionists" is to open early in April.

M. BARBET DE JOUY has been elected a member of the Académie des Beaux-Arts in place of M. Montalivet.

M. BENJAMIN FILLON, the eminent collector, writing in the current number of the *Gazette des Beaux-Arts*, makes known two unpublished documents containing certain indications relating to the great engraver, Marcantonio Raimondi. The first of these simply records the names of Marcantonio and his father Andrea on the title-page of an Aldine edition of Aulus Gellius, published in 1515; the second is a letter written from Bologna in March 1659 by a certain Deshayes (possibly Jean Deshayes, a French engraver) to François Langlois, in Paris. In this letter the writer records that he has visited a bookseller at Bologna who claims to be descended from a bastard son of Marcantonio, who was also a famous engraver, like his father. Marcantonio left this son some property at Argini, near Bologna, at his death; and his descendant, the Bolognese bookseller, still possessed four copper-plates and a book of drawings by Marcantonio, as well as a number of plates by the son, who was baptised by the name of Giorgio and surnamed Benedetto Verine, after his mother. These are slight details, but still they are of interest in the paucity of information regarding Marcantonio's life, and it would be extremely interesting to find out something more about this son, whose name has not hitherto been known. M. Fillon hazards a surmise as to whether he may not be the same as the master who generally signed his plates with a die, but sometimes with the initials "B.V." The Master of the Die was certainly an imitator of Marcantonio, but until we gain further particulars it is useless to frame hypotheses regarding the productions of this newly discovered son of the great engraver.

ROUEN is a town that has long been noted for its appreciation of the fine arts. Its exhibitions rank among the most important of all in the French provinces, and have always attracted a large number of distinguished contributors. Its permanent gallery also reckons some important works, and these have increased so greatly of late that a new museum has become necessary to hold them. This new museum, which is to be a picture gallery and a library in one, has indeed been begun, and the pictures from the ill-lighted old gallery in the Hôtel de Ville have been removed to one wing of it, which is already finished. The entire building will, when completed, include another wing and a large central building. It has been designed on the same plan as several of the newly constructed European galleries, and is said to leave nothing to be desired in point of convenience of arrangement.

It has been proposed by M. de Chennevières that portraits of all the members of the French Academy shall be placed in an album and preserved in the library of the Institute. These portraits should be either drawn or engraved, and executed by the principal artist-academicians. The proposal is to be discussed at the next meeting of the Academy.

THE third centenary of the death of Andrea Palladio will be publicly celebrated in Vicenza on August 10.

WE hear from Montecassino that the celebration of the centenary of St. Benedict has been postponed until April 4. The *fiêtes* will last three days, and the wonderful frescoes of the band of German Benedictines entrusted with the restoration of the abbey are expected to attract a throng of artistic visitors.

THE Neapolitan archaeologist, Prof. Giulio Minervini, is now employed on a descriptive catalogue of the terra-cottas in the Museo Campano at Naples. This museum, which was only established a few years ago, contains a precious collection of more than five thousand terra-cottas.

M. CHARLES BLANC, who is at present

occupied with his course of lectures at the Collège de France on the Italian painters of the fifteenth century, is also, according to the *Moniteur Universel*, preparing a complete history of painting at this period. This will be published, when ready, in the form of a magnificent illustrated work, giving reproductions of all the great pictures executed by Italian painters before the full triumph of the Renaissance in the sixteenth century. His desire seems to be to show how much was achieved by the precursors of Raphael and Michelangelo, and how these great masters only consummated the work that was begun by Lippo Lippi, Masaccio, and other distinguished artists of the preceding century.

THE new number of the *Etcher* more than maintains the character of the periodical, which is now about the first of our artistic monthlies. Mr. Chattock's etching of "Tintagel" is a picture both poetical and forcible, and the little poem that accompanies it is thoroughly welcome on its merits as excellent verse, with high feeling and happy expression of it. Mr. Murray's etching of "The Tiger"—with verses by Blake—is adroit, but not very interesting. Baron von Gleichen-Russwurm contributes a winter landscape—skaters in Holland—which it is truly said reminds one, by its theme, of Isaac van Ostade, as indeed of many another Dutch painter. The transitions from dark to light may possibly be too abrupt, but all modes of representation are necessarily conventional, and the present etching is successful in the sense that it is a striking picture.

In the *Portfolio* this month there is an article by Miss Julia Cartwright that will interest most readers. It is entitled "Varallo and her Painter," and gives an inviting description of the beautiful old town of Varallo in the Val Sesia, one of the valleys which lie around the southern slope of Monte Rosa. This lovely spot has a reputation for sanctity, for just above the town is the Sacro Monte with its chapel built in 1493 in exact imitation of that of the Holy Sepulchre at Jerusalem. Hither crowds of pilgrims flocked in former times, and even now, at any of the chief festivals of the Church, this secluded little sanctuary receives numerous devotees. The painter, *par excellence*, of this region is the graceful Gaudenzio Ferrari, who was Raphael's assistant in Rome. Gaudenzio was born in the Val Sesia in 1484; and though he left it after a time to study at Milan, Perugia, and Rome, he returned to fill all the churches of his native valley with his lavish conceptions. More especially at Varallo, where he lived for many years surrounded by pupils, are his elaborate representations of sacred events to be seen. Two views of the Sacro Monte, etched by E. Yon, give some idea of this little-known locality, and show that Miss Cartwright has not exaggerated her description of its beauty. A refined portrait study of a young girl, by P. H. Calderon, etched by C. O. Murray, which is given as a frontispiece, will also be likely to prove an attraction in this number of the *Portfolio*.

THE fourth number of the *American Art Review* contains various articles of value and some excellent etchings. Of the articles of more than American interest perhaps the chief is a short sketch, from the pen of Prof. E. S. Morse, of Hokusai (or Hoksai), the founder of the modern Japanese school of drawing. This account, which is partly based on the work of Dr. Anderson, of the British Legation at Tokio (*History of Japanese Art*), and partly on information contributed by an old pupil of Hokusai's, offers a charming picture of the artist who, springing from the ranks of the people and working with unwearied industry till his ninetieth year, wrought a complete revolution in Japanese design. He was born in 1760, but

did not become famous till 1810, when his *Mañguwa* (or "Ten Thousand Sketches") began to appear. It is curious, indeed, that an artist whose motto was "the return to nature," who "went on studying, not from books, but from nature," should have appeared in the farthest East at the very moment when Wordsworth and Turner were beginning to teach the same lesson among ourselves. The chief illustrations of the number, beside those from the Japanese, are two etchings by the brothers Thomas and Peter Moran, and one (first printed by the Viennese Gesellschaft für vervielfältigende Kunst) by Forberg, after Salentin's *Prayer in the Forest*. Mr. Thomas Moran's *The Passaic Meadows* is a lovely study of still water, and lush grasses, and distant trees. The American etchers of landscape are pressing very close after their European brethren.

ONE of the most charming works of sculpture that the modern Italian chisel has lately produced is now being packed in its temporary sarcophagus to be shipped for London, where it will be, without doubt, one of the most attractive objects of the spring exhibitions. We hear that it is to go to the Grosvenor Gallery, and the managers of that valuable institution may congratulate themselves on the temporary possession of so fine a work. It is the result of some years of thoughtful study and careful execution, the conception and the work of the Cav. Francesco Fabi-Altini. It represents *Galatea* seated upon a rock, about which the waters gently surge, fearful to moisten the tender foot round which they play. Her head inclines over the right shoulder, and is elegantly dressed with leaves and shells, intertwined with strings of pearls. The right hand, gracefully raised over the head, holds a drapery, disposed with much elegance, falling over her back and slightly filled, sail-like, by the breeze; the lower portion of this drapery covers the rock on which she sits, in part passing over the right thigh and gently held by the left hand. The expression of the whole figure is of perfect purity and graceful simplicity, free from a too naturalistic realisation, avoiding at the same time false sentimentality. In short, it is an elegant and refined work, executed with admirable skill, in a marble of remarkably fine quality.

WE hear from Florence that crowds of people have been pouring out from that city every day this week to see the famous San Donato collection. As many as 10,000 visitors were admitted on March 12, yet nothing was touched or injured, for the Florentines are a most orderly people, and submit to regulations with a much better grace than the English. It is believed that the attendance at the sale will be enormous, for dealers and *connoisseurs* have been attracted from all parts of the world by the fame of this immense collection.

THE STAGE.

TO-DAY the *Merchant of Venice* is performed at the Lyceum for the last time this side of Good Friday, and a rest is entered upon which has been merited by all—from Mr. Irving down to the two young stage Venetians who lie on their backs on the Riva dei Schiavoni in the first scene, and are idle as only Italians and stage supernumeraries know how to be. The great run of the piece has not thus far resulted in materially damaging the artistic excellence of the performance. Shylock is intelligent, studious, and subtle at every moment, and at times passionate and moving. Portia is as elegantly restless and perturbed, and as quick with tears and laughter as she was on the first representation. Bassanio is what he has been from the beginning—vigorous and honest, but never quite satisfactory, till the scenes of playfulness in that beautiful garden at Belmont. Antonio is a little phlegmatic, as Shakspeare made

him. Gratiano is happily lively, and not so uncomfortably boisterous as stage tradition generally urges him to be. Jessica is as wily a little Jewess as the Jews' Quarter could show. The piece is to be played again, after the brief holiday, for yet many weeks more. But the *Corsican Brothers* is understood to be promised for production some time before the close of the season, nor will the manager be sacrificing the interests of art when he produces it; for melodrama is a form of stage work into which, if genuine artists engage in it, art may largely enter. It is, perhaps, even easier to be inventive and fresh in that department than in the well-worn characters of older standing on the stage.

A NEW comedy, or comedy-drama—a term of curious ugliness—is, it is stated, actively preparing at the Vaudeville, the name of its author not being yet announced. We believe it was Mr. Burnand who suggested in a recent number of the *Theatre* that the fairest condition for the production of a stage play was its production under cover of the anonymous. Prejudice and prepossession can then have no part in the formation of opinion. We do not know whether Mr. Burnand's plan is to be adopted at the Vaudeville when the new piece is brought out. Dramatists are not very easy to satisfy. Mr. Byron not long ago laid down a statement as to the fair conditions for criticism. He objects to the professional critic basing his verdict on a first-night performance. But it has since been pointed out to him by Mr. Dutton Cook that, on the whole, dramatists have quite exceptional advantages in the present conditions of criticism. The public, not perhaps really more eager about a new play than about a new volume, is yet supplied, through the traditions of journalism, with a report directly it is produced, and its foundation is generally the verdict pronounced in friendliest fashion by a first-night audience "packed" for the most part—we must venture to say—by manager and friends. Mr. Byron lays down excellent laws for ideal criticism. A piece must be seen more than once; the literature examined independently of the performance. But criticism is practical work. And it is not invariably that our stage plays would be found to repay that close and repeated attention upon which the ideal criticism is to be based.

THE success of *Macbeth* at New Sadler's Wells—with Mrs. Crowe as Lady Macbeth—has led to its repetition this week, and *Hamlet* will speedily follow, to witness to the energy with which the management pursues its Shaksperian enterprise.

WE may next week have occasion to speak of the new programme at the St. James's Theatre, which is an attractive one, Mr. Tom Taylor's *Still Waters Run Deep*—an old and favourite comedy—running alongside of a new and original *lever de rideau* of which good things are said.

MUSIC.

A "FAUST SYMPHONY" BY F. LISZT.

"Programme-music is a legitimate genre of the art." "Programme-music is a degenerate species of instrumental music." These two propositions, the former from Fr. Niecks' remarks, "A propos of Liszt," and the latter from a well-known History of Music, show that in speaking of the Faust symphony we are treading on dangerous ground. Liszt has, however, departed from his usual plan of giving an explanatory programme by way of preface. The title of the work is "A Faust Symphony (after Goethe)" in three character-pictures—(1) Faust, (2) Gretchen, (3) Mephistopheles, with choral ending, "All that is transient is but a semblance." Thus the composer merely names the subject or subjects which occupied his mind during the composition of the work, and each listener, having the source of the

musician's impressions revealed to him, is at liberty to interpret the music more or less according to his own fancy. Fr. Niecks complains of the unpardonable neglect of Liszt's works. He also adds, "The fact is, Liszt never got fair play." Well, the reproach of neglect certainly does not apply to Mr. Walter Bache, who, with much patience, has laboured year after year in the cause of his master and friend, and the magnificent performance of one of the composer's most representative and characteristic works at Mr. Bache's sixteenth annual concert last Tuesday at St. James's Hall is, at any rate, a proof of "fair play." It is impossible not to agree with Niecks' concluding sentence—"After all, the best that can be done for Liszt is to let him speak for himself."

The word "symphony" in the music before us is somewhat misleading. It is an old word with a new meaning. The main features of the classical form are preserved, but the number, order, and metamorphoses of the themes, the frequent changes of time, measure, and key, and especially the character of the third movement, are all peculiar to Liszt. It is a very long work, occupying more than one hour in performance. The introductory part of the first movement contains two motives, the second of which plays a prominent part throughout the work, and is justly described (by Niecks in his analysis) as the Faust motive *par excellence*. In the *allegro agitato* which follows, three more themes are introduced—the first, restless and agitated; the second, melancholy and impassioned; and the last, energetic and triumphant. These motives, with their peculiar combinations and developments, form the musical portraits of Faust, who appears either lost in gloomy meditation, struggling to grasp the infinite, cursing the world as a hollow mockery, or urged on by the spirit of endeavour and enthusiasm. All these motives are characteristic and well contrasted; the workmanship is of great merit, the orchestration clever and effective, and the whole movement one of great power and originality.

The second portion ("Margaret") of the work is full of poetry and charm. It opens after a short prelude with a flowing and graceful melody, which, of course, depicts Margaret; but the subsequent entry and development of themes from the first movement show that Faust is still the centre of attraction, but changed and soothed by Gretchen's pure love and devotion.

This section is short and easy of comprehension. The charming motives, the skilful and interesting Faust episode, and the wonderful delicacy of the orchestration, all combine to render the movement most pleasing and satisfactory.

The third section of the work again presents to us Faust, but now under the influence of Mephistopheles, "the spirit that ever denies." The motives of the first movement re-appear, but they are sadly changed. They have lost their former seriousness and power. The mocking spirit of the fiend has taken hold of Faust, and the music becomes weird and devilish. Traces of the influence of Berlioz are here apparent. The orchestration is masterly, and it is certainly a wonderful tone picture; but, while acknowledging its skill and cleverness, we frankly confess, after a first hearing of the work, that we think the first two movements more powerful, and more impressive.

The symphony ends with an *andante mistico* (men's chorus, tenor solo, and orchestra). The chorus chants in a simple but solemn manner some lines from the second part of Goethe's *Faust*. The tenor solo (excellently sung by Mr. Barton McGuckin) is taken from the Margaret theme. "And thus," says Niecks, "all struggles being past, the close is one of perfect bliss and peace."

J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.

To-night, at 8, a Play, in five acts, THE OLD LOVE and the NEW. By BROSNOW HOWARD and J. ALBERT. Messrs. Coghlan, Fisher, Leatham, Price, Deane, Holman, Benn, Douglas, Phillips, and Anson; Mesdames A. Roselle, Emily, Emily, J. Roselle, and J. Roselle. Morning Performance of "The Old Love and the New," Saturday, April 3, at 2. Box-office from 11 till 5. No fees.

DUKE'S THEATRE, Holborn.

Managers, HOLT and WILMOT.

To-night, at 7.30, a new dramatic Play, in four acts, by the late JOHN WILKINS, Author of "Civilization," entitled THE BATTLE OF THE HEART. Mr. C. Holt, Miss F. Brough, and full Company. At 9.30, Miss Lisa Weber and her Burlesque Troupe (specially engaged) in BURNAND'S Extravaganza, PARIS. New scenery, dresses, &c.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

TOOLE, to-night, in three pieces (for a few nights only). At 8, THE SPITALFIELDS WEAVER. At 9, the celebrated trial, BARDWELL v. PICKWICK. At 10, OUR CLERKS. At 11, IN THE REAR. Doors open at 7. Prices 1s. to 2s. 3s. Box-office 11 till 5. No fees for booking. "The Upper Crust," a new and original comic Drama, in three acts, by H. J. BROWN, will shortly be produced.

GLOBE THEATRE.

Saturday, March 20th, the Last Night of LES CLOUCHES DE CORNEVILLE.

To-night, at 8, this celebrated Opera, with new scenery, new dresses, and new effects. Messrs. Shiel Barry, Edward Marshall, Frederic Darrell, C. Ashford, and Wilford Morgan; Mesdames Kate Munroe, Laura Clement, Clara Graham, Kate Chorley. Increased band and chorus. Conductor, Mr. E. SOLOMONS. Preceded, at 7, by the Oriental Extravaganza, THE HAPPY MAN. Mr. Shiel Barry, &c. Doors open 6.30, close at 11.0. Stage Manager, Mr. H. B. FARNIE.

IMPERIAL THEATRE.

Shakspeare's Comedy. AS YOU LIKE IT. Every afternoon at 3, in which Messrs. Lionel Brough, Herman Veda, W. Farren, Kyrie Bellew, F. Everill, E. F. Edgar, J. Baanister, C. Coe, G. Coventry, F. Charles, E. Allbrook, F. Stephens, G. Trevor, C. Bunch, and Miss Litton, Miss Crosswell, Miss Brunton, Miss Sylvia Hodson will appear. The overture and incidental music selected and arranged by Mr. Burnand from the works of Dr. H. Bishop, Martin, and C. Horne. The Comedy produced under the personal superintendence of Miss Litton. Stage Manager, Mr. Coe. The doors open at 2.30; Overture at 2.45; Comedy precisely at 3; Carriages 5.45.

LYCEUM THEATRE.

Solo Lessee and Manager, Mr. HENRY IRVING.

This Theatre will be CLOSED on MONDAY next, MARCH 22nd, and the four following evenings, RE-OPENING on SATURDAY MORNING next, 27th MARCH, with THE MERCHANT OF VENICE. The Box Office remains open as usual except on Friday.

NEW SADLER'S WELLS.

Proprietor and Manager, Mrs. S. F. BATEMAN.

SERIES OF SHAKSPEARE'S PLAYS. OTHELLO, having been received with marked favour, will be given for five additional nights, beginning MARCH 22nd, with Mr. Herman Veda as Othello and Mrs. Vernon as Iago; Emilia, Mr. Charles Calvert; Desdemona, Miss Carlisle. At EASTER, TOM TAYLOR'S famous Comedy-Drama, CLANCARRITY.

OPERA COMIQUE.

Saturday, March 20th, the Last Night of CHILDREN'S PINAFORE—EVENING PERFORMANCE.

To-night, at 7.45, a new and original Vaudeville, written by F. DESPREY, music by ALFRED CELLIER, in THE SULKERS. Characters by Mr. Richard Temple, Mr. F. Thornton, and Miss La Rue. At 8.30, THE CHILDREN'S PINAFORE. Being a representation of Messrs. GILBERT and SULLIVAN'S popular Opera, "H.M.S. Pinafore" (all the characters sustained by children). At 10.30, AFTER ALL.

PRINCE OF WALES'S THEATRE.

Solo Lessee and Manager, Mr. EDGAR BRUCE.

This Evening, at 7.00, an original Comedietta, A HAPPY PAIR. By S. THREY SMITH. At 8.40, HERMAN MEYER and F. C. GROVES'S original Play, FORGET-ME-NOT. (By arrangement with Miss Genevieve Ward.) Miss Genevieve Ward, in her original character, Forget-me-Not, Mrs. Bernard Moore, Miss Kate Pattison, Mrs. Leigh Murray, Miss Layton, Mr. John Clayton, Mr. Flockton, Mr. J. G. Shore, Mr. Ian Robertson, and Mr. Edgar Bruce. No fees of any description. The Box-office open daily between 11 and 5. Secretary and Treasurer, Mr. W. H. GRIFFITHS. Doors open at 7.30.

ROYALTY THEATRE.

Managers, Mr. and Mrs. J. P. BURNETT.

This evening, at 8.15, J. O. Messrs. J. P. Burnett, Groves, Charles, Crisp, Wilkinson, Edwards, Leigh; Mesdames Bennett, Brunel, Robertson, K. Lee, Steele, Drummond, and Jennie Lee. At 7.15, THE GOOSE with the GOLDEN EGGS.

ROYAL CONNAUGHT THEATRE.

This evening, at 7, WHO SPEAKS FIRST? Mr. Walter Joyce. LOCKED OUT. Mr. Howard Paul, Miss Lesley Bell. SHE STOOD TO CONQUER. Miss Caroline Hill, Mr. Kyrie Bellew. Incidental. HUNCHBACK BACK AGAIN. Mr. E. Highton; Mesdames Kate Lawler, Amalia, Lizzie Coote, &c.

Dining-room Suites, from £7 7s. to 40 guineas.
And all other goods in great variety.
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862

TARAXACUM and PODOPHYLLIN.—A solid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. F. PEPPE, 237, Tottenham-court-road, London, whose name must be on the label. — Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. F. PEPPE is signed in red ink on the label.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,
and without which none is genuine.
Sold Wholesale by the Proprietors, Worcester;
Gosse & Blackwell, London; and Export Oilmen generally
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."
Wordsworth's Chemical Food of Health.
Prepared from the choicest Peruvian Leaf. The New
Remedy for GENERAL DEBILITY, NERVOUS PROSTRATION,
NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.
Sold in Bottles, 1s. 1½d. and 2s. 9d., post-free.
H. WORDSWORTH & Co., Homoeopathic Chemists, 6, Sloane-street, and 4, King-street, Kensington, London.

LOCKYER'S SULPHUR HAIR RESTORER.
Large Bottles, 1s. 6d. Restores the Colour to Gray Hair in a few days. The best, safest, and cheapest. Quite equal to expensive ones.
Sold by Chemists and Hairdressers.

DINNEFORD'S MAGNESIA.
The Medical Profession for over Forty Years have approved of this pure solution as the BEST REMEDY for
Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion,
And as the safest Aperient for Delicate Constitutions, Ladies, Children, and Infants.
DINNEFORD'S MAGNESIA.

PAINLESS DENTISTRY.

MR. G. H. JONES,
Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name."
"G. H. Jones, Esq." "S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HALLALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

No. 5 now ready, price 6d., with Full-page Engraving, and containing all the Fishing News of the Fortnight.

Well spoken of by the whole Press.

THE ANGLER'S NOTE-BOOK

AND
NATURALIST'S RECORD:

A REPERTORY of FACT, ENQUIRY, and DISCUSSION
on FIELD SPORTS and SUBJECTS of NATURAL
HISTORY.

The ANGLER'S NOTE-BOOK is a magazine for recording notes and observations on the habits and natural history of fish, bird, and beast, on adventures and captures, on tackle and lures, on grounds and quarters, and on those thousand and one matters, literary, artistic, and scientific, of interest to Anglers, Sportsmen, and Field Naturalists.

The ANGLER'S NOTE-BOOK opens its pages to all notes of this character, whether new or old, if records of original observation and of general interest and permanent value; it contains questions and answers of correspondents on all subjects coming within its scope; and also notices of men, deeds, and books of the past and the present.

The ANGLER'S NOTE-BOOK is printed in a form which admits of its being readily bound and kept for future use. The want of such a book of reference has long been felt. The weekly sporting papers, invaluable on their own ground (upon which the "Note-Book" will not trench), fail to supply it. To bind them is costly; they are cumbersome to handle when bound; ordinary book-cases are not large enough to hold them, and patience is soon exhausted in hunting through their closely-packed pages. Year by year thousands of interesting notes are thus practically lost. With the advent of the "Note-Book" this need no longer happen.

The ANGLER'S NOTE-BOOK is printed on good paper, in small quarto form, and issued in a neat wrapper, on the 1st and 15th of the month. Twenty-four numbers will form a volume, and be provided with a title-page and a copious index, in which all the facts garnered during the year will be properly classified and made available for easy reference.

Subscription: Annual, 12s.; Quarterly, 3s. (post-free).

To be completed in about Ten Parts.

A NOVEL

appearing in Monthly Parts, together with occasional
Papers on Subjects connected with the Story.

PERMANENT PHOTOGRAPHIC BOOK

ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Paleogeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its cheapness for small Editions of 500, 500, &c.
- 3rd. The plates being direct on the Paper there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.

* * For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chef-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN," illustrated by Jane E. Cook. Second Edition (1880). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIORUM." Facsimile from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

W. SWAN SONNENSCHNEIN & ALLEN'S

New Educational Publications.

ROYAL RELIEF ATLAS. Consisting of

THIRTY-ONE MAPS in RELIEF, framed and bound in 1 vol., royal 4to, price about One Guinea. [In Map.]

These maps have been prepared with great difficulty and at great expense. The result, however, fully comes up to the expectations that had been made with respect to this undertaking, and the numerous geographers, teachers, &c., who have inspected the maps express great satisfaction with them, being assured that they will be of the greatest value for educational purposes. Each map presents in bold relief the leading physical characteristics of the chief countries of the world, the various elevations, &c., being relatively accurate.

LINEAR BLACK-BOARD MAPS.

FIRST MAP—ENGLAND and WALES. 4ft. 9in. by 4ft.; mounted on double rollers, 16s.

In order to facilitate the teaching of geography with outline on the black board (a system now in great vogue) this series of maps has been projected. They are printed in broad white outline upon stout, linoleum, and the positions of the chief towns, and their relative sizes, are indicated by dots, and the countries by dotted lines. The pupils can thus fill in on the linoleum with chalk the courses of rivers, names of towns, positions of coal-beds, &c., which can at once be removed with a duster or damp sponge.

INDUSTRIAL GEOGRAPHY PRIMERS.

Edited by G. PHILLIPS BEVAN, F.R.S., F.S.A. 18mo, cloth, 1s. each.

Vol. I. GREAT BRITAIN and IRELAND. [Ready.]

Vol. II. FRANCE. [Nearly ready.]

Vol. III. UNITED STATES of AMERICA. [In the press.]

"The series is likely to be welcomed as a valuable aid to those engaged in the practical branches of education."—*Saturday Review*."We wish the series all success."—*Educational Times*."Quite within the grasp of children, and will be a welcome addition to our supplementary school-books."—*School Guardian*."We can only trust that these Primers may in time be used in every school in the land."—*Western Daily Mercury*.

MENTS, and HOW to USE THEM. By F. E. HEYER, F.R.S., F.S.A., Art-Master of Marlborough College, Author of "Principles of Ornamental Art," &c. Imp. 16mo, with Fifty-six Illustrations, pp. xvi-153, cloth, 3s. 6d.

LONDON: TRÜBNER & CO., LUDGATE HILL.

RICHARD BENTLEY & SON'S NEW WORKS.

Price One Shilling.

THE TEMPLE BAR MAGAZINE.

CONTENTS FOR APRIL.

- I. ADAM and EVE. (Continued.)
- II. WILLIAM WILBERFORCE.
- III. DREAMS.
- IV. "O WAE'S ME."
- V. DOSIA.
- VI. THE BRITISH PEERAGE.
- VII. LETTERS from CONSTANTINOPLE.
- VIII. RECENT MATERIAL for FUTURE MEMOIRS.
- IX. THE REBEL of the FAMILY. By Mrs. E. LYNN LITTON. (Continued.)

LORD BEACONSFIELD: his Life, Character, and Works. A Critical Study. By GEORGE BRANDES. Translated by Mrs. GEORGE STURGE. Demy 8vo, 10s. 6d.

THE "TIMES."

"Herr Brandes' information is copious and singularly accurate so far as we have tested it; and his literary criticisms at least are sound, penetrating, and genial. As a biography, his work is far more valuable, because more concise and impartial, than any which has appeared in England. As a criticism, it is generally instructive, and often suggestive."

"VANITY FAIR."

"Herr Brandes is the first author who has touched the personality and history of Lord Beaconsfield with anything like scientific critical method. . . . As a rule his work is really remarkable for sound conclusions and calm sense."

PRINCE METTERNICH'S AUTOBIOGRAPHY. Edited by his Son, PRINCE METTERNICH. Translated by ROSINA NAPIER. With Portrait and Facsimiles. 2 vols., demy 8vo, 30s.

THE OLD RÉGIME: Court, Salons, and Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris," &c. With Portraits of Louis XV., Marie-Antoinette, Rousseau, Voltaire, Mde. du Barry, and Mlle. Clairon. 2 vols., large crown 8vo, 24s.

THE HEART of HOLLAND. By Henry HAVARD, Author of "The Dead Cities of the Zuyder Zee," "Picturesque Holland," &c. Translated by Mrs. CASHEL HORY. Demy 8vo, with Eight Illustrations, 15s.

"SATURDAY REVIEW."

"The Heart of Holland" stands the best test to which a book of travels can be put. It raises in the reader a strong desire to follow in the footsteps of the author. We had not reached the end of M. Havard's volume before we had got out our maps, our Bradshaw, and our Baedeker, and planned another trip to Holland."

"GLOBE."

"No living writer describes Holland so well as Henry Havard."

NEW ADDITION TO "BENTLEY'S FAVOURITE NOVELS."

NELLIE'S MEMORIES. By Miss Carey, Author of "Heriot's Choice," &c. In crown 8vo, price 6s.

NEW NOVELS AT ALL LIBRARIES.

BY THE AUTHOR OF "VIRGINIA."

HONOR CARMICHAEL. By Henrietta A. DUFF, Author of "Virginia: a Roman Sketch." 2 vols., crown 8vo.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE."
NO RELATIONS. By Hector Malot. Translated by the Author of "Hogan, M.P.," &c. 3 vols., crown 8vo.

"An extremely fascinating story, written with unflagging force, and as full of genuine pathos as of graceful and delicate descriptions. . . . This novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

TWO WOMEN. By Georgiana M. Craik. 3 vols., crown 8vo.

"Those who have not yet perused this latest story by Miss Craik may be warmly recommended to do so."—*Morning Post*.

BY THE AUTHOR OF "FLITTERS, TATTERS, AND THE COUNSELLOR."

CHRISTY CAREW. By the Author of "Hogan, M.P.," "The Hon. Miss Ferrard," &c. 3 vols., crown 8vo.

"Christy Carew" is a very clever book, displaying in many places passages such as one has at present the right to expect from George Eliot alone. The characters are most original in conception and true to nature."—*Morning Post*.

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
etc. in Ordinary to Her Majesty the Queen.

SMITH, ELDER, & CO.'S NEW BOOKS.

SHAKSPEARE'S KNOWLEDGE and USE of the BIBLE. By CHARLES WORDSWORTH, D.C.L., BISHOP of S. ANDREWS, and Fellow of Winchester College. Third Edition. With Appendix, containing additional Illustrations and Tercentenary Sermon preached at Stratford-on-Avon.

NEW and OLD: a Volume of Verse. By JOHN ADDINGTON SYMONDS, M.A. Crown 8vo. [Shortly.]

A RULE of PROPORTION for the HUMAN FIGURE. By JOHN MARSHALL, F.R.S., F.R.C.S., Professor of Anatomy, Royal Academy of Arts. Folio, Illustrated by John S. Cuthbert, wrapper, 8s.; portfolio, 9s.

"Mr. Marshall, who has done such good service already in art education by his 'Anatomy for Artists' and 'Anatomical Diagrams,' now presents us with a new rule of proportion for the human figure which is at once simple and scientific. Mr. Marshall's rule and Mr. Cuthbert's diagrams will be of great value to artists, as the former is simple and easy to remember, and both are founded upon ascertained facts."—*Academy*.

NEW NOVELS.

MARTHA and MARY. 2 vols. [This day.]

NOVEL BY THE AUTHOR OF "THE ROSE GARDEN."

THE WHITE MONTH. By the Author of "The Rose Garden," "Unawares," Crown 8vo, 7s. 6d. [This day.]

Part III. On the TRANSFORMATION of the MEXICAN AXOLOTL into AMBYLOSTOMA—On the MECHANICAL CONCEPTION of NATURE. Price to Subscribers for the Complete Work, 6s.

Now ready, an entirely New Work by JULES VERNE.

THE GREAT NAVIGATORS of the EIGHTEENTH CENTURY. With numerous Illustrations and Facsimile Copies of Old Engravings, Charts, Maps, &c. Demy 8vo, cloth extra, 12s. 6d.; gilt edges, 14s.

PUBLISHER'S NOTE.—This volume forms the second of three volumes under the general title of CELEBRATED TRAVELS AND TRAVELLERS. The first volume, already published, is entitled THE EXPLORATION OF THE WORLD, and covers a period in the World's History extending from B.C. 565 to the close of the Seventeenth Century. The present volume extends over the Eighteenth Century, and the third volume will give an account of the GREAT EXPLORES and TRAVELLERS of the NINETEENTH CENTURY.

THE NEW ADDITIONS TO LOWE'S STANDARD SIX-SHILLING NOVELS ARE

THE AFGHAN KNIFE: a Novel. By ROBERT ARMITAGE STEEDMAN, Author of "Scenes," Small post 8vo, cloth extra, 6s.

AND

MY LADY GREENSLEEVES. By the Author of "Comin' thro' the Rye," &c. Small post 8vo, cloth extra, 6s.

CHRIST IN SONG. By Dr. Philip Schaff. A New Edition, Revised and Enlarged. Crown 8vo, cloth extra, 6s.

Now ready, 4to, in Wrapper, price 1s. 6d.

MEN of MARK, for APRIL (No. 52, Vol. V.).—Containing, with Brief Biographical Notices, Three Permanent Cabinet Photographs, specially taken from Life (by LOCK & WHITEFIELD) for this Work only of—The Hon. Sir C. G. FOLLOCK, WILKIE COLLINS, and Sir JULIUS BENEDET.

"Certainly the photographs are very fine."—*Times*.

LITERATURE.

The Life of John Milton: Narrated in Connection with the Political, Ecclesiastical, and Literary History of his Times. By David Masson, LL.D. Vol. VI. 1660-74. (Macmillan & Co.)

WE heartily congratulate Prof. Masson on the satisfactory termination of his herculean task. It is given to comparatively few men to carry out in all its entirety the plan of a great literary work which extends, if we mistake not, in his case, over some thirty or more years. The concluding volume is, if possible, more interesting as regards Milton himself than any or all of the former ones, since it embraces that period of the poet's life with which hitherto the public at large have been undoubtedly the least acquainted. But, on the other hand, as regards the political part of the present volume, we confess to a grave disappointment at the meagre manner in which this equally interesting portion of the subject has been treated. To explain briefly what we mean we need only point out that the history of Scottish and Irish affairs here given us absolutely stops at the year 1661, and for the last thirteen years of Milton's life the state of those countries is left entirely to the reader's imagination. This is, we venture to think, a mistake arising not so much from any paucity of materials on which to work as from an apparent desire to hasten, even in the English political part, to the conclusion of a task which had grown somewhat—and, we think, only naturally—irksome and oppressive. Although, as we have said, there is no lack of original papers and correspondence illustrative of this period of Scottish and Irish history, yet they have been so little used or appreciated by former writers that we had hoped the more from the hitherto unflagging activity and industrious zeal displayed by Milton's latest biographer in hunting up and reproducing to the best advantage any sources of information, however obscure and hard to come at. It may be that for Scottish contemporary history the pages of Wodrow and Calderwood are considered sufficient for the reader; but these are eminently ecclesiastical, and necessarily so partial to the cause of the people that the other side—that of the Government, and its able policy in playing off the several nobles and chieftains one against another—is to this day left without a lucid exponent or impartial writer. The brief notices we get in the first chapter of Prof. Masson's sixth volume of the future Archbishop of St. Andrews, James Sharp, in his Covenanting days are extremely interesting, though not so full as they might be. Setting out from London on May 4, Sharp arrived at Breda

on the 8th, and therefore, as Prof. Masson omits to tell us, he had a week's start of the Parliamentary Commissioners, and actually left the Court the day before they arrived. And we must not altogether accept the statement that what passed between Sharp and his Majesty no one really knows. For we have Sharp's own account, in his letter of May 29 to Provost Wood (Add. MS. 23114, f. 1).

"I had from the King an acceptance of as much kindness and respect as I could have wished, and an opportunity to give a full account of all the late transactions and of the condition of our Church and nation. He was pleased to admit me five or six times to private conferences, in which he did express a great affection to Scotland and a resolution to restore us to our former liberties. I wondered to hear him speak of all the passages as to persons and things whilst he was in Scotland with as full a remembrance and exact knowledge as if they had been recently acted and he had lately come from thence. However his Majesty may be influenced as to the settling of religion in England (which, I fear, through the prejudice of this people against that uniformity which was covenanted for, will not be such as we wish), yet what the Lord hath wrought in Scotland will be perfected and not altered by his Majesty."

Sharp, we may be sure, while thus basking in the smiles of royalty, was enjoying to the full his revenge for his unceremonious expulsion from England by the Council of State less than twelve months before, and the stern and peremptory order to him to forbear from all political intermeddling, and to confine himself strictly to the duties of his calling.

The lengthy account of the trial of the Regicides and excepted persons is given with Prof. Masson's usual care and explicitness of detail; but he fails to tell us the reasons why Sir Gilbert Pickering, one of the most active and influential Councillors of the Protector Oliver, escaped with comparative immunity, or why Sir John Swinton of Swinton was so eagerly sought after and so rigorously proscribed. Indeed, we are left in the dark altogether as to the ultimate fate of the latter through the abrupt termination of Scottish history at the close of the year 1661. The fact is, Sir Gilbert Pickering, being a cousin of the first wife of the Earl of Lauderdale, had been very instrumental in saving the estates of the Earl and the dower of the Countess from the grasping greediness of Swinton, of Swinton to whose portion they had fallen out of the forfeited estates in Scotland. Also the wife of Sir Gilbert Pickering had supplied the Earl with money from time to time during his captivity at Windsor, and by her influence had rendered his imprisonment less rigorous. When, therefore, the times were changed, the Lauderdalees gratefully protected and made interest for their former friends, and at the same time took a very natural revenge on the enemy, Swinton, who had so bitterly wronged them. It is curious to note among the excepted persons the name of Serjeant Keble, who narrowly escaped being included among the Regicides and sharing their terrible fate, and yet was the ancestor of John Keble, the author of *The Christian Year* and almost a worshipper of the memory of Charles I.

In the account of the restoration of Episcopacy and of the Conference of divines at Worcester House in October 1660, Prof. Masson passes over in silence the part taken in this question by Morus, the old antagonist of Milton, and by the other leading Protestant divines of the French Church. Through the agency of Daniel Brevint, a Jersey man, formerly chaplain to Marshal Turenne, and made by Charles II. when in Paris his own chaplain and Prebendary of Durham, these French ministers were set on at the Restoration to write for Episcopacy in England. Sir Robert Moray, who in June 1660 was still lingering in Paris waiting for a royal summons to return to London, took up the subject very warmly, and had several conferences himself with Morus and his colleagues, and his opinion (Add. 23114, f. 6) was that "there cannot be a fairer opportunity wisht (excepting only a National Synod) to have the judgment of the French divines in this matter, nor is there anything more advantageous than to have their judgment." As to unlimited Episcopacy in place of Archbishop Ussher's famous model of Episcopacy under the restraints of Presbyterianism Moray's criticism is very strong.

"This Nehushtan that hath long obtained amongst Christians of preeminency and dignity is so consonant to Original Sin, that it slides easily into flesh and blood, else it had never been the stair by which Anti-Christ scaled not only the top of the Church, but the very heavens, to put on the roof-stone upon his Babel-Babylon."

It was for his services at this crisis that Morus was invited afterwards into England for a visit to the English Court, and hence his letter to Lauderdale on New Year's Day, 1661, for his writing which Prof. Masson, on p. 421, can find no reason.

It is amusing to notice the honest scorn and contempt of Milton's latest biographer for the religious ceremonies on the coronation day of Charles II.—"A venerable archbishop and a body of good and learned bishops about him had done their blasphemous utmost; and is it God or Mephistopheles that governs the world?"—for if we turn back to vol. v., pp. 148-49 and 302-7, we find approving commendations of the august manner and regal pomp of the second protectorate of Oliver. That which had been a solemn installation of poetic significance in the one case becomes a "blasphemous utmost" in the other. A very interesting bibliographical fact is given us on p. 188. The anonymous tract *Eikon Aklastos* is traced to its hitherto unknown author, Joseph Jane, "a lawyer of some kind;" in reality he was brother-in-law to Sir Edward Nicholas, Secretary of State, and probably wrote the work at his instigation. A large number of original letters from Jane to Nicholas still exist among the Nicholas papers and correspondence in the British Museum. It is very unfortunate that Prof. Masson should in his account of the *Eikon Basilike* have departed from his usual admirable mode of going fully into a disputed question, and weighing carefully the pros and cons, by rejecting finally all the evidence on both sides for the authorship, and urging instead his own dogmatic opinion,

"viz., that Gauden, if he was not the author of the *Eikon Basilike*, was the maddest and most

impudent liar and impostor in English history, and that Clarendon, who could have exposed him, crushed him, made him bite the earth or stand in a pillory, was his soft-headed dupe, and a sheer idiot and coward in the whole business."

This may be forcible and strong language, but it is not calm logical reasoning or convincing argument. So far from the case being untenable since the discovery of the North papers, it is exactly those papers that prove Gauden's story to be a concocted lie and a miserable forgery from beginning to end. There is no need to call for any witnesses for the King or against Gauden from any other quarter; he stands self-convicted out of his own mouth. His letters to Clarendon on December 28, 1661, and to the Duke of York, January 17, 1662, and his petition to Charles II. undated but from internal evidence written before March 20, 1662, are found, not in the possession of the persons to whom they were addressed or of their descendants, but in the keeping of the person who penned them. Are they then merely drafts of the actual letters sent to his correspondents, or are they the originals intended to be forwarded, but never sent? The two letters were actually found folded up, enclosed in envelopes, directed to the respective correspondents, and sealed with the bishop's family arms. The envelopes of both letters are torn half off, but enough remains to enable us to make out the superscription. It is hardly fair of Prof. Masson to quote this letter to Clarendon as a genuine one on which any argument can be founded, because Clarendon never received it; and surely no man but a forger would make copies of letters he never intended to send, fold them up, direct them, seal them, and then partially destroy them. The true reason, in our opinion, why Clarendon did not expose Gauden was not that "he was Gauden's soft-headed dupe, and a sheer idiot and coward in the whole business," but that Clarendon had been told of Gauden's claim by Charles II., who imposed secrecy on him—a secrecy only too faithfully kept till he received, at the close of his life, Bishop Morley's message. Charles II., at the Conference of divines at Worcester House, made use of the ill-timed expression—"All that is in that book [*i.e.*, the *Eikon Basilike*] is not gospel;" meaning simply that he did not hold its words as sacred as the Bible. Gauden, who was present, saw his opportunity to ingratiate himself with Charles, and instantly resolved to claim it as his own work. Charles, at this time a crypto-Catholic, was only too glad to escape from the reproaches of his conscience, awakened by the forcible words of his father, quoted to him from the *Eikon*, to be steadfast in his adherence to the Protestant Church of England. He therefore not only listened to, but supported Gauden's claim by informing Clarendon and Bristol of it, but pledging them to secrecy. The Duke of York, who was with Charles when Gauden made his claim, as the Bishop tells us, naturally as a Roman Catholic imitated his brother's example; and Clarendon, who, it must be remembered, being out of England at the time of the publication, could know nothing from his own observation of its true history, was forced to accept what Charles told him.

Again Prof. Masson forgets that, at the very time of Gauden setting up his claim, the whole disturbance caused by the marriage of Clarendon's daughter to the Duke of York was taking place, and their eldest child was born on the very day of the Worcester House Conference, and in the house itself. Was it likely that Clarendon, in the distress he was in at this time, added to all his official business, could find time or patience to listen to or enquire into the story of a disappointed prelate ill satisfied with his reward for a few literary services to the royal cause, and clamorous for more? In the account of Gauden's writings during the Protectorate, on p. 424, there is an evident misprint of 1665 for the date of his "Petitionary Remonstrance to Oliver Cromwell."

In the account of the changes in the Ministry in October 1662, we are told that Sir Edward Nicholas was induced to retire from his Secretaryship with £10,000 as a compensation. In reality, he was absolutely forced to retire by Charles, as nothing could induce him to retire willingly. The King offered to make him a baron, but, in his indignant wrath at being shelved, he would have nothing to say to it, nor would he permit any mention of his successor in the official newsbook, and Charles actually wrote the account of the change with his own hand.

The whole history of *Paradise Lost*, its beginning before the Civil Wars, its gradual progress, its meaning, and its several editions, are all related in an admirably lucid and instructive manner. No word-painting in all the six volumes is at all comparable to the description (on p. 524) of the universe, as revealed to us by modern science. It is an exquisitely poetical description in admirably chosen language, and displays to perfection the startling advances of the present century on the crude and mystical ideas of astronomy entertained by our forefathers.

In the interesting account of the natural children of Charles II., on p. 605, is a story of a certain son named James, supposed to be the eldest of all the King's offspring. There are some very curious documents among the papers of Luigi Gualterio, Nuncio at Naples 1744-53, relating apparently to this man and his posthumous son James Stuart, the latter of whom claimed to be the heir of the Royal Family of Stuart of England in the year 1752, and who furnished the Nuncio with his genealogy and a certificate of the marriage of his father, James Henry de "Bove Stuardo," with Donna Teresia Corona of Naples.

In his description of *Samson Agonistes*, Prof. Masson has very ably and clearly shown how, by reading between the lines, we get a perfect autobiography of the principal events in the poet's life, without any overstraining of the Biblical narrative for a personal purpose. Yet such an autobiography is by no means sufficient for those who desire an intimate knowledge of him whom his latest biographer aptly designates the Genius of Puritanism; and Prof. Masson amply deserves all the gratitude and ungrudging praise which will undoubtedly be awarded him by all lovers of the history of their country for his unwearied and successful

efforts to raise Milton to his proper position among the greatest men not only of his own time and country, but of all ages and peoples.
EDWARD J. L. SCOTT.

CAROLINE VON LINSINGEN.

Caroline von Linsingen, die Gattin eines englischen Prinzen. Ungedruckte Briefe und Abhandlungen aus dem Nachlasse des Freiherrn K. v. Reichenbach, herausgegeben und mit einer Einleitung versehen von * * *. (Leipzig: Duncker & Humblot; London: Nutt.)

IN publishing this singular volume, the editor claims to reveal a secret which has been kept for nearly a century. While doing so, he has chosen, whether wisely or unwisely, to withhold his name. For this he offers an apology in the prefatory words of the book. He writes:—

"As will, with justice, be asked, how comes it that the editor has gained possession of this information, these facts which have a claim to be held authentic? And who may the editor be? Why does he choose an anonymous garb? To this last question I shall at once give answer. If my name be now hidden, it will not long remain so; of that I am convinced. At present I would crave permission to retain the mask, that the effect of what is said from behind it may suffer no damage. Judgment being passed upon the subject-matter itself, and upon that only, the verdict given to these pages will be the more an impartial one. When that shall have been pronounced, I will gladly set my name upon the title-page."

Caroline von Linsingen, so this book tells us, was none other than the unrecognised first wife of our own sovereign William the Fourth. From these seven of her private letters we learn the whole sad story of her *mésalliance*, and of the bitter grief and anguish which ensued. The editor finds the tale so touching, so full of sentimental interest, that these qualities wholly outweigh any scruples which might have suggested themselves to him before he decided to send it to the press. For him it is nothing but a highly romantic episode; he claims the privilege of adding another portrait to the gallery of his famous countrywomen. If Caroline von Linsingen be a reality, there is certainly much to interest Englishmen in her figure. To our thinking, however, it will need other proof than these letters can yield to set her identity beyond question.

Caroline von Linsingen, so her biographer, Baron Reichenbach, relates, was born in Hanover on November 27, 1768. Her father, General von Linsingen, held a commission in the 12th Hanoverian Infantry Regiment. His relations with the House of Mecklenburg-Strelitz were of a most intimate character. He accompanied the Princess Sophie Charlotte to England on the occasion of her betrothal to King George the Third, and for three years he remained at the English Court. The Queen continued to show him much kindness, treating him quite as a personal friend. She had always offered to take his daughter Caroline under her care, and promised to give her a post at Court as one of her maids of honour. When Caroline had reached the age of fourteen this offer was renewed. The child's grandmother,

however, was unwilling to allow her granddaughter to leave home until her education had become in every way more complete. So she remained in Germany. On April 13, 1790, the young Prince William Henry, Duke of Clarence, arrived in Hanover on a visit to General von Linsingen, who had travelled with him from England. He met with a very cordial reception. A certain Lord Dutton is mentioned as being among his suite. There is surely an error here, for at the time in question no such person will be found in the list of English peers. Dutton is the surname of Lord Sherborne, and, if the Prince's companion was a member of this family, he was probably at that time only the Hon. Mr. Dutton. A Lord Dutton there has never been; it reminds one of George Sand's historic "Sir Brown." The Prince on seeing Caroline straightway lost his heart. In the first of her letters—in the one addressed to Teubner, her son-in-law—Caroline thus tells of her meeting with the young English Prince.

"William came with my father and brought me a letter from his royal mother, and a shawl-pin with her initials in diamonds. It was on April 13 that I first saw him: in July we already knew that by death alone our love could have its end. No sooner did my beloved father become aware of the position in which we stood to each other than he straightway sought to part us, himself appealing to the Queen in the matter. Yet she, who was so fearful for the ardent blood of her son William, took the matter but lightly—she knew nothing of love, and begged my father to let this dallying [*tändeln*] continue. She thought with complacency that her son's fancy for me at this the most critical period of his youth might serve to keep his virtue intact. None dreamed that for two lives it meant the utter wreck of all their joy."

Then follows an epitome of the succeeding events. We cannot do better than quote the sentences which the heroine herself has written.

"A year later I at last yielded to William's irresistible entreaties, and, in the presence of Ernst [her brother] and Dutton, we were made one at the altar by a Scotch minister, who afterwards went to Washington and who was greatly attached to William.

"Naught, naught of our bliss! Words can never describe it; and my heart is rent, is torn! Only after thirteen months did we disclose our secret to my father, when William had also written home to his parents. This would not yet have been done had not others urged his return to England. For the King was ailing; the Prince of Wales lay sick with a wasting fever; the Duke of York, through his excesses, had earned the hatred of both kindred and nation; William it was who should shine upon his parent's throne. My father at once went to London himself. In two months William followed him; and to me the explanation was given that I formed the obstacle to my beloved one's happiness. As if I believed it! Ah! I knew too well the heart in which I lived and had my being."

It now became evident that the two must be separated. Tears, vows, entreaties, all were of no avail. The English Court could never recognise a marriage of this kind; it was one to which the Prince's parents were wholly blind. Caroline was taken by her father to Cassel, and from thence to Driburg. The anxiety and mental anguish which she suffered resulted in the still-birth of her child.

While she was at Driburg, during her illness, the Prince re-appeared, to renew his vows of constancy, urging her to be firm and on no account to submit to a divorce. But, from a letter of the Queen's that he brought with him, it was plain that the English Court entirely refused to countenance the marriage, even if they admitted its legality. With the Prince's departure came the final leaving-taking; the lovers were never to meet again. For Caroline, all joy had been taken from her life. Her illness assumed a far graver form, and culminated in a trance, from which she was restored by a clever young physician, a Dr. Meineke. Three years later she became his wife; all recollection of the Prince was thus effaced; the first marriage was as if it had not been. Her daughter Jettchen married one Teubner; and to him Caroline in her last years penned the greater portion of these extraordinary Werther-like letters, pitched as they are in a truly hyper-sentimental key. They retell the great and absorbing romance of her youth; in writing them she, as it were, revives the ecstasies of her early love. At the age of forty-six she died at Blansko on January 31, 1815.

This, then, is the brief outline of her history. Shall we believe it, or is it false? The editor of these letters evidently has perfect faith in their authenticity. He seeks to rank his heroine among the rest of the great German women, to make her love-episode gain the sympathy and admiration of all. So far as we are concerned, he fails. The weak point in the whole story, as a romance, is the fact that Caroline marries again. With a love such as hers was, or as she asserts it to have been, such a course was absolutely impossible. To be consistently great, she should have proudly wrapped herself in the mantle of her grief, thus passing in mournful silence from the scene. This would have been the proper close to her life; the calm dignity of such silence would have formed the fittest rebuke to the Prince who had basely deserted her. Yet Caroline deliberately takes another husband, just as any matter-of-fact elderly widow might do. Apparently no special compulsion is used; she voluntarily accepts Meineke, by whom she has two children. After so commonplace a proceeding as this, it is useless for her biographer to insist upon the infinite "poetry of her life-story," or to believe that "her truly tragic fate will lay claim to our pity," or "that at the least it must gain the appreciative sympathy of posterity."

As an historical heroine, therefore, Caroline von Linsingen falls decidedly into the second rank. Nevertheless, her letters, as letters, will interest many Englishmen; the fact alone that an English Prince plays the chief part in the whole romance will probably secure for the volume an attention beyond its deserts as a piece of literature. Yet we must receive such a book with every caution; tales such as these need strong and thorough confirmation before they can be cleared of the usual suspicion which they inevitably excite. If a forgery, this is undoubtedly a very clever one. Simply as an episode in royal life, it will gain readers and enthusiasts enough, whether it be genuine or whether it be a myth.

As we understand, the letters are to appear shortly in an English dress.

PRECY E. PINKERTON.

Jungle Life in India. By V. Ball, M.A. (De la Rue & Co.)

It was certainly a happy thought which induced Mr. Ball to supplement the numerous geological reports penned by him during the last fifteen years with a popularly written description of his ramblings through some of the most unfrequented districts of India. Most Anglo-Indians find time to write more or less bulky official reports, which a paternal Government prints with the most zealous regularity; but few have the opportunity of travelling over so extended an area as Mr. Ball, and fewer still find time, after the day's work, to keep so lively a record of their travels as he has done. His book appears in the shape of a diary, a fact which may be held by some to detract from its literary merit, but which serves to give us a capital notion of the every-day life of a surveyor. We feel we are not reading the slowly moulded views of a district officer, which may be more or less influenced by those among whom he is permanently located, but the impressions of one who is come to-day and gone to-morrow, whose special faculty is that of quick scientific observation; who is always anxious, as a good geologist should be, to see for himself, and not to accept *data* on hearsay evidence; and whose journeys from the Central Provinces to the Himalayas, and from Afghanistan to the Nicobars, have imparted a breadth of view and experience of no common order. The chief value of his general observations, we take it, is to give us an idea of the life spent by some of the semi-savage tribes with which the jungles and more secluded districts of India are peopled. Mr. Ball's conclusion respecting these semi-nomadic tribes is that

"their normal condition, with their scanty cultivation, reaches a depth of poverty barely removed by the narrowest of margins from absolute destitution. In short, there are in India probably many millions of people whose means of subsistence are almost identical with those of the beasts that inhabit the jungles where they also live. The same wild fruits and leaves furnish the staple food of both. One thing may be pointed out, however, as being in their favour when compared with the cultivating ryots—they are less affected by famines. The jungles produce their ordinary food whether there is drought or abundant rain."

At Chaibassa (Singbhum) the author came across a resident official who seems to have been a very pattern civilian. Most Bengal officers look upon this station in the light of a penal settlement; but this gentleman had so far identified himself with the Hos, as the inhabitants are called, that he had learnt to play their national airs on the tom-tom, and used himself to join at times in their national dances. These accomplishments were, however, but a small part of his virtues.

"His house was open to all who came into the station to market. His knowledge of, and intercourse with, these people were the means of his often acting as adjudicator in disputes which among Hindus and under a less patriarchal system would have blossomed into cases before

the court. Thus a great amount of vexatious litigation which would give rise to ill-feeling—to be perpetuated, perhaps, for generations—was put a stop to at an early stage. In domestic matters, even of a most delicate nature, my friend was also often the referee, and the amount of confidence and attention paid to his *ex-officio* decisions was simply marvellous."

We hear so much nowadays of Englishmen living a life among themselves and eschewing all intercourse with the natives that bright exceptions like these deserve prominent notice.

The author seems, on the whole, to have experienced hospitable treatment from the Rajas and other natives of position with whom he was from time to time brought into contact. On the other hand, many of the native Government officials seem to have had an unpleasant knack of making themselves as obstructive and disagreeable as possible. Supplies were on more than one occasion withheld, false charges trumped up against Mr. Ball's followers, and a general spirit of "cantankerousness" displayed by these native jacks-in-office. On another occasion, when entering the town of Ungul, in Orissa, Mr. Ball requested that two rooms in a good and substantial bungalow, in the occupation of the tehsildar or native magistrate, might be placed at his disposal. This request was refused, as the native was a Hindu, and his family were residing there with him. Consequently Mr. Ball had to encamp under a tent in the open. Subsequently, however, he discovered that the tehsildar had only been permitted to occupy the house on the express condition that he should vacate half of it to any official traveller requiring lodging. Mr. Ball cites this in illustration of the social relations subsisting between natives and Europeans, and adds that on this text much might be written. We certainly wish that people like Mr. Ball would give us the benefit of their views on the subject, for, while the extended employment of the native throughout all grades and branches of the Civil Service is so sedulously advocated, it is as well that these little idiosyncrasies in their temperament should be more generally known.

From the extracts cited it must not be supposed that the scope of the book is uniformly grave and didactic. Anecdotes of sport and travel, stories illustrative of the manners and customs of the natives, and a great variety of incidents relating to the natural history of the districts traversed are plentifully scattered throughout the work. This last class of information is so liberally provided that we have no hesitation in saying that Mr. Ball's observations should prove of value to both the Zoological Society and the writers of the *Flora Indica*. He appears to have had tolerably good sport with bears in Singhbhum, Chutia Nagpur, and elsewhere, and many incidents of his encounters with them and other wild beasts are quite exciting reading. One monster, found by the author in the Nicobars, was very nearly playing the part of Victor Hugo's gigantic cuttle-fish towards one of the party. The animal was an enormous crab, called the "cocoa-nut thief" (*Birgus latro*), measuring two feet and a-half across, which Mr. Davison undertook to carry by means of a noose formed out of a vegetable creeper. The crustacean, while extending its claws, managed

to grasp the skirt of Mr. Davison's coat and began thence gradually to work its way up his back towards a very exciting *dénouement*. Fortunately its benevolent intentions were perceived in time by Mr. Ball, who arrested its further progress, while the owner of the coat quickly divested himself thereof, and thus gracefully declined the contest.

It is, however, quite beyond the scope of a short review to convey a correct idea of a book of upwards of seven hundred pages filled with the varied events incidental to a scientific tour through so many different regions. In spite of the scientific character of Mr. Ball's previous writings (we learn from this work that he has contributed no less than sixty-two different papers to various journals and proceedings of societies), the general reader may be assured that he will find *Jungle Life in India* a most readable and amusing work, while the Anglo-Indian statistician will discover new facts and observations of importance regarding some of the least-known districts of Hindustan. The "get-up" of the book is handsome and the printing excellent.

CHARLES E. D. BLACK.

LETTERS OF BISHOP KETTELER.

Briefe von und an Wilhelm Emmanuel Freiherrn von Ketteler, Bischof von Mainz.
Hrsg. von Dr. J. W. Raich. (Mainz.)

THIS volume is rather a disappointing one. The editor explains in his Preface that Bishop Ketteler's public duties did not leave him much time for correspondence, and that he did not usually preserve the private letters addressed to him or copies of his replies. The present collection contains apparently all, or nearly all, of his letters that have been found, beginning with those which he wrote as a boy from the Jesuit school at Brig in 1825 and 1826. A great many of these are addressed to his brothers and sisters, and they show warm and genial feeling and strong family affections, but do not tell us much of his moral and intellectual character generally. Official and polemical documents, pastorals, and the like are excluded, with one important exception to be noticed presently; and writings of this kind were the Bishop's literary speciality. He was throughout his life a controversialist and combatant, as he expresses it in one of his later letters, against the opponents of the Church; and latterly he was brought into controversy, rather against his will, with the dominant party in his own Church, where he cannot be said to have appeared to advantage.

It is curious to find how very few notices occur in the earlier letters of Dr. Döllinger, under whom he studied for two years at Munich, though at the time of the Vatican Council he professed to have formerly entertained a high respect for him and sense of obligation for his teaching, as though in order to emphasise more acutely the severity of his subsequent censures. In one place he speaks of reading Döllinger's *Church History* with great interest, and elsewhere of his edition of some posthumous works of Möhler, for whose writings he himself avows "a true passion." These are the only references to Döllinger at that period which we have detected. For

Windischmann, on the other hand, Archbishop Reisach's Vicar-General at Munich, and one of the ablest and most advanced Ultramontane divines of his day in Germany, Ketteler expresses the warmest admiration, as a man for whom we owe a special debt of gratitude to God. This same Windischmann, in a letter addressed to Ketteler ten years later, in 1851, after he had become Bishop of Mainz, speaks of Döllinger's teaching and spirit in terms of the gravest suspicion. To this letter we have no reply. The general impression left on one's mind is that Ketteler's instincts were always in the main on the Ultramontane side, though he shrank from the final outcome of its policy in 1870. In a letter to his sister-in-law, written from Rome in 1854, he speaks with enthusiasm of the approaching definition of the Immaculate Conception, but with very little apparent apprehension of its real significance, directly and indirectly, for the consecration of the restored church of St. Paul without the Walls on the following Sunday is mentioned in the same breath, as "another great festival," presumably of equal interest and importance.

Many readers probably will turn with most curiosity to the letters towards the end of the volume, which exhibit the Bishop's attitude in relation to different parties and views during the Vatican Council and after it; for here the editor has thought fit to make an exception to his rule of not inserting public or official manifestoes. It would, however, have been more satisfactory to his admirers, and perhaps more advantageous to Ketteler's memory, if we could have been told either more or less. His real motives and line of thought are still left very much in the dark, while his conduct was such as could satisfy neither party, and is not easily to be reconciled with a standard of straightforward and simple consistency. We are permitted to see that he was very anxious at once to do all in his power to prevent the famous decree being passed, and yet to avoid exposing himself to the charge of not agreeing with it. He poses throughout in public as an "inopportunist," but his language in some of his letters certainly goes beyond this, and so still more does the language of the pamphlet (*Quæstio*) which he circulated in Rome during the Council, though he was eager afterwards to explain that he did not compose, and did not altogether agree with, it. He writes to the Pope, with many expressions of profound veneration and respect, that his conscience obliges him to oppose the decree, and again, later on, that he cannot possibly vote for it, but that he will submit to it when it is passed. He writes at the same time to Archbishop Deschamps, in July 1870, that there is a radical difference between the language of the decree, which is "the exaggerated teaching of a certain school," and that of Bellarmine, in whose sense alone he holds papal infallibility to be tenable. Next year, after all is over, he issues a fly-leaf at Berlin denying that the Council has ever taught that the Pope is infallible, but only that his office is infallible; and in 1872 he allows De Buck to compliment him on never having said a word against the doctrine of the decree, but only against its "inconveniences and inopportunities." He seems, in short, never quite to know his own mind, or certainly

not to wish others quite to know it. And we are left at last with an uncomfortable impression of a series of mental reactions or tergiversations of a man terribly oppressed by the conflicting responsibilities of his position. He says more than once that he earnestly desired "to lay down the burden" of his episcopal office, and seems to be breaking his heart over the vain endeavour to run with the hare and hunt with the hounds. It was his misfortune to be involved in a crisis to which he was evidently unequal. He shows at his best in controversy with Protestants, to whom he could be both outspoken and generous, and in those pastoral or domestic relations which called out the genuine sympathy of a devout and kindly nature.

H. N. OXENHAM.

Memoirs of Madame de Rémusat, 1802-8.
Published by her grandson, M. Paul de Rémusat. Translated from the French by Mrs. Cashel Hoey and Mr. John Lillie. Vol. I. (Sampson Low & Co.)

[Second Notice.]

It is idle and unprofitable to discuss in detail Bonaparte's crimes and offences against humanity, morality, and good taste, and consider whether or not they were due to want of generosity, want of soul, or want of heart. Controversy and indignation are alike wasted over the various items in the catalogue. For the convenience of the moralist, he has himself gathered all his offences into one neck, which can either be struck at or left unharmed according to the view taken of his general principle of conduct. Much of his conduct has been canvassed; it probably underwent more scrutiny from his own restless mind than it has been subjected to by all his numerous critics put together; and he formulated for himself a general principle by which he sought to excuse all his breaches of morality, social and international. He was a person apart; he was above the laws of morality. Where is the good of minute discussion by ordinary standards over the actions of a man who deliberately held himself superior to those standards; who declined to be bound by them, and avowedly disregarded them whenever it suited his purpose? Indignation should be directed against the general pretension, rather than the individual act. Bonaparte had brought his conscience into such a mood that it would have condemned him for a dereliction of duty if he obeyed the impulses to which the common sense of mankind has attached the epithet of "good." One of the most valuable contributions which Mdme. de Rémusat has made to the understanding of Bonaparte's character is her record of conversations in which he developed this theory. Her gossip about the imperial Court and its petty figures is most interesting, but the few pages in which the central personage is made to throw light upon himself are worth all the rest. His talk in his wife's drawing-room on the evening after the murder of the Duc d'Enghien is more instructive as to the spirit in which he committed that crime than the most perfect accuracy that could be attained on the many controverted points concerning his behaviour during the preceding week. After some pro-

found remarks on the feebleness of historians and their explanation of motives, and a compliment to Frederick the Great—"one of those who have best understood their business in every sort of way"—he went on to say that Frederick might perhaps be accused of harshness and selfishness. "But," he asked, "after all, is a great statesman made for feeling? Is he not a completely eccentric personage, who stands always alone, on his own side, with the world on the other? The glass through which he looks is that of his policy; his sole concern ought to be that it should neither magnify nor diminish. And, while he observes objects with attention, he must also be careful to hold the reins equally; for the chariot which he drives is often drawn by ill-matched horses. How, then, is he to occupy himself with those fine distinctions of feeling which are important to the generality of mankind? Can he consider the affections, the ties of kinship, the puerile arrangements of society? In such a position as his, how many actions are regarded separately, and condemned, although they are to contribute, as a whole, to that great work which the public does not understand! One day those deeds will issue in the creation of the Colossus which will be the wonder of posterity. And you, mistaken as you are—you will withhold your praises, because you are afraid lest the movement of that great machine should crush you, as Gulliver crushed the Lilliputians when he moved his legs. Be advised; go on in advance of the time, enlarge your imaginations, look out afar, and you will see that those great personages whom you think violent and cruel are only politic. They know themselves better, they judge themselves more correctly, than you do; and, when they are really able men, they can master their passions, for they calculate the effects even of them."

Here we have Bonaparte's *apologia pro vita sua*, his frank admission of all the crimes of which M. Lanfrey has laboured so faithfully to convict him, and his plea in their defence; his argument that for him, with his mission in life, they were not crimes. After such an appeal from the common law of humanity, who can care very much to have it proved on unimpeachable evidence that the great criminal sat on the arms of chairs and talked indelicately to ladies?

It is not to be denied that the effect of Mdme. de Rémusat's revelations about Napoleon and the people who surrounded him is to produce a certain sympathy with him. One feels less inclined to blame him for succeeding in his defiance of law and order than to despise the men whose truckling and subservieny allowed him to succeed, and the "legitimate" rivals of his power whose paltry schemes against him furnished him with opportunities, and, from his own point of view, with necessities, for encroachments on the liberties of the French people.

It seems to have been only gradually that Napoleon formed the ambition of becoming absolute ruler of France, though every step in his action from the time when he helped to put down the mob of Paris was as perfectly directed towards that object as if it had been deliberately so calculated. When he conceived the happy thought of going to Egypt, the thought of further distinction in France than he had acquired as the servant of the Directory had apparently not entered his dreams.

"The charm of Oriental conquest [he said to Mdme. de Rémusat] drew my thoughts away

from Europe more than I should have believed possible. My imagination interfered this time with my actions, but I think it died out at St.-Jean d'Acres. . . . In Egypt I found myself free from the wearisome restraints of civilisation. I dreamed all sorts of things, and I saw how all that I dreamed might be realised. I created a religion; I pictured myself on the road to Asia, mounted on an elephant, with a turban on my head, and in my hand a new Koran, which I was to have composed according to my own ideas. I would have the combined experience of two worlds with which to set about my enterprise. I was to have ransacked, for my own advantage, the whole domain of history; I was to have attacked the English power in India, and renewed my relations with old Europe by my conquest."

In this dream Bonaparte thought that his imagination had run away with him, and he vowed never to allow it to interfere with his actions again; but the enterprise to which he returned was probably more difficult of realisation than his project of Oriental conquest. It is interesting to note the growth of his ambition, and it is interesting also to see how his ideas on the subject of keeping men in subjection developed with the advance of his authority. He told Mdme. de Rémusat that he read history only to get ideas which he might apply in practice. Among his innumerable artifices for keeping those about him constantly on the alert was one which he seems to have borrowed from Philip II.—that of muttering unintelligible instructions, and then falling out with his subordinates for not understanding him. He would never repeat an instruction. Everybody about him lived in constant fear of his displeasure, and it was his policy to keep them so. He had a trick also of forgetting men's names, not from the vanity of new-made honour, but, Mdme. de Rémusat assures us, to keep them in mind of their comparative littleness. But before he attained the summit of power, he practised with equal assiduity the art of making himself agreeable according to the historical models. When he was on his Italian campaign, he made a point of knowing the name of every officer in his army, and even the names of their sisters, cousins, and aunts. Later in his career than this, he carefully committed to memory the muster-rolls of his regiments, and the Empress told Mdme. de Rémusat that she had heard him repeating them in his sleep. But, once he was Emperor, he threw aside this courtesy as an unnecessary encumbrance, finding that it answered his purpose better to forget men's names. So at least Mdme. de Rémusat declares, and she gives some amusing instances of his studied forgetfulness; but it ought to be remembered that when Napoleon was in possession of imperial power he had cares enough to occupy his mind without continuing to observe the petty artifices by which he had attained it.

There is one direction in which Mdme. de Rémusat's Memoirs show unmistakable traces of what must be called spitefulness. Napoleon's brothers and sisters were jealous of her as the friend and companion of the Empress Josephine, and her record of their little ambitions and their family quarrels has an appearance of retaliation which may be false, but which certainly suggests that what she says about them should be received with

caution. One cannot help remembering that the scandals which she puts on record about Napoleon's relations with his sisters cannot possibly have had any foundation except in abominably ill-natured surmise. Mme. de Rémusat's vindication of Hortense Beauharnais from scandalous calumnies would have carried more weight, agreeable as it is to have any such testimony, if she had not prejudiced herself by repeating such scandalous gossip as is to be found in her portraits of the Bonaparte family.

WILLIAM MINTO.

NEW NOVELS.

Greene Ferne Farm. By Richard Jefferies, Author of "The Gamekeeper at Home," &c. (Smith, Elder & Co.)

Civil War in Home and Land. By the Author of "A Bride from the Rhineland." (Civil Service Publishing Co., Limited.)

Mademoiselle de Mersac. By W. E. Norris, Author of "Heaps of Money." In 3 vols. (Smith, Elder & Co.)

ALTHOUGH every reader for whom country life has a charm must be acquainted with *The Amateur Poacher* and *Wild Life in a Southern County*, we doubt whether any have met their author heretofore in the field of fiction. Here he conciliates all suffrages by three lures—the shortness of his novelette, its truth to nature, and the breath of rural life which he infuses into it because it has won him a passport in other fields. Our author should hail from the Wiltshire Downs, to judge by the dialect of his rustics and his insight into the ways, words, folk-lore, and surroundings of the Southern county which he has made the scene of this winsome and unexaggerated story. Its plot turns on the rivalry of two young men, Geoffrey Newton, a returned settler from Australia, and Valentine Browne, an owner of race-horses and racing stables—habitual guests at the Hall—for the hand of sweet Margaret Estcourt, the witching daughter of Widow Estcourt, of Greene Ferne Farm, whose husband had been the friend of Squire Thorp, and who exercised in his stead a patriarchal sway over acres where there could not be the shadow of an excuse for agricultural depression. Running evermore in couple with Margaret—a noble girl of high spirit and rare judgment, concerning whom Mr. Jefferies waxes classical, where he describes Geoffrey Newton as touched "by the feeling which the Greeks embodied in the punishment that fell on those who looked unbidden on the Immortals," what time he surprised her asleep on a warm spring day, in a silvan, bird-haunted retreat—is the less queenly, but not less bright, figure of May Fisher, sole survivor of all the womankind of her nonagenarian and skinfint grandsire, Andrew Fisher, of the Warren, who had worried the rest of his womankind to death, and richly earned his universal character of an "ould varmint." As May was nearest of lawful kin to this old tyrant it was a relief to her durance under his roof to spend as many of her days as she could in the society of the inmates of Greene Ferne Farm, and there to find opportunities

of reciprocating the love of the Rev. Felix St. Bees, the devoted curate of the manufacturing town of Kingsbury, whom the miser welcomed at the Manor House, when he first sought his consent, by hurling a blackthorn stick at his head, and who, at his second coming on the same errand, was first to discover the old man's sudden death and the rifling of his treasures by his wretched housekeeper and her cronies. Our first introduction to the chief characters of this rural drama is that typical show-ground, the village churchyard, where on Sunday morning the farmer folk, according to custom, the clerk, and the shepherd who leads the choir discuss "pegs" and "clauver," "the wimmen" and scandal in general, until the bell stops and the village folk move into church, asserting their grades of rank by the length of time each keeps on his hat after getting through the porch. In that rustic fane Margaret is the violet that fills it with perfume; and shepherd Jabez the scapegoat choir-leader, who reaps the vengeance of smockfrocks and hobby-de-hoys after church for his extemporised elongation of "Jacob" into "Ja-aa-fol-de-rol-cob" at the end of the fifth verse of the hymn. Geoffrey and Valentine sit with Squire Thorp, feeding the flame of passion which propinquity to Margaret has maddened into rivalry. Little traits soon show that Geoffrey is her favourite, as his sympathy with St. Bees' philanthropic ways makes him the reader's also. The strife is indeed fanned by divers incidents—first, on the occasion of the labourers' strike at hay harvest, when good Mrs. Estcourt is helped to bear the brunt of rural rebellion by Margaret and May, with the aid of Augustus Basset, a ne'er-do-well old soldier turned bailiff, who harness the cart horses and toss and load the hay with the help of their "squires" and volunteers.

"Now then" (such were Basset's directions)—"now then, you lards and gennelmen, one on 'ee get each side and pitch up thaay wakes, and mind as you doan't stick your farkes into I. The wimmen—I means the ladies—will rake behind, and paason can help um—th' rakes be hung on th' hedge. Now, bailie, look arter them 'osses" (p. 89).

At first, Valentine scores one against Geoffrey by his superior use of the hay-fork, but ere long, through Felix's aid, Geoffrey recovers himself in Margaret's esteem by his gentler prowess as a "song-bird." The strike soon yields to the plucky manner of meeting it; and when, soon after, Margaret rides to the Warren to prevail on old Andrew Fisher to allow his granddaughter to return to Greene Ferne Farm, Geoffrey approves himself a modern knight errant in his opportune lying in wait for her return, when at even Margaret loses her way in the mist, but happily finds her lover, who, though sore perplexed when at night "the ranges mingled and the dark slopes faded into mist," was able, if not to guide her home or tell her course by the stars, to keep her clear of the chalk pits, and find her a very passable night's lodging under the capstone of a cromlech, "the sepulchre," as antiquarian Felix proves later on, "of some dead king without a name." This night adventure ends well, and helps Geoffrey's footing; and, though the episode of going "a-nutting" enables Valentine to rouse Geoffrey's

jealousy afresh, and reveals somewhat of the events of the benighted wandering, which had been kept till then from all but Mrs. Estcourt, it is well seen that Margaret's heart is beyond variableness, and needs but some fitting climax to make it declare for Geoffrey. Here arises our sole demur to Mr. Jefferies as a story-teller, where, in the chapter headed "A Fray," when left alone on the Squire's turnips, he makes the rivals, on slight provocation, blaze away at each other with deadly breach-loaders, instead of a more national recourse to honest fisticuffs. Here Basset's timely intervention averts manslaughter, his military experience enables him to stanch Geoffrey's blood, and his hasty avowal that "it was a regular pitched battle" is effectually cancelled by the probable tale "that he was drunk when he said so." Without forestalling the details of the happy double marriage which follows Geoffrey's recovery, we must just note that the "butter and eggs" which, blending with other wild-flowers, decorated the posts and beams of Greene Ferne Barn at the marriage supper is true Wiltshire for the toadflax, or *Linaria vulgaris*. Such expressions as "dry as a gicks," "hardy as a woodpile toad," "a sarsen stwoan" (a round boulder stone), "a charm" (i.e., chorus) of starlings, and many kindred phrases bespeak a Wiltshire scene of action.

The awkward title of *Civil War in Home and Land* fits the story of Constance Beverley so far better than "Catching a Tartar" in that she really catches two. A resolute rebel against her father, a cross-grained squire, who worried his first wife's life out by his overbearing temper and supplied her place by a passive second who yielded to his petulance and added to his family, Constance is despatched to school, where she proves herself his true daughter by her insubordination, contumacy, and disobedience. It is true that Miss Farquhar had from the father much such a character of her as she deserved; and true also that, when her school-days are cut short through her illness brought about by a schoolfellow's sudden death, she transports to her father's home in a North-west county her inborn spirit of rebellion. This is fomented when he finds that, without his knowledge, she accepts the addresses of a Hungarian noble, Stephen Carolyi (Tartar No. 2), with whom he forbids her to correspond on the baseless plea that he is an "infamous foreign swindler." Of course Constance disregards his commands, and, despite *surveillance* and confinement to her room, contrives to elope from her home with her admirer, not without a misgiving that he will turn out a less perfect husband than lover. Her surmise proves correct. What between the Count's tincture with "the Turkish odour pervading Hungarian domestic life," and his jealousy of his wife's preference for his younger brother André, the Count soon leaves her society for the Austrian Court, where he nurses his ultra-Royalist sentiments, while she and André are busy at home in drilling recruits among the tenantry for the rebel cause. It is but fair to Constance to say that faithlessness to her husband was not one of her sins; and it was certainly hard measure when the Count, on an Austrian

victory giving him the opportunity, handed over his brother to the barbarous punishment of "beating to death," and, after telling his fate to his wife, gave her in charge to an Austrian colonel for life-long imprisonment in the fortress of Rosenau. One scarcely sees what better fortune so confirmed a "rebel in home and land" could have expected, though English readers might expect that printers should print "sewing" (of needlework) with an "e" not an "o," and describe the estates of the Count as those of a "magnate," not a "magnet" (pp. 141, 165).

If we assign to Mr. Norris's *Mademoiselle de Mersac* scarce the space due to a very cleverly constructed three-decker, this is partly owing to its having already occupied the attention of steadfast novel-readers in the pages of the *Cornhill* from month to month, and partly to a wish not to defraud such as seldom allow themselves the luxury of fiction of the full enjoyment of a rare treat. The author has made a decided advance in this new work, whether we regard his well-planned plot, his unhackneyed scene, or his carefully delineated characters. It is not unwittingly that in the outset he bespeaks an interest in Jeanne de Mersac, his heroine, and her facile but weaker-minded younger brother, Léon, by a sketch of their family antecedents, and the career of their sire, a French marquis, of the Legitimist school, who, in the first Napoleon's wars, preferred the service of the usurper to sheathing his sword, and, after divers vicissitudes, sold his family estates, took to trade, married an English wife, and settled eventually as a farmer in Algeria. Here, after she had borne him our heroine and, two years later, her brother Léon, the Marquis de Mersac slipped out of the world as unobtrusively as she had entered it. Here, too, "an old love," the widowed Duchesse de Breuil, renewed her intimacy with the bronzed and gray-headed farmer of El-biar, took a lease of the adjoining villa, and, on the old Marquis's death at the age of eighty, let her house to his trustee, M. de Fontvielle, and took up her quarters as Jeanne and Léon's *chaperon* at the Campagne de Mersac. When first we meet with mademoiselle she strikes us as a damsel out of the common—beautiful, well dowered, and, though unfettered by testamentary conditions, unmarried and in no hurry to marry. She is discovered awaiting, from the sea-view of the Campagne de Mersac garden, the return from Europe of her brother, who has been buying farm machinery and visiting relations, and is carrying back on a visit an English squire, Mr. Barrington, who is destined to be Jeanne's fate more or less, though the reader will marvel at so refined a taste being caught by so selfish a prig. Something like two-thirds of the three volumes is taken up with scenes and society in Algeria, where the old "Duchesse" takes the lead in the latter, and laudably snubs M^{de}. de Trémonville, a lady of considerable assurance and *aplomb*, the wife of a Bonapartist *employé*, who aspires to be a rival leader of fashion, and whose house is much frequented by the officers of the French garrison. It is this syren's wiles, far more than the influences of M. de St.-Luc, a *quondam* member of the Paris Jockey Club, a noted duellist and gambler, which exercise

an evil influence on Léon, though his sister, our heroine, is prejudiced against St.-Luc and his addresses, partly through his past character, and partly by her preference for Barrington, who ingratiates himself with her by painting her in the foreground of the Moorish villa of the de Mersacs, by his easy manners, and by the self-esteem which prevents his addresses from being as earnest and pronounced as poor St.-Luc's. Much of the charm of the story lies in description, especially of interiors—e.g., at the Duchesse's reception, M^{de}. de Trémonville's dance, and an eventful night spent playing "lansquenet" at the club; as well as of exteriors, from the yard, which is filled with Jeanne and Léon's pets—of which the Duchesse says the deerhound "Turco is bad enough, but not so bad as the wild boar or Jeanne's jackal, which they call Jérémie on account of his ceaseless lamentations"—to the excursion into Kabylia taken by Jeanne and Léon, with Barrington and old Fontvielle to do propriety; a five-days' glimpse into Elf-land for two of the party, until, as their *tête-à-tête* is spoilt one day by the intrusion of a horseman, Jeanne exclaims "M. de St.-Luc!" and Barrington's response is, "Hang him!" A change in the dream of happiness at this villa is brought about first by the aforesaid evening of deep play, where St.-Luc, loyal in spirit to his promise to Jeanne to keep her brother out of harm's way, both with the cards and with M^{de}. de Trémonville, finds it best to attract Léon's hot-headed impetuosity upon himself, and eventually wins from the young Marquis no less than £10,000, a debt he never dreams of claiming, but which Léon insists on discharging though at the cost of ruin, a discharge which brother and sister suppose can only be made by the sacrifice of M^{lle}. de Mersac's hand. As Barrington goes away without proposing, it had been as well if the old Duchesse's death had not a few months later suggested Jeanne's visit to England, where her kinsfolk, the Ashleys, were near neighbours of Barrington. He, though still very averse to come to the point, loses no chance of engaging Jeanne's affections, though she is now affianced to St.-Luc, who, by the changes of fortune, is a colonel in the imperial army, at the climax of its misfortunes, with Léon as a major in his regiment. Mr. Norris's account of the adventures of our heroine in her uncle's neighbourhood in Surrey is racy and discriminative, and shows what our country life appears to Franco-African sojourners; and one little episode of Jeanne's visit to Miss Barrington in Bedford Square—where the self-reliant Algerian damsel is bold enough to find her way to the parks with Turco and a compass, but is constrained to seek guidance from a thief who steals her purse and dog—is so good that it ought to be quoted *in extenso*. But bad news comes from the seat of war. Jeanne and her hostess hurry off to Léon's sick bed, find him carefully nursed by his tender-hearted colonel, who, as the patient gradually comes round, takes occasion to release Jeanne from what was at best an extorted promise. How it was that Barrington missed after all the prize he was surely *fainéant* in his desire to win, and why an old colonel of Chasseurs-à-cheval

kneels most days in the cathedral of his garrison town with a prayer once more to meet "Jeanne de Mersac" in heaven, are secrets which will reward the perusal of this very fascinating novel. JAMES DAVIES.

RECENT ITALIAN BOOKS.

Ricordanze della mia Vita. Da Luigi Settembrini. Con Prefazione di Francesco de Sanctis. Vol. I. (Naples: Morano.) Brilliant and daring as the fresco painting of a great master, and, like a fresco, dashed in from day to day, these records give us a vivid picture of life in the kingdom of the Two Sicilies before its liberation from Bourbon misrule. Born in 1813, and dying in 1876, Settembrini witnessed three revolutions, was a prominent actor in two, and spent fourteen of the best years of his life a State prisoner in Bomba's dungeons. Of his posthumous memoirs only the first volume has appeared, but, fortunately, this treats of those earlier portions of Settembrini's career which were barely touched upon in the monograph by Francesco Torraca reviewed in the ACADEMY of June 15, 1878.

The best monument to Settembrini's literary fame is his *History of Italian Literature*—a delightful, though much criticised and by no means faultless, book; but it is impossible to read these Reminiscences without being penetrated by the singular beauty of the author's character—a beauty reflected in his clear, downright, yet elegant style. Single-hearted and single-minded, he has none of the bitterness which so often constitutes the defect of those qualities. He is too ardent to be altogether impartial in his judgments of men and things; but, except where the priesthood is concerned, he is lenient even to his worst enemies. His keenly observant eye is guided by a genial, kindly heart prompt to discover infinitesimal good in the midst of infinite evil; quick to discern the comic side of humanity amid personal sufferings that would have utterly crushed a man of ordinary mould. The artistic temperament, joined to vigorous intellect and sweet steadfastness of character, was proof against even the accumulated horrors of Neapolitan prisons.

Passing over the interesting account of his childhood and its surroundings, we find Settembrini at seventeen sending verses by post to his future persecutor, young King Ferdinand, in which he adjures the new monarch to call all Italy to arms, drive out the Austrians, make the Pope King of Jerusalem, and place the crown of Italy on his own head. Three years later this is the portrait he gives us of the same sovereign:—

"In mind and manners the best of his family, yet so ignorant that he never opened a book and could not write the simplest letter without mistakes in spelling. Like his father and grandfather, he disbelieved in virtue, mocked at learning, laughed at intellect, prized nothing but cunning. All students and writers he considered his enemies, and sneeringly called quill-drivers [*pennaioli*]. He surrounded himself with the coarsest and most ignorant of men; it was impossible for him to understand that kingdoms were not maintained by force alone, and that men of character and intellect, if not made friends, may become very formidable enemies. Educated by Court servants of the lowest class, such as the Bourbons always cherished as their best friends and counsellors, he lived and jeered like a true-born *lazzarone*. With him kind words, promises, and hand-pressures were mere instruments of deceit, and while using them he would turn aside, wink significantly at his familiars, and whisper that the world was made to be tricked, and that a king should know better than other men how to trick it. He bestowed nicknames on all who approached him; had a biting jest for everyone; thought it exquisite fun to lash the legs of a courtier—Caracciolo della Castellana—with a riding

whip, and went into fits of laughter at the cries and contortions of his poor old butt. . . . Once, in presence of the Court, he pulled his wife's chair from under her as she was about to seat herself at the piano, and roared with delight on seeing her fall. Queen Cristina's reply is historical: 'I thought my husband was the King of Naples, not a *lazzarone*.'

The royal princes and the infamous Ministers of this detestable sovereign are touched off with the same incisiveness.

And this is how he describes Neapolitan society as he found it about 1835:—

"Men incapable rather than bad; women not ugly, but insipid; young men, effeminate and ignorant, talking only of women, dress, and official dignity; nobles clumsy as their own domestics; judges better versed in gastronomy than law; no conversation on public matters, nor on art, nor science, nor literature—everywhere scandal, back-biting, bigotry."

This, of course, was the natural order of things under a government like that of Naples, composed, as Settembrini says, "of police, spies, and priests." Yet buried amid all this corruption there existed the germ of national life.

"Among old races like the Italian, national feeling is born of the memory of past times, is first visible in the works of cultivated minds, and then in the deeds of the people. And the primary manifestations of this feeling are like excrescences on an old tree-trunk, and are necessarily of an antiquated shape, out of harmony with that which is new: hence a struggle only terminated when the new has absorbed the old, and, preserving true and essential elements, has discarded the false and useless."

In 1835 young Settembrini obtained a professorial chair, married his first love, and established his modest home at Catanzaro; but neither study nor domestic happiness could make him blind or indifferent to the condition of his country. Here in Calabria, the scene of some of the worst excesses of Bourbon tyranny, it was impossible for a man of Settembrini's generous temper not to throw himself heart and soul into any enterprise for the liberation of his countrymen. In those days conspiracy was the only road to political change, and all Italy was striving, in one fashion or another, to break the chains that kept her divided and enslaved. The rigid censorship of the Neapolitan press could not shut out every echo of Mazzini's attempts, nor of the vigorous young sect, the Giovine Italia, which had sprung from the ashes of the Carbonari. Settembrini was enrolled in a miniature secret society founded by Benedetto Musolino on the model of that of the great Genoese, and carried on an active correspondence with friends in Naples. (And here we must digress a moment to protest against the one jarring note in these noble *Ricordanze*—i.e., the singularly unjust verdict on Giuseppe Mazzini, the first modern man to raise the cry for the unity of Italy, and one whose whole energies were devoted to its promotion. It is equally strange and painful to find Luigi Settembrini, a patriot so thoroughly after Mazzini's own heart, stigmatising the apostle of Italian unity as "one who had only a vague idea of liberty, and cared nothing for the unity of his country." Had Settembrini ever stood face to face with Giuseppe Mazzini, or had he merely taken the trouble to study his works, his pen could never have traced this calumny.) The Catanzaro Society was speedily betrayed by one of the amateur spies who sprang up on all sides like mushrooms in this fertile soil, and cost our author more than three years of cruel imprisonment. But neither suffering nor confinement could destroy his elasticity. He lived even in prison, contrived to establish communications with fellow-captives, studied the characters of gaolers and felons, and forgot his personal woes in reading Homer and arranging a daring plan of defence. In simple, graphic words, free from

all attempt at "sensation," he brings once more before us those fearful Neapolitan prisons—held up by Mr. Gladstone to the execration of Europe—where condemned and uncondemned, innocent and guilty, political offenders, thieves, forgers, murderers, were all huddled together in darkness and filth indescribable, continually tormented by hunger and devoured by vermin. After his release, Settembrini earned a scanty living for his wife and babes by giving lessons from house to house. His professorship was gone; he was not allowed to hold classes of any kind; police agents dogged his steps. "Nevertheless," he says, "I was still a conspirator, for I taught my pupils to love certain truths, and in time this love would, I knew, bear good fruit for their country." At last the police left him alone; his obscurity shielded him; and they had yet to learn that the revolution of 1848 would be mainly the work of schoolmasters.

Next, with rapid strokes, Settembrini sketches the gradual evolution of the national idea during eight years of apparently barren plots and risings. One day in 1847 he beheld a weeping woman, with four children in ragged black, endeavouring to present a petition for some prisoner's pardon to the infamous Minister, Delcarretto. He saw her driven away with blows and curses, and his long-smouldering indignation found a vent in the most celebrated of his political writings, *The Protest of the People of the Two Sicilies*. Printed and circulated clandestinely, this anonymous pamphlet proved the first successful stroke against the edifice of Bourbon tyranny. All Naples was in a ferment, the police made arrests wholesale, but no one suspected its real author. A copy of it was thrown into the King's lap while he was visiting Sicily, and it is said that Bomba trembled as he read the scathing words. How in the following year the King was compelled to grant a Constitution, how he betrayed his solemn promises, and finally massacred his own subjects in the streets of Naples is a well-known page of history, but has seldom been described so vividly as in these *Ricordanze*. The volume closes with the reactionary period of 1849, on the eve of the author's second and most terrible imprisonment, shared by Poerio, Spaventa, and other patriotic statesmen. The sympathetic and brilliant Preface by the present Minister of Public Instruction completes Settembrini's portrait, and fully explains the love and veneration which his name inspires among Italians. A volume of Settembrini's miscellaneous writings, collected since his death, is also on our table. These are occasional papers and pedagogic articles of little interest for a foreign public, but they are preceded by a masterly sketch of the author's career from the pen of the philosophical writer, F. Fiorentino.

Lettere e Scritti inediti di Pietro ed Alessandro Verri. Vol. II. (Milan: Galli.) This second volume has far less general interest than the first, noticed in the ACADEMY, October 18, 1879. It contains some very graphic and amusing sketches of London life and customs in 1767 and of Roman society in the following year, but every page increases our wonder at finding men of the high character and talents of the brothers Verri condescending to so much paltriness in their social relations. The perpetually recurring details of the feud with Beccaria resemble the outpourings of spiteful village gossips; remind us now of the doings of Greys and Rolands in Harriet Martineau's *Deerbrook*, now of the greenroom strife of rival tenors. If these letters damage Beccaria they damage their writers scarcely less, even with all due allowance for the spirit of the eighteenth century, that age of powder and pettiness. Probably there is just as much literary vanity, spite, and rancour in the world

now as then; but men no longer air these sentiments so conspicuously, and do not openly gloat over their enemies' domestic troubles or diminished fame. Both brothers are continually itching to know what the world—particularly the little world of Milan—thinks of them, and Alessandro the younger determines to prolong his travels principally to humiliate his former friend, Beccaria, who had so ridiculously out short his own journey in order to return to his wife and family. No wonder that their sympathies went with Rousseau in that famous quarrel with Hume! Yet on all intellectual and political topics these men are dispassionate thinkers, and hold large views considerably in advance of their times. Indeed, in one passage on the difference of national character in Italy, France, and England, Pietro Verri unconsciously touches the plague spot with which he was himself infected by saying

"Here you will find much malignity, much impudence, and all the signs of an intelligent nation corrupted and degraded by prejudice; architecture and painting are still triumphant; but the art of living, education tending to render us pleasant to one another, indulgence to our neighbours' self-love—none of these things will you find here."

Dopo il Caffè. Racconti per la Marchesa Colombi. (Bologna: Zanichelli.) In "Un Sogno azzurro," the first tale in this volume, we have a sparkling little love story with a plot so well worked out that we never stop to question its probability. The other contents are more or less readable, and the concluding tale, "Skating Ring" (*sic*), affords the best of sport to an English reviewer. Apparently, Italy is beginning to make reprisals on England for the many impossible Italians, crime-laden and fascinating, who have figured so largely as the stage villains of English fiction. So Italian novelists—evidently after much study of English manners as depicted in French romance of twenty years ago—now revel in comic English personages, red-haired and stupid, with enormous bodies and colossal appetites, supposed to be correct representatives of the British nation. But the lady whose *nom de plume* is Marchesa Colombi has outstripped all competitors by producing an English hero, one Sir Oswald Proud, who not only possesses all the above-mentioned characteristics, but is positively a baronet, a laird, the son of a lord, and a peer of the realm all in one! His conduct is as peculiar as his rank, and the author is careful to tell us that this nobleman's wife will be Lady Proud until his mother's death raises her to the title of "My Lady Proud." We should good humouredly submit to caricature, remembering the procession of monsters, nominally Italian, exhibited by Mrs. Radcliffe and her descendants; but we may be allowed to remark that Marchesa Colombi is more successful in delineating her own countrymen than ours.

LINDA VILLARI.

NOTES AND NEWS.

MISS MARY ROBINSON, whose *Handful of Honeysuckles* attracted considerable notice last year, has now in the press a version of the *Crowned Hippolytus* of Euripides.

MESSRS. CASSELL, PETER, GALPIN AND CO. have been entrusted with the publication of an important political work by Louis Kossuth, the chief interest of which centres in the fact that it gives the secret treaties and details of the understanding between England, the Emperor Napoleon, and Count Cavour during the important period when the Italian kingdom was being established. The work will, we understand, be shortly ready for publication.

THE Rev. F. W. Kolbe, of the London Missionary Society, has prepared the M.S. of an English-Herero dictionary. The Herero or Otji-Herero or Damara is the leading dialect in

the Bantu class of African languages, extending on the Eastern Coast from the Equator down to the Cape. Stanley thinks that the tribes on the Congo speak dialects very near akin to Herero, and the late Dr. Bleek had pointed out long ago the necessity of a special study of this language. Dr. Kolbe asks for subscribers, as he is unable to publish his work without such aid. Subscribers' names should be sent to his address, 57 Buitenkant Street, Cape Town.

MR. ALEXANDER J. ELLIS, F.R.S., is to succeed Dr. J. A. H. Murray as President of the Philological Society, and will hold office for two years from May next.

It will be good news to many that Mr. Ruskin has resumed the publication of *Fora Clavigera*. He proposes to carry it forward, as he finds leisure, to the close of the eighth volume; and the complete summary and indices of the whole will form a ninth volume, to be issued with the closing letter.

An important discovery has just been made by Mr. J. B. Marsh in the Record Office, viz., a prayer in the handwriting of Charles I., dated 1631, which turns out to be identical with the second prayer in the *Eikon Basilike*. The importance of this identity in relation to the authorship of the *Eikon*, when the date of the prayer and that of the publication of the *Eikon* are considered, cannot well be overstated. An article by Mr. Marsh on his discovery, in which the two forms of the prayer will be given in parallel columns, will appear in the *Antiquary* for May.

The Folk-Lore of Shakespeare, by the Rev. T. F. Thistleton Dyer, M.A., author of *British Popular Customs* and *English Folk-Lore*, is the title of a work which Messrs. Griffith and Farran will publish.

MOHL's *Rapports faits à la Société Asiatique* have been published in a collected form by his widow. They have been re-issued under the very appropriate title of *Vingt-sept Ans d'Histoire des Etudes orientales*. There is no book which gives a better account of Oriental studies from 1840 to 1867, a period which has justly been called the heroic age of Oriental studies in Europe. The two volumes are preceded by a Preface by E. Renan, and a Biographical Notice by Max Müller.

At a recent meeting of the Hull Literary Club, Mr. John Cook read a paper on "The History of the Hull Charterhouse," an institution which was founded by Sir Michael de la Pole in 1384. It has been decided to issue the paper in book form, as it contains much important information not included in the local histories.

MR. HORACE HOWARD FURNESS is to take a holiday after finishing his variorum edition of *Lear*, and will be in England in July, in Switzerland in August.

MESSRS. W. SWAN SONNENSCHNEN AND ALLEN announce as for issue next month a *Student's Manual of Psychology and Logic*, by Mr. F. Ryland, B.A. (Camb.), designed specially for the London B.A. and B.Sc. examinations; a translation by Dr. W. H. Greene of Wurtz's *Elements of Modern Chemistry*, with 132 illustrations; and, as new volumes in their series of Educational Primers, a *Primer of Drawing* by E. Cooke; a *Primer of Mathematical Geography*, by A. Sonnenschein; a *Primer of Logic* and a *Primer of Political Economy*, both by Alfred Milnes, M.A. The next two volumes of the same publishers' series of "Industrial Geography Primers" are to be *France* and the *United States*, by G. Phillips Bevan, F.G.S.

THE same firm has in the press for immediate issue a second edition of Miss Emily Shirreff's *The Kindergarten*, formerly published by Messrs.

Chapman and Hall. The new edition has been revised by the author and reduced in price. A second edition of Mr. Charles Marvin's *Our Public Offices* will also be issued from this house next week.

THE whole of the third and popular edition, consisting of 2,500 copies, of Mr. George Barnett Smith's *Life of Gladstone* having been immediately sold, a fourth edition is now in course of rapid production, and will be ready in a few days.

MR. CHARLES TOMLINSON, F.R.S., will give twelve lectures on Dante's *Divina Commedia* (the "Paradiso") at University College, London, commencing on April 21. The lectures will be given on Wednesdays and Fridays at three p.m., and will be open to the public without payment or tickets.

THE Rev. Prof. Beal will deliver two lectures at University College, London, on the method of Buddha's teaching as exhibited in the Vinaya Pitaka on Tuesday, April 27, and Thursday, April 29, at three p.m. These lectures will likewise be open to the public.

DR. MORITZ TRAUTMANN, of Gohlis, near Leipzig, is preparing an edition of the short-line version of the *Sege of Jerusalem*, the *Vengeance of God's Death*, or the *Romance of Vespasian*, for the Early-English Text Society.

ACCORDING to the *Molva*, the Russian Geographical Society contemplates issuing, in concert with the other scientific societies of Russia, a descriptive work on Siberia, in view of the approaching tercentenary of the occupation of that country by the Russians. The society proposes to undertake the geographical department of the work, as also the publication of an index of books and articles relating to Siberia which exist in the Russian language.

M. FRÉDÉRIC GODEFROY has issued the first part of his *Dictionnaire de l'ancienne Langue française et de tous ses Dialectes du IX^e au XV^e Siècle*. He has been collecting materials for his work for the last thirty years, and it will now form at least ten volumes quarto, in five-shilling parts. The main portion of the book will be confined to obsolete words of the eleventh, twelfth, and thirteenth centuries. Modern words will not be included unless they have had, in earlier days, some sense which has become obsolete. Etymologies will not be given, but there will be copious extracts for all the different meanings of the words.

THE proprietors of *Chatterbox* are publishing a series of vigorously illustrated articles on Chaucer and the characters of *The Canterbury Tales*. This is excellent; but it would have been still better had care been taken to give a trustworthy account of the poet. Surely there is no excuse for telling youthful readers that "Chaucer was born about 1320; was educated at Oxford, Cambridge, and Paris; and wrote his first book when only eighteen years old"? Nor should those whose interest in literary matters is just growing be impressed with the notion that the poet was a daring innovator in thought and language, and a politician of a troublesome type. Those who learn in their early teens that Chaucer, for some mysterious reason, had to "fly from England," and that when he ventured back to his native shores he was "seized and imprisoned in the Tower," are likely to have confused notions about him afterwards. It is interesting enough, if it were only true, to learn that the poet, on regaining his liberty, "retired into the country, and lived very quietly, writing his *Canterbury Tales*;" and it is only as a fitting climax to such a chequered romance as that of the *Chatterbox* biographer that readers will look upon the sentence devoted to Chaucer's death. "He died," it is asserted, "rather suddenly in London, where he had gone for a short visit on business." If Charles

Lamb was right about juvenile literature there is room for reformation here.

M. ROSSEUW ST.-HILAIRE (Member of the Institute) has just completed for the press a third and revised edition of his *Histoire d'Espagne* in fourteen volumes—a work which has been twice crowned by the French Academy, and which has occupied the author for nearly forty-five years. The last volume contains a very detailed account of the Peninsular War.

MRS. STRANGE BUTSON, the author of *On the Leads*, has in preparation a work to be issued by Messrs. Griffith and Farran, named *The Art of Washing*. It is divided into three sections, of "Personal," "Clothes," and "House Washing," and the author has aimed at making it practical and useful throughout.

PROF. GHERARDO NERUCCI, the Italian translator of Max Müller's *Lectures on the Science of Language*, has been engaged for many years in collecting the popular stories current in the neighbourhood of Pistoia. He has just published a first instalment under the title of *Sessanta novelle popolari Montalesi*.

MR. WILLIAM ANDREWS has just brought to a close a series of sketches dealing with strange stories, scenes, mysteries, and characters in our national and local history, which have appeared in twenty provincial journals under the title of "Historic Romance." The articles will shortly be issued in a volume. The same author will commence at an early date in the *Nottingham Daily Guardian* a series of papers entitled "Strange Stories of the Midlands," which will present chapters on the legendary lore, traditional tales, and romantic episodes of Mid-England.

MESSRS. SMITH, ELDER AND Co. send us the first number of the *Transactions* of the Cremation Society of England. Friends and opponents alike of the proposed system will be glad to have the careful and apparently exhaustive bibliography of the subject in various languages which Mr. Eassie, the secretary, has compiled.

SOME attention was attracted a few weeks back by the correspondence which appeared in a daily paper on the subject of the remuneration of authors. The state of things both in Germany and France seems to be equally unsatisfactory to the writing class. A German publisher usually prints from 800 to 1,000 copies of an ordinary book, 100 or 150 of which are bought by the libraries, and sixty or eighty sent to the leading Reviews. The remaining 800 or thereabouts are distributed among the retail booksellers, who return those which are left on their hands at the close of the year. The publisher often receives more than his original 800, as the reviewers' copies find their way back to him. The *Revue Politique et Littéraire* assures us that the same phenomenon is by no means unknown in Paris, and instances a French poet who published a volume of verse in the early years of the Second Empire. The author entrusted ten copies to a publisher on the Quai Voltaire, and every morning, as he stole past the shop, cast a sidelong glance at his beloved volumes. What was his horror at finding them, in the course of a few days, increase to eleven and then to twelve! The two waifs were the *hommages de l'auteur* returning to their parent nest. Prof. von Holtzendorf, in view of the great number of excellent works which are disposed of by the publishers at the price of waste paper, suggests that for a very small expenditure every village in Germany might have a liberal supply of good books. Unfortunately, according to Karl Hillebrand, the "general reader" is almost unknown in Germany.

MESSRS. SAMPSON LOW AND Co. send us the authorised translation of Dr. Ebers' latest

romance, *The Sisters*, which was reviewed in the ACADEMY of January 3, 1880.

WE have received from the Clarendon Press the Library Edition of Canon Stubbs' *Constitutional History of England*. It seems to us in every way worthy of the author and his work.

MESSRS. CASSELL, PETTER, GALPIN AND CO. are bringing out in monthly parts the *New Testament Commentary for English Readers* edited by the Bishop of Gloucester and Bristol.

MESSRS. GRIFFITH AND FARRAN have in the press a new work by Miss M. Betham-Edwards, entitled *Six Life Studies of Famous Women*. The author's endeavour has been to present brief biographies, to be read at a sitting without fatigue, and yet so comprehensive as to embrace the leading features of the life and character of some little known but remarkable persons. These are Fernan Caballero (the Spanish novelist), Alexandrini Tinné (the African explorer), Caroline Herschel (astronomer and mathematician), Marce Pape Carpentier (the educational reformer), Elizabeth Carter (scholar), and Matilda Betham (*littérateur* and artist).

WE have received *Instructions for Testing Telegraph Lines, and the Technical Arrangement of Offices*, by Louis Schwendler, vol. ii., second edition (Trübner); *First Greek Grammar*, by W. Gunion Rutherford, new edition, enlarged (Macmillan); *Murby's Church Catechism*, enlarged edition (Murby); *A System of Moral Science*, by Laurens P. Hickok (Boston: Ginn and Heath); *British Dogs*, part viii. (Bazaar Office); *The Practical Fisherman*, part vi. (Bazaar Office); *Facts and Impressions of England*, by Henry de Hochstrasser (Effingham Wilson); *Summer-Savory*, by Benj. F. Taylor (Chicago: Briggs); *La Philosophie Scientifique*, par H. Girard (Paris: Baudry); *Old and New*, from the Italian of O. Occioni, by F. Townsend (Rome: Loescher); *Truthfulness and Ritualism*, by Orby Shipley (Burns and Oates); *Report of the Association for the Oral Instruction of the Deaf and Dumb for 1879* (Wertheimer, Lea and Co.); *How to excel in Study*, ed. James Mason (Ward, Lock and Co.); *Back Again: or, Five Years of Liberal Rule 1880-85, a Forecast* (Sampson Low and Co.); *Principles of Agriculture*, by S. Tomlinson (Simpkin, Marshall and Co.); *The Origin, or Basis, of every Miracle of the Bible, separately considered*, by Ben de Monkton, part vi. (Simpkin, Marshall and Co.); &c.

AFRICAN EXPLORATION.

MR. JAMES STEWART, C.E., of Livingstonia, has just sent home an account of his journey from the north end of Lake Nyassa to Lake Tanganyika, and from this, taken in conjunction with Mr. Thomson's report on the route followed by him (ACADEMY, March 13), we obtain a very good idea of the nature of the country between the two lakes. Mr. Stewart left Lake Nyassa at the Kambwe lagoon, some twenty-five miles to the westward of Mr. Thomson's starting point, on October 14, and struck west till he reached the Rukuru River, up the valley of which he marched for some distance; the road then took him through the hills, which for two days were very rugged and steep, in a westerly direction to Maliwandu's village in Chungu, where an elevation of 3,900 feet was reached. Here Mr. Stewart says they were quite across the hills, and had a view over a level plateau as far as the eye could reach to the south and west, while to the north-west, in the direction of Tanganyika, some hills were seen. Mr. Stewart left this place on October 21, marching at first due west, and the district passed through up to November 3 may be described in a few words. Four marches led through the open valley of

the Songwe, and then the road passed on to a high level plateau, across which the hills overlooking Lake Tanganyika could be seen. Mambwe's country (and especially Chirundumusia's village) occupies the highest part of it, and from many points a most extensive view is obtained; the average elevation is about 4,700 feet above sea-level. The rainfall is large, beginning a month earlier than on Lake Nyassa; the climate is cool and bracing. Cattle are found at almost every village, and sheep and goats are kept in large numbers. Mr. Stewart describes the route which he followed through this region as a remarkably easy one, gradually rising from 3,900 feet at Maliwandu's to 5,400 feet at the ridge overlooking Tanganyika, and there is not one difficult ascent; the undulations met with form no obstacle to the construction of a road. Water is plentiful, even in the dry weather, but good timber is scarce. The descent to Lake Tanganyika occupied two days, and was gradual, so that walking was quite easy. Mr. Stewart reached the south end of Lake Tanganyika on November 4 after a march of 243 miles in seventeen days from Lake Nyassa. The first view of the lake was not an attractive one, as the shore for miles is fringed by a belt of dead trees, many still standing. From indications which he saw on the spot, Mr. Stewart confirms Mr. Thomson's view that there is no evidence of a continued and gradual rise in the waters of the lake. From the most easterly bay, where he first touched the lake shore, he crossed Molitonga Cape, the River Lonzua, and Cape Chikala to Pambete, where he met Mr. Thomson. Mr. Stewart started on the return journey on November 10 by the easiest route, and, as soon as he reached the highlands, sickness appeared among his men owing to the cold and wet, and caused much delay. All the way between the basins of the two lakes traces of ironstone were found, and on one hill-side in Mambwe there were eight smelting kilns in good order. The ore used is the brown hematite; it is very hard and compact, and is found in solid beds four or five feet thick. When Mr. Stewart arrived in the Chungu country, he found the trees thickly covered with large caterpillars, three or four inches long and as thick as the forefinger. The natives were gathering them in great numbers, and preserve them for food. One kind was of a light pea-green colour, the other dark, with white spots and sharp spines on the back. Mr. Stewart reached Lake Nyassa on December 3 after a march of 232 miles, or twenty-two miles less than the outward march to Pambete, and he thinks that a few more miles might be cut off by a carefully selected road; he has no hesitation in recommending that the line he took be accepted as the route between Lakes Nyassa and Tanganyika, as the country to the eastward is from Mr. Thomson's experience undoubtedly difficult.

MAGAZINES AND REVIEWS.

The Antiquary. No. III. (Elliot Stock.) We do not notice any falling off in this useful periodical. "The Ancient Earldom of Mar," of which Mr. Harrington Beaumont contributes a first instalment, promises to be a useful popular account of a question, or rather series of questions, of much historical and legal interest. The letter of Charles I. with which the number opens is interesting, as every scrap concerning one who has influenced the fortunes of our country in so great a degree is worthy of preservation and study. "Colour in Folk-Medicine," too, is very good, and opens out what will be to many readers a new line of thought. We can say little in praise of "By Hook or by Crook;" and we strongly object to decorating the pages of a Review with woodcuts, however good, taken from the book noticed.

This is done in the paper, otherwise a harmless one, on *The Civil War in Herefordshire*.

THE January number of the *Library Journal* contains an examination by Mr. A. M. Pendleton of some common "Notions, Wise and Otherwise," on the subject of popular libraries, and the first instalment of Mr. W. E. A. Axon's industriously compiled "Notes on Chinese Libraries," in which he gives an account of the great encyclopaedia of Kanghe, a copy of which has been recently obtained for the British Museum. Mr. Melvil Dewey (or Dui, as he now writes himself) treats of "Consulting Librarianship," and announces that Mr. F. B. Perkins, one of the ablest officers of the Boston Public Library, has left that institution and started in Boston as a "Consulting Librarian." Prof. Sumner, of Yale, contributes a "Selected List of Books in Political Economy and Political Science," which is useful as far as it goes, but is inadequate alike in discrimination and in comprehensiveness; nor does the characterisation of the books seem always to rest upon first-hand knowledge. The usual Notes and News conclude an interesting number.

In the *Archivio Storico Italiano* Signor Modigliani publishes the "Statutes of the Commune of Anghiari" in the form in which they were redacted towards the end of the thirteenth century. Signor Lampertico writes on a neglected period of the history of Ugucione della Faggiuola when he was Podestà of Vicenza. Signor Frizzoni brings to a conclusion his interesting notes on "Italian Art in the National Gallery." Signor Cecchi, in commenting on the recent publication of the letters of Alessandra Macinighi negli Strozzi, draws a sketch of the development of social morality in Italy during the Renaissance which, in its carefulness and sobriety, deserves to be contrasted with the sensational writing and highly coloured pictures of that period to which English and French readers have been so accustomed in late years.

DR. OORT contributes a paper on the text of the prophet Amos to the *Theologisch Tijdschrift* for March, which is among the most important monographs which this obscure prophetic book has called forth. Among other noteworthy points is the conjecture that the feast of Succoth ("Tabernacles," Authorised Version) was originally the feast of Sacouth (an Assyrian name of Adar or Molech, restored by Schrader, with extreme probability, in Amos v. 25). Mr. Sidgwick's *Methods of Ethics* is described and criticised in a friendly spirit by Dr. Koebakker, from whom similar articles on other English philosophical works may be expected. Dr. Oort's important book on the latter centuries of Israel's national independence is reviewed by Dr. Koster; the notice increases our regret that the translator of *The Bible for Young People* did not see his way to introduce this valuable appendix to the English reader, especially as it might have found favour with some who were not unreasonably repelled by certain characteristics of the main body of the work. The usual critical notices of books on Biblical science conclude this number. Among these we would specially mention that of Merx's important work on Joel by Dr. Kuenen (see ACADEMY, February 7, 1880), in which the learned and cautious reviewer at last definitely commits himself to the post-exile date of the Book of Joel.

In the current number of the *Anglia*, Mr. Phelan returns to his rolling three Arthur Massingers—of Gloucester, Salisbury, and London—into one, the father of Philip Massinger, the dramatist, but can only repeat his old groundless arguments. He also still tries to identify the *Tyrant*—doubtless Massinger's (at present) lost play—sold at John Warburton's sale on November 20, 1759, with the *Second Maiden's Tragedy* in the Lansdowne MSS.

which is printed in Hazlitt's *Dodsley*. Mr. Furnivall has, therefore, had to turn to Warburton's Sale Catalogue in the Museum, and naturally finds there the two plays entered separately, the *Tyrant* alone, and the *Second Maiden's Tragedy* with its two mates, as it is now on the Museum shelf:—

"211 The Tyrant, a Tragedy, 4to.

222 The Queens of Corsica, a Tragedy written by Fran. Jaques, 1642.—The second Maiden's Tragedy, *Licenced by the Duke of Buckingham*, 31st Oct. 1611.—The Buggbears, a Play, very ancient, fol."

This disposes of the Tieck-Phelan notion of the two plays being identical, as the one MS. can hardly have been a copy of the other; and it holds out hope that this *Tyrant* may be still recoverable. A MS. sold in 1759 ought to be traceable now; and, as it is one of a play of Massinger's, folk interested in the drama should bestir themselves to find the MS. Lord Lansdowne can hardly have bought it at Warburton's sale, or it would have been with the rest of his MSS. that his representatives sold to the nation in 1807. The interleaved copy of Warburton's Catalogue in the Museum does not contain the name of any buyer at his sale.

OBITUARY.

THE Swedish poetess Tekla Levinia Andrietta Knös died at Wexjö on the 10th inst., after a long interval of hopeless insanity. Tekla Knös gained the gold medal of the Swedish Academy for her poem of *Ragnar Lodbrok* in 1851. In 1852 she published *Elfvarnas Kvillar*, and in 1853 two volumes of *Poems*. In 1855 she lost her mother, and came into closer intimacy with various literary persons, and particularly with Fredrika Bremer. About thirteen years ago her mind gave way, and, after being cared for by the Baroness Silfverstolpe until the death of that admirable lady, Tekla Knös entered the asylum at Wexjö in 1869, and has remained there until now.

THE death is likewise announced of Baron de Jonge, sub-librarian of the Hague National Library, and author of a work on the *Rise and Growth of Dutch Power in the Indian Archipelago*; and of the Comte de Castlenau, author of a *Mémoire sur les Poissons de l'Afrique Australe*, &c.

THE MARQUIS OF WORCESTER.

THIS nobleman, so well known by his *Century of Inventions*, was, it will be remembered, imprisoned in the Tower of London for his adherence to the cause of Charles II. Some curious and interesting particulars respecting this imprisonment have recently come to light in the State papers. In December 1652 he petitioned the Council of State

"for a grant of such concealed debts as are not yet discovered or recovered by the State for satisfaction of some crying engagements, for want whereof certain persons will be ruined and himself utterly disgraced. Began maintenance for himself, wife, and family; his brewer, baker, and cook call on him; his keeper has not received a penny for lodgings or fee. His audit roll of 1646, taken with him, surpassed £27,000, all of which with his then estate, during his father's life, ironworks, and woods, amounting to £4,000 a year, is sold, and only some impropriations and tithes remain. Began a grant of these, in consideration of his voluntary coming in, his ingenuous answer, and submissive compliance, and, most of all, their noble dispositions."

A second petition, asking for maintenance for himself and family, set forth that, had he been taken in arms, he and his family would not have been left without bread, but he submitted voluntarily, and had lived in imprisonment six months on credit, which was hourly likely to fail, and his wife had neither jointure nor main-

tenance. A third petition asked for release on bail for his good behaviour and submission to the present Government. He thanked the Council for their charitable intentions for his subsistence, yet found the presentation of his condition obstructed by multiplicity of affairs, and was out of hope to be relieved. The Marquis, in his petitions, styled himself Earl of Worcester only, his late father's elevation to the marquise taking place in November 1642, when the titles conferred by the King were not recognised by Parliament. His second wife, a daughter of the Earl of Thomond, also petitioned, pleading that, though her portion was £20,000, she had only received £400 in six years, and but for the charity of friends must perish. The last petition of the Marquis was to Cromwell after he had dissolved Parliament. He lauds Cromwell's unparalleled endeavours for the common welfare, and adds, in reference to himself, that "no subject in England has been so hardly dealt with; but having recourse to the fountain head of mercy and nobleness, whose crystalline waters may now run without interruption, my heart is elevated with hopes." These hopes were not doomed to be disappointed; £3 a week was allowed him two days afterwards, to be paid weekly or otherwise, as he might choose, and with arrears. This is the same Marquis of Worcester whose romantic history so frequently figures in fiction.

KIRGHIZ PROVERBS.

THE following proverbial sayings are quoted, among others, by the *Turkestan Statistical Magazine* as being in vogue among the Kirghiz nomads. Many of them are, of course, only variations, though often curious and characteristic, of proverbs of a very wide circulation, such as "Forge while the iron is hot," or "A live mouse is better than a dead lion." Our own "It never rains but it pours" reappears as "One never falls but one falls from a nar" (a tall species of camel); and "Even a worm will turn" as "Don't pursue a coward too long, lest he become brave." "Nothing is cheap that you do not want" is "Burn the saddle which is too heavy for the horse, even if it be made of gold," or, as we remember Lord Palmerston once put it, "Dirt is matter in the wrong place." "One crow should not peck out the eyes of another" is almost identical with the Scotch "Hawks winna pyke out hawks' een;" and "Respect me and I'll call thee brother" (which is also the Russian form), is represented by the pithy Scotch version, "Ca' me, ca' thee." This mutual laudation is, by-the-way, even more laconically expressed in Punjabi by two words, signifying "the scratching against each other of two donkeys." Others of these Kirghiz sayings sum up in a sentence the moral of some well-known fable, as "Take-it-easy will overtake a hare, even in an araba" (country cart), "Between two camels a fly will easily come to grief." Others breathe the free spirit of the Steppe, as, "He whose mother was a slave is no slave unless he becomes so by his own deeds;" "The son of a noble father may become a prince or a slave;" "The people is sacred;" "A great festival is one for the whole people;" "Only a cow would ask a brave man who his father was." Shrewdness and pathos and humour are all represented. "Be discreet and you will never have to eat dirt," and "Don't fulfil an order and put yourself to shame," recall "Surtout point de zèle." "The lost knife had a golden handle, the lost cow gave the largest supply of milk," reminds us of the angler's lost salmon. "A sharp knife is better for work, but it cuts the sheath"—this is just the

"Fiery soul which, working out its way,
Fretted the puny body to decay."
"A horse cannot roll about without leaving

some hairs on the ground;" "The father's thought is the child, the child's thought is the Steppe;" "Your daughter is at home, but her reputation is abroad;" "The dog barks, but the caravan moves on;" "Abuse is more harmless than smoke; it does not affect the eyes;" "One meal is worth forty salaams;" "Lies are useful weapons, but they injure the soul." This maxim may pass current in the Steppe, but hardly in the cities of Central Asia! "A beautiful woman cannot remain virtuous" is, at all events, genuinely Asiatic. "When you have a grievance go to the Khan, when hungry to a rich man"—this is perhaps ironical. "A coloured cup may lose its colour, but not its shape" expresses more than the corresponding "Can the Ethiopian change his skin?"

Some of the collection have quite the ring, and even more than that, of the utterances of Solomon, as, "If a rich man is made a judge, he will be like a leafy tree: if a poor man, like a withered branch;" "When a rich man loses his wife, another takes her place: when a poor man loses his, trouble becomes his bed-fellow;" and this, especially, "A good man's desire for vengeance lasts till dinner time, while a bad man's outlives his victim."

CORRESPONDENCE.

MR. GROTE AND PROF. SCHÖMANN.

University College, Oxford: March 19, 1880.

Prof. Mahaffy's unqualified adhesion to Grote's views of Athenian constitutional history will surprise many students (*vide* notice of translation of Schömann's *Handbook*, ACADEMY, March 13). I do not think that all Schömann's points are important, or all proved; but I think that some which are important are proved, not on the evidence of the Attic orators, but on the evidence of Aristotle. I should like to draw attention to two only. First in importance and in certainty comes the contention that the four Ionic tribes contained the whole Athenian people before Kleisthenes, if not before Solon. This seems to me proved, unless the quotation from Aristotle (fr. 347) can be impeached.

If so, we must give up the extensions of the suffrage which Grote so lavishly ascribes to Solon and Kleisthenes, enfranchising the same class twice over (*vide* Freeman, *Essays*, series ii., p. 122, note), and admit that, though the Kleisthenean tribes more easily received aliens, yet free native Athenians were citizens by birth in Solon's time, as in the fifth century. In other words, the development from a "patrician" government to one in which "plebeians" were included, as indicated by Grote and insisted on by Freeman, would seem to be a figment.

(The real extension of the higher political rights to a new class as such, by taking personal property into the census, Grote at first ascribed to Solon; but as his work now stands it is hardly mentioned.)

Second comes the familiar problem of the Jury-courts; here everything turns on the genuineness and interpretation of a passage of Aristotle (*Politics*, ii. 12). I should not have thought that anyone would now maintain Grote's interpretation; if not, surely Aristotle says that Solon made the Jury-courts, and that by giving them such powers as involved the establishment of the democracy.

It is a pity, I think, that our admiration for Grote's genius should blind us to the defects (but for Prof. Mahaffy's high authority I should have said the palpable defects) of his account of the Athenian democracy. No doubt he is right much more than wrong; but he would not believe that Athens doubled the tribute in 425 or depreciated the coinage in 407 (*vide* on this Macaulay, *History of England*, iv. 623). The point is that the economical grounds on which Grote denies the depreciation could not have appeared tenable to him but for some bias; and our experience of these and the above matters, which are comparatively certain, should make us doubt the unmixed value of English political experience when applied beyond the range of evidence to the re-construction of Athenian history. B. BOSANQUET.

THE ASTURIAN NEUTER.

6 Norfolk Terrace, Baywater, W.: March 20, 1880.

The Asturian Spanish dialect is the only one among those of the Neo-Latin branch which is possessed of a regular neuter termination for its adjective. To Latin *us*, *a*, *um* corresponds Asturian *u*, *a*, *o*. In this very interesting dialect *bonu* ("good"), for instance, always refers to a masculine substantive and *bona* to a feminine, while *bono* is used in a neuter and indeterminate sense. "The good tree" is rendered by *el árbol bonu*; "the good earth" by *la tierra bona*; and "what is good" by *lo bono*. The article also, as in Spanish, has its three genders—*el*, *la*, *lo*; but in this last language adjectives in *o* are masculine and in a feminine, while the neuter is always replaced by the masculine. With regard to Italian, *il* and *lo* exist both for masculine and

la for feminine; but the distinction between masculine and neuter is not observed. "The horse, the fright, the earth, what is good, what is strange," are rendered, in Spanish, by *el caballo*, *el espanto*; *la tierra*; *lo bueno*, *lo extraño*; in Italian, by *il cavallo*, *lo spavento*; *la terra*; *il bello*, *lo strano*; and in Asturian, by *el caballu*, *el espantu*; *la tierra*; *lo bono*, *lo extraño*.

However interesting this peculiarity of the Asturian dialect may be, its importance is increased, if I be not mistaken, by the support it affords to the opinion of those who regard the Latin nominative, rather than the accusative or the ablative, as the origin of the Neo-Latin singular. It is, in fact, rather difficult to admit that Asturian *bonu*, *bono*, have both the same derivation from the accusative *bonum* or from the ablative *bono*, and not from the masculine nominative *bonus* the first, and from the neuter nominative *bonum* the second. The termination in *us* is quite as near to *bonu* as the termination in *um*; but this last explains much better the neuter *bono* than the termination in *us*.

It has been observed by phonetists that nasality gives to *u* a tendency towards *o*, and it is more than possible that Latin final *m* had no other object than that of nasalising this vowel, giving to it a sound more or less approaching that of *o* as it is heard in the French pronunciation of Latin words finished in *um*, which sound as if they were finished in *om*—*templom*, *bonom*, &c., instead of *templum*, *bonum*, with the Italian and Spanish *u*. It is here to be remarked that French influence has nothing to do with the pronunciation in *om*, for, if such were the case, the Latin final *um* would not be pronounced as *om*, but as *um* nasal in the French words *parfum*, *alum*, &c. Moreover, other languages show the permutation of *u* into *o* under a nasal influence, as in *obruć* Bohemian, corresponding to *obrűć* Polish, syn. of *obrűć*, "hoop," pronounced *obrűć* with nasal *o*.

It seems then to me that Asturian *bonu*, *bona*, *bono*, is much better explained by *bonus*, *bona*, *bonum*, than by *bonum*, *bonam*, *bonum*, because of the repugnance one feels in admitting that two distinct terminations like *u* and *o*, corresponding so well in gender to the nominative *us* and *um*, may be both indiscriminately derived from the sole accusative termination in *um*.

L.-L. BONAPARTE.

A PASSAGE IN "2 HENRY IV."

Cambridge, Mass., U.S.: Feb. 28, 1880.

In *2 Henry IV.*, the Cambridge editors end the fourth scene of act IV. with line 132, where the king asks to be borne "into some other chamber." There is no new scene here in the early editions, and the modern ones generally follow Capell in directing that the king be "conveyed into an inner part of the room and laid upon a bed." Dyce (second edition) has the stage direction, "*They place the king on a bed: a change of scene being supposed here*;" but he makes no change of scene. The Cambridge editors say:—

"Capell's stage direction is not satisfactory, for it implies a change of scene, though none is indicated in the text. The king's couch would not be placed in a recess at the back of the stage, because he has to make speeches from it of considerable length. He must therefore be lying in front of the stage, where he could be seen and heard by the audience."

It is passing strange that they did not see—and that no commentator, so far as I am aware, has seen—that the text itself furnishes indisputable evidence of a change of scene.

At IV. iv. 110 the king swoons, after saying, "And now my sight fails, and my brain is giddy—O me! come near me, now I am much ill."

At the close of the very same scene, as the editors generally make it, he asks,

"Doth any name particular belong
Unto the lodging where I first did swoon?"

On being told that "'tis called Jerusalem," he asks that he may be carried back to that chamber:

"But bear me to that chamber; there I'll lie;
In that Jerusalem shall Harry die."

But, if there has been no change of scene, he is already in the Jerusalem Chamber. According to the common text, the king is *not* carried to another chamber when he bids his attendants do it; and yet he asks to be borne back to the room in which he has remained all the time. Collier not only makes this mistake, but also adds this note:—"Of course, Henry remains in the same apartment until after the interview with his son, and then he retires to the Jerusalem Chamber." How could he help seeing that his two rooms are one and the same?

The Jerusalem Chamber is *not* a bedroom. The king is holding a council there when he swoons; and when he asks to be taken "to some other chamber" (that is, to a bedroom) he is, of course, obeyed, and the scene shifts to that chamber, where he remains until he asks to be carried back to the Jerusalem Chamber on account of the prophecy concerning his death.

The Cambridge editors, although they end scene iv. at the point mentioned above, omit the usual *Exeunt*. Whether this was intentional or not, I have no means of knowing. In my edition now printing I make the change of scene and insert the *Exeunt*. W. J. ROLFE.

APPOINTMENTS FOR NEXT WEEK.

THURSDAY, April 1, 4 p.m. Archaeological Institute.

8 p.m. Linnean.

8 p.m. Chemical.

FRIDAY, April 2, 7 p.m. Civil Engineers: "Construction of Brick and Concrete Egg-shaped Sewers," by E. van Putten.

8 p.m. Society of Arts: "The Best Route for a Line of Railway to India," by B. Haughton.

8 p.m. Geologists' Association.

SCIENCE.

Maistre Wace's Roman de Rou et des Ducs de Normandie. Nach den Handschriften von Neuem herausgegeben von Dr. Hugo Andresen. (Heilbronn: Henninger; London: Trübner.)

PLUQUET's edition of the *Roman de Rou* is so inaccurate, and has so long been practically unobtainable, that a warm welcome will be accorded to the new one whose title is here given; an edition which (though Dr. Andresen might have spared four-fifths of the space devoted to exposing Pluquet's mistakes and alterations) we may at once say entirely supersedes its predecessor. The advance in historical, critical, and linguistic methods during the half-century since the poem was first printed is so great, and our knowledge of Old French in particular has so increased, that even if Pluquet had been considerably less careless than he was, a new edition by a competent scholar was much to be desired; and though, as might be expected, Dr. Andresen is not equally well prepared in all the subjects required for editing Wace's work, scholars have reason to be, on the whole, well satisfied with the result of his labours.

The present editor's strong point is evidently history. In two hundred closely printed pages of notes (not including the introductory discussion as to whether all the poem is by Wace), to which reference is

made tolerably easy by an Index of persons and places, he compares Wace's statements with those of the other Old-French and Latin chronicles treating of the subject, and gives the biographical and geographical information required, to appreciate them; and though numerous points (sometimes because of MS. corruptions) remain obscure, the fullness and carefulness of his treatment render this part of the work a valuable contribution to the interpretation and restoration of the text and to our historical knowledge. That its preparation delayed the completion of the book for two years will be best understood and excused by those who have gone through similar time-consuming work; but the account of the modern literary history of the poem is so entirely composed of details that we get no clear idea of the poet or his work, and wish it shortened by the omission of the republication and re-refutation of obsolete guesses.

As regards the text, the later and altered language of the sole MS. of the first two parts and of the *Chronique Ascendante* (a short poem of doubtful authorship appended to them in the MS.) have been transliterated by the editor into that of the oldest MS. (Brit. Mus. Reg. 4, C. xi.) of the third and largest part; and most of the numerous scribal errors, which often make the original unintelligible, have been more or less satisfactorily corrected. In the third part the editor has wisely confined himself to reproducing (false readings excepted) the text of the British Museum MS., which is probably little more than a generation later than the poem itself, and whose language has been but slightly modernised or Anglicised by the scribes. In restoring the readings he has, of course, availed himself of all four MSS. (whose variants are given at the foot of the page), being guided by a preliminary examination of their relations. The first 336 lines of this part have been printed by Prof. Meyer in his *Recueil d'anciens Textes*, and, as Dr. Andresen remarks, there is little difference between the two editors with respect to readings. A comparison of the forms with those of the MS. which both follow shows, however, that neither print is free from errors; and as Dr. Andresen goes so far in the way of literal reproduction as not to normalise the *i*'s and *j*'s, *u*'s and *v*'s, or to use any diacritics (matters of less consequence than the indication of MS. contractions), the show of accuracy in his case is much more likely to mislead his readers. Most of his misprints or misreadings, which here average one in every twenty lines, are, it is true, of little importance, though they are responsible for several of the anomalous forms (*mieux* for *mieuiz*, *douz* for *dous*, *ecuiers* for *escuiers*) he has pointed out; but this cannot be said of *air* and *palais* for *air* and *palais*, or even of the non-mention of the fact (duly recorded by Prof. Meyer) that accented letters are common. Complete accuracy in a print of a text containing over eleven thousand lines is, of course, not to be looked for; but proper revision would have greatly diminished the number of errors, and if the editor was unable to have the proofs read over with the MS., he should have warned his readers.

Of the linguistic part of the editor's work,

and of the important branch of his text-criticism which depends on it; we cannot speak very favourably. The hundred pages (to which must be added a few in the Introduction) he has devoted to cataloguing, and occasionally discussing, the peculiarities of spellings, inflections, and rhymes are, indeed, ample evidence of his industry and a useful collection of materials; but, in spite of occasional references, it is evident that Dr. Andresen is only imperfectly acquainted with the important researches of the last few years. Besides this ignorance of various recent discoveries, especially in phonology (for instance, the important Early Old-French distinction between *e* = Latin *ē*, and *e* = Latin *æ* in position, is not mentioned, and the question whether Wace distinguished or confounded the sounds is consequently not even raised), there is an imperfection of method apparent in the absence of a systematic attempt to determine, by a complete examination of rhymes and comparison of some living dialect of North-west Normandy, the phonetic features of the poet's language, as well as in the frequent non-distinction (as in discussing the diphthongs *oi*, *ui*) between orthographical and phonetic phenomena. With a few exceptions, Dr. Andresen confines himself in this department to repeating the opinions of the writers he has consulted, even where his own facts are inconsistent with them; thus we are told once more that Old-French *ai*, *ei*, and *e* were all the same to Anglo-Norman scribes, though he himself remarks that the twice-occurring spelling *paies* perhaps indicates the passage of *ai* to *e* in pronunciation, and though the above-mentioned forms *air*, *palais* (which he might have seen in Prof. Meyer's extract) are irreconcilable with the theory that the scribe who used them pronounced the Old-French *ai* of these words as simple *e*. Of mere errors of detail we will note but one or two. Wace's presumed inaccurate rhymes of *é* on *è* are correct, for *cembel* (Italian *zimbello*) had certainly *è*, not *é*, and there is no reason to suppose that *Alveré* (Old-English *Ælfrēd*) had anything but *é*; and *en* in *Engleterre* does not stand for *an*, as the word (Italian *Inghilterra*) comes from the mutated form. Perhaps the most striking deficiency of treatment is in one of the most important points—the question whether Wace distinguished the sound resulting from *iè* + *i*, which is *i* in Parisian and some Norman (and other) dialects (*lire* = *legere*, *gist* = *jacet*), from general French *i* (*dire* = *dicere*, *fist* = *fēcit*). Dr. Andresen has indeed noted a number of cases in which words of the former class are spelt with *ie* (*liere*, *giesent*), but his account requires correcting and supplementing. Spellings with *ie* occur, not only in the British Museum MS., but in the three others; in *piere*, *pies*, *desconfiere*, *sofiere*, *ie* corresponds to Latin *ē* (*pějor*, *pėjus*, *-fēcere*), not to *ē* or *i*; and though in *dierre*, *ociere*, where it corresponds to Latin *i* (*dicere*, *occidere*), *ie* is doubtless a scribal error, the *ie* of Modern-French *virege* from Old-French *virge* (*virginem*) is by no means anomalous, as the same sound-change has taken place in Modern-French *cierge* from Old-French *cirge* (*cēreum*), the only other word in which *i* was followed by *ye*. More surprising than these errors is the omission

of every case in which this *iè* (we may thus distinguish it from *ie* and *i-e*) is final; beside numerous place-names in *-iè* (Modern-French *-y*, rarely *-é*) from Celto-Latin *-iācum*, there are *liè* and *celiè* (from a Latin form *illac*), and *miè* (*mi*, *medium*). That this omission is no mere oversight is evident from the editor's consistently printing *mi(e)*, and altering *devers mièdi* (iii. 6344) into *vers miedi*, as if the *e* were in the former case a scribal error, in the latter the syllabic feminine ending. Most surprising is his not having examined whether words entitled to *iè* rhyme on those entitled to *i* only; a rapid perusal has shown us no such case in the third part, and but nine in the others. As these cases all occur in stanzas of unfixed length, and as there is here but one MS., some at least are probably alterations or interpolations; so that, with the frequent spelling *ie*, and the fact—not hinted at by Dr. Andresen—that these *ie* forms occur in Modern Guernsey (Métivier gives, for instance, *piere* = *pire*, *lliet* = *lit*), it is all but certain that the sound that Wace, a native of Jersey, gave to the result of *iè* + *i* was not *i*, but *iè*. As we have named the Channel Islands, we would ask the editor's reasons for believing the *ui* of *Gersui* (as the MS. regularly spells it) not to be etymological; the word rhymes on *sui* (Modern-French *suis*) and on *Guernerui* (Guernsey), which is etymologically an extremely correct form (Latin *Grenerodium*). Lastly, we regret for more reasons than one the absence of a reference glossary of rare words, or words used in unusual meanings; it would have been considerably more useful than the lists of passages in which common normal forms of strong verbs occur.

Of the importance and many-sided interest of Wace's famous poem we need say but little. Looking at it simply as a literary production, we now read with amused astonishment the comments, "veriest rhymers," "lifeless tone," "chilling apathy," "sluggish feeling," of the English reviewer (quoted by Dr. Andresen) of the original edition; for though Wace is not a great poet, he at least possesses the merit—no small one in a chronicler—of liveliness. As a generally trustworthy record of events on which contemporary native English historians are naturally reticent, and as a memorial of the ancestors of many of the chief actors in later Norman-English history, it is often invaluable; while, as a specimen of a Norman dialect of the time (about A.D. 1170) when English was beginning to rapidly appropriate French words, it cannot be neglected by either French or English philologists. In conclusion, we can only recommend all Englishmen who take an interest in national history or in family biography, in early literature or in mediæval life—provided they know enough Old French to make out the text or enough German to understand the notes—to read Dr. Andresen's edition themselves.

HENRY NICOL.

CURRENT SCIENTIFIC LITERATURE.

Science for All. Edited by Robert Brown, M.A. Vol. II. (Cassell, Pether, Galpin and Co.) The second volume of this very useful publication contains a number of articles on those subjects which, at the present time, most

fully engage the attention of the scientific world. They are written for the most part by men who have specially devoted themselves to the study of the subject upon which they discourse. All branches of science equally find a place in the work; we have the "Sun" by Mr. Proctor, "Diamonds" by Mr. Rudler, "The Physics of Music" by Prof. Eaton Lowe, "Touch" by Mr. Jeffery Bell, "Polar Ice" by Mr. Moss, and a number of other equally interesting and instructive articles. The illustrations are very good, and the work entirely maintains its original high standard under the able editorship of Dr. Robert Brown.

The Rise and Development of Organic Chemistry. By Carl Schorlemmer, F.R.S. (Simpkin, Marshall and Co.) Few chemists are more competent to write on the subject of organic chemistry than Mr. Schorlemmer. He has given us within the compass of a little more than a hundred pages a very succinct account of the rise and progress of what was once called organic chemistry. The first and only acid known to the ancients was an organic acid—vinegar. By the action of this on the alkalis the first artificial salts were obtained, and the first re-agent (which word the author appears to use in the sense of test only) was the infusion of nut-galls, which was used for the detection of iron in the form of green vitriol in verdigris. Pliny mentions that paper steeped in infusion of nut-galls was used for this purpose:—"Deprehenditur et papyro, galla prius macerata; nigrescit enim statim aerugine illita." The author discusses the origin of the word "chemistry" at some length. The latest writer on the subject is Prof. Gildemeister (*Zeitsch. Deutsch. Morgenl. Ges.*, xxx. 634), who asserts that the word *ktmiyd* in Arabic signifies the name of a substance by means of which the transmutation of metals may be effected, and synonymous with *ikstr*. Alchemy thus becomes the science of *ktmiyd*, or *ikstr*. Later Arabic writers called the science *al-ktmiyd*, and applied the term *al-ikstr* (which afterwards became *elixir*) to the philosopher's stone. As to the progress of chemistry, the author commences the bifurcation with Agricola and the metallurgical chemists on the one hand, and with Paracelsus and the iatro-chemists on the other. In the next century Boyle pointed out that chemistry must no longer be ancillary to any one science, but that it is itself a definite and individual science. Afterwards came attempts at classification, the division of the science into inorganic and organic, the discoveries of Scheele and Lavoisier, and the commencement of quantitative chemistry. The first great step in the history of organic chemistry was undoubtedly the artificial production of a substance hitherto believed to be produced solely in the living organism of animals. The author traces with great skill and ingenuity the succeeding history of the science, the various theories of substitution, direct and inverse, types, conjugated, formulated, residues, valency, and isomerism, ending with an account of the synthesis of indigo and indigo purpurin. We cordially recommend Mr. Schorlemmer's admirable little work to all students of chemistry, both young and old.

NOTES OF TRAVEL.

WE hear that Mr. Carter, who has charge of what is known as the "elephant expedition" of the International African Association, intends to remain at Karema, M. Cambier's station on the eastern shore of Lake Tanganyika, during the rainy season, and will then return to the coast for further orders. In so doing, he proposes to try a new and more direct route than has hitherto been followed *via* Mpwapwa, and will march nearly along the seventh parallel of south latitude, thus avoiding the

Ugogo country, which is a source of so much trouble to travellers.

THE establishment of the Church Missionary Society's station at Mpwapwa and of that of the Universities' mission at Magila is stated to have already had the useful effect of inducing a large number of natives to settle down peaceably at those places.

MR. WALSH, who is well known for his researches into the natural history of South Central Africa, has recently arrived in Kimberley, and it is stated that he is about to accompany a Roman Catholic missionary expedition, which is preparing to start for the Victoria Nyanza. Mr. Walsh has had considerable experience in travelling in the interior, for, in company with Dr. Bradshaw, he spent some time with Mr. Westbeach at Pandamatinka, the most northern trading station in South Africa, and situated above the Victoria Falls.

THE last mail from the Cape brings news that the Matabele have been defeated by the Mashonas, and it is thought most probable that their country, which is considered the richest gold-field in South Africa, will now be open to Europeans, as the Mashonas are reputed to be peaceable and hard-working. Hitherto it has been very difficult to penetrate into the Matabele country, as Lo Bengula, their chief, would only allow Europeans to visit certain districts.

DR. WILLIAM K. PEDEN has just left England to join the Scotch Presbyterian mission station at Blantyre on the heights between the Upper Shiré and Lake Shirwa, and he hopes to be able to take useful meteorological and hypsometrical observations in that mountainous region of East Africa.

MR. F. C. SELONS, who has spent much time on the Upper Zambesi and its tributaries, and has made more than one attempt to reach Lake Bangweolo, is about to start on another expedition from the Transvaal with the same object. Mr. Richard Frewen, it will be remembered, proposed some two years ago to make a journey from near the Victoria Falls to this lake, but was obliged by ill-health to abandon the idea of spanning what has been termed the "unconnected link between the Cape of Good Hope and the Mediterranean," and the region still remains a blank on our maps.

MR. E. B. FLEGEL has just had lithographed at Gotha his large-scale chart of the Binue branch of the Niger, from Djen to Ribago, from surveys which he made when attached to the Church Missionary Society's expedition under Mr. J. H. Ashcroft last summer. Mr. Flegel has made the several sheets the more interesting by introducing some small sketches of noteworthy spots in this previously unexplored region.

SURGEON-MAJOR J. E. T. AITCHISON, who has already done good scientific work on our North-West frontier, has just returned to India to resume his botanical explorations in Afghanistan. Previously to leaving England, Dr. Aitchison also qualified himself for making topographical observations, and he hopes to have opportunities for doing good geographical work.

WE hear that Prof. Wagner, at present Professor of Geography at the University of Königsberg, has accepted the chair rendered vacant by the death of Prof. Wappäus at Göttingen.

SCIENCE NOTES.

The Beard as an Ethnical Characteristic.—A recent number of M. Broca's *Revue d'Anthropologie* contains a valuable paper by Mr. C. Staniland Wake, of Hull, entitled "La Barbe considérée comme Caractère de Races." It is but few writers on ethnology who have recog-

nised the beard as an important race-character, and many travellers have been so careless as to make no observations as to the presence or absence of the beard among the peoples whom they have visited. Mr. Wake, after an elaborate ethnological survey, concludes that the hair on the face is a character of much value to the anthropologist. It is curious that the most highly civilised races are those most plentifully supplied with beard; and, in fact, the beardless peoples may be compared to the children, and the bearded to the adults of the human race. It is further suggested by Mr. Wake's studies that the development of the beard is a special characteristic of dolichocephalic races, while its absence is connected with brachycephalism. To this generalisation there are, at the present time, many exceptions, which the author attempts to dispose of with much ingenuity.

IN part ii. of vol. xi. of the *Annals of the Astronomical Observatory of Harvard College*, the publication of which has quickly followed that of part i., Prof. Pickering communicates the results of photometric measurements of the satellites of Mars, Jupiter, Saturn, Uranus, and Neptune, of unequal double stars, and of miscellaneous objects. The satellites of Mars offered a photometric problem of no little difficulty. To measure their brightness in terms of that of the planet involved the determination of a photometric interval as great as that between the sun and moon, while the faintness of the satellites was such as to preclude the ordinary methods of measurement. The several plans which, under the circumstances, were resorted to led ultimately to the conclusion that, in case the capacity of reflecting the sun's light is the same for the satellites and for the planet, the diameter of the inner satellite, Phobos, is .00122, and that of the outer, Deimos, .00107 of that of Mars. The true diameters are probably greater rather than less, since the colour seems to be darker than that of the planet. In any case, they must be such small objects, even as seen from Mars itself, that their phases could scarcely be recognised by the unassisted eye of an observer stationed on the planet. The number of observations obtained during the late opposition of 1879 has proved unexpectedly large. The photometric measurements, which were confined to Deimos, are wholly independent of those made in 1877, different methods and different instruments being employed; and they lead to the conclusion that the mean brightness of the satellite appeared greater in 1879 than in 1877, and its light, when on the following side, exceeded by nearly half a magnitude that on the preceding side. The diameter deduced from these later observations is .00135. That the great difficulty of seeing the satellites arises from the proximity of Mars and is but little affected by moonlight is strikingly shown by the fact that the best series of position angles was obtained when the moon was less than four degrees distant. The satellites seem to have been observed longer at the Harvard Observatory than at Washington, Deimos having been measured on December 30, so that there is good prospect that they will be observable again during several weeks at the end of 1881. The photometric measurements of the satellites of Saturn show that the total change in the light of Iapetus is much less than is commonly supposed, and they indicate the diameters of the satellites, expressed in ten-thousandths of the diameter of Saturn, to be:—Titan, 200; Rhea, 106; Tethys, 81; Dione, 77; Enceladus, 52; Mimas, 42; Hyperion, 27; while that of Iapetus is 60—the light varying between that of bodies of diameter 82 and 44. No observations were obtained of the inner satellites of Uranus in consequence of their extreme faintness; the measurements of the outer ones gave the diameter of Titania .0175, and of Oberon

*0162, of that of Uranus. The observations of the light of Neptune's satellite indicate an unexpectedly large value of its diameter—0652 of that of the planet.

Prof. Loomis' Twelfth Contribution.—This appeared in *Silliman's Journal* for February. The first part contains two charts of mean pressure for the United States for January and July, which differ somewhat from previous charts. *En passant*, the professor remarks that Dunwoody's Tables, published in the Signal Service Report for 1876, give good results for sea-level reductions up to 7,000 feet. He next discusses the question of the difference in the rate of motion of storm centres in America and Europe, the former being nearly double the latter, and he finds that, by a comparison of the amount of rain collected with a falling and a rising barometer respectively, the proportion at Philadelphia is 3:1; on the west coast of Europe it is greater than 2:1; at Paris it is 3:2; and in Central Europe the ratio is in the opposite way. The third part of the paper refers to the motion of rapidly travelling storms advancing more than 1,000 miles a day, of which an analysis published by the Deutsche Seewarte at Hamburg gave for Europe eleven in the two years 1876-77, while in the United States the annual average is fourteen. All of these rapidly moving storms were accompanied by an unusual extension of the rain area in advance of the storm centre, and by a large amount of abnormal winds, i.e., winds from S. by E. to N.E., in front of the system. Prof. Loomis thinks that, though the immense area of the United States weather maps is not sufficient to show all the causes which produced rapid motion, the main principle is that pressure is diminished in front by the efflux of easterly winds from adjacent regions of high pressure, and by the condensation of moisture, and is increased in the rear by the influx of violent N.W. winds.

PHILOLOGY NOTES.

THE *Cymmrodor*, or Journal of the Welsh Society of the Cymmrodorion, is now in its third volume, and in the enjoyment of full vigour. The recently issued number contains, among other things, a very valuable and learned article by the new editor, Mr. Thomas Powell, on "Some Forms and Uses of the Substantive Verb in Welsh;" also an exact copy by Prof. John Rhys of the so-called "Historical Triads" as given in the Red Book of Hergest; and we must add that the first fifty pages are devoted to a paper by the Rev. John Davies on "The Celtic Languages in Relation to other Aryan Tongues." The writer tries to show that the Celts have contributed a good deal to the vocabulary of Latin and Teutonic. He is very erudite, but lacking in due respect for the phonetic laws of the Celtic languages; as when he will have it that the English word *flask* is a Celtic loan word, and adduces as proof a Welsh *flasc* and an Irish *flasc*, without perceiving the difficulty occasioned by the initial *f* in the two latter, where they could not stand unless one or both words were borrowed. Mr. Davies, who is himself an Englishman, ought to have considered whether his views will not tend to perpetuate the old idea of our Celtic countrymen that most or all languages of the civilised world are derived mainly from Welsh or Irish. Mr. Stokes and other recent Celtists, on whom he makes war, have been at some pains to make room for a more scientific study of Celtic, and one would be sorry to see the return of chaos.

MR. KERSLAKE has, in the *Transactions* of the Dorset Natural History and Antiquarian Field Club, recently been studying the Welsh dedications of churches in Dorset. He successfully

disposes of the so-called Devonian Compact and the Defusastas, and substitutes for them certain Dunsæte or Mountain Dwellers, whom he tries to establish as a sort of a little or surrounded Wales in Dorset so late as the time of E. heled. We should, however, advise him to pursue the studies he has so well begun without assuming, for instance, that "the labial convertibility of *w* and *b* is well known." We would also call his attention to some inscriptions found at Wareham and published not long ago in the *Archæologia Cambrensis*; their existence there has been rather a puzzle to us, as they certainly seem to be of Welsh origin and not to date before the ninth century or so.

At the last meeting of the Cambridge Philological Society, a paper was read by Mr. Lewis for the Rev. W. O. Green on *γνωσιμαχέιν*. Mr. Green contended that *γνωσιμαχέιν* was for *γνώσαι τὴν μάχην*, not *μάχεσθαι τῇ γνώσει*. The former view was Elmsley's (not the latter, as L. and S. s. v. implied), note on *Heraclid*, 706. The word occurs five times; three times in Herodotus (iii. 25, vii. 130, viii. 129), in all of which places it refers to combatants and an impending contest (*μάχη*), in which the weaker, or supposed weaker, adversary, *γνωσμάχει*, "gives in" as owning his weakness, and in all of which places the sense "to contest one's previous opinions, change one's mind," is unsuitable; while in the second passage it is absurd, as the Thessalians had had no "previous idea" of superiority over the Persians. So also in Aristoph. *Av.* 555 and in Eur. *Heraclid*, 706. *γνωσιμαχῶ* comes from an adjective, *γνωσίμαχος*, like *λυσίμαχος*, Ar. *Pax*, 992: cf. *μνηστικαίειν*, *κρονσιδημείν*, &c., and from analogy should mean to have a *γνώσις* of one's *μάχη* rather than have a *μάχη* with one's *γνώσις*. A discussion followed, in which it was observed that the meaning of *γνωσιμαχέιν* might have been derived from that of being at odds with oneself, wavering in one's opinion, and also that *γνωσμάχειν* would justify the formation of the word on that hypothesis.

MEETINGS OF SOCIETIES.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, March 17.)

SIR P. DE COLQUHOUN, Q.C., in the Chair.—Mr. J. W. Redhouse read a paper "On a Theory of the Chief Human Races of Europe and Asia," in which he combated the usually received views of the spread of the Arvan tribes N.W. into Europe, and S.E. into India, from the high plateau of Pamir in Central Asia. He based the theory he advanced—viz. that they really came from the N.W. Polar regions—on the considerations of the map, and the geology of the Old World of Europe, Asia, and Africa, guided by such fragmentary traditions of sudden upheavals or subsidences as have been more or less corruptly preserved and handed down to us, and which seem to show the probability that this portion of the earth's surface may, in some pre-historic age, have consisted of several distinct continents, islands, or archipelagoes. Each of these must have been tenanted by a fauna and a flora, nearly, if not quite, peculiar to themselves, just as America, Australia, and New Zealand were found to be, when first discovered by Europeans. Certain it is that over this whole range a tropical climate must once have prevailed, and perhaps over the ideal lost continent also. Mr. Redhouse's paper was illustrated by sixteen skeleton maps, showing the successive alterations of the earth's surface he regarded most probable.

SOCIETY OF ANTIQUARIES.—(Thursday, March 18.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—The Rev. Benjamin Webb exhibited an altar frontal which had been found in the parish chest at Alveley Church, Shropshire. It is a very fine specimen of English embroidery of the fifteenth century, being composed of panes of red and white damask, the pattern of the damask being a crown and pineapple. On it are worked, in gold and coloured silks,

a figure of Abraham holding souls in a cloth, a figure common enough on English brasses, with angels on each side, and above alternate flowers-de-lis and pomegranates.—Mr. C. S. Percival exhibited a grant by Edward I. to Glastonbury, in which the initial letter was illuminated, an unusual occurrence among Chancery documents.—Mr. S. A. Moore exhibited a few documents from Dartmouth, bearing the seals of the Corporation at various dates, and a specimen of the seal of Cornworthy Priory.

FINE ART.

Salon Illustré de 1879. Publié sous la direction de F. G. Dumas. (Paris: Baschet; London: British and Foreign Artists' Association.)

WHEN the Salon opened last spring, M. Dumas produced a Catalogue Illustré, which was a much more serious work than the Illustrated Catalogue as known to us; it was approved by the Administration, and sold side by side with the official catalogue of the Exhibition. Not only were the "get-up," the printing, and the paper better than those which we seem to think sufficiently good for a like purpose, but the illustrations themselves—drawn in every instance by the authors of the works represented—were of an order which contrasted with the rather comic sketches to which we are accustomed.

Under these conditions, the publication had a great success; at the close of the Exhibition, M. Dumas decided to give a permanent form to the work, and as soon as this was known he received contributions from all sides to the already important collection of drawings in his hands. It was at first proposed to accompany the new and enlarged issue of the drawings with a few lines from the criticisms by which the appearance of the pictures which they represented had been greeted in the journals of the day, but these furnished, only in rare instances, exactly that which was appropriate. Thereupon M. Dumas called the poets instead of the critics to his aid, and the result is a collection of verse which will be, perhaps, as curiously interesting to the students of modern French poetical literature as the drawings and etchings which it accompanies must be to the student of modern French art. The most various shades of feeling, of expression, and of manner are represented, from the light *vers de société* of Louis Paté to the grave and somewhat bitter mood of Aicard. A patriotic passion animates the lines in which Erckmann-Chatrian completes the full meaning of *Le Cadeau d'un Grand Père* by Alphonse Pabst; the exquisitely graceful verse of François Coppée suggests the pathetic aspect of the incident brilliantly rendered by Berne Bellecour in *Sur le Terrain*; and the spirit of the "modern" realistic school breathes with a certain savage but unmistakeable energy in the appropriate lines by Gustave Vinot which comment M. Butin's *Femme d'un Marin*. But among the most perfect in form and finish in the whole series must be ranked the little poem "Un Ange au Ciel," in which M. Jean Aicard describes M. Rougeron's picture *Funérailles d'un Enfant en Andalousie*. One cannot but regret that space forbids the quoting of this delicate marvel of art, which wears a shape of the barest simplicity.

The sketch made by M. Rougeron for his

picture, which is here reproduced, comes fairly well, and there are few indeed out of the long series of two hundred drawings which do not present some point of interest, for the photographic process employed gives us—as no engraving, however excellent and faithful, can do—the actual touch, the individual imprint, of each master. If we allow for the accidents of printing, which sometimes blacken that which should be fair, and sometimes leave all delicate and pale just those passages which require strength and force of colour, we shall find that these reproductions furnish us with much curious and accurate information as to the special gifts or defects of each well-known master. Of course, they vary very greatly, and for two reasons: in the first place, it has ceased to be the prevailing custom of the French school to work out their subjects elaborately before beginning to paint, and therefore a hasty note which indicates only the position of the different planes is often the only record to be obtained from its author of a picture the whole effect of which depends on the most delicately fine gradations of tone; in the second place, there are the enormous differences made by character, by temperament, by power, which are never more conspicuous than in a collection of this nature. M. Billet's *Avant la Pêche* is one of the most remarkably successful. The grace, the freshness, and the living truth of movement which he has put into his little fisher girls is even more visible in his lovely drawing than in his painting. The figures are admirably grouped, as they lie listlessly chatting on the sands, waiting till the tide shall ebb slowly out and leave free paths to the recesses of the rocks—recesses which imprison the clear pools of water in which the little maidens will find work for the shrimping nets, now tossed carelessly on one side. There is one little girl, with her back to us, who looks very lazy, playing with a straw, but M. Billet has made us feel, with a master's art, by the wicked twirl of her limbs—expressive of immense readiness to be up and off at any moment—that she is really the most energetic creature of the whole group. In quite a different way, M. Flameng's *La Berge de la Seine, à Ivry*, is equally noticeable, and here we have a sketch which shows a marvellous facility for indicating an infinite variety of relations of tone in half-a-dozen lines. M. Casanova, also, in a drawing intensely personal in manner, touched with keen wit, and characterised by sharp observation, gives us the central group from his *Mariage d'un Prince*; but his method of work shows with even happier effect in an etching which he has contributed to the collection of "Eaux-fortes" which accompanies the *Salon Illustré*. Of the three figures, seen at half-length, which form the subject of this brilliant little plate, it is difficult to say which—the self-conscious, supercilious beauty, or the two shameless old monks, who indiscreetly murmur confidences and comments close at her ear—is touched with the finer point of satire, and the sensitive delicacy of the workmanship is rewarded by that valued richness of colour which is often vainly sought for by means of loaded black.

After looking at work so exceptionally full of character and variety of value, even M.

Veyrassat's graphic needle seems a little commonplace, though, in *Un Enseignement*, the central group—the horses, white and black, the attendant waggoner, and the impatient keeper with his dogs in leash—challenges attention with all the striking vividness and luminousness of effect which could be ensured by his long-practised skill. Yet one other of these etchings must have serious notice, and that is M. Gaillard's rendering of his portrait of Monseigneur de S. . . , which was, in its way, one of the most remarkable portraits of last year's Salon. Oddly enough, the execution is totally different from that which one would expect from a study of M. Gaillard's engraved work, and totally different, too, from the method of M. Casanova; it is broad and strong and simple, and yet equally full of minute observation, intensely personal, yet expressive of wholly different character—serious, rather than satirical; profound, rather than witty. One regrets, in the etching, the absence of the hands, which in the picture deserved as much study as the head.

The sketches furnished by the principal sculptors are less successful as a rule than those of the painters, and curiously enough the works of those who show a picturesque rather than a sculptural intention are the best represented. The slight sketch, too, often fails to give the drawing the quality of line on which the effect of a statue or group really depends, but is generally happy in rendering anything like animation of movement. Notwithstanding this, there are exceptions, and one or two works—notably in the second part of M. Dumas' publication—are very satisfactorily recorded.

The second part of the *Salon Illustré*, it should be said, is exclusively devoted to works recompensed by the jury, and these are accompanied by the official list of the medals and decorations conferred by the Administration and a catalogue of the paintings and sculptures purchased by the State. In this way M. Dumas has succeeded in giving to his *Salon Illustré* a permanent and documentary value which will make it a most useful work of reference for all those engaged in the study of modern French art.

E. F. S. PATTISON.

GOTHIC CHURCHES IN CYPRUS.

THE cathedral church of Haghia Sophia—of Christ, that is, as the Divine Wisdom—at Nicosia is, in spite of Turkish vandalism, and its degradation to the condition of a mosque, a perfect gem of the beautiful Gothic architecture of the Lusignan dynasty. It is a large and extremely lofty church, with nave and side aisles terminating in apses, lateral chapels, and two noble western towers, which are now truncated above the second story, and further defaced by the addition of two minarets of poor design and proportions. Extending across the west front and under the towers is a noble portico, with three great doorways towards the west, and from this the church is entered by three other doorways of white marble, with highly enriched decorated mouldings. The western window of geometrical tracery is of no less than twelve lights, and is situated one bay back from the front of the portico, above which, doubtless, there was originally the tracery of another window without glass. It would be hard to find either in England or France more

exquisite windows of two lights than the two in the north-western tower. The lofty nave is of six bays, and, although there is no triforium, is of striking dignity from the great height of the columns, which have Corinthianising capitals, and from the noble proportions of the clear-story windows. Externally, the bays of the nave and octagonal apsidal choir are divided by quatrefoiled flying buttresses. Except in the great west window the glass has been all removed, and the space filled with plaster, perforated with various Arabesque designs, of which the internal effect is not by any means bad, although, outside, the careless execution of the lattices interferes with the remarkable beauty of the tracery. The whole of the interior of the church has been whitewashed, the capitals of the pillars being painted green. As is often the case in churches which have been desecrated to Mohammedan worship, the effect of the interior is, as far as possible, destroyed by the prayer-carpets and other fittings being all turned southwards, the *Kibleh*, or point towards Meccah, being in that direction. Some of the carpets, although in bad repair, are of great beauty. The whole church is built of a warm yellow limestone, and with the surrounding buildings, several of which are also of Gothic architecture, forms a noble group. Many of the old incised tombstones with Norman-French inscriptions still exist, and on the exterior are many undefaced coats of arms, one of which, bearing three pine cones, struck me as curious.

Near Haghia Sophia, to the south, is another beautiful Gothic church of the decorated style, that of S. Nicolas, now used as a grain store. It has a central octagonal dome and an octagonal apse. The north porch is of extreme beauty. Over the door still stands the figure of the patron in the act of benediction, and near it is a sculpture in white marble representing the death of the Blessed Virgin, in perfect preservation. It was intended to purchase this noble church, execute the few necessary repairs, and use it for the worship of the Church of England, for which, in all respects, it is admirably suited. The authorities of the mosque, however, represented that it would be an insult to their religion if British Christians worshipped God so near their own mosque—the other side of the street—and so, with characteristic British subservience to Muslim fanaticism, this excellent plan was abandoned, and the Turks were allowed to score another point against "the English dog!" North-east of the cathedral is another very interesting mosque, formerly the Church of Santa Katerina. The tall, almost lancet-shaped windows, of two lights, have early decorated tracery, which vies in beauty with that of the windows of Merton Chapel at Oxford. The fine south door is square-headed, with a gable above. The western front has likewise a fine door, but its effect is marred by the addition of a trumpet minaret. The roof is of grained stone. Outside there is a cornice with dogtooth mouldings. I should have mentioned that the windows are filled with plaster lattice work of extremely pleasing design.

Several of the Greek churches and domestic buildings in Nicosia are either more or less of Gothic architecture, or show manifest signs of its influence, the pointed arch and dog-tooth moulding being of constant occurrence.

Second only, if not equal in beauty, to the Cathedral of Nicosia is the great church of the Haghia Sophia at Famagosta. This splendid church, which, like its namesake in the capital, is now a mosque, is likewise built in the rich style of decorated Gothic. The doorway of the precinct to the side of the western entrance is remarkable as being round-headed and for an intermixture of rich decorated mouldings with the earlier chevron. The effect of this is so

good that one is tempted to regret that the latter was ever abandoned. There are three western portals over the centre, one of which is a fine decorated window of six lights. The nave of six bays and the octagonal, apsidal choir, have immensely lofty decorated windows of two lights, with the most exquisite tracery possible. These glorious windows are divided by flying buttresses, and over each is a lofty gable inclosing roundels of rich sculpture. A remarkable, and, so far as I know, a unique, feature is that round the apse externally there extends an apparently coeval stone gallery under the clearstory, supported on massive corbels. The incised memorial slabs of the Lusignan period are even more numerous here than at Nicosia.

Famagosta is altogether a heap of ruins of noble buildings, including an extraordinary number of churches, among which a few Turks burrow in wretched hovels. The miserable appearance of the place is explained by the fact that the Turks permitted no Christian Cypriots to live within the walls. These last have a flourishing village outside. The massive walls of Famagosta date from the Venetian occupation. The port-gate still exhibits the Lion of S. Mark in white marble, with the name Nicolao Priolo and the date A.D. 1496. Lying about in various parts of the ruins are numerous columns and other fragments of Greek sculpture, which came, doubtless, from the neighbouring site of Salamis. The Conak has a picturesque Venetian gateway, into which four ancient columns have been worked with good effect. GREVILLE J. CHESTER.

SIR FREDERICK LEIGHTON'S FRESCO.

THE fresco recently finished by the President of the Royal Academy in one of the lunettes of the South Court of the South Kensington Museum is in many ways a work of no ordinary importance. It is of unusual size, is painted by a new method, and the subject is one of a class not usually selected for so large a picture, though, as we have already said, very appropriate to the gallery which it decorates.

This subject is *The Arts as applied to War*, illustrated by a scene from the interior of an armourers' yard in Italy during the Middle Ages—a subject not, indeed, calling for those higher powers of imagination which the President has so often shown, but admirably adapted to display his genius in composition and refined sense of beauty in form and colour.

The interest of the design is not concentrated, but dispersed pretty equally over the whole composition, the principal figures being divided into two large masses, composed of the armourers' workmen and their customers, one on each side of a fortified gateway, through which are seen two mailed warriors on horseback, with a white banner worked in gold. Above and behind, flights of steps rise to other parts of the city, which is adorned with terraces and orange groves, and surmounted by a fortress with tall machicolated tower, standing out against the blue sky, barred with white clouds. On the battlements on either side of the gate are groups of figures—that on the right inspecting a flag, that on the left trying different forms of targe. The severity of the architectural forms introduced, broken with animated figures and bright colours, gives dignity and repose to this elaborate background.

The central figure in each of the principal groups in the armourers' yard is a handsome youth of proud bearing. On the body of one, two armourers are busy fitting the breastplate of a suit of gilt armour; the other, in a white jacket embroidered with gold, and crimson trunk hose embroidered with vandykes round the thighs, is critically examining a sword. The great resemblance between the two youths and their confident demeanour suggest that they

are brothers and of high birth. Each of them is surrounded by other youths of different types of beauty, all earnestly devoted to the fitting and choosing of armour and swords. The artist has succeeded in giving the utmost variety of posture and expression consistent with the employment of his characters and the almost statuesque reserve which rules the composition.

In the immediate foreground on the left is a beautiful woman seated on the ground embroidering tabards. In this as in the other groups the variety of action and expression is remarkable. While each gesture is natural and fit, and each face simple and unaffected, they are united, not only by mere skill of line and hue, but by a common spirit of delight in the exercise of artistic intelligence, into a group of singularly harmonious beauty.

In colour as in form this fresco shows the well-known skill of the artist. From top to bottom and from side to side there is an endless play and counterplay of those rich rather than brilliant colours which Sir Frederick Leighton most affects. Mulberry and citron, saffron and plum, damson and orange, with continuous alternation of gentle contrast and tender harmony, broken here and there with a broad space of delicate white and brightened with gleams of different metals, make the picture an unwearying feast of colour from a near view.

Of the effect of the picture at the distance at which it should be seen it is still difficult to form an opinion, for its position is singularly unfortunate. The extreme end of the gallery is too far, the passage in front of it too close, and from below it cannot be seen at all. It will be necessary to throw out a balcony from the side of the court to see the fresco fully from the right place. Some of the brighter masses of colour, especially the orange lining of the robe of the crossbow-man on the right, appear to be too intense in relation to the rest. At a little distance it has much the same effect as a fresh orange would have in a box of preserved fruits.

COSMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

MR. HAMO THORNYCROFT has completed the large work in sculpture on which he has been occupied for some time past. It is a figure, six feet high, of the huntress Diana; she pauses, as she moves through the forest, at the sight of her quarry, and the right hand is bent over her shoulder to take an arrow from the quiver at her back, while the left pulls her hound, which has strayed on to her right side. This action, by which the leash presses her hand against her side, gives novelty to the pose of the figure, and compresses the composition. The goddess is lightly draped in a single garment of thin material, which falls in severe folds over the bands that girdle it. There can be no doubt that this work will attract great attention in the exhibition of the Royal Academy. It is at once singularly original and full of poetical dignity, and must be pronounced to show a remarkable advance in the development of the artist.

WE are authorised to confirm the report that Mr. Hamerton will very shortly present himself as a candidate for the Watson Gordon Chair of Fine Art in the University of Edinburgh.

MESSRS. SAMPSON LOW AND Co. will in future publish *The Etcher*. The April part will contain "My First Muff," by H. R. Robertson; "Fishing Boats off Hastings," by David Law; and "The Haymaker," by J. W. Buxton Knight.

THE exhibition of the City of London Society of Artists at the Hall of the Skinners' Company in Dowgate Hill is well worth a visit. It is especially rich in sculpture, some of which is advantageously placed for view, although the pieces arranged in the vestibule are insuffi-

ciently lighted. By far the most important of them is the marble statue of *Lot's Wife*, by Mr. Hamo Thornycroft, which has been already exhibited at the Royal Academy, but which was there so placed that it could be seen from one side only; while as it stands now, at the City exhibition, the spectator can see it from all sides. It is a grand figure, the rigid look overspreading it being excellently given, while the turn of the head on the neck and the chiselling of the hand holding the jewels are specially good. By Mr. Thornycroft are also a spirited sketch for a statue of Sir Rowland Hill and a portrait-bust of a gentleman. Mr. T. Nelson Maclean has some small and graceful designs for figures of *Ione* and *A Sea Nymph*, and two busts which give the impression of being good likenesses. Mr. Boehm has several of his careful busts of members of the Royal Family, and Mr. C. B. Birch a bust of the present Lord Mayor, who is the president of this, the first exhibition of the society. Of the paintings, there are several that are interesting in the larger room, of which three heads by Sir Frederick Leighton, Mr. Alma-Tadema, and Mr. Calderon are pleasing; they are, however, less pictures than studies from the life. Mr. Tadema has added to the attractiveness of his very pretty brunette by placing in her hand some lovely orchids, which the lady holds in a Venetian glass before her face; whether through coyness, or in order to hide her mouth, is scarcely explained. Mr. John Collier has most successfully painted a conservatory full of orchids as a background to his portrait of the late Mr. Serjeant Cox, which would seem to be a good likeness, although the flesh tints are rather pink. Mr. John White has some very pretty rural scenes, and Mr. Reid some charming studies of old-fashioned gardens with figures, one of which, called *Her Own Garden*, shows a quaint lady crouching down digging with a trowel in the favourite manner of ladies; by the whole arrangement of the flowers anyone would know at a glance that no other than a lady—and a strange lady—could have had the digging and planting of that unusual garden. By Mr. Yeend King are some slight studies, which are effective, as his paintings usually are; but they do not bear long inspection, their attractiveness not being borne out by any thorough work. Among the drawings are not many to linger over. Miss Clara Montalba has a water-colour note of *Mazorbo, near Venice*, which is striking through its simplicity; her painting of a bridge, called *Thames at Sunset*, is not quite worthy of her. We regret to see so many examples of a past school of cottage sentimentality here, as also a fairy piece with sheep, of the style that even publishers of infants' picture-books would now consider as unworthy of the approval of their juvenile public.

THE next series of the Society of Arts' Cantor Lectures will be on "The Decoration and Furniture of Town Houses," by Mr. Robert W. Edis.

AMBROGIO FOPPA, surnamed Caradosso, was an eminent Italian goldsmith and medallist of the early part of the sixteenth century. He is spoken of in terms of high praise by his contemporaries, Benvenuto Cellini and Vasari, and was a favourite artist at the Courts of Ludovico Sforza, Julius II., Leo X., and Clement VII. Beyond this not much is known about his history, not even the date of his death. Recently, however, M. Eugene Müntz, in the course of his indefatigable researches in Italian documents, has hit upon the will of this worthy, which proves him to have been living in December 1526, but, as he speaks of himself as being then "ill and infirm," it is probable that he died shortly after, as M. Piot has conjectured. At the Universal French Exhibition some old Milanese bas-reliefs in bronze were lent by M. Dreyfus, one of which was attributed to Caradosso. The text of his

will, which is written in Latin, is given in the *Chronique des Arts* of last week in full.

A NEW etching by M. Tissot, from his picture of *The Emigrants*, exhibited in the Grosvenor Gallery last year, will shortly be published by Messrs. Dowdeswell. The plate is a very successful one, the figures of the young mother and child (the emigrants) being distinguished by much sweetness, while the forest of masts which constitute the background are executed with all M. Tissot's well-known power.

THE *Revue Critique* states that the collection of weapons at the Château de Pierrefonds is to be incorporated with the artillery museum at the Invalides. It comprises about 600 pieces, including a unique white French coat-of-mail of 1430, fine helmets, Renaissance bucklers in repoussé work, &c., and French weapons of which there was no specimen in the artillery museum.

COL. ADOLF VON SEUBERT, a writer on military subjects and the translator into German of the works of Byron, Sterne, Beaumont and Fletcher, George Sand, Puschkin, and Lope de Vega, died at Cannstatt last month at the age of sixty-one. Col. Seubert took a great interest in art subjects, and latterly turned his knowledge of art history to account by editing the second edition of Müller's *Allgemeines Künstlerlexikon*. This useful dictionary, which is now generally known as *Seubert's Lexikon*, was in great part re-written by him. It has not been long completed.

THE last few numbers of *L'Art* have been greatly enlivened by a very amusing description given by M. Louis Leroy of the lady students of the Louvre (*"Pensionnaires du Louvre—Classe des Dames"*), who work in the galleries at copying the pictures of the Great Masters. The writer, accompanied by his friend, M. Potet, an irrepressible "impressionniste," is supposed to make a peregrination through the Louvre, visiting all the easels set up by the lady students, and indulging in much lively conversation and flirtation with the fair painters. Young and old, grave and frivolous, all come in for a share of M. Potet's amusing criticism, and have their various characteristics hit off with keen appreciation. These literary sketches are accompanied by some extremely clever drawings by M. Paul Renouard, who makes us intimately acquainted with the stout, middle-aged Frenchwoman whose speciality it is to copy Prud'hon's picture of *Divine Justice pursuing Crime*; with the daring coquette who, making eyes at the critic, is rewarded by his telling her that the eyes of the Virgin she is painting have a decided squint; with the dashingly young woman who copies, "de préférence, les tableaux galants," and has a great demand for her works; with the industrious old lady whose eyesight is failing, but who continues diligently to reproduce the works of Hubert Robert; with the lady who only copies the most insignificant portions of pictures, having achieved a reputation at one time by her admirable rendering of the glove in Titian's celebrated portrait known as *L'Homme au Gant*. These and several other typical portraits are all rendered by M. Renouard in a manner that shows a keen insight into character and a power of expressing it by art which rival several of the celebrated French caricaturists who have preceded him.

M. C. HENRY, of Paris, will publish in about a fortnight, under the auspices of the Society for the History of French Art, some inedited Memoirs of Ch. Nicolas Cochin, relating to the Comte de Caylus, Bouchardon, and the Slodtzes. Messrs. de Goncourt deplore the disappearance of these memoirs in their book on *L'Art du dix-huitième Siècle* and their study on *Mme. de Pompadour*. The editor has supplemented Cochin's part in this publication with an Intro-

duction and an Appendix. In the latter appear for the first time the wills of Slodtz, jun., and Cochin, as well as a catalogue of some MSS. formerly belonging to Caylus and a list of inedited or very scarce works of the Count.

THE death is announced of Edouard Girardet, the well-known Swiss painter and engraver.

MUSIC.

RECENT CONCERTS.

At the first concert of the Bach Choir on Tuesday evening, March 16, was given an excellent performance of Brahms' Requiem. This, one of the composer's finest works, was written in 1867, and first performed in England by the Philharmonic Society in 1873. The difficult music was rendered with great accuracy, precision, and feeling. The choir also greatly distinguished itself in the singing of the Gloria (written in six parts, unaccompanied) from Palestrina's celebrated Missa Papae Marcelli. The programme likewise included Bach's Magnificat in D, and an eight-part anthem ("Lift up thine eyes") by Sir John Goss. Mr. Otto Goldschmidt deserves great praise for his conducting, and for the careful rehearsals which must have preceded such a fine choral display.

The Philharmonic Society gave their fourth concert on Thursday, March 18. Herr Joachim was the violinist, and was heard in Brahms' concerto. This work was performed last season in London, and, though perhaps not one of the composer's greatest works, improves much on further acquaintance. Herr Joachim played with great skill and feeling. He gave further proofs of his marvellous powers by a most finished rendering of Bach's Sarabande and Bourrée, from suite in B minor. These symphonies were Haydn in B flat and Schumann in C. The latter was executed with great care and vigour. Mrs. Osgood was the vocalist.

At the Crystal Palace on Saturday was performed for the first time a characteristic suite for orchestra, "In the Black Forest," by F. Corder, who was elected Mendelssohn scholar under the Mendelssohn fund in 1875. It is a piece of genuine programme music in five movements bearing the following titles:—(1) "Sunrise," (2) "The Brooklet," (3) "Noontide Stillness," (4) "The Echo," (5) "Evening at the Inn." The composer, we are told, reckons this as his first work, and as such it is certainly one of promise. The ideas are clearly expressed, they are developed with some skill, and the orchestration is delicate and effective; but the influence of Mendelssohn obscures both the quantity and quality of the composer's individuality. Herr Barth was the pianist, and gave us another opportunity of admiring his perfect mechanism and wonderful command of the instrument by a performance of Chopin's difficult concerto in F minor. The programme included Beethoven's symphony in C minor. Mr. Santley was the vocalist.

On Monday evening the last of the Popular Concerts of the present series took place. Miss Agnes Zimmermann and Mdlle. Janotha were the pianists. The former performed with Signor Piatti three short duets of Rubinstein, and the latter gave three of Schumann's charming Phantasies—"Grillen," "Warum," and "In der Nacht"—and for an encore his "Arabesque." Both ladies were in excellent play; Mdlle. Janotha especially charmed her hearers by her refined and poetical rendering of Schumann's tone pictures. The concert opened with Mendelssohn's quintet in B flat, and closed with some of Brahms' and Joachim's Hungarian dances. Mr. Santley was the vocalist. Mr. Arthur Chappell has, we believe, every reason to be satisfied with the results of the now concluded twenty-second season.

J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.
To-night, at 8, a Play, in five acts,
THE OLD LOVE and the NEW.
By BROOKS HOWARD and J. ALBERT. Messrs. Coghlan, Fisher, Leathes, Price, Deere, Holman, Benn, Douglas, Phipps, and Anson; Mesdames A. Roselle, Emery, Giffard, J. Roselle, and Little.

Morwell-street, W.C. Established 1862

TARAXACUM and PODOPHYLLIN.—A
fluid combination for Derangement of the Liver, particularly when
arising from slight congestion. By gently stimulating the action of the
liver, and slightly moving the bowels, the heavy, drowsy feeling, with
sensations of fulness, headache, pain beneath the shoulders, and other
indications of Dyspepsia are removed. Taraxacum and Podophyllin is
much safer than calomel or blue pill, and quite as effective for removing
bile.—Prepared by J. PEPER, 237, Tottenham-court-road, London, whose
name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all
Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a
faithful compound of Quinine, the active principle of Yellow Cinchona, or
Peruvian Bark, blended with a refined, trustworthy preparation of Iron,
produced in a form which the experience of many years has proved the
best. It offers a ready means of gaining the strength and other benefits
afforded by Quinine and Iron, without any fear of ill consequences.—The
name of J. PEPER is signed in red ink on the label.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,
and without which none is genuine.
Sold Wholesale by the Proprietors, Worcester;
Rouse & Blackwell, London; and Export Oilmen generally
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."
Wordsworth's Chemical Food of Health.
Prepared from the choicest Peruvian Leaf. The New
Remedy for GENERAL DEBILITY, NERVOUS PROSTRATION,
NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.
Sold in Bottles, 1s. 1½d. and 2s. 6d., post-free.
H. WORDSWORTH & Co., Homoeopathic Chemists, 6, Sloane-
street, and 4, King-street, Kensington, London.

"I CONSIDER THAT FOR ASTHMA AND ALL THROAT AND CHEST
DISEASES THE BEST REMEDY IS
DR. LOCOCK'S PULMONIC WAFERS."
The above is from Mr. JOHNSON, M.P.S., 191, Meanwood-road, Leeds,
February 2, 1880.
They taste pleasantly, and effect a rapid cure.
Price 1s. 1½d. and 2s. 6d. per Box.

DINNEFORD'S MAGNESIA.

healthy condition of the Nervous and Physical Systems.

IMPORTANT AMERICAN PUBLICATIONS.

Crown 8vo, cloth boards, 5s. Revised by the Author.

THE DOUBLE WITNESS of the CHURCH. By the Right Rev. W. Ingraham Kip,

D.D., LL.D., Bishop of California.

"Bishop Kip is an old-fashioned High Churchman. . . . A course of parish sermons based on Bishop Kip's Lectures would be most useful, and would pave the way for further teaching. Messrs. Wells Gardner's issue has been printed from the Twenty-second Edition. The book has met an acknowledged want, and has been of good service."—*Church Times*.

Crown 8vo, cloth boards, 6s.

LOVE is GOD, and other Sermons. By the Right Reverend W. Bacon Stevens,

D.D., LL.D., Bishop of Pennsylvania.

"Theologically regarded, Bishop Stevens is a Low Churchman. . . . The contents of Bishop Stevens' volume are gratifying, and these sermons are certainly above the average of those which would ordinarily come from an English preacher."—*Church Times*.

Crown 8vo, cloth boards, 6s.

SERMONS, DOCTRINAL and PRACTICAL. By the Rev. Morgan Dix, S.T.D.,

Rector of Trinity Church, New York.

"These sermons are the production of a cultured mind, and are such as would be listened to both with profit and pleasure."—*Church Times*.

18mo, cloth boards, 2s. 6d.

STUDIES in the CHURCH: being Letters to an old-fashioned Layman. By the

Right Reverend H. C. LAY, D.D., LL.D., Bishop of Easton, U.S.A.

"We are glad to see these sensible and practical letters of a most conciliatory and charitable tone. It is a work most needed in these days, full as it is of sweet and soothing oil to pour into the wounds of party strife."—*Literary Churchman*.

"It is a fresh, vigorous, and devout book."—*Christian World*.

MEMOIR of the LIFE and EPISCOPATE of GEORGE

AUGUSTUS SELWYN, D.D., Bishop of New Zealand, 1841-1899; Bishop of Lichfield, 1897-1878. By the Rev. H. W. TUCKER, M.A., Secretary to the Society for the Propagation of the Gospel. With Two Portraits, Map, Facsimile Letters, and Engraving of the Lady Chapel of Lichfield Cathedral. 2 vols., 8vo, 800 pp., cloth boards, 24s.

"Of more than ordinary interest. . . . We shall rejoice if our endeavour to depict him shall send many to the pages of his Biography for fuller information."—*Quarterly Review*.

"The manner in which Mr. Tucker has done his work fully justifies the confidence and urgency of those who desired that it should be put into his hands. No recent biographer has been more scrupulously observant of the primary canon of the biographical art, that of self-suppression."—*Saturday Review*.

NEW BOOKS.

HONOR BRIGHT; or, the Four-Leaved Shamrock.

By the Authors of "Two Blackbirds," "Robin and Linnet," &c. With Full-page Illustrations. Crown 8vo, cloth, bevelled boards, 3s. 6d.

"It is a relief to turn to such a cheery, sensible, and healthy tale as 'Honor Bright.' 'Honor' is the eldest girl of a family of seven, who are all much troubled by the quaint names that have been bestowed upon them by their godfathers and godmothers; a very jolly family, full of frolic and mischief, but good and sensible little bodies, as their parents find when trouble comes. It is not all sunshine with them, but the sadness is never overcharged, and the morality is of a wholesome and cheerful order."—*Times*.

THE OLD SHIP; or, Better than Strength. By

H. A. FORDE, Author of "My New Suit," &c. With Full-page Illustrations. Crown 8vo, cloth, bevelled boards, 3s. 6d.

"This is a pleasant little story."—*Literary World*.

DOGGED JACK. By the Author of "True under

Trial." With Full-page Illustrations. Crown 8vo, cloth, bevelled boards, 3s. 6d.

ROBIN and LINNET. By the Authors of "Two

Blackbirds," "Honor Bright," &c. With Coloured Illustrations by T. Pym. Square 16mo, cloth boards, 1s. 6d.

"Two prettily told stories for the little ones are 'Robin and Linnet' and 'We are Seven,' both being brightly and prettily illustrated in colours."—*Graphic*.

WE ARE SEVEN. By Caroline Birley. Coloured

Illustrations by T. Pym. Square 16mo, cloth boards, 1s. 6d.

Just published, Third and Enlarged Edition, crown 8vo, cloth boards, 6s.

THE CHRISTIAN MINISTRY: a Manual of Church

Doctrine. By the Rev. THOMAS FARRAR, Rector of St. Paul's, Guiana, and Chaplain to the Lord Bishop of Barbados and the Windward Islands; Author of "Steadfast in the Faith," "The Harvest is Past," &c., &c., &c.

8vo, paper boards, cloth back, 2s. 6d.

PERSONAL RECOLLECTIONS of BRITISH BURMA.

By the Right Reverend J. H. TITCOMBE, D.D., First Bishop of Rangoon.

Second Edition, crown 8vo, cloth boards, 3s. 6d.

LIFE and WORK among the NAVVIES. By the

Rev. D. W. BARRETT, M.A., Vicar of Nassington, late Curate in Charge of the Bishop of Peterborough's Railway Mission.

Second Edition, carefully Revised, with important Additions.

HEARTY SERVICES; or, Revived Church Worship.

By the Rev. J. G. NORTON, M.A., Vicar of St. Giles', Durham. Crown 8vo, cloth, bevelled boards, 3s. 6d.

Fcap. 8vo, cloth, 1s.

HOLY SCRIPTURE; TEMPERANCE; and TOTAL

ABSTINENCE. By Canon HOPKINS.

"This little book is one of the calmest and weightiest arguments for total abstinence on Scriptural grounds we have seen. The Canon's pages fairly bristle with quotations and authorities, while no one can charge him with having intemperately advocated this much-vexed question. The book deserves to be widely read."—*Literary World*.

Printed on Toned Paper, with Frontispiece, square 16mo, cloth, 1s.

BRIGHT THOUGHTS for the MORNING: a Book

for Simple Meditations for Young People. These little Meditations are arranged so as to form Readings for a Month, and are intended as a help to Young People in their Daily Devotions.

"A dainty little volume of readings or meditations for young people growing out of childhood. The language, although spiritual, is far removed from mere sentimentalism, and the meditations may be described as thoughtful and sober, and as specially free from anything that is forced or morbid."—*Publisher's Circular*.

"Simple and practical."—*Aunt Judy*.

"A very suitable book of devotion—fresh, hopeful, and to the point."—*Church Bells*.

"Full of pithy suggestions bearing on the religious duties of daily life, and well calculated to prove helpful to young and old."—*Rock*.

"Will furnish excellent seed-thoughts for a short daily meditation. The devotional poems which illustrate the various subjects are very far above the average."—*Literary Churchman*.

LONDON: WELLS GARDNER, DARTON, & CO., 2, PATERNOSTER BUILDINGS.

Printed for the Proprietor by YATES & ALEXANDER, Lonsdale Buildings, Chancery Lane; and Published by HENRY VILLERS, 52, Carey Street, Lincoln's Inn, W.C.

Selwin Image, and Miss Jekyll; and Designs for Borders, &c., by Miss Webster, Miss Burnside, and Miss Mary Herbert, of the Royal School of Art Needlework. Crown 8vo, 5s.

ENGLISH PHILOSOPHERS.—Announcement.

No further evidence is required of the rapidly increasing interest taken by the public in Philosophy than is disclosed by the number of Philosophical Societies and Publications that have sprung up in the last few years, and by the tendency displayed by the daily press to propound and discuss Philosophical Questions.

It is the aim of the forthcoming series to encourage this healthy interest in the great problems of life, and to assist the reader in forming his conclusions by placing before him, in a concise and interesting form, the views taken of these problems by the different members of that long list of philosophers who have made England as famous in the world of abstract thought as her scientific men have made her in the world of practice.

No technical acquaintance with the problems of philosophy will be presupposed in the reader; the wearisome polemics which have penetrated even to the calm heights of philosophy will be relegated to the background, and the positive contributions of each philosopher will be laid before the reader, accompanied by such elucidation as the nature of the subject may require.

Each volume will contain a short biographical notice, and a bibliographic appendix, which will direct the reader to the sources of more detailed and extensive criticism than the size and nature of the books in this series would permit.

Though not issued in chronological order, the series will, when complete, constitute a comprehensive history of English Philosophy.

Two volumes will be issued simultaneously at brief intervals.

The following are already arranged:—

BACON. Professor FOWLER, Professor of Logic in Oxford.
BERKELEY. Professor T. H. GREEN, Professor of Moral Philosophy, Oxford.
HAMILTON. Professor MONK, Professor of Moral Philosophy, Dublin.
J. S. MILL. Miss HELEN TAYLOR, Editor of the "Works of Buckle," &c.

MANSELL. Rev. J. H. HUCKIN, D.D., Head Master of Repton.
ADAM SMITH. Mr. J. A. FARRER, M.A., Author of "Primitive Manners and Customs."
HOBBS. Mr. A. H. GOSETT, B.A., Fellow of New College, Oxford.
BENTHAM. Mr. G. E. BUCKLE, M.A., Fellow of All Souls, Oxford.

AUSTIN. Mr. HARRY JOHNSON, B.A., late Scholar of Queen's College Oxford.
HARTLEY. } Mr. E. S. BOWEN, B.A., late Scholar of New College Oxford.
JAMES MILL. }
SHAFTESBURY. } Professor FOWLER.
HUTCHESON. }

Now ready, 4to, in Wrapper, price 1s. 6d.

LIBRARY of the late JAMES MAIDMENT, Esq.

MESSRS. T. CHAPMAN & SON beg to

intimate that they will SELL by AUCTION, within their GREAT ROOMS, No. 11, HANOVER STREET, EDINBURGH, on TUESDAY, APRIL 27th, and Fourteen following lawful Days (excepting Saturdays, May 1st and 8th), each day precisely at 1 o'clock, the Extensive, Curious, and Valuable LIBRARY of the late JAMES MAIDMENT, Esq., Advocate, Editor of numerous Publications, &c.

This Library will be found the most interesting, while it is one of the most extensive, which has been sold in Scotland. The books are generally in fine condition, and elegantly bound. Many of them are not to be found in Public Libraries, and are unknown to Lowndes and Brunet. A leading feature in the Library consists in the interesting "Collections" made by Mr. Maidment (which only a long and intimate acquaintance with literary work enabled him to form) in Topography, Genealogy, and Biography of Carolus Magnus, Queen Caroline, the Jacobites, the Rebellion of '45, Sir Walter Scott (including numerous Manuscript Letters), Byron, Burns, Hogarth, &c. Two unique quarto Copies of Kay's Portraits, of which Mr. Maidment was Editor; Family and Local Histories, Curious Trials, a very large Collection of Broadside, Chap Books, Ballads, Garlands, and Fugitive Publications, all neatly arranged and mounted; Publications of the Abbotsford, Maitland, Roxburgh, Hunterian, Camden, and other Clubs; Privately Printed Books by J. Payne Collier, Sir E. Brydges, Uterson, Hilson, David Laing, Turnbull, Pitcairn, and others; a SET of the VERY RARE PRIVATELY PRINTED WORKS EDITED BY MR. MAIDMENT, Black Letter Works, Rare Poetry, Facsimiles; Heraldic, Antiquarian, and other Curious Books.

THE WORKS IN DRAMATIC LITERATURE form an Extensive Collection, and occupy Two Days' Sale.

Catalogues, price Half-a-Crown, will be forwarded on application to Messrs. CHAPMAN.

ENGRAVINGS and ETCHINGS (rare).—

By and after REMBRANDT, VAN OSTADE, TENIERS, BARTOLOZZI, STRANDE, &c. &c. Mostly fine Proofs. For SALE. Priced list free.—No. 1, 886, "SCOTSMAN" Office, Edinburgh.

TEN ORIGINAL DRAWINGS of OLD

MASTERS by Raffaele, Guido, 1 Palma, Annibale Caracci, Sloop, Signora, Hobbema, P. Moucheron, Lalrease, and Van Linschooten, representing Italian, Roman, Bolognaese, French, Flemish, Dutch, and Spanish Schools, some from Pond and Cosway, Sir Thomas Lawrence, and Verbruggen Collections, on VIEW.—Mr. E. TUCKER, 29, Percy-street, Bedford-square.

RARE ETCHINGS, ENGRAVINGS, and

DRAWINGS by the most esteemed OLD MASTERS may be obtained at GEORGE LOVER'S OLD PRINT SHOP, 81, BUNHILL ROW, LONDON. The Engravings, &c., are in fine condition, and have formed portions of the celebrated collections. A Catalogue of a small portion of the Stock will be sent on receipt of two penny postage stamps.

* Established above 60 years.

LIBER STUDIUM (J. M. W. TURNER),

PLATES of Wanted to Purchase by Messrs. DOWDESWELL, 38, Chancery-lane, W.C.

STUDIO, with Ante-Rooms, &c., in

Fumbridge-place, Baywater. Specially built for the purpose. Lofly and well-lighted. Remaining Set.—Apply to E. & F. SWAIN, 63, High-street, Notting Hill, W. (7/375).

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK

ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are—

1st. The absolutely facsimile nature of the result.
2nd. Its Cheapness for Small Editions of 250, 500, &c.
3rd. The Prints being direct on the Paper there is an absence of all oozing and that disagreeable effect inherent to all Mounted Prints.

* For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chef-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.

"THE PIER PIPER OF HAMELIN." Illustrated by Jane E. Cook.

Second Edition (1880). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and successfully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIUM." Facsimiled from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE.

The Works, Sailing Lane, Middlesex.

General Manager, W. S. BIRD. Director of the Works, J. R. SAWYER.

LECTURES. Third Thousand. 10s. 6d.

London: LONGMANS & Co.

ROLLS OFFICE CHRONICLES.

In royal 8vo, pp. 772, with Facsimile, price 10s., half-bound.

MATTHAEI PARISIENSIS, MONACHI

SANCTI ALBANI, CHRONICA MAJORA, Vol. V. A.D. 1148-1159.
Edited by H. R. LADD, D.D., and published by the authority of the Lords
Commissioners of H.M. Treasury, under the Direction of the Master of the
Rolls.

The present volume completes the *Chronica Majora* of MATTHEW
PARIS. The historical materials of this section of the work are of exactly
the same character as the history of previous years. There is the same
vividness of description (see the description of Prince EDWARD's tears and
sob on parting with his father at Portsmouth before the King sailed to
Gascony in 1134, and his refusal to leave the shore as long as the vessel re-
mained in sight), the same occasional minutiae of detail, the same atten-
tion to the affairs of other countries than England, both when closely con-
nected with England, as in the cases of the Papal dominions, Gascony, or
France, and when comparatively independent, as in those of the empire or
the cities of Italy. The account of the campaign of the Emperor
FREDERICK II. in Italy, as, for instance, the siege of Parma, his defeat
there and subsequent success; the details of the death of PETER de VINCE,
the abstract of the Emperor's will, one clause of which is peculiar to this
author; the elaborate description of St. LOUIS's crusade; the details of the
rising and outrages of the Pastoureaux in France in 1320—must have been
obtained from eye-witnesses, or from sources quite independent of any that
we know.

London: LONGMANS & Co. and THURNER & Co. Oxford: PARKER & Co.
Cambridge: MACMILLAN & Co. Edinburgh: A. & C. BLACK and
DOUGLAS & FOULIS. Dublin: A. THOM & Co.

THE NEW METAPHYSIC.

I.—THOUGHT.

TIME and SPACE: a Metaphysical Essay.

By SHADWORTH H. HODGSON. 8vo, 16s.

II.—ACTION.

THE THEORY of PRACTICE: an Ethical

Enquiry. By the same Author. 2 vols., 8vo, 34s.

III.—SYSTEM.

THE PHILOSOPHY of REFLECTION.

By the same Author. 2 vols., 8vo, 31s.

London: LONGMANS & Co.

W. SWAN SONNENSCHNEIN & ALLEN'S

New Educational Publications.

ROYAL RELIEF ATLAS. Consisting of

THIRTY-ONE MAPS in RELIEF, framed and bound in 1 vol., royal
4to, price about One Guinea. [In May.]

These maps have been prepared with great difficulty and at great
expense. The result, however, fully comes up to the expectations that
had been made with respect to this undertaking, and the numerous
geographers, teachers, &c., who have inspected the maps express great
satisfaction with them, being assured that they will be of the greatest
value for educational purposes. Each map presents in bold relief the
leading physical characteristics of the chief countries of the world, the
various elevations, &c., being relatively accurate.

LINEAR BLACK-BOARD MAPS.

FIRST MAP—ENGLAND and WALES. 4ft. 9in. by 4ft.; mounted on
double rollers, 16s.

In order to facilitate the teaching of geography with outline on the black
board (a system now in great vogue) this series of maps has been projected.
They are printed in broad white outline upon stout linoleum, and the
positions of the chief towns, and their relative sizes, are indicated by dots,
and the countries by dotted lines. The pupils can thus fill in on the black
linoleum with chalk the courses of rivers, names of towns, positions of sea-
beds, &c., which can at once be removed with a duster or damp sponge.

INDUSTRIAL GEOGRAPHY PRIMERS.

Edited by G. PHILLIPS BEVAN, F.G.S., F.R.S. 18mo, cloth, 1s. each.

Vol. I. GREAT BRITAIN and IRELAND. [Ready.]

Vol. II. FRANCE. [Nearly ready.]

Vol. III. UNITED STATES of AMERICA. [In the press.]

"The series is likely to be welcomed as a valuable aid to those engaged
in the practical branches of education."—*Saturday Review*.

"We wish the series all success."—*Educational Times*.

"Quite within the grasp of children, and will be a welcome addition to
our supplementary school-books."—*School Guardian*.

"We can only trust that these Primers may in time be used in every
school in the land."—*Western Daily Mercury*.

STUDENT'S MANUAL of PSYCHOLOGY

and ETHICS. By F. RYLAND, B.A. (Camb.). Crown 8vo, cloth, 3s. 6d.

[In April.]

W. SWAN SONNENSCHNEIN & ALLEN,
PATERNOSTER SQUARE, E.C.

RICHARD BENTLEY & SON'S NEW WORKS.

"*ADAM and EVE*" and "*The REBEL of the FAMILY*," the two new serial stories, are continued in the *TEMPLE BAR MAGAZINE* for April, price One Shilling.

DR. BRANDES' LORD BEACONSFIELD :

his Life, Character, and Works. A Critical Study. Translated by Mrs. JANE STURGE. Demy 8vo, 10s. 6d.

"Herr Brandes' study of Lord Beaconsfield, which Mrs. Sturge's admirable translation has opened to English readers almost immediately after its German publication, is neither a biography of the ordinary kind nor an attempt at one. It is a singularly subtle, brilliant, and impartial study of a character unique in modern politics, if not in history. It is not an exaggeration to say that it may well be compared with one of Macaulay's best and most thorough biographical essays, with an added subtlety of psychological interpretation which Macaulay seldom used. As in those essays, the biographical facts are followed by the reader and realised more forcibly than in a 'Life' of the conventional form and arrangement; while he is from the beginning carried along with the author's keen study of his subject. Herr Brandes follows the development of Disraeli's character, ideals, and methods through his revelations of himself in his novels and elsewhere quite as much as in the greater acts of his career. He approaches him rather as an extraordinarily interesting type of mind than as a statesman or a conspicuous figure of the moment; but these aspects cannot, of course, be really separated; and for whatever purpose one goes to Herr Brandes' book, he finds in it the most brilliant analysis yet written of one of the most remarkable characters of the time."—*Scribner's Magazine*.

"As a biography the work is far more valuable, because more concise and impartial, than any which has appeared in England. Herr Brandes' information is copious and singularly accurate so far as we have tested it; and his literary criticisms at least are sound, penetrating, and genial."—*Times*.

PRINCE METTERNICH'S AUTO-

BIOGRAPHY. Edited by his Son, PRINCE METTERNICH. Translated by ROSINA NAPIER. 2 vols., demy 8vo, with Portrait and Facsimiles, 38s.

"The fact that the first edition of the Metternich Memoirs was exhausted on the day of publication, and that five editions have been called for in rapid succession, is evidence that its revelations of secret history, its political portraits, and especially its remarkable picture of Napoleon have fully met all the anticipations that have been aroused."—*Scribner's Magazine*.

THE HEART of HOLLAND. By Henry

HAVARD, Author of "The Dead Cities of the Zuyder Zee," &c. Translated by Mrs. CASHEL HOXY. Demy 8vo, with Eight Illustrations, 15s.

"The Heart of Holland" stands the best test to which a book of travels can be put. It raises in the reader a strong desire to follow in the footsteps of the author. We had not reached the end of M. Havard's volume before we had got out our maps, our Bradshaw, our Baedeker, and planned another trip to Holland."—*Saturday Review*.

"No living writer describes Holland so well as Henry Havard."—*Globe*.

THE OLD RÉGIME: Court, Salons, and

Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris," &c. With Portraits of Louis XV., Marie-Antoinette, Rousseau, Voltaire, M^{me}. du Barry, and M^{lle}. Clairon. 2 vols., large crown 8vo, 24s.

NEW NOVELS AT ALL LIBRARIES.

BY THE AUTHOR OF "VIRGINIA."

HONOR CARMICHAEL. By Henrietta A. DUFF, Author of "Virginia: a Roman Sketch." 2 vols., crown 8vo.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE."

NO RELATIONS. By Hector Malot. Translated by the Author of "Hogan, M.P." &c. 3 vols., crown 8vo.

"An extremely fascinating story, written with unflagging force, and as full of genuine pathos as of graceful and delicate descriptions. . . . This novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

TWO WOMEN. By Georgiana M. Craik.

3 vols., crown 8vo. "Dorothy's character is so charming that by itself it would be sufficient to give Miss Craik's story a high place among the novels of the present day; and there are other characters besides which, though not equally important, are yet very cleverly drawn."—*Saturday Review*.

RICHARD BENTLEY & SON,

NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

REMINGTON'S

NEW BOOKS AT ALL LIBRARIES.

NOW READY, THE FIFTH EDITION OF GEORGE AUGUSTUS SALA'S NEW WORK,
PARIS HERSELF AGAIN, with 400 Illustrations by the first French Artists of the day. 2 vols., demy, handsomely bound, 25s.

"For those who do and those who do not know Paris these volumes contain a fund of instruction and amusement which can be 'drawn' at almost any page with the certainty of a 'find.'"—*Saturday Review*.

"Such a pleasant mixture of anecdote, observation, experience, knowledge, intelligence, and insight as none but Mr. Sala could supply."—*Pall Mall Gazette*.

AMONG the BOERS: Notes of a

Trip to South Africa in Search of Health. By JOHN NIXON. 1 vol., demy 8vo, illustrated and handsomely bound, 10s. 6d.

"There is no doubt that the book will be read."—*Scotsman*.

HERMANN: a Novel. By E.

WEINER, Author of "Under a Charm," "Success, and How He Won It," "Riven Bonds," &c. 1 vol., 10s. 6d.

LITERATURE.

History of the Administration of John de Witt, Grand Pensionary of Holland. By James Geddes. Vol. I. 1623-54. (C. Kegan Paul & Co.)

MR. GEDDES has undertaken a work of the utmost importance for the history of Holland. He has boldly plunged into a task which has been neglected by Dutch historians, mainly, we are inclined to think, from its laborious character. It is indeed remarkable that in the present generation the history of Holland should have found its great exponents in writers of the English tongue, Mr. Motley and Mr. Geddes, both of whom worked entirely from documents, and had little help from Dutch historians. But, while Mr. Motley wrote with a view to his compatriots, and had the object of putting before them the heroic days of Republican government, Mr. Geddes is animated solely by instincts of research. He has chosen a subject and has worked at it simply as an historical student. He has dealt with the period which he has selected in the same spirit as a Dutch writer might have done. Save for its close connexion with English history, there is nothing in the book to indicate that it was intended for the English public.

This is, perhaps, to be regretted, as it may tend to lessen the number of Mr. Geddes' readers. There is no attempt throughout his book at popularisation; no effort to clear away, by means of an introductory chapter, the difficulties that beset the understanding of the cumbrous movement of the Dutch political machine. Mr. Geddes is concerned only with de Witt, and refuses to deviate from his main subject. Hence his book may be deterrent at the outset to those who are unfamiliar with the period of which it treats. But we can assure the reader that if he perseveres he will by no means find Mr. Geddes' pages dull in the end. The care, the labour, and the enthusiasm which Mr. Geddes has bestowed upon his subject are rarely found in combination with such entire sobriety of judgment. He is not led away, like many biographers, to estimate the importance of de Witt in proportion to the difficulty which he has experienced in discovering information about him.

Mr. Geddes frankly begins by saying that John de Witt is in no sense a hero. The fervent patriotism and religious zeal which had marked the rising of the Dutch Republic had to a great extent burnt away in the course of the protracted conflict in which the Confederate States had been engaged. A generation had arisen that knew nothing of the heroic struggles of the days of William

the Silent, and was desirous only to reap the commercial results of the position which their forefathers had won. The constitution of the Confederate States had made little progress toward such a union as could alone guarantee stability in the future. The States General was an assembly of delegates from the Provincial States, which again rested on a number of municipal oligarchies. The House of Orange, in which the office of Stadholder and Captain-General had tended to become hereditary, was the sole representative of a central national life. But the House of Orange in the days of Princes Frederic Henry and William II. had become untrue to its old traditions. It was inspired with the desire to take up a position among European sovereigns, and entered upon a course of dynastic aggrandisement. Military glory, royal marriages, and the other principles of European statecraft had made it forgetful of the interests of the people. The burgher oligarchy looked upon it with well-founded suspicion; and when, in 1650, Holland insisted on a reduction of the army and proceeded to disband some of the forces in its pay, the Stadholder William II. attempted a *coup d'état*, rode round the towns of Holland, and forbade the disbandment. Six of the delegates of the States of Holland—among them Jacob de Witt, John's father—were thrown into prison, and were only released on consenting to exclusion from office for the future. William II., who was son-in-law to Charles I. of England, was negotiating secretly for an alliance with France and an undertaking to restore the Stuarts to the English throne when he suddenly died in November 1650.

The son of the Stadholder William II., who afterwards became William III. of England, was born within a week of his father's death, and the abeyance of the activity of the direct line of the House of Orange gave the burgher oligarchy an opportunity of realising its ideal of government without a Stadholder on the sole basis of provincial and municipal privileges. Of this attempt John de Witt became the leading spirit; in fact, so completely was he identified with it that details of his personal life are almost entirely wanting. Again and again does Mr. Geddes bewail the absence of a Dutch Boswell. Even de Witt's voluminous correspondence has been ransacked in vain for any information that may enable us to realise the character of the man. Mr. Geddes can show us only de Witt's policy—the cold, far-seeing, logical results of an application of traditions of the past to a state of things which had advanced beyond their control.

John de Witt was born in 1623, of one of the leading families of Dordrecht, or Dort. He had a good education, travelled in his youth, and practised law at the Hague. In December 1650 he was made Pensionary of Dort, a salaried officer corresponding roughly to a town clerk, who also accompanied the town deputies to the Provincial States, collected their opinions, and announced their votes. He was present at the meeting of the States in 1651 in which Holland, smarting under the recent aggression upon its liberties, succeeded in preventing the election of a

Captain-General and practically established a government without a Stadholder.

But serious questions lay before the Republic. The Orange party was strong in its hold upon the people, and the hatred arising from commercial jealousy was high against England. The execution of Charles I. had given a shock to the whole of Europe, especially to the United Netherlands, where the Stuart cause was identified with that of the House of Orange. On the other hand, the English Commonwealth rested on principles with which Holland had much sympathy; but Holland could not count on the co-operation of the other Dutch States in an intimate alliance with England. This was what Cromwell pressed for. He could not have the Dutch States a hatching-ground for Stuart intrigues; he wanted them, on the other hand, to join with the English Commonwealth in forming a grand Protestant alliance. He proposed "a more strict and intimate union between England and the United Provinces." By this he meant, as afterwards appeared, a union of the two governments, so that the United Provinces should send representatives to the English Parliament, and England should send representatives to the States General. While negotiations went slowly on, the English envoys at the Hague were insulted in the streets, and were in terror of their lives from the Orange faction. Nothing definite was done; but the Dutch made a treaty with Denmark not to reduce the Sound dues in favour of any other nations, and England retaliated by the Navigation Act. If the United Provinces would not make up their minds to ally themselves closely with the English Commonwealth, Cromwell could not afford to neglect English interests or suffer any diminution of English *prestige* under his government; he must rather show Europe that it had to deal with a ruler more careful of English honour than the feeble Stuart kings.

So in 1652 England and Holland drifted into war because Tromp refused to strike his flag within view of the English flag. The war went on, with some glory to the United Provinces, but at a cost which they could not long endure. It was felt in 1653 that peace was necessary. Meanwhile, John de Witt, who had been made Grand Pensionary of Holland, had more and more made himself the brain of the Republican oligarchy, and, on behalf of Holland, was directing a clandestine negotiation with England. Again Cromwell brought forward his old plan of a union between the United Provinces and England so as to set on foot a great Protestant alliance in Europe. But this idea was beyond the comprehension of the Dutch, who cared little for the cause of Protestantism, or for the general political aspect of Europe, in comparison with their own commercial prosperity. Nor did the state of parties within the Dutch Republic allow of such a project.

"To the six Orange provinces, coalition with the greatest enemy of their beloved House could be nothing but repulsive. As for Holland, where would its political fetish of the sovereign independence of the several provinces be? Where would be the preponderating influence, amounting sometimes to semi-tyranny, which it wielded over its six confederates if the two Republics were amalgamated? Had a coalition of the

two governments been attempted, every town in the seven provinces would have blazed forth into open insurrection; the Prince of Orange would have been proclaimed from every town-house by infuriated mobs; there would not even have been a civil war, for the faction in power would have been swept away before the first shock of the popular wrath."

So John de Witt was obliged to negotiate peace because the continuance of war would have led to the fall of the oligarchy with which he had cast his lot. He could not frankly accept Cromwell's conditions, for they would have overthrown in like manner the oligarchic constitution. Though but a young man of the age of thirty, he had to decide upon a course to adopt, and had to pursue it by tortuous ways, shrouding himself in secrecy, deceiving Cromwell, deceiving the States General, deceiving Holland, juggling even with his accomplices. All this he had to do on his own responsibility, acting carefully in such a way as not glaringly to upset any part of the lumbering constitutional machinery by which he was surrounded, thinking always how he could make out a good case for himself at the end. If Cromwell was not to have his "intimate union" with the Dutch Republic, he was resolved to protect England from possible hostility in the future. Among Cromwell's proposals, the one which caused the greatest trouble to de Witt was the exclusion of the Prince of Orange from office. De Witt's enemies in later days charged him with having suggested this exclusion, but Mr. Geddes satisfactorily shows that it originated with England.

"Complete exclusion of the Prince, or the most absolute binding down of him if elected to any high office not to aid the Stuart cause, was part of the very essence of Cromwell's position. It was not Oliver's habit to overlook the central or essential point of a treaty; and, if the idea did not originate with him, it was floating about as the common property of the Puritan party."

The demand for exclusion was modified by negotiations into a willingness on Cromwell's part to accept an obligation on the part of the State of Holland alone to exclude the Prince. This obligation it was de Witt's great diplomatic triumph to procure, and he did so by an unbroken series of deceptions. There is no more curious page of diplomatic history than this negotiation of de Witt, and Mr. Geddes has patiently and skilfully unveiled its complications step by step. With the conclusion of peace in 1654 and a consideration of de Witt's apology for his own proceedings Mr. Geddes ends his first volume. The succeeding ones will have still greater interest for English readers as showing the political conditions under which were moulded the character and convictions of him who, as William III., gave a decisive turn to the fortunes of England. Of the excellence of Mr. Geddes' workmanship, the thoroughness displayed in collecting materials, and the breadth of historical judgment which he has shown in using them it is impossible to speak too highly. M. CREIGHTON.

A History of Ancient Geography among the Greeks and Romans, from the Earliest Ages to the Fall of the Roman Empire. By E. H. Bunbury, F.R.G.S. 2 vols. (Mur-ray.)

It is not a little surprising that, while Englishmen have done more than any other nation towards the investigation of classic lands and of other countries illustrative of ancient geography, no comprehensive book on that subject has hitherto existed in our language. It is true that Dr. Smith's *Dictionary of Geography*, which is perhaps the best executed of all his classical dictionaries, supplies most of the student's needs in investigating the geography of countries and the topography of localities in detail; but for a real understanding of this branch of study a great deal more is required than any dictionary, however good, can provide. In order to appreciate the worth of a statement about any point of geography, we must have some idea of the state of knowledge and the extent of men's information at the time it was made, and must also be able to estimate the caution, truthfulness, and good judgment of the authority from whom it is derived. But beside this, the history of the growth of geographical knowledge is a part of the history of the development of the human mind, and is well deserving of study on its own account. But the difficulty of the subject is such as to discourage students from undertaking it, and the qualifications requisite for dealing with it are not easily found. The path of the geographer is a thorny one. He is met at every turn by disputed questions, which demand the most careful investigation. The extent of the subject both in time and space necessitates very wide reading, and it ramifies in so many directions, and is connected with so many other branches of science, that it cannot be properly dealt with by a specialist. At the same time it calls for the highest qualities of the critic, both in sifting evidence and in deciding between conflicting hypotheses.

In the present instance it is satisfactory to feel that the subject has fallen into the very best hands. As long ago as the time when the earliest numbers of the *Dictionary of Geography* appeared—nearly thirty years since—Mr. Bunbury showed himself, by his articles contributed to that work, to be a geographer of the first order, and his subsequent studies have at length borne ripe fruit in the great work that lies before us. Every page of this bears testimony to his fitness for the task. The excellence of his scholarship is shown by his occasional criticisms of passages in ancient writers the interpretation of which affects geographical questions, and we are thus enabled to feel confident elsewhere that he has arrived at the true meaning of his authorities. His perseverance appears in the way in which he has pursued the subject into its remotest and darkest corners, not neglecting the most obscure treatises, or such evidence as is to be obtained from writers not professedly geographical. He displays a rare power of discrimination in discovering the element of truth which underlies some "traveller's tale," and in rejecting what is fabulous, or on other grounds untrustworthy, without running into unreasonable scepticism. He takes equal interest in the mathematical side of the subject

on the one hand, and the physical and ethnographical on the other, and at the same time is ready to discuss mythological questions and to analyse the story of Minos or the voyage of the Argonauts. He has qualified himself to take a practical view of the subject, both by travelling himself, and by an extensive acquaintance with modern books of travel and exploration in countries without as well as within the immediate range of his subject. And, finally, he is unfailing in his courtesy towards opponents in controversy, while clearly stating and firmly maintaining his own point of view. The work which he has now produced is both exhaustive in treatment and admirable in method and execution, and is an honour to English scholarship.

The subject of ancient geography naturally divides itself into two parts, viz., the history of the growth of knowledge on the subject, and the discussion of the facts known about it at any particular time. Of course the two must to a great extent run into one another, but the details, at all events, especially those which call for investigation, can be kept separate, and this Mr. Bunbury has very wisely done. With this view he has attached to the end of each chapter a number of Notes—they might better be termed short appendices—which are devoted to special points, and thus lighten the reading of the text, and prevent its continuity from being broken. To what an extent this has been carried out may be seen especially in the chapter devoted to Alexander's Asiatic expedition, which has no less than forty-nine of these appendices. In this way the gradual development of the science is steadily kept in view, and we are able to trace its connexion, first with commerce, especially among the Phoenicians and the Greeks of the earlier period, and afterwards with conquest in war, as in the case of Alexander's campaigns, which laid open so much of the interior of Asia, and at a later period the Mithridatic wars, in the course of which Pompey penetrated almost to the Caspian, while in the west the war with Jugurtha caused more accurate information to be obtained about the interior of Africa, and the progress of Caesar's arms in Gaul, Germany, and Britain advanced men's knowledge of those countries. Nor are the voyages of discovery, or such as led to discovery, which lend an element of romance to geography, neglected. Such are the expedition for the circumnavigation of Africa in the time of Necho, in discussing the truth of which Mr. Bunbury gives us an admirable specimen of carefully balanced argument; that of Hanno along the coast of that continent; Nearchus' voyage from the Indus to the Euphrates in connexion with the expedition of Alexander; and those of Eudoxus, who twice sailed from Egypt to India and back. Our author's evident interest in mountains also causes him to draw attention to the remarks of the ancients upon them; and in particular he notices the volcanic phenomena which they mention—the cone of Vesuvius, on which Strabo sagaciously observed that it had every appearance of having been once a burning mountain which had gone out for want of fuel; the nature of the lava streams of Etna, and the suitability of the volcanic ashes for the cultivation

of vines; the constant activity of Strongyle (Stromboli) and the neighbouring island of Hiera, the special scene of Vulcan's subterranean operations; and the eruptions at Thera (Santorin) and the peninsula of Methone on the coast of Argolis.

On the subject of the Homeric geography Mr. Bunbury's views appear to us to be especially clear and sensible. He considers that the author or authors of the Homeric poems were well acquainted with the countries bordering on the Aegean and the greater part of Greece Proper; and this applies to the *Odyssey* as well as to the *Iliad*, for he notices the accuracy with which the various sea routes between Greece and Asia Minor are described in connexion with the return of the Greek chieftains from Troy. But beyond this he believes the geographical knowledge of that period to have been extremely vague, and shows that the wanderings of Ulysses, when reduced to a scheme, cannot be reconciled with the positions of any actual countries or localities. Thus, notwithstanding the view of a later period, which represented the slopes of Etna as the abode of the Cyclopes, there is nothing in Homer to lead to that conclusion; nor can Thrinakia either, though the name has been thought to suggest the idea that Sicily was meant, be identified with that island, for it is described as having been both small and devoid of inhabitants. With regard to Scylla and Charybdis, and the island of Aeolus, it is probable that vague rumours may have reached the Greeks of that time through Phoenician traders of the passage of the Straits of Messina and of Stromboli, but they had no idea of the actual position of these. Coming nearer home, he deprecates the attempt to find a substantial basis of reality for the Phaeacians, or to identify their land with the island of Coreyra; and, as might be expected, he altogether discredits any endeavours like those of Dr. Schliemann to identify the local topography of that region. As to Ithaca itself, and the neighbouring islands, after commenting on the Homeric account of them, he says:—

"The only real solution of the difficulty appears to be to admit that Homer was not personally acquainted with the group of islands in question, and that, though familiar with their names, and with some of their leading natural characteristics, he had an indistinct and erroneous conception of their geographical position."

Dulichium, the name of which, though it appears in the *Iliad* as well as the *Odyssey*, had totally disappeared in the historic times of Greece, he is disposed to identify with Santa Maura.

The principal writers of geographical treatises in antiquity, as might be expected, are very fully dealt with by Mr. Bunbury. Among these, Strabo holds the first place, though his predecessor, Eratosthenes, whom he often criticised, is to be regarded as the founder of scientific geography. But Strabo, living in the Augustan age, had greater abundance and variety of materials to work upon, and the plan of his work was conceived on a grander scale than that of any other ancient writer, so that he deserved the title of the Geographer, which was regularly applied to him by the later Greeks. He was the first

to attempt to bring together all the geographical knowledge that was attainable in his day, and to comprise in one treatise the four divisions of the subject that have been called in modern times mathematical, physical, political, and historical geography. His own travels, as is here pointed out, had not been extensive, and much depends in his descriptions of places on his having, or not having, visited the spot. This is especially noticeable in his account of Greece, in which his description of Corinth, which he had seen, is clear and intelligent, while the rest is the least satisfactory portion of his work, being marred by rambling digressions and by a slavish subservience to the authority of Homer. For the same reason his merits are nowhere more conspicuous than in his description of his native city, Amasia, which is concise, where he might have been tempted to be discursive, and presents a clear view of its somewhat complex topographical features. But the great value of his work consists in his having written, as we might say, for the general reader, and having felt that the habitable globe was a subject of study, not merely for professed geographers, but also for politicians and statesmen. In this respect he contrasts favourably with Pliny, who, though he made an important contribution to the statistical geography of the provinces of the Roman empire, yet in doing so fills page after page with voluminous lists of obscure names, and omits almost entirely the leading features of each country. Of Ptolemy, in whom the geographical science of the ancients culminated, Mr. Bunbury's judgment is at once appreciative and discriminating. He remarks that the blind, almost superstitious, reverence with which he was regarded throughout the Middle Ages has descended in some degree to our own days, and shows that the means at his command did not enable him to carry into execution his ideas on the subject; but, at the same time, he allows that he saw clearly the true principles upon which geography should be based, and the true mode in which a map should be constructed. With Strabo he does not properly come into comparison, for mathematical geography and map-making were the studies which he pursued, and he approached the science in the spirit of an astronomer rather than that of a geographer in the higher sense of the word. Two of the facts which he mentions, though they would at first sight appear to be questionable, have been strikingly verified by modern discovery, viz., that the Nile flows from two lakes in the interior of Africa, and that near its sources there is a range of mountains, some of which are covered with snow, though situated under the Equator. Mr. Bunbury considers that authentic intelligence on these points had reached the Alexandrian geographer, having been transmitted by the Greek traders at the settlement of Rhapta on the East Coast of Africa, who had received information about them from the interior.

Want of space prevents us from noticing our author's discussions of such points as the Retreat of the Ten Thousand, whose route he lays down with due regard to the determining features of the country and Xenophon's descriptions, while giving up that writer's distances as hopeless; or Hannibal's passage

of the Alps, which he regards as having been made by the Mont Cenis. In fact, it is impossible within the limits of a review to give an adequate idea of a book which comprises such a variety of questions and points of discussion. It must suffice to say that it is a permanent addition to our knowledge of the subject, and will prove invaluable to students of ancient history as a book of reference.

H. F. TOZER.

Essays and Criticisms. By T. G. Wainwright. Edited by W. C. Hazlitt. (Reeves & Turner.)

THE collection and editing of the writings of the singular person who distinguished himself as an art critic, a forger, and a murderer in the third and fourth decades of this century has often been desiderated, and Mr. Hazlitt is to be thanked for at last undertaking the task. We cannot say that he has discharged it absolutely well. His memoir is lacking in fullness and clearness, and contains some matter of doubtful relevance. While he is very severe on Dickens for *Hunted Down*, he is not above himself assigning a disproportionate space to the incidents which gained Wainwright a sinister reputation and helped to direct public attention to the dangers of strychnine. He has not taken the trouble to ascertain (as in the course of a couple of mails he surely might have ascertained) the exact date of the transported convict's death, or any additional particulars of his last days in exile. No reference is made to the very interesting episode of the critic's connexion with Blake. Mr. Hazlitt further inclines to attribute to Wainwright the *Character of the late Elia*, which is as clearly Lamb's own as the essay on Sarah Battle or that on Roast Pig. Still he has given us the Vinkbooms and Weathercock papers from *London*, and this is of itself a sufficient boon to prevent us from grumbling any more at the details and setting of the gift.

Opinion has hitherto differed with a curious divergence as to the actual literary merits of the only critic who actually developed the murderous capacities which (if we may believe some authors) underlie the critical temperament. His contemporaries—the very best of them—thought very highly of Wainwright. Lamb has left not merely various kindly references to him, but a distinct and categorical statement that his prose was "good." Since that time, however, the horror arising from the crimes which he certainly committed, while for some not wholly explicable reason he was never punished for them (though he suffered for a comparatively harmless forgery by which he merely obtained irregular command of his own property), has rather affected judgments of his purely literary work. That work is undoubtedly peculiar in character, uniting as it does the archaistic affectations of Elia with the foppery of the then nascent dandy school. Yet it is, after a very brief perusal has initiated the reader into the secret of the mannerism, clear enough why his friends thought much of him. Not merely is the matter of his art judgments singularly good, but their manner, despite all its tricks and fripperies and egotistic impertinences, is far from unattractive.

Wainewright writes as the contributors to society journals nowadays would like to write, but cannot, with a happy affectation of coxcomby which is not ill-bred, and which does not exclude the possibility of the writer having brains as well as spirits and knowledge of the world. Here is a typical passage:—

“Forthwith WE (Janus) sneaked home alone—poked in the top of our hollow fire, which spouted out a myriad of flames, roaring pleasantly, as, chasing one another, they rapidly escaped up the chimney; exchanged our smart, tight-waisted, stiff-collared coat for an easy, chintz gown, with pink ribbons—lighted our new, elegantly gilt French lamp, having a ground-glass globe, painted with gay flowers and gaudy butterflies; hauled forth Portfolio No. 9, and established ourselves easily on a Grecian couch! Then we (Janus) stroked our favourite tortoiseshell cat into a full and sonorous purr; and after that our muse or maid servant, a good-natured, Venetian-shaped girl (having first placed on the table a genuine flask of as rich Montepulciano as ever voyaged from fair Italia), had gently but firmly closed the door, carefully rendered air-tight by a gilt-leather binding (it is quite right to be particular), we indulged ourselves in a complacent consideration of the rather elegant figure we made, as seen in a large glass placed opposite our chimney mirror, without, however, moving any limb, except the left arm, which instinctively filled out a full cut glass of the liquor before us, while the right rested inactive on the head of puss! It was a sight that turned all our gall into blood! Fancy, comfortable reader! Imprimis. A very good-sized room. Item. A gay Brussels carpet, covered with garlands of flowers. Item. A fine original cast of the Venus de Medicis. Item. Some choice volumes in still more choice old French maroquin, with water-tabby silk linings. Item. Some more vols., coated by the skill of Roger Payne and ‘our Charles Lewis.’ Item. A piano by Tomkisson. Item. A Damascus sabre. Item. One cat. Item. A large Newfoundland dog, friendly to the cat. Item. A few hothouse plants on a white marble slab. Item. A delicious melting love-painting by Fuseli: and last, not least in our dear love, we, myself, Janus! Each and the whole, seen by the Correggio kind of light, breathed, as it were, through the painted glass of the lamp!!! Soothed into that amiable sort of self-satisfaction, so necessary to the bodying out those deliciously voluptuous ideas, perfumed with languor, which occasionally swim and undulate, like gauzy clouds, over the brain of the most cold-blooded men, we put forth our hand to the folio, which leant against a chair by the sofa’s side, and at hap-hazard extracted thence—Lancret’s charming ‘Repas Italien’ T. P. le Bas, sculp.

‘A Summer party in the greenwood shade,
With lutes prepared, and cloth on herbage laid,
And ladies’ laughter coming through the air.’
L. HUNT’S Rimini.

This completed the charm. We immersed a well-seasoned prime pen into our silver ink-stand three times, shaking off the loose ink again lingeringly, while, holding the print fast in our left hand, we perused it with half-shut eyes, dallying awhile with our delight.”

We do not remember to have seen it noticed, but, if Thackeray was not familiar with the quaint extravaganzas entitled *The Delicate Intricacies*, we have lighted on a very singular instance of accidental anticipation. Elsewhere Wainewright is obviously and sometimes almost avowedly a follower of Sterne; here he is distinctly a forerunner of the *Roundabout Papers*. We do not notice

that he anywhere acknowledges acquaintance with Diderot’s *Salons*, but that he must have possessed such acquaintance is beyond a doubt. On the whole, it is not difficult to take his literary measure. He was one of the numerous persons who are spoilt by amateurish addiction to art. If he had been driven to write regularly for his bread his affectations would soon have been knocked out of him, and a great deal of good work would probably have been the result. As it was, with immensely expensive tastes, he had for some time the opportunity of gratifying those tastes more or less legitimately, and was not regularly enough employed on literary work to feel the effect—specially salutary to men of his temperament—of being in harness. Hence his work is small in quantity and, to a certain extent, crude and patchy in quality. But the best patches are very good, and show rare aptitude in a special kind. An examination of his tastes would lead us too far. There is an odd tawdriness about some of them which reminds one of Edgar Poe, another pupil of Wainewright’s on whose pupilship we would stake something. Unfavourable circumstances of time and fashion, and the want of discipline, which was Wainewright’s great bane, probably account for this tawdriness. But this volume will, we think, convince all literary tasters that those who relished Wainewright were not in principle wrong.

GEORGE SAINTSBURY.

The Life of the Right Reverend Samuel Wilberforce, D.D., Lord Bishop of Oxford and, afterwards, of Winchester. By A. R. Ashwell, M.A., late Canon of the Cathedral and Principal of the Theological College, Chichester. Vol. I. (Murray.)

THERE is no surer way of misleading people than by speaking the truth. This is an axiom in diplomacy, and Bishop Wilberforce’s life confirms its soundness. Throughout his career he was the object of suspicion. Whatever he said or wrote was supposed to contain some hidden meaning at variance with its outward expression. His actions were attributed to deep design or tortuous policy. He was accused of inconsistency both as an ecclesiastic and a politician, and described as one who was by turns a High Churchman and an Evangelical, as the exigencies of the moment might determine, and who shaped his course solely by the motive of expediency or the love of popular applause. Some few (including those who knew him best) judged him otherwise; but this was the verdict of the public at large, which was unable or unwilling to comprehend a character in which singleness of motive and versatility of power were marvelously combined.

The publication of selections from the Bishop’s diaries will do more to correct this false estimate than can be effected by the expression of mere individual opinion. For the analysis which he therein from time to time makes of his conduct must be either true or false. If true, then it is obvious that, though like other men he might err from defective judgment, he sought ends by the purest means; if false, the further question arises whether it was

consciously or unconsciously so. We can hardly accept the former alternative, for even the worst enemies of the prelate would forbear to accuse him of deliberately placing upon paper, under cover of a confession to a God which judgeth in secret, what was nothing less than a lie. But might he not deceive himself in the matter, and, without deliberate purpose, accustom himself to view his own conduct in the light in which he desired others to see it? It would certainly be rash to limit anyone’s powers of self-deception; but, in the case of a man like Bishop Wilberforce, conspicuous for clearness of sight in other matters, it is difficult to believe that he became blind so soon as his eyes were directed inwards. It is far easier to suppose that he knew more about his motives than those could know whose judgment was based upon his conduct only. It is far more likely that he was swayed by a number of considerations—that his actions were the result of mixed motives—than that his life was controlled by one single master-passion, which enslaved his conscience and led him to play the hypocrite even when the eye of man was not upon him. Our own conviction, therefore, is that Bishop Wilberforce was a man of genuine truth and honesty, and that on those occasions when his conduct seems to have been inconsistent the inconsistency was the result of that progress towards larger thoughts and more liberal dealings which must ever be the mark of a mind which grows with the times in which it lives. Brought up in the strictest sect of the Evangelicals, confronted at a time when his feelings were stronger than his judgment with a religious movement full of good and evil, possessing an ensnaring versatility of gifts and a keen appreciation of the good-will of those around him, the marvel is that he became what he did become. The marvel is not that in a life more full than most men lead he made some mistakes which he himself was the first to deplore, but that he was able to preserve throughout a mind well balanced and a lofty soul. His biographer has, we believe, formed in the main a true conception of the Bishop’s character, and one which will stand the test of the minutest investigation. He does full justice to his unusual power of sympathy, his warm affection, his intellectual interest in every subject, and observes with justice—

“It was thus that Bishop Wilberforce literally ‘turned every way’ and found some point of contact with almost everyone; so that the very richness of his mind and character led in some cases to a suspicion of unreality. The majority of men fail to realise whatever lies beyond their own horizon of character and experience, and, lacking the divine gift of sympathetic imagination, they have no other standard by which to estimate their fellows than their own knowledge of themselves. Thus all men of wide natures encounter inevitable misconception; and the writer has been often amused with looks of unwelcome surprise on the faces of men with whom the Bishop had been in close conversation on matters within their own range and ken when they saw him instantly absorbed with equal completeness in discussing infinitely wider topics with the next person to whom he spoke.”

We have been led to say so much upon the Bishop’s character that we have left

ourselves little room to follow the details of his active public life. But we hold that it is beyond the reviewer's scope to present a succinct version of what the book itself tells at length. For just as the brief announcements of the telegraph rob of their interest the fuller intelligence that follows them, so does a summary inflict a positive injury upon the book from which it is derived. We appreciate Canon Ashwell's work too highly to wish it to suffer by such treatment, and accordingly have thought that we shall best discharge our duty to him and to our readers by indicating the contents of the volume, and expressing our regret that the hand which penned it is now for ever at rest.

Samuel Wilberforce was born at Clapham Common on September 7, 1805, and was the third son of William Wilberforce. Canon Ashwell traces the first forty-two years of his life—a period embracing by far the most important part of his career—and had arranged the materials for two further volumes, which would carry on the biography to the year 1873, when, in the plenitude of his powers, the Bishop was removed from the world by death. The writer adduces reasons for regarding the section of the Bishop's life with which this first volume is concerned as complete in itself. The reasons do not seem to us to be very clearly expressed, nor are we able to recognise in the Hampden controversy (with which the volume terminates) a turning-point in the Church's or the Bishop's history. The part which the Bishop took in that unfortunate affair was not regarded with satisfaction even by his best friends, and was certainly open to misconstruction. Perhaps Canon Ashwell would have done better to have given to it less prominence. But, with this exception, the contents of the volume are singularly interesting. We have a charming picture of Samuel Wilberforce's early training in a home where the good influence of its head was sensibly felt. Then comes the busier life at Oxford, followed, in rapid succession, by his marriage and ordination. Much space is rightly given to an account of Wilberforce's experience as a parochial clergyman, and here the narrative teems with passages of great interest and with many characteristic anecdotes in which his readiness, his humour, his wonderful versatility, showed themselves. But it is as a bishop that Samuel Wilberforce will ever be remembered. No doubt he did his work well in the numerous capacities in which he served the Church before his elevation to the episcopate at the early age of forty; but the way in which he discharged the higher functions in times of unusual difficulty attracted universal attention. It was not merely that he was an active and eloquent prelate displaying in a larger sphere the gifts of language and the grasp of business details which had brought him to the front at Winchester and Westminster. He quickly showed that he possessed administrative powers of the highest order, and was determined to employ them in making his diocese of Oxford the model diocese of England. This he did, first of all by setting an example of untiring zeal to his clergy, and then by attaching them to himself by the bond of sympathy, and, through his rare insight into character, finding for each

the most fitting field for the exercise of his special talent. Whether the title "great" is to be conceded to such a man is perhaps an open question, but it must be allowed on all sides that no prelate has left so distinct a mark upon the Church in recent times, and that the void created by his death still remains unfilled. CHARLES J. ROBINSON.

Disguises: a Drama. By Augusta Webster. (C. Kegan Paul & Co.)

Rhymes and Legends. By Mrs. Acton Tindal. With a Prefatory Memoir. (R. Bentley & Son.)

To succeed in writing a genuine drama is, it would seem, one of the impossible things. Before Mr. Wills had his poetic dramas acted, there was a somewhat settled opinion that anything endurable by a sufficient, and sufficiently numerous, audience could not be done by a modern hand. This aphorism of criticism has had, like other articles of belief, gallant attacks upon it lately. Mr. Gilbert's fairy legendry and allegorical realism were most promising movements towards sweeping away the charge of impotence from our drama. With these two gentlemen at work, the matter looked the more hopeful, because they were in actual, practical connexion with the theatre. It may be amusing and helpful for their writers to make dramas or dramatic poems for the study; to those whose feet are grounded on fact a drama is nothing if it cannot be acted. It is, perhaps, for this reason of insufficient acquaintance with the boards that Mr. Tennyson in his dramas has failed to do anything effective.

Again, the feeling that there is a forlorn hope to be volunteered about grows on the most sanguine; and it is with interest one meets in the field so good a writer of verse as Mrs. Webster. That she has succeeded where so many have gone wrong it would be pleasant to be able to affirm. Perhaps the highest word for *Disguises* might be to say that it has enough life in it to interest a small, somewhat cultivated audience. There is no humour in it; there is a want of firmness in the plot, though it is worked out consistently; but the great want is that of dramatic passion. Fine sentences of the sententious kind occur ever and anon, but there is none of the fire that catches as it burns and burns as it catches. It is true that there is always much of this that is the proper province of the actor, but he cannot assume the thing of which he gets no hint. This drama has the pastoral spirit, not the dramatic; and the interspersed lyrics, some of them of considerable beauty, only adds to this conviction. Some of the situations are so obscure that even a reader has to go backwards and forwards searching what they may fully mean. Now, drama being addressed, and properly, to the average intellect, it is bad art to play with situations, and vital ones, as if they were refined innuendoes, only to be discerned by the keenest, most cultivated wits. With all sympathy for requirements of sentiment and plot, no one who has sound judgment can admire what does not strike its aim. Mr. Irving, with the true perception that an artist often unconsciously has, put it down that the usefulness of the drama is, and has

always been, mainly for the many, and for those of like culture and progress with them. A dramatist who forgets this works in a corner, and cannot complain if he or she may be overlooked. But that it may be said "by book," is not the swoon of Gualhardine caused by too far-fetched or too little obvious a cause? And this is not a solitary instance. Mrs. Webster seems oftenest writing for the calm of a rather philosophic drawing-room. Her really wise and charming sayings, it is to be feared, would be lost even in the intellectual atmosphere of the London School Board if she should experiment there in such "unreasons" as she says are "fair ladies' eloquence." No doubt, she will "truck" there "for sober sense and use." In any case, she has the poetic experience to help her, that honour comes rather posthumously, if she find that the generous reformers in School Boards, as elsewhere, must wait for posterity for their full fame. So good a poet devoted to "sober sense and use" may be cause of regret to Bohemian *littérateurs*, who are wicked enough not to value public dignities before private skill.

But if we cannot allow that this drama is an addition to English dramatic successes, it is impossible to deny the thoughtfulness, the *finesse*, often to excessive quaintness, the culture, the literary skill, that appear throughout the volume. The translator of Greek plays, and a wide reader of the poets, Mrs. Webster shows marks of only too much sympathy with them. It is a real critical objection to her work, that she uses, as one example of several such, Dante's "forward foot" for the help of one of her characters; and in the scene of Aubrey with his mother, it is impossible to forget the similar one in *Hamlet*. It is a final test of true dramatic feeling if a dramatist allows even for a moment a memory of this kind to disturb his or her own special vision. No one caught up to the dramatic heaven can possibly be an imitator. Some of the words this lady manufactures are also tests of her dramatic weakness. Who could enjoy as expressive such words as "asquawk," "painsfully"? These do not come but of the study, and they are not its best products. Her use of the word "foul" is objectionable exceedingly. To say that *Disguises* can be read a second time with much more pleasure than the first is a just tribute to the literary ability of its author, who has already gained an honourable place among present writers; but this is hardly a testimony to its dramatic power. It has all the nature of a study: the paleness, the correctness, the over-nicety, and the mosaic of memories of other writers. This is not the field where Mrs. Webster's undoubted powers can get their fullest exercise, and it is to be hoped she will find time to "tell" some other "thesis" yet which may fulfil her fine promise of several years ago. Of *Disguises* she has no need to be ashamed or the opposite. Its good bits could be picked out by hundreds, but these do not make a true play, however numerous. To quote from a drama would be the poorest of all compliments to its artistic unity.

About Mrs. Tindal's *Rhymes and Legends* the proverb *Nil de mortuis nisi bonum* warns us. It could be proved perhaps that this,

like most proverbs, ought to be read by contrary, the feelings of the living being the right and only subject of anxiety to criticism. Charming sympathy woman she must have been, and, in the circle of friends, of essential importance; but there is nothing in this volume of value to the world of art. It is a book of fine impressions, literary, moral, and religious; but there is no executive shape in any one poem of the book. It is full of generous thoughts and of most womanly aspirations after happiness for everyone in this and all other life, but they are such as prose can express better than rhyme. That the volume may be readable to very many so-called lovers of poetry need not be doubted. There is a wide world of readers who think that measure and sound and vagueness are the sole characteristics of poetry. The foam is foam; and it is fact, let it be remembered; and it has beauty, though not much reality: therefore, there should be no rash condemnation of things of this kind that may not have truly poetic form to preserve them from soon dying. Mrs. Tindal's friends may well be proud of their cultivated and refined relation. It is one thing to have such a memorial of her, no doubt a good one; it is another to demand the verdict from artists that this is genuine work in their department. "The Cry of the Oppressed" is the strongest piece in the volume, and it is nearly a piece of art. The muse that awakes at contemporary events, such as "The Hartley Colliery Accident," is not of the true quality. Excess of sympathy is as destructive of art as too little of it. Floating on the present, as on facts of the daily newspaper, is not the way of poets. Let, however, the chill, if beneficial, air of public criticism make Mrs. Acton Tindal's memory but the nearer and dearer to the friends who had the high privilege of her delicate and cultivated companionship.

The facts of the "Prefatory Memoir" are interesting, but the criticism is of the kind from which to be saved. T. SINCLAIR.

NEW NOVELS.

Lily of the Valley. By Mrs. Randolph. In 3 vols. (Hurst & Blackett.)

Edna: a Tale of the Babylonian Captivity. By Julian St. Clare. (Charing Cross Publishing Co.)

Hugh Heron, Oh. Oh.: an Oxford Novel. By the Rev. R. St. John Tyrwhitt. (Strahan & Co.)

Marie; or, Glimpses of Life in France. By Annie Raine Ellis. (Bell & Sons.)

IMITATING the sensible practice of certain stud-farms, Mrs. Randolph christens each of her literary offspring by the name of a species of the same genus. Such names should be perfectly arbitrary; the attempt to work into each book some desperate reference to its floral title is clearly a mistake. Being first in the field, she has naturally monopolised the wild flowers as the prettiest set of titles, but there remains no lack of specialities—the hothouse, for instance, or the kitchen garden—for even *Cauliflower* or *Onions*, if they only helped us to remember the author, would be better than the weak alliterations in vogue. It must, however, be owned that *Lily of the*

Valley justifies its name in its modest disproportion of flowers to leaves. There is really so little of it that we could easily have compressed it without loss into half a volume. But in fairness let us add that if we had then been challenged to expand it again without adding to it, we should utterly have failed in the art where Mrs. Randolph is supreme, for the literary Penelope who deludes the suitors with the semblance of activity and of daily progress, whose shuttle flies so deftly, but to so little purpose, is an artist essentially feminine. Since her last work, *Genista*, Mrs. Randolph has taken a false and fatal step, from the good old-fashioned improbability of incident to improbability of conduct—a distinction, by-the-way, which too many novelists ignore to their hurt. It is not the vagaries of fortune which offend the reader, so long as the worthy heroes and heroines do not tamper with her wheel; but when, on purpose to tempt Providence, their wisdom stoops now and then to folly, and their virtue to tricks, we dismiss with incredulous contempt, if not with a certain spiteful triumph, these pretentious personages who fall so far beneath our feet from heights so far above our heads. This Lily and her lover, for instance, owe the privilege of tragic experiences entirely to their persistent device of burning, losing, or forgetting addresses. After a two years' heartrending separation, due to these causes, during which Lily hides herself as a governess under a false name, and the artist resides in Italy—of course, insanely forbidding any letters to be forwarded—they meet by chance in Kensington Gardens, and arrange, not only a speedy marriage, but a new complication. "Here is my address," he says, at parting, "write to me every day. Ah, here! the only card I have. If I am run over going home there will be nothing to identify me, Lily; think of that!" Need we add that at the first crossing, absorbed in her departed vision, he heeds not the impending furniture van, and is carted off to the hospital with a fractured skull; or that Lily, on her side, contrives to lose the card before she gets home, where she is promptly turned into the streets on the undeniable charge of kissing a young gentleman in the public park; or that she is rescued in a fainting and famishing condition by a lady of rank, who turns out to be her own aunt; or that the lovers, severed as the poles for another volume, meet in the end, and regale one another with the usual tedious unravelling of their own misunderstandings? The main plot of the book is more unusual, if rather painful. A little girl, Lily Kinnaird, the child of an insane mother, is drowned on the voyage from India. By a mistake, her playfellow, Lily Dalrymple, is substituted for her, and handed over to an eccentric Mr. and Miss Kinnaird, who, dreading this hereditary insanity, bring her up in the cloistered seclusion of their walled park, within which no word of love, spoken, written, or printed, is allowed to intrude—at least, until a lover chooses to creep in by a wicket gate, and prove in a single interview that "stone walls do not a prison make." The subject of the first volume is therefore much the same as that of the *Golden Butterfly*; but the treatment, if inferior in vigour and originality, is far more adequate to the

theme, both in delicacy of sentiment and grace of expression. Indeed, it is not for the first time that we felicitate Mrs. Randolph upon her style, which is so even and harmonious that even this new work, poor as it is in matter, will be read with satisfaction.

Of *Edna* we do not pretend to have read much more than the Preface, where the author hints that, the newspapers having been exercised a good deal lately about the "fertile plains of the Mesopotamian Valley," he has lost no time in striking while the iron is hot. That there exists a public which can grasp the connexion between the Decree of Cyrus and the late Turkish Convention is painfully clear, as the work has reached its third edition. No doubt, as the author observes, "the revered men of this period were indeed—to borrow the words of a great authority—men of like passions with ourselves;" but we were hardly prepared to find their speech at once so like and so unlike our own. The soliloquies, for instance, of "that strangely composite priest Assur" recal the less lucid moments of Jean Paul rather than of Nebuchadnezzar. The descriptions are naturally of that voluptuous exuberance peculiar to the Scriptural novel; Belshazzar's feast might indeed have been painted by a guilty guest at that "pandemonial orgie" (*sic*), or by one of the dancing girls—"not mere balli [*sic*] dancers, but educated ladies who held a high place in Egyptian society, who coupled with their terpsichorean accomplishment," &c. These pages, rich in absurdity, are headed by a fair frontispiece, in which their whole scope and character are presented, as it were, under a type or symbol. This is inscribed "The Temple of Baal or Tower of Babel." This fabric, so stupendous, so airy, so fantastic—in short, so Babylonish—merits a word of description. Its architect—whether Nimrod or Nebuchadnezzar matters not—has adopted a style which we may call Prophetic Eclecticism. The base of the structure, whose main outline is that of a Burmese pagoda, is borrowed from the Coliseum; upon this inclined arcades of a Tay Bridge character form a series of *perrons*, a neat little Queen Anne residence adorning each intersection. Higher up more Tay Bridge, winding in a vast spiral dotted with small objects, apparently railway trains, if they are not more Queen Anne houses. Still higher frowns the Castle of St. Angelo, enriched with good Romanesque work, supporting at about the height of Snowdon the familiar buttresses and pinnacles of Mont St. Michel. We must not forget the front door—an arch of Titus flanked by two of Cleopatra's needles—nor the handsome Italian belvederes on the second floor. In the foreground lies Babylon the Great, represented by two Hottentot huts of the inverted pudding-basin form, whence issue goodly Babylonians—among whom we fail to identify the Pope—who point with pride, as well they may, to their religious edifices. This Babel of Styles as well as of Tongues is a really ingenious contribution both to the theory and history of art.

We cannot but regret the form in which Mr. Tyrwhitt has written his reminiscences of Oxford. As these, he tells us, "extend over more than thirty years, various anachron-

isms have been indulged in, which are retained, to exercise the ingenuity or the memory of old Oxford men." But as the book will be popularly accepted as a picture of the Oxford of some particular date within that period, if not of the present day, we are bound to observe that, though each scene may have been true of its own day, the university life which they depict as a whole is one which never has, and never could have, existed. To crowd into the three years' career of *Hugh Heron* all the movements of event and of thought at Oxford in which Mr. Tyrwhitt has taken part is as reasonable as to combine the whole of English history in a fancy sketch of the present reign. His long experience, varied recollections, and strongly marked views would, we think, have fully entitled him to attention without the ensnaring aid of fiction. Some excellent things he says excellently, when he is quite serious and much in earnest; and upon the aim and method of the university as a training place for barbarians we must own ourselves personally among the minority who share his views. The great defect of the book is, however, the free use of Oxford and sporting slang of various periods. It may be unreasonable, but it is surely only natural, to be shocked at the slang in use before our own days. The jargon of Miss Burney's horsey young men, or of Verdant Green's set, was no doubt admired in its day as sharp and genteel, but we can hardly realise the fact now if we try. Those, however, who protest the most sincerely against Mr. Tyrwhitt's form and style will, we feel sure, be those who will at the same time do fullest justice to his genuine enthusiasm, ripe culture, and generous love for and striving after all that is best.

Marie is only one of Bell's Reading Books for Schools, but it deserves more than a passing notice among the schoolbooks. Children will indeed learn more about French life from it than from a library of geography and history; but it requires a grown-up taste satiated by modern fiction to appreciate fully this homely and unvarnished chronicle. *Marie* is an average respectable servant-maid of the old school, who attends a middle-class master and mistress during a sojourn in France, where she uses her eyes well, and notes down facts and impressions with a freshness and simplicity which are altogether charming. If the book be not an autobiography, or at least taken down *verbatim* from Mary's lips, the authoress has shown marvellous art in catching the blunt, steady, observant, and shrewd tone of the capable maid-servant. We shall hope to find out the truth upon this not unimportant point. If there were space a few passages of true English humour might be quoted. The old aunt is excellent, who insists on taking her pet donkey upon the tour, and, finding that travelling does not suit him, stays on the way at Havre till his death, tending his infirmities, and playing cards with her landlady. Mr. Lalor, the genteel Irishman, riding his favourite mare through France, a sort of knight-errant warring with *douaniers* and hotel keepers, is also capital. The descriptions of the towns, too, remind us more forcibly of the places than anything we have

read elsewhere. Those who agree with our reasons for liking this little book are sure to like it excessively; those who are not content with prosaic simplicity, however truthful, will call it poor stuff.

E. PURCELL.

RECENT VERSE.

Hine Moa, the Maori Maiden. By J. E. Ollivant. (Mowbray.) This is a poem of no great length, written in verse of the *Hawatha* brand, on the basis of a New Zealand legend. The extreme facility of the style has long caused it to drop out of favour with readers of poetry who care for something more than improvisation, but Mr. Ollivant will compare not unfavourably with most of Longfellow's followers. He has, moreover, given his book an additional interest and value by joining to his verse copious notes and appendices on what Col. Haymerle would call *Res Novo-Zelandicæ*, the fast disappearing fauna, flora, customs, &c., of the Archipelago. A short time may thus be spent on the book with more pleasure and profit than on most volumes of minor verse.

Original Readings. By R. Henry. (Newman and Co.) These readings deserve the praise given to them in a short recommendatory epistle given to them by Mrs. Stirling, who has been, we are told, among the readers. They are not entirely verse, though the majority are. Some of these latter, perhaps most of them, are of the domestic affection kind, which is supposed to be effective at readings, and hardly claim to be treated as literature. A very effective medley of prose and verse, entitled "St. Valentine," seems to have been written for Mrs. Stirling, and most people can guess how admirably that accomplished artist would counterfeit Miss Lucretia. A little scene called "Fast Friends," with two personages only, might be made very good in a drawing-room, and so might the comedietta of "Lady Helps." Altogether, Mr. Henry would seem to possess considerable ability for this sort of work, and might, we should think, aspire to something better in the way of dramatic or semi-dramatic composition.

The Syrens, and other Poems. By Mary Ann Jevons. (W. Kent and Co.) This is a very small book of verses which seem to have been composed at very long intervals. With so much breathing-time Mrs. Jevons might perhaps have turned out something a little more *soigné*. For instance, let us take her first poem's first stanza:—

"Look down—far downward. Are not these the
syrens?
Do not their white arms gleam?
Here wavering sunbeams light the depths of
ocean
Like some sweet doubtful dream."

It must be clear that a single rhyme is not sufficient for so long a stanza, and that the ear distinctly demands another in the first and third lines. Similar "ungirtness" is manifest elsewhere, while the novelty and beauty of the thought are seldom sufficient to compensate for the lack of precision and elegance in the form.

William of Normandy: a Play, and Poems. By Robert Mitchell. (Effingham Wilson.) Mr. Mitchell's work is of a kind not very easy to criticise. It is careful enough in design and execution, and has a certain old-fashioned plainness of diction which is not altogether unattractive after the "intensities" and affectations of the day. Some of the "Crimean Sonnets" which close the book and mark the date of at least part of its composition are by no means unworthy perusal. But, on the whole, the book must be pronounced against when the one infallible test, the question, Has this, or has it not, distinctness of savour? is

applied to it. "William of Normandy," we may mention, is a long and elaborate play with an extensive list of characters, and testifies to much diligent reading of Shakspeare and other standard dramatists on the part of its author.

The Juvenile Poems of Joseph S. Fletcher. (Published by subscription.) There is an oddity in the title of this little book which will strike most readers. The "Juvenile Poems" of A. B. is a title generally adopted by A. B. when he has written poems that are not juvenile and wishes to mark the distinction. Mr. Joseph Fletcher, it appears, has not reached the age of seventeen yet, and he would therefore seem to have taken time rather by the forelock in this designation of part i. before part ii. has come into being. Regarded as exercises, these *juvenilia* are not unworthy some attention, principally because the models upon which they are *calqués* are good models in themselves and not often studied nowadays. Mr. Fletcher has chosen Milton and Byron as his great exemplars, and in part his themes also. His work is as yet purely imitative, but it displays a certain amount of literary skill.

The Pirate Ship, &c. By David Blyth. (Edinburgh: Edmonston.) In point of composition this is rather an odd book. Forty years ago, it seems, there died at Dundee a certain David Blyth, who came of "kenned folk" in the metropolis of jute, and was for most of his short life—he died at the age of twenty-eight—a sailor in the merchant service. David left certain MS. poems, and these lead the van in this book. But other members of the Blyth family have, it seems, since been made poetical by the gods, and a selection of their work forms an Appendix which is not the least bulky portion of the book. David's poems are written in the literary English of the early part of this century; the others mostly, though not wholly, in Scotch. "The Pirate Ship" manifests a certain literary capacity, and here and there are some strong lines. This quatrain of "Advice to a Critic," for instance, is not contemptible either as verse or sense:—

"Give the advantage of thy better taste
To mend what's badly done or done in haste;
Commend with pleasure, but condemn with pain,
Faults may be mended if we try again."

The volume as a whole must be said to be likely to be of greater interest to persons of the name of Blyth than to outsiders, but it certainly manifests a good standard of ability and culture in the family which produced it.

Wet Days. By A. Farmer. (C. Kegan Paul and Co.) It is not surprising that any farmer nowadays should be in a bad temper, and that a farmer who habitually, as the author of these poems tells us is his practice, indulges his muse on wet days only should take a gloomier view even than other agriculturists. We doubt, however, whether mere ill-temper is a specially poetical mood, and ill-temper, we fear we must say, is the prevailing characteristic of this book. The author seems to be, like the *Père Duchêne*, in a perennial rage. He is angry with the poets who write in cliques, with the critics who praise those poets, with the rector of the parish who does not come and see him often enough, with the tutor at Eton who, as he thinks, did not teach his young ideas to shoot twenty years ago, with Mr. Tennyson and Mr. Browning because they will not write what he considers songs. When he is not scolding he meditates in a melancholy manner upon various riddles of the painful earth. We should feel rather inclined to rechristen the book—"The Blues," by A. Grumbler. Yet this farmer is not devoid of some faculty of verse, and has a frequent nobility of thought. The following short poem, dealing with the well-

known privilege attached to the title of King-sale, is worth quoting:—

"Day yields to day in this calm place,
Years are but days that I retrace;
As yet no change they bring.
And here, life's furious battle over,
I, Courcy, lie, who once might cover
My head before a king.

"Still would I differ from the living,
If rinces were like honours giving
To men in fight who shine.
Since now few doff their hats for love
Of king below and God above,
I, Courcy, would doff mine."

THE *Poems* of the late William Frank Smith deserve the second edition in which they are now presented (Smith, Elder and Co.), accompanied by a short, but very interesting, memoir of the author by Dr. Pye Smith, and by a specimen of his more professional work in the shape of a lecture on medicine. Mr. W. F. Smith was one of those men in whose case it is, to use the vulgar phrase, a toss-up whether they settle down to literary or to professional pursuits. The profession of medicine finally won Mr. Smith, and kept him till his death, at the age of forty. But, at little more than twenty-nine, he produced a volume of poems which, with some additions and omissions, is here reprinted, and which was such as to leave traces in the memory of those who read it of a very different kind from those left, or not left, by the usual minor poetry of the usual minor poet. "The Cilician Pirates," a poem which, unless our memory deceives us, first appeared, with an illustration, in some periodical, is by no means Mr. Smith's best work, but it is among the most characteristic of its author's bent. That bent led him to produce vivid fantasy-pieces of the pictorial kind not altogether unlike those in which some of the later poets of France, and especially M. Leconte de Lisle, have excelled. The triad of poems, "The Believer," "The Thinker," "The Worker" (St. Bruno, Spinoza, and the alchemist Cornelius), are remarkable examples of the style, and, what is more, they are full of originality, though partially read students of poetry may here and there think that they detect an echo of Mr. Browning. The mystical pietism and religious melancholy of the "Saint Bruno" is particularly well rendered. As the merit of Mr. Smith's verse lies rather in the complete presentation of the several pieces than in any scattered beauties, he is not a very easy author to illustrate by quotation, but the following lines may perhaps not unfairly represent him. Even here, perhaps, the mutilation is hardly fair, for the whole poem, "The Idol," is a remarkable one. Yet in one respect Mr. Smith will gain, inasmuch as one terribly bad rhyme, "wars" and "laws," mars the earlier stanzas. The Idol muses over his deserted fane, and has already described its former magnificence:—

"The slowly rising sand
Hath reached my sceptred hand.
The cruel carrion birds have driven wholly
The Ibis half divine
And the crane from out my shrine;
But the jackal comes by night, and the scorpion
slowly

To my very lap hath crawled,
Unabashed and unappalled
By my solemn eyes, and there hath dared to hatch
her brood unholy.

"But the temple roof above
I watch the stars I love;
For a time they pass away, and in their room
Other constellations burn;
Yet in cycles they return
Through the void again benignantly to loom.
And in my stony ear
They whisper better cheer,
And solemnly and patiently I wait the change of
doom."

The last stanza well illustrates the strength and weakness of Mr. Smith's work. He is frequently deficient in attention to details of language, metre, rhythm, rhyme, and the like. But he is more than saved by the vigour, the freshness, and the poetical quality of his imagery and thought. A longer and steadier devotion to literature must have made him something more than a minor poet.

The Brook. By Sophia Lydia Walters. (C. Kegan Paul and Co.) No one capable of judging could mistake the merits of Miss Walters' "Dreamers' Sketch-book." But everyone capable of judging must have felt that the author was in great danger of being carried away by her own *copia verborum*. Her appearance so soon with a fresh volume of verse is therefore a sign of doubtful healthiness, and on opening *The Brook* the reader soon sees that his fears are justified. A stanza of Miss Walters own best expresses her attitude—

"I am so glad in wandering,
I cannot think—I only sing
Of life, of light, of everything,
And wonder what they mean."

This volume, like the former, is full of pretty and musical things. But, even more than the former, it is open to the charges of vagueness, diffuseness, and wordiness which not seldom loses sight of sense altogether. Miss Walters should impose upon herself an abstinence of at least a year from putting pen to paper.

Choice Poems and Lyrics. Edited by J. T. Ashby. (Relfe Bros.) This is a volume of school selections not worse, but perhaps rather better, than the generality of such things. To some of its critical remarks—for instance, to that which asserts that the present Lord Lytton is "one of the truest poets of the day"—exception may perhaps be taken. But the readers, or rather learners, for whom it is intended are not likely to pay very much attention to the criticism, and when they have learnt the text they will have stored their minds with no small proportion of the best things in English poetry.

NOTES AND NEWS.

THE *Annual Register* for the year 1879 will shortly be issued by Messrs. Rivington. With the present volume—the seventeenth of the new series—the *Annual Register* enters upon the 122nd year of its publication. This year is marked by the appointment of a new editor, and the new volume aims at preserving an absolutely impartial record of contemporary history compiled with more than ordinary care.

MESSRS. RIVINGTON will likewise shortly issue in two volumes a critical and devotional exposition of the *Collects of the Day*, by Dr. Goulburn, the Dean of Norwich; *Church Principles on the Basis of the Church Catechism*, for the Use of Teachers and the more Advanced Classes in Sunday and other Schools, by the Rev. Dr. Macbeth; and *Characteristics and Motives of the Christian Life*: being Ten Sermons preached in Manchester Cathedral, by the Rev. W. J. Knox Little.

SIX periodical publications are issued in Antananarivo, the capital of Madagascar. *Tény Sôa* ("Good Words") enjoys a circulation of 3,500 copies monthly; *Varytondràhan-Tantely* ("Rice mixed with Honey"), a bi-monthly sale of 3,000 copies, this periodical being illustrated with engravings from the *British Workman*; *Mpanolotsaina* ("The Counsellor"), 700 copies quarterly; *Sakàzan'ny Ankisymadincka* ("The Children's Friend"), 2,500 copies monthly; the *Antananarivo Annual* (in English), 700 copies annually; and the list is closed by the *Proceedings of the Malagasy Folk-Lore Society*, printed for private circulation.

THE American Spelling Reformers have started a journal, called the *Phonetic Teacher*, for discussing and disseminating their views, being apparently a new series of an older periodical of the same title. It is printed entirely in the alphabet of the American Spelling Reform Association, and will in future supersede the *Bulletins* of that body. The two numbers that have reached us contain articles on various points connected with spelling and pronunciation, a poem of Tennyson's, and other purely literary pieces. The journal seems likely to do good work in popularising the movement. It appears monthly, the publisher being T. R. Vickroy, 1117 North Twenty-fifth Street, St. Louis.

MISS BETHAM-EDWARDS' work, *Holidays in Eastern France*, an account of some months spent in the Jura, Franche-Comté, Seine-et-Marne, &c., is to be published in a French translation.

WE learn from the *Tablet* that the continuator of Baronius' *Annals*, Father Generoso Calenzio, the learned Oratorian engaged upon the continuation of Baronius' *Church History*, has already six folio volumes of MS. ready for the press. They cover a period of six years, and comprise part of the reigns of Sixtus V., Urban VII., Gregory XIV., and Innocent IX. They contain a great quantity of unpublished documents, including about two hundred briefs of Sixtus V. The times of Clement VIII. and of Leo XI. will occupy six other folio volumes. Father Calenzio is the author of the *Lives of Boniface VIII. and of Cardinal Baronius*; of the *Esame critico letterario delle Opere riguardanti la Storia del Concilio di Trento*, of the *Saggio di Storia del Concilio di Trento sotto Paolo III.*, and of the volume of *Documenti inediti e nuovi Lavori letterarii sul Concilio di Trento*.

MR. H. SCHÜTZ-WILSON is the author of the article on "Epplein von Gailingen" in the April number of the *Cornhill Magazine*.

THE number of applicants for tickets for M. Ernest Renan's Hibbert Lectures has been so great that, notwithstanding St. George's Hall will hold twice the number that the Chapter House would accommodate, there would be many hundred persons disappointed. Under these circumstances M. Renan has kindly consented to repeat each lecture on the morning of the days following those advertised, at eleven o'clock.

MESSRS. RIVINGTON have the following educational works just ready:—*Romeo and Juliet*, edited by the Rev. O. E. Moberly, M.A., forming a volume of the Bugby edition of Shakspeare's plays; and *A Practical Greek Method for Beginners*, based on a *Graduated Application of Grammar to Translation and Composition*, by F. Ritchie, M.A., and E. H. Moore, M.A., masters at the High School, Plymouth. The aim of the work, which is at once a grammar and exercise book, is to secure a uniform method of teaching grammar, and to afford abundant practice in inflections, &c., at the time the grammar is being learnt.

THE Commission of the Archives of the Ministry for Foreign Affairs met for the first time on March 17. The new regulations were discussed in the most liberal spirit. English readers will be glad to learn that free access to all documents was admitted in principle down to the fall of the First Empire (1814). Access to those of later date is to be subject to the approval of the Commission, which intends to use its right of refusal with the very greatest reserve. At the next sitting the preparation of the catalogue and the publication of documents will be considered.

THE Record Office has just issued a new volume of the *Croniques et Anciennes Histoires de la Grant Bretagne*, by Jean Waurin. We

need scarcely call attention to the merits of the new edition of this author, who is so valuable for the history of the fifteenth century. The edition published in France from 1858 to 1863 by the Society for the History of France is far surpassed by this of Mr. William Hardy. The latter more closely follows the only complete and important MS., which is in the National Library at Paris. It even gives the passages borrowed by Waurin from Monstrelet, Jean Lefevre of St.-Remy, and other authors. The new volume contains an account of the events which occurred between the years 1422 and 1443.

It is proposed to form in St. Petersburg a society to be called the Society of Lovers of Poetry. Its comprehensive scope will be the study of Russian and foreign poets, both ancient and modern, including also attention to the arts of music and the drama. The society will undertake the publication of selections and translations from the more remarkable productions of foreign poetical literature, and of essays on the genius of their authors.

A POSTHUMOUS volume of the late Prof. S. M. Solovieff's History of Russia, forming the twenty-ninth volume of this elaborate work and bringing the History down to the reign of Catherine II., will shortly be published.

MR. FURNIVALL is printing from two of the Hengwrt MSS. of Mr. Wm. W. E. Wynne, of Peniarth, a fifteenth-century hymn to the Virgin by a Welsh poet in ordinary English spelling, and a phonetic copy of it by another Welshman, showing the Welsh pronunciation. "We seene the bright queene with cunning," appears as "Wi sin dde bricht qwin wyth kwning," and "who wed such with a rich ring" as "hw wed syts with a ryts ring."

A CONTRAST to the Oberammergau Passion Play, which is to be performed again this season, is thus described by a well-known Shaksperian authority in a letter to a friend:—

"Years ago I saw a Passion Play in Spain which was sublimely national. After the Magi had presented their gifts to Mary, who was seated beside a pasteboard manger surrounded by pasteboard oxen with a great deal of genuine straw about, at the tinkle of a little bell ballet girls in short skirts and pink tights darted from the side scenes, and, pirouetting around the group, finally struck an attitude with their hands over the cradle, and their elevated toes pointing to the audience. When the curtain went down, there were vociferous calls for the actors, and Christ appeared, leading Joseph and Mary, and bowed his thanks. It was deeply religious to the people, and many women wept."

A NEW volume by M. Girard de Rialle, entitled *Les Temples de l'Afrique et de l'Amérique*, has just appeared in the "Bibliothèque Utile" published by Germer Baillière. The object of this series is to render the new school of scientific and historical studies popular in France.

THE *Nation* states that, in token of the centenary of Channing's birth, the Unitarian Association will issue a new edition of his Life, by his nephew, the Rev. W. H. Channing, compressing it into one volume. Roberts Bros. also will publish *Reminiscences of Dr. Channing*, by Miss Elizabeth P. Peabody; another book about him by the Rev. Charles T. Brooks; and *Principles and Portraits*, by the Rev. Dr. Bartol.

A FAIRLY satisfactory Portuguese translation of Goethe's *Faust* has been made by a native of Funchal, Madeira.

IN view of the approaching contest for the American Presidency, there has just been published by Messrs. Robert Clarke and Co., of Cincinnati, a compilation, by Florian Gianque, of all constitutional provisions and laws of the United States relating to elections, the elective franchise, citizenship, and the naturalisation of aliens.

M. LÉOPOLD DELISLE, Director of the National Library, will publish shortly with Messrs. Champion a new volume, entitled *Mélanges de Paléographie et de Bibliographie*. The points of scholarship handled in this miscellany are:—The Lyons Pentateuch, an uncial MS. of the sixth century; the St. Benigne papyrus at Dijon; the cartulary of Algare, Bishop of Coutances (about 1140); the book copied about 1250 at St.-Denis; the first works printed at Angoulême in the fifteenth century. An atlas with *photogravures* will render the work one of much value for the study of palaeography at these several dates.

THE *Revue Critique* states that F. Ingold, of the Oratory, will shortly publish an *Essai de Bibliographie Oratorienne*, and a work on *Le Jansénisme de l'Oratoire*.

M. TURQUET proposes to publish a *Revue des Sociétés des Beaux-Arts* on the plan of the *Revue des Sociétés Savantes*.

THE 150th anniversary of the foundation of the city of Baltimore is to be duly celebrated. Beside a public dinner (without which no celebration appears to be complete), the Maryland Historical Society recommend that a series of papers be prepared for publication by competent writers to illustrate the history of the city in every important particular from the date of its original settlement to the present time.

ON Tuesday next, April 6, Prof. Huxley will give the first of a course of two lectures at the Royal Institution on "Dogs and the Problems connected with them;" on Thursday, April 8, Prof. Tyndall will give the first of a course of six lectures on "Light as a Mode of Motion;" on Friday evening, April 9, Prof. Huxley will give a discourse on "The Coming of Age of the 'Origin of Species';" and on Saturday, April 10, Mr. James Sully will give the first of a course of three lectures on "Art and Vision."

UNDER the title of "The Household Library of Exposition," Messrs. Macniven and Wallace, of Edinburgh, propose to issue a series of volumes containing expository lectures on short books and connected passages of the Bible. The object is to place within the hands of the general public the best results of Biblical study, expressed in a fresh and readable form, and with direct Evangelical application. The volumes, which will appear at intervals, will be written by representatives of various Evangelical Churches. With the exception of two or three copyright reprints from periodicals, they will be entirely new.

"W. M." writes:—

"A paragraph in your current issue relating to our much neglected poet Philip Massinger reminds me of a correspondence which passed between the late Lieut.-Col. Cunningham and the present writer in 1869, when we interchanged opinions respecting certain doubtful passages in the received text of the dramatist in question. These rough notes I have still by me, and would be happy to place them at the disposal of any scholar who might think fit to re-edit Massinger's plays. Your reviewer says: 'A MS. sold in 1759 ought to be traceable now;' but what of the MS. of *Believe as you List*, a reprint of which appeared in 1848, and of which nothing whatever has been heard since—at least so far as I can learn? Lieut.-Col. Cunningham says in a letter now before me: 'I have found out too late [for his edition then published] that among the MSS. bequeathed to the British Museum by John Wilson Croker there is yet another play of Massinger's—the *Philippo and Hippolyta*.' I have not been able, personally, to search for this missing work; but a friend who asked the library officials for tidings respecting it was told that they knew nothing of it. It may possibly exist in the Croker collection under some other title; at any rate, it is worth the looking for. William Gifford's notes on Massinger are fine examples of how to lash vanity, ignorance, and folly; but there is room for a reprint of these excellent dramas the annotations in which shall contain more information and less invective."

WE are requested to state that applications for prospectuses and tickets for Mr. Newton's Lectures on Greek Art should be addressed, not to Prof. Goodwin, but to the Secretary, University College, Gower Street, W.O.

MAGAZINES AND REVIEWS.

Macmillan's Magazine prints Mr. Freeman's address delivered in August last to the Archaeological Institute at Taunton, on "The Shire and the Ga;" it is really concerned with a subject familiar to Mr. Freeman's readers—viz., the reason why it is wrong to use the form *Somersetshire*. The Bishop of Carlisle gives a few pleasant reminiscences of the late Prof. Sedgwick, chiefest among which is the erudition and enthusiasm which he poured forth to save the old name of the chapel of Cowgill from being turned by the Ecclesiastical Commissioners into the awful form of *Kirkhwaite*; he actually succeeded in procuring a remedy for his grievance by an Act of Parliament. Mr. Bence Jones gives his experiences as an Irish landlord, which are more cheerful than the general accounts with which we are too familiar. The most interesting article is one on "Backsheesh," which gives a picture of Turkish administration, and suggests the dimensions of the task of reform which we have undertaken. The writer gives his experiences in obtaining from the Sultan a commercial concession for an English company; it took him nearly a year and a-half, spent in constant intriguing with officials, and cost in backsheesh £20,000.

THE *Cornhill* contains an article on "Illusions of Memory," which is thoroughly interesting, and a happy example of scientific thought turned to popular uses. The story of "White Wings" goes on its slow way, the charm of it consisting, at least in the present number, in the straightforward shrewdness of the utterances of the Laird, who, though perhaps not so much individual as typical, is in some sense another character added to fiction. A new tale, "Mrs. Austin," is begun. It is written pleasantly, in quiet English, but it will be difficult for the reader to feel quite the sympathy which the writer seems to do with the fascination of an ingenuous youth of two-and-twenty by a mature widow of about thirty-seven. The reader may think that the youth was not particularly healthy in preferring this very accomplished person to his earlier friend, Tiny Vivian, who was simple, lithe, and eighteen. The preferences of novelists are interesting subjects of study, but perhaps it is too early to come to any conclusion on those of the distinctly clever writer who is giving us "Mrs. Austin." The talk is bright as well as natural.

Revue de Droit International. The third and fourth numbers of this periodical are of more than usual interest, inasmuch as they deal with several questions of international law which are not theoretical but are embodied in public treaties, and of which the treatment by the writers is essentially practical. The Congress of Berlin, for instance, is treated by Prof. Bluntschli in the fourth number with a largeness of view and a scientific grasp of the subject worthy of the reputation of the chair which he occupies in the University of Heidelberg. The professor concludes his paper by declaring the treaty which has resulted from the deliberations of the Congress of Berlin to be a charter of liberty for all religious confessions, and to affirm the principle that the freedom of religious worship is an essential condition for the admission of any new State into membership with the European family. Prof. M. F. Martens, of the University of St. Petersburg, in a very able paper in the third number has delineated with great skill and moderation, from the Russian point of view, the

relations between Russia and England in Central Asia, and he advocates the common action of the two Powers in the work of civilisation, their mission to civilise the half-savage populations of Central Asia being, according to his conviction, no chimera, but, on the contrary, a real fact and a task worthy of their combined efforts. Mr. Westlake, Q.C., in a subsequent paper in the fourth number, avows his complete accord with Prof. F. Martens in his view that a sincere agreement between Russia and England in a common Eastern policy is most desirable, and that this can best be brought about by the establishment of a common frontier. He rejects altogether, in common with Prof. Martens, the system of "buffer States" (*pays buffers*)—in other words, of small States interposed between great States in order to prevent any collision of the great States with one another; but he joins issue with the professor as regards the charge advanced by him against the British Government of a violation of faith towards Russia in the matter of Mr. Douglas Forsyth's communications at St. Petersburg with Prince Gortshakow. Both papers will well repay perusal by those who take an interest in the complications of Eastern diplomacy. M. Engelhart, late representative of France on the European Commission of the Danube, communicates a paper on the free navigation of the great rivers of Europe as provided for under the Treaty of Vienna of 1815 and the Treaty of Paris of 1856. His paper is intended to form a chapter of a greater work on the subject of the Liberty of River Navigation, and it raises several points which look as if they cast before them the shadow of coming difficulties. An interesting paper on Swiss legislation concerning the penalty of death for crime is furnished by Advocate Alfred Martin, of Geneva, from which it appears that the recent legislation of the Federal Council of Switzerland has repealed the article of the Federal Constitution by which the infliction of the penalty of death was altogether prohibited, and has enacted its prohibition in the case of political crime, leaving to the several States the option of free legislation in the case of other crimes. Prof. Bulmerincq, late of the University of Dorpat, has communicated a paper on the theory of maritime prize, which contains a very learned and comprehensive study of the subject to be submitted to the future consideration of the Institute of International Law. The proceedings of the last session of the Institute at Brussels, under the presidency of M. Rolin Jacquemyns, the Belgian Minister of the Interior, are briefly detailed, as well as those of the recent Conference of the Association for the Reform and Codification of the Law of Nations held in the Guildhall of the City of London, under the presidency of Sir Robert Phillimore. Prof. Fiore, of the University of Turin, has contributed an historical outline of the recent legislation of various European States for the punishment of crimes committed by their subjects in foreign countries. Various other communications touching comparative legislation will be found in the two numbers of this periodical, coupled with a bibliography of new publications on law, showing that the Review under its new editor, Prof. Alphonse Rivier, of the University of Brussels, is losing nothing of its interest, while it is gaining in its usefulness to the statesman and the diplomatist.

OBITUARY.

It is nearly sixty years ago since *The Broad Stone of Honour*, the first work of Mr. Kenelm Henry Digby, came before the world. Its author was then an undergraduate at Trinity College, Cambridge, where he took his degree in 1823. It was eagerly welcomed at first, and has since

been frequently republished, the last reprint appearing in five volumes in 1876-77. *Morus* was published in 1826; and *Mores Catholici*; or, *Ages of Faith*, in 1831. The popularity of the latter work extended to the New World, an American edition being issued at Cincinnati in 1841. Another work from his pen, entitled *Compitum: a Meeting of the Ways at the Catholic Church*, was published anonymously in 1848, and honoured with a second edition in 1851. These were his best-known labours in literature, but at various times since that year he has gratified his admirers with some delightful volumes of poetry. Mr. Digby was the youngest son of the Very Rev. William Digby, a dean of the then Established Church of Ireland, but at an early age allied himself with the popular religion of his native land. All his writings were instinct with religious feeling; their morality was as pure as their English. He sympathised with the chivalrous sentiments of the noblest statesmen of the Elizabethan age, and succeeded in imparting his enthusiasm to some of the most eminent teachers of the last and present generation. His death took place on the 22nd ult., at a venerable age, for he was born in the first year of this century.

THE recent death at St. Petersburg of G. N. Gennadi, a well-known Russian writer on bibliographical subjects, is announced. He was the author of a *Literature of Russian Bibliography*, and compiled catalogues of anonymous and rare books and of works on architecture existing in the Russian language. He also published a collection of erotic poems, and edited the second edition of Pushkin's works. His most considerable undertaking—the *Dictionary of Russian Men of Science and Authors*—he has not lived to complete. Two volumes only, ending with the letter M, have appeared. M. Gennadi was also a frequent contributor to Russian periodical literature.

THE death is also announced of Mr. Charles Winchester, translator of the *Memoirs of the Chevalier de Johnstone*; of Herr Hellmuth von Kiesenwetter, the distinguished entomologist; of Dr. Sneller van Vollenhoven, author of the *Faune Entomologique des Indes Orientales*; and of Dr. W. Schimper, Director of the Strassburg Museum of Natural History and editor of the *Bryologia Europaea*.

CORRESPONDENCE.

MR. CONDER'S PROPOSED VISIT TO THE LAND OF THE HITTITES.

Edinburgh: March 24, 1880.

A notice having appeared in the *ACADEMY* stating that I am contemplating a visit to the land of the Hittites, I should feel obliged if you would insert these few lines.

Although a few friends, interested in this important question, have kindly agreed to assist me, no public appeal has been made in aid of this exploration, because I have not as yet asked leave of my superiors for the purpose, and I could not make any arrangements or pledges myself until such leave had been obtained.

The present disturbed state of Syria would render exploration almost impossible, and I do not therefore propose to ask permission to visit the country.

Should tranquillity be restored, and should the Adjutant-General think fit to give me the necessary permission, it is my hope to be able to undertake a very interesting exploration at some future opportunity.

CLAUDE R. CONDER, Lieut. R.E.

MR. MARSH AND THE "EIKON BASILIKÉ."

South View, Bromley, Kent: March 29, 1880.

The statement relating to Mr. Marsh's discovery in last week's *ACADEMY* is incorrect in two important particulars. In the first place the prayer was long ago discovered by the late Mr. Bruce, and printed in full by him in his Preface to the volume of the Calendar of Domestic State Papers relating to 1631. In the second place, what Mr. Marsh has established is its very great resemblance, not to the second prayer in the *Eikon*, but to the second of the prayers used by Charles I. before his death, printed with some editions of the *Eikon*. This may be a fact of some importance, but the paragraph in the *ACADEMY* conveys the impression that absolutely conclusive evidence of the authorship of the *Eikon* has been obtained, which is certainly not the case.

SAMUEL R. GARDINER.

A CORRECTION.

Aberdeen: March 30, 1880.

In the *Antiquary* for March the place of honour is occupied by a letter from King Charles I. to his son James, Duke of York, prefaced by the editor with the remark that it is "hitherto unpublished and unknown to historians." On reading this letter it occurred to me that I had seen it before, and on turning to p. 995 of Sanderson's *Complete History of the Life and Reign of King Charles from his Cradle to his Grave—London, 1658*, I found the letter printed almost verbatim as given in the *Antiquary*. The letter in Sanderson begins with the words "Charles Rex" and has the date at the end, and instead of the words "may be an objection," as in the *Antiquary*, it has "may be objected." Otherwise the two versions of the letter are verbatim the same. At p. 992 Sanderson says:—

"The King had made a suit to the Parliament to vouchsafe him the comfort of seeing his children (at Syon) as he passed towards Windsor, but was not admitted. He being now at Causam (the Lord Craven's house) made his case known to the

General, who resents it so much that he writes to the Speaker of the Commons House and the same to the Lords. And answered the Parliament's exceptions because the Duke of Richmond and two of the King's Chaplains had access to him."

Then follows Fairfax's letter to the Commons, and Sanderson proceeds:—"In the letter to the House of Peers, which is the same with this to the Commons, there was enclosed a Letter from his Majesty to his son the Duke of York." Then follows the letter in question, and Sanderson gives this further piece of information:—"And accordingly the King and they met at Maidstone, where they dined together, went with the King to Casam, and there stayed two days and returned."

ALEXANDER KEMLO.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, April 5, 5 p.m.** Royal Institution: General Monthly Meeting.
 7 p.m. Lectures: "Observations on the Graduation of Mortality Tables, with Special Reference to the Conditions under which Certain Methods are to be Preferred," by James Sorley.
 8 p.m. Society of Arts: "Decoration and Furniture of Town Houses," I., by R. W. Edis.
 8 p.m. Victoria Institute: "The Nature of Life," by Prof. H. A. Nicholson.
 8 p.m. British Architects.
TUESDAY, April 6, 3 p.m. Royal Institution: "Dogs and the Problems connected with them," by Prof. T. H. Huxley.
 8 p.m. Society of Arts: "Art in Japan," by O. Pfundner.
 8 p.m. Civil Engineers: Discussion on "Explosive Agents applied to Industrial Purposes."
 8 p.m. Photographic.

SATURDAY, April 10, 3 p.m. Royal Institution: "Art and Vision," by Jas. Sully.
 3 p.m. Physical.
 3.45 p.m. Botanic.

SCIENCE.

A Treatise on the Mathematical Theory of the Motion of Fluids. By Horace Lamb, M.A., formerly Fellow and Assistant Tutor of Trinity College, Cambridge; Professor of Mathematics in the University of Adelaide. (Cambridge University Press.)

THE mathematical theory of the motion of fluids, treated as perfectly frictionless, is at the present time in a most interesting stage, every fresh problem solved constituting a distinct advance of our knowledge, while, at the same time, a number of important problems must be attacked before much real progress can be made.

In the first chapter of the present work the general equations of motion are estab-

lished, and the distinction between the so-called "Eulerian" and "Lagrangian" methods carefully explained. Weber's transformation of the equations to a system of the first order and second degree is here introduced for the first time into a text-book. The author, following the English custom, employs the letter d to denote partial differentiation and uses δ for *particle* differentiation, where we follow a particle of fluid and investigate its rate of change. This is the opposite of the Continental notation, where δ is employed to denote partial differentiation; it is advisable that uniformity in this matter should be introduced.

As a matter of terminology, also, the author reverses the distinction between the definitions of "lines of flow" and "stream lines" as laid down in Clifford's *Kinematic* (p. 199). A "line of flow" is such that the tangent is in the direction of the velocity at that point, while a stream line is the actual path of a particle. It is only in the case of steady motion that a line of flow and a stream line coincide.

The equation of continuity and the general equations of motion are established both ways, called by Maxwell respectively the "flux" method and the "force" method, in the first of which we consider what takes place at a fixed point of space, and in the second of which we follow the motion of a particle; the first method being most appropriate to the Eulerian, and the second to the Lagrangian, system of co-ordinates.

The author is to be congratulated on being the first to omit all reference to d'Alembert's principle. He deduces the equations of motion immediately from Newton's laws of motion, without introducing the confusing idea of the fictitious "effective forces."

In chap. ii. the equations of motion are integrated on the supposition that a potential and velocity function exist, and several interesting problems are discussed.

In the next edition it would be advisable for the present articles 26, 27, and 38 to be placed together, so as to bring out the precise "analytical," "kinematical," and "physical" distinctions between the cases contemplated, and to discuss with greater fullness the contradistinction between "rotational" and "irrotational" motion, and the manner in which they may be created.

The author is also to be congratulated on giving (in chap. iii.) due importance to Green's theorem and its application to the analysis of hydrodynamics. What Sir W. Thomson says of the kindred subjects of electricity and magnetism may equally well be said of hydrodynamics, that the analysis of Green's theorem "suggests to the mathematician the simplest and most powerful methods of dealing with problems which, if attacked by the mere force of the old analysis, must have remained for ever unsolved."

One would almost have expected that an author who has thus recognised the overwhelming importance of Green's theorem and analysis would of necessity have employed it from the beginning to establish the equations of motion, by considering what takes place within a given finite surface, and then, by means of Green's theorem, deduce the usual differential equations; and in this

way avoid the awkwardness of violating the fundamental precepts of the differential calculus, or at all events passing them over in silence. In the ordinary differential method the fundamental equations are established in a way that really requires the infinitesimal parallelepiped considered to have each of its dimensions, though infinitesimal, successively infinite compared with the other pairs and with the infinitesimal element of time.

In chap. iv. the author, after explaining the analytical methods of the use of the function of a complex, proceeds to apply it to numerous interesting examples of liquid motion in a plane; and among them we notice his own elegant solutions for the motion of an elliptic cylinder. The liquid surrounding the cylinder is supposed to reach to infinity, but a very slight modification will give the solution when the liquid is bounded by two confocal elliptic cylinders.

At the end of the chapter the author introduces the application of the complex variable to certain discontinuous problems of plane motion, first evolved by Helmholtz, and afterwards almost reduced to a direct method instead of an inverse one by Kirchhoff. The subject is at present in its infancy, and almost too subtle to be introduced to any but very advanced students.

In chap. v. we come to the chief problem of the subject, to determine the motion of one or more solid bodies in a fluid medium as affected by the presence of the medium.

The author here, for the first time, assigns the merit of the discovery of the motion of a liquid due to the motion of an ellipsoid in the direction of its axis to Green, and to Clebsch the merit of the extension to the case of any motion whatever of the ellipsoid. At present this constitutes the solitary example of the kind worked out completely by mathematicians. It is possible, however, easily to extend the theorems to the slightly more general case where the liquid is bounded by two confocal surfaces.

The electrostatic analogy employed by the author for determining the motion of an ellipsoid in liquid is unnecessary and misleading, inasmuch as many mathematicians have been led astray in attempting to apply the same principle to other bodies not bounded by surfaces of the second degree.

The general treatment of the cases of motion of bodies of various degrees of symmetry is, for so difficult a subject, very clearly put, and here the author has employed screw co-ordinates with great effect, as published by him in the *Proceedings* of the London Mathematical Society.

The expression in sec. 117, "reducible to a matter of quadratures," has an antique ring; the time has come when the solution of this and similar problems should be expressed by elliptic functions.

In chap. vii. vortex motion is considered, and here the physical analogy of the vector potential is really useful. The author follows Kirchhoff's treatment of the subject, but with improvements of his own, and gives a complete account of a branch that is likely to receive considerable developments in the next few years. Chap. vii. gives a short account, which may well be amplified in the next edition, of waves in liquids; the principal

novelty being the introduction of Bessel's functions to waves in a circular tank. Thomson's investigation of the free oscillations of an ocean follows; but the result for the longest period tacitly supposes that the central nucleus is fixed in space; if free to move, the period would be increased.

No mention is made of capillarity and its influence on wave motion, a very beautiful subject created by Sir W. Thomson and Lord Rayleigh.

Chap. viii., on waves in air, necessarily takes the same line as the corresponding chapters in Lord Rayleigh's *Sound*, especially in discussing Riemann's method; but the results of sec. 170, where from the initial motion the analytical expression of the motion at any subsequent time is given, appears for the first time in an English treatise. The few problems that have been hitherto solved when the viscosity of the fluid is taken into account constitute chap. ix. At the bottom of p. 228 the values of [f] and [h] should be interchanged, and corresponding corrections made in the remainder of the work.

In reading the Notes we find that the author has himself anticipated many of the criticisms we have made; these Notes, when embodied in the text in the next edition, will considerably lessen the difficulties of the beginner.

A list of memoirs and treatises on the subject and a short collection of typical examples finish the book.

A. G. GREENHILL.

TWO PHILOLOGICAL BOOKS.

Die Laute der Mundart von Greetsiel in Ostfriesland. Von J. Hobbing. (Emden.) This short sketch (of twenty-six pages) is one of the many proofs that have lately appeared of the revived interest of German philologists in accurate phonological analysis. The author says in his Preface that his essay was suggested by Sievers' well-known *Grundzüge der Lautphysiologie*. Like Winteler, he determines each sound by a minute physiological analysis, and abstains from comparing the sounds of other languages, "taught," as he says, "by my experience of others." Although we cannot but agree with the author that the construction of such independent and special systems as his own is the indispensable foundation of a sound general system, we cannot but think that a cautious comparison of the sounds of the best-known European languages, such as French and English, would have added greatly to the value of the work, even with occasional errors of detail. The German system of isolated investigation based entirely on a study of books (as Dr. Hobbing tells us is the case with himself), while escaping from the danger of superficial identifications of foreign with native sounds, renders any unity in the use of symbols impossible, and makes the results of each investigator mutually inaccessible. These defects will not be remedied till the universities of the different countries provide systematic training in practical phonetics for their own and foreign students. The dialect described is pure Low German, the original Frisian having become extinct. The slow and phlegmatic character of the people (the natural result of their chill and damp climate) is, as the writer well shows, clearly reflected in their language, most of whose characteristics, such as the feeble expiration, with the resulting poverty of tone, weakness of the hiss-consonants, and non-trilling

and loss of *r*, the unenergetic articulation of the lower jaw and lips, which dulls the vowel *i*, and gives a general mumbling character to the pronunciation, strikingly remind us of English. English also is the tendency to introduce vowel-murmurs before *r* and *l*, and to reduce dissyllables to monosyllables. The analysis of the sounds is extremely minute, and in many cases is quite sufficient to enable the reader to identify them with certainty. The writer upholds against Sievers the traditional division into vowels and consonants. The most imperfect is, as the writer confesses, the analysis of the vowels. Thus, he cannot find any articulative difference between some of his vowels of the first and second series, distinguishing such pairs as the narrow *e* and open *i*, &c., only by ear; many phoneticians still confuse them acoustically as well. In the consonants we may note the purely labial *w*, and the interesting assimilative influences of *r* and *j*.

Die laut- und flexionslehre der mittelkentischen Denkmäler. Von Otto Danker. (Strassburg: Trübner.) This inaugural doctor's dissertation, by a pupil of Prof. ten Brink's, is a very welcome contribution to Middle-English philology, as it gives for the first time an accurate survey of the phonology and inflections of the Kentish texts of the thirteenth and fourteenth centuries—the Sermons printed by Morris in his *Old-English Miscellany*; the poems of Shoreham, edited by Thomas Wright; and Dan Michel's *Ayenbite of Inwyrt*, by Morris. The author agrees with Matzner and Konrad (*Beiträge zur Erklärung des William von Shoreham*, Berlin, 1878) in considering the existing MS. of Shoreham's poems to be a slovenly copy in a different (though still southern) dialect. He has throughout compared the late old Kentish documents of the tenth century: the paraphrase of the fifty-first psalm, a hymn, and the glosses to the Proverbs of Solomon, published by Zupitza in the *Zeitschrift für deutsches Alterthum* (neue Folge, ix.). The best part of the work is the treatment of the inflections, which is full and clear, with references for each form, which are, however, difficult to verify, only the page being given. The author ought to have numbered the lines of the texts himself, or, at any rate, to have indicated in each case whether the reference is to the upper or lower half of the page. But it is to be hoped that in future all text-editors will number the lines in their books. He has, of course, utilised Morris's valuable grammatical introduction to the *Ayenbite*, but has considerably improved on it, as in the simplification of the scheme of declensions. The phonology is conscientious and generally accurate, though with occasional slips. What authority is there for an Old-English *nasu* (p. 5)? *Nosu* is the only existing form. *Fegere* (p. 9) is included under the mutation *-e*: it simply = Old-English *fægre*. The *e* of *gefan* (p. 10) is original West-Saxon *giefan*, *gyfan* being a special development, due to the influence of the guttural, as shown by Paul in his *Untersuchungen zur Geschichte des deutschen Vokalismus*, and should not be put on a level with *zeppre*, which probably comes from the late Old-English *syððan*, with the usual change of *y* to *e*. The treatment of the difficult *eas* and *gas* is not very clear. The author rejects Sweet's view of their having been diphthongs with the stress on the second elements, although he cites Shoreham's rhyme of *lyas* (= Old-English *leās*) on *was* (= *was*), and follows ten Brink. The conclusion apparently drawn from Shoreham's rhymes of *leste* (= *lestan*) on *preste* (= *preost*), &c., and the spelling *e*—viz., that all long *e*'s in middle Kentish had the close sound—seems improbable. It is safer to assume inaccurate rhymes in Shoreham's poems.

NOTES OF TRAVEL.

DURING the past year M. Miklukho-Maklai has been travelling among the islands in the west and north of Mikronesia, and he has forwarded to the Russian Geographical Society notes of his observations there which will one day form part of a great work he has in preparation on that region. When last heard from he was at a group to which he gives the name of the Ahomès Islands. On his first arrival he examined a large extent of the coastline without seeing any trace of habitations, but at last he met a native in a canoe in one of the channels, who undertook to be his guide and brought him to the chief hut of the island. Accustomed as he was to the appearance of the Papuans, he says the women were singularly ugly and enormously fat; while their dress consisted of a handful of leaves, and as a special ornament they trailed two long leaves behind them. They are tattooed above the elbow, the marks being somewhat graceful and regular, and differing considerably from the tattooing in the island of Tawi-Tawi. The hut referred to was a large one, being from forty to fifty feet long and twenty-five to thirty feet broad, and lighted by four doors; it was made of boughs, supported by strong posts in the middle, whence it is probable that trees are plentiful in the island. M. Miklukho-Maklai afterwards proceeded to the Ninigo group.

WE understand that a project is under consideration for training native explorers in Western Africa, and turning them to account in the interior, after the plan so successfully adopted by the late Col. T. G. Montgomerie with the native subordinates of the Great Trigonometrical Survey of India. If the idea should be carried out, the first exploration attempted by their agency would probably be that of the mysterious region in Central Africa where the Binué branch of the Niger and the River Shary, which empties into Lake Chad, are supposed to have their sources.

THE last mail from the Cape brings news that the Trek Boers have met with forcible resistance on the part of the natives of Ovampoland in their attempt to settle in the country to the south of the River Cunene.

THE exploration of the Sahara Desert with a view to the construction of a railway across it has now fairly begun, for we learn that Col. Flatters' expedition, to which we briefly referred on January 17, left Wargla on the 5th ult. on their southward march. In addition to the leader, the party comprises nine scientific officers and twelve French soldiers, beside numerous camel-drivers, chiefly belonging to the Chambeas tribe.

LETTERS received by the last Zanzibar mail state that Mr. E. C. Hore, of the London Missionary Society's station at Ujiji, was about to undertake a thorough examination of the shores of Lake Tanganyika, especially at the southern end.

SEÑOR MACHADO, Director of Public Works at Mozambique, in his project for developing communication with Lake Nyassa, proposes to make use of the navigable portions of the Zambesi and its affluents, and to overcome by short railways the difficulties presented by rapids, &c. He thinks that only 252 kilometres of railway in all would be required. Two lines would start from Chibisa, on the right bank of the Shiré near the Blantyre mission station, one going to Lake Nyassa and the other to Tete. The third would be used for surmounting the difficulties caused by Kebra-basa Rapids on the Lower Zambesi.

UNFAVOURABLE news has reached St. Petersburg respecting two important expeditions which have been vainly endeavouring to enter

Thibet from different quarters. An impression is prevalent, though at present only based on rumour, that some great disaster has befallen Col. Prejevalsky's expedition in its attempt to penetrate southwards from Tsaidam, and it is certainly now a very long time since we have had any authentic intelligence of his movements. The Austrian expedition of Count Szechenyi also appears to have met with another check. Their first attempt to reach Lob Nor and Thibet from North-Western China was frustrated by the opposition of the Governor-General of Kansu, and Count Szechenyi then resolved to make another trial from the west by following Capt. Gill's route to Bathang. In this he is said to have failed, presumably through the inveterate hostility of the Lamas to all Europeans, notwithstanding the strict orders given to the Chinese officials to afford him all facilities for advancing.

MM. PEYRUSSET AND D'INFREVILLE, two officers on the staff of the Governor of Saigon, have been despatched on an exploring expedition in Cochinchina to the north-west of Tay-ninh, in order to ascertain the feasibility of a plan for uniting that post with Phnum-penh by a railway, to be continued to Saigon, with a branch line to Hué.

A COMMITTEE of the United States Congress have recently reported favourably on a Bill authorising the establishment of a temporary station, at some point north of 81° N. lat., on or near the shore of Lady Franklin Bay, for purposes of scientific observation and exploration, and for the discovery of new whaling grounds. The Bill also authorises the President to accept the steamer *Gulnare* from Capt. H. W. Howgate, and to fit it out for the purposes of this expedition.

Primer of the Industrial Geography of Great Britain and Ireland. By J. Phillips Bevan. (Sonnenschein and Allen.) There can be no doubt that a knowledge of the industrial condition of various countries is of very great importance, more especially in a country dependent in so large a measure as is the United Kingdom upon the prosperity of its manufactures and commerce. In a handy volume of 108 pages Mr. Bevan has compressed a vast amount of information on these subjects. He deals with mining, manufactures, agriculture, means of transport, and commerce, and exhibits throughout his mastery of the topics dealt with. His little book is eminently readable, and we look forward with interest to the succeeding volumes of the same series, which are to afford us a similar insight into the industrial condition of foreign countries.

SCIENCE NOTES.

Italian Ethnology.—About six years ago the Italian Society of Anthropology and Ethnology, located at Florence under the presidency of Dr. P. Mantegazza, drew up a circular calling for statistical details on a variety of subjects connected with the ethnology of Italy. This circular was distributed throughout the kingdom, but out of the 8,300 communes to which it was addressed replies were obtained from only 540. These represent a population of about 3,200,000, or scarcely one-eighth of the entire population of the country. The mass of data obtained during this enquiry has been carefully studied by Dr. E. Raseri, who has lately published the results in the form of a memoir entitled *Materiali per l'Etnologia italiana*. This memoir has appeared in the *Annali di Statistica*, and is in course of publication in the *Archivio per l'Antropologia*. The early part of Dr. Raseri's work is occupied with statistics as to the height of the population. Then follows an enquiry into the age at which menstruation commences and ceases; and this

is succeeded by observations on the frequency of the pulse according to sex and condition of life. Information of a very interesting character is next supplied as to the nature and quantity of food consumed in various localities, with special reference to the alimentation of the poor. Another branch of enquiry related to the complexion, and to the colour of the hair and beard; to the occasional occurrence of red hair, and to the frequency of baldness. It is shown that, out of 3,217,536 Italians comprised in these statistics, there were only 111 albinos; or one albino to about every 29,000. Finally, the eyes of all the subjects were examined as to size, direction, and colour of iris; and their teeth, as to durability and prevalence of caries. Dr. Raseri's interesting monograph is accompanied by three plates—one showing graphically the law of bodily development enunciated by Dr. Liharzik, of Vienna; while the other plates illustrate the frequency of pulse in males and females at various ages.

WHILE Oxford and Cambridge still profess to be ignorant what the "endowment of research" means, the Birmingham Philosophical Society has already formulated a scheme with these obnoxious words at the head. It is proposed to institute a fund "for the purpose of assisting persons engaged in scientific investigations," and the first recipient of the honorary wage of £150 for three years is to be Mr. Gore, F.R.S. Birmingham is to be congratulated, not only upon the modest inauguration of such an important enterprise, but also upon having within its own limits so distinguished a representative of physical science.

PHILOLOGY NOTES.

Revue Egyptologique. No. 1. (Paris: Leroux.) This new and important publication is inaugurated under the joint direction of MM. Brugsch, Revillout, and Chabas. It is, in the words of the publisher's Preface, intended to embrace "all subjects relating to Egypt," and will be largely devoted to the reproduction and interpretation of hieroglyphic, hieratic, and Coptic texts. The first part consists of forty-eight pages quarto and four plates of lithographed facsimiles. It contains the beginnings of three papers, all of which are to be continued. The first, by M. Revillout, is entitled "Quelques Notes chronologiques sur l'Histoire des Lagides;" the other two, "Le Mot *Adon*" and "Le Lac Mareotis," are from the pen of Brugsch-Bey. M. Revillout, who has long made the Louvre collection of demotic deeds and contracts his especial study, takes for his subject a unique series of documents belonging to a family of hereditary Pastophori of Thebes, dating from the reign of the last Darius down to the twentieth year of Euergetes I.; and from this apparently arid and technical source he deduces a variety of interesting historical facts relating to the deification and cult of the Lagidae in Egypt. Thus he shows that the Ptolemies must have been but imperfectly acquainted with the religious doctrines of their Egyptian subjects; and that Ptolemy Philadelphus, in those very public acts by which he sought especially to identify himself with the custom and belief of his adopted country, committed, in fact, a series of egregious blunders. That one who wrote himself "son of Ptolemy" should, at the same time, have assumed the style and title of "Son of the Sun" was a distinct contradiction in terms; and that he should have hoped to fortify his claim to the solar line by exacting from the priesthood a vote of deification imitated from Greek usages was a sol-cism as ridiculous as it must have been offensive in the eyes of the hierarchy. What he did not understand was that every native Pharaoh was a deity by divine descent, and

that his style and title were solar and not local. Among other curious facts, M. Revillout also points out that Ptolemy Soter must either have lived for twenty years after the date assigned to him by historians, or that his name must have figured in royal protocols for twenty years after his decease. The word *Adon*, or *Aten* (rendered in Pierret's *Vocabulaire Hiéroglyphique* by "chief," "director," "commander"), has long been a source of difficulty in the interpretation of texts. Brugsch-Bey institutes an ingenious parallel between *Aten* and the ancient root *dub* or *debu*, whence come many derivations signifying exchange, substitution, &c., seeking thus to show, by a comparative analysis of various texts, that *Adon* must have been employed in the sense of lieutenant, deputy, and viceroy. The continuation of this article, as well as that of the monograph on Lake Mareotis (the name of which, derived from *Pi-mar* or *Pa-mar*, would seem to be pure Egyptian), promises to be full of interest. As regards paper, typography, and accuracy, the *Revue Egyptologique* leaves nothing to be desired. At the same time, it is perhaps to be regretted that the traditional quarto form should again have been adopted in a work of this class. Unhandy and liable to damage in parts, and unwieldy in volumes, it is a size that has nothing but its appearance to recommend it.

THE *Revue de Philologie* (vol. iv., livraison i.) opens with a very interesting discussion by Weil on the newly discovered fragments of Euripides, in which the writer controverts the theory of Cobet that the first fragment belonged not to an ordinary tragedy but to a drama of domestic life. Weil has also some remarks on the recent article of Blass on these fragments in the *Rheinisches Museum*. Jules Nicole ("Etudes sur les Archontes athéniens") contends against M. Fustel de Coulanges—(1) that the yearly archons before Solon were appointed not by lot but by election; (2) that the legislation of Solon did not interfere with this arrangement. The author promises to consider in another article the question of the date at which appointment by lot was introduced. E. Desjardins discusses the two Viviers inscriptions relative to L. Vestinus. Emile Chatelain ("Sur l'Anthologie latine") demonstrates by means of two letters addressed to Statius Achilleus, which he has discovered in the Vallicellian Library at Rome, that the poems printed 914-17 in Biese's Latin Anthology, and formerly attributed to Gallus, are no older than the sixteenth century. A paper discussing from a medical point of view Herodotus' account of the accident to Darius (iii. 129, 130) is contributed by Dr. J. Geoffroy. Havet has notes on words in the *Carmen Saliare*, Herwerden on Xenophon, and Harant on the position of the enclitics *que*, *ve*, and *ne* after short *e*. Thurot traces the history of the words *thesis* and *positio* in prosody. The short paper of Gaston Boissier, "A propos de l'Auditorium Maecenatis," is an interesting contribution to the history of recitation among the ancient Romans. An important collation of the Paris MS. (No. 6331) of Cicero's *De Finibus* is contributed by O. Nigoles, who shows the inadequacy of the collation used by Madvig; and a report on the Medicean (*M*) and Vatican (*R*) MSS. of Livy, intended as supplementary to the collations of Frigell, is given by O. Riemann. Graux has some valuable notes on questions of palaeography. The volume is concluded by a very useful "Bibliographical Bulletin," or brief notice of various philological works which appeared in 1879.

THE new volume of the *Transactions* of the Philological Society contains two very valuable papers on Swedish and Russian pronunciation by Mr. Sweet, the president's address last year, and a collation of the Durham Ritual, with notes and introduction by Prof. Skeat. The

president's address is largely occupied, as might be expected, with an account of the great work he has taken in hand, the editing of the new English dictionary. As yet the only letters or sections of letters that are in working order are F, K, parts of O and R, and parts of A, E, N, O, and U. Dr. Murray quotes several instances of the curious way in which the pronunciation of words may be affected by their spelling; thus *avantage* came to be written *advantage* on the supposition that it contained the Latin preposition *ad*, and the pronunciation adapted itself to the new spelling. A word, again, may have two origins; *castle*, for instance, combines *castellum* directly imported into Old English in its Vulgate sense of *village*, and *castel*, with its French sense of "fortress." Analogy has acted upon this department of language as it has upon all others; the final *ate* of words like *penetrate*, *create*, *terminate* is due to a confusion with the termination of words taken from Latin passive participles like *separate*, *institute*, *abstract*. The address further incorporates able articles on the dialects of Italy by Prof. Rajna, on the languages of the Caucasus by Prof. Schiefner, which derives a melancholy interest from the recent death of its author; on the mutual relationship of the Finnish and Lappish by Prof. Donner, who disputes the attempt of Budenz to separate Lapp from Finnish and include it among the South Ugrian idioms; and on the little-known Korean language by Mr. Cust. Mr. Sweet in his paper on Swedish has brought forward many interesting facts with regard to the grammar of the language as now spoken, not the least curious being the use of some substantive to denote the pronoun of the third person. He also notices that a chief "difficulty in acquiring a command of the Swedish prepositions lies in their peculiar specialisation of those various abstract relations which in English, French, and German, are all generally expressed by one preposition," the English "widow of," for example, being expressed in Swedish by "widow after," "inhabitants of" by "inhabitants in," and the like.

At the last meeting of the Anthropological Institute, a paper by Mr. V. Ball, M.A., F.G.S., on "Nicobarese Ideographs" was read. As the Andamanese may be said to have not progressed in civilisation beyond that stage which was represented by the people of the early Stone periods in Europe; so the Nicobarese, who are much less savage and degraded than their neighbours of the Andamans, may justly be compared with the people of the "Bronze period." The example of Nicobarese picture-writing described by the author was obtained in the year 1873 on the island of Koudul, where it was hanging in the house of a man who was said to have died a short time previously. It is now in the Museum of Science and Art at Dublin. The material of which it is made is either the glume of a bamboo or the spalthe of a palm which has been flattened out and framed with split bamboos. It is about three feet long by eighteen inches broad. The objects are painted with vermilion, their outlines being surrounded with punctures which allow the light to pass through. Suspended from the frame are some cocoanuts and fragments of hog's flesh. The figures of the sun, moon, and stars occupy prominent positions. Attention was directed to M. Maklai's description of a Papuan ideograph which symbolised the various guests present at a feast given in celebration of the launch of two large canoes (see *Nature*, vol. xxi., p. 227).

TRÜBNER'S *Record* states that the Dictionary of the Suahili Language, first compiled by the Rev. Dr. J. Ludwig Krapf and the Rev. J. Rebmann, the pioneers of missionary enterprise in Eastern Africa, during their residence as

Mombasa from 1844 onwards, and since considerably added to and thoroughly revised, it is now ready for press. It is proposed to publish it by subscription. Ki-suahili (i.e., the Suahili language) is the vernacular of the Wa-suahili, the inhabitants of the Eastern Coast of Africa. Suahili is derived from Arabic *sahel*, sea-beach, plural *sawahil*; the name thus distinguishing those who bear it from the dwellers in the higher country beginning at from ten to twenty miles from the sea-board. Dr. Krapf writes:—"The Ki-suahili language is spoken within twelve degrees of latitude from Barawa on the Somali coast near the Equator down to the Portuguese settlement of Mozambique in the South. It is also spoken on the East-African islands, Patta, Mombasa, Pemba, Zanzibar, &c. The Ki-suahili-speaking population may amount to one million of souls, being chiefly Mohammedans, who are generally upon good terms with their pagan neighbours inland. As the Ki-suahili is spoken all along the sea-board, it presents the key to the numberless dialects inland which are comprised in the great South-African family of languages, all of which are more or less related to each other, and spread over all South Africa from East to West. This being the case, we cannot help attaching great importance to the Ki-suahili idiom. Vigour, tendency to clearness, and other grammatical phenomena are peculiarities which must surprise a student of this language. The principle of *alliteration* or *euphonic concord* regulates the Ki-suahili as well as all the dialects of this great family of languages, which the author in his Vocabulary of the Wa-kuafi nation has called 'The Orphno-Hamitic' stock of languages, spoken by the brown-complexioned tribes of Africa, in contradistinction to the Nigro-Hamitic, or entirely black nations in Nigritia. The language, customs, and habits of the Orphno-Hamites show that an important future is, by divine wisdom, reserved to them."

In confirmation of Dr. Krapf's statements respecting the usefulness of Ki-suahili in the interior of Equatorial Africa, it may be mentioned that it is understood by the kings and chief men of the nations on the borders of the Victoria Nyanza; and it is through this medium that the missionaries of the Church Missionary Society have been able to hold free communication with Mtessa, King of Uganda, and Lukongeh, King of Ukerewe. Respecting the Dictionary itself, Dr. Krapf writes:—

"I may mention that there are about 11,000 ground words, the derivatives excluded. I have embodied in the book all words which I could find in the MSS. of my colleagues, Messrs. Rebmann and Erhardt. Also the valuable Vocabulary of Bishop Steere, at Zanzibar, has been made use of in many instances. But I have always given the name by adding the initial letters of those gentlemen, so as to avoid even the appearance of plagiarism. The words derived from the Arabic will be added at the end of the book, and also a small outline of the grammar of the Ki-suahili will be appended to the volume."

The Dictionary will comprise about eight hundred pages octavo.

In the *Revue Critique* M. Stanislas Guyard justly objects to the connexion of the name of the Magi with the word *imga*, which occurs in the inscriptions of Nebuchadnezzar as a title of the gods and kings. The connexion has been often maintained, and has lately been repeated by Dr. Justi. But while correcting this error, M. Guyard falls into another of his own. *Imga* has nothing to do with the Assyrian *emku*, "wise," as he supposes, but, as Dr. Hincks long ago pointed out, is an Accadian derivative formed from *im*, "brightness" or "glory," by the help of the suffix *ga*. It is one of a numerous class of words which show that M. Lenormant is right in maintaining the existence of this suffix in Accadian against Prof. Delitzsch. The Babylonian equivalent of *emku* would be written *e-im-gu*.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, March 19.)

DR. J. A. H. MURRAY, President, in the Chair.—The paper read was on "Quantity and Sentence-Stress in English," by H. Sweet. The following laws of quantity were stated:—(1) In every accented monosyllabic or final syllable either the vowel or consonant is long; (2) Short vowels are often lengthened before a single voice [consonant], as in *dog* (*doog*), contrasting with *stop* (*stopp*); (3) Short vowel + short consonant occurs only before an unaccented vowel, as in *hitter* (*hite*) from (*hät*), also in groups of words, as in *hit it* (*hitit*); (4) long vowels under these circumstances are partly shortened, as *tidy* contrasted with *tide*; (5) when words of class (3) are drawn, the unaccented vowel is lengthened, as in *what a pity!* (*pitii*). In treating of sentence-stress Mr. Sweet gave numerous instances of its use in marking grammatical distinctions and distinguishing the meanings of words which would otherwise be confounded.

FINE ART.

History and Mystery of Precious Stones. By William Jones, F.S.A. (R. Bentley & Son.)

Not only our own literature, but that of all the other vernacular languages of Europe, was until recently very poor on the subject of gems, their structure and history, and how from time to time they have been fashioned by the hand of man. Almost all that was of interest or value existed in a Latin garb only. The tide has, however, turned, and we have had many—perhaps, considering the quality of some of them, too many—books on precious stones and allied subjects. Mr. Jones has added an interesting volume to the store. If he had digested his materials thoroughly, and given exact references and an index, we should have been inclined to speak very highly of it. As it is, however, the facts and fictions recorded therein will have to be hunted up in other books, to which the author often gives no clue, before students can use them. As an amusing book for the drawing-room table it will take a reasonably high rank; but for other purposes, until improved in a new edition, it must be nearly valueless. Bright and shining minerals were no doubt among the first articles of ornament worn by our remote ancestors. It is probable—almost certain, we believe—that dress itself originated in a desire for display rather than in a craving for warmth. The instinct of all simple natures is to regard the beautiful as of more importance than the merely useful. Sparkling stones, we may be sure, were first collected to be used as ornaments, and then became objects to which spiritual powers were attached. Whatever may be true or false in philosophy or religion, we may be certain that barbarous folk have always regarded every notable object with which they came in contact from a double point of view—the one called natural, in which the scientist conceives of things at the present day; and another which, for want of an exactly appropriate term to express our meaning, we may provisionally name the spiritual or mystical one. The tree whose fruit they ate, and whose wood and leaves furnished them with utensils and cordage, was to them, as to us, a useful natural object—it was, moreover, a god, or the abode of some power exercising a will of its own, or the channel of some still higher will, capable of being harmful or benevolent according to circumstances.

As gems when discovered would be highly prized for their beauty and their rarity, this alone would account for their having at once spiritual functions assigned to them. There was, however, another and, we believe, a far more potent cause. Precious stones, though not alive, seem to the untutored mind more life-like than any other dead thing. They will not from their own inward light illuminate dark places, as the romance writers have fabled that they have the faculty of doing; but diamonds and other stones will shine brightly when light is very feeble, and they flash and sparkle when moved, in a manner which the savage can only explain by believing that there is an active intelligence inside. The various stones have had, and have still, different qualities attributed to them. One is said to make its wearer invisible, another gives victory in battle, a third wards off sickness, a fourth cures love. How these characters became the reputed properties of the different stones it is vain to guess at present, although we do not think that it is beyond the limits of human research to find out. If, however, we are to know the truth we must have before us an exhaustive series of extracts from the earliest sources, with exact references by which we may estimate their worth from the context. A series of anecdotes, however well selected, is only tantalisingly amusing. There is a question still unanswered which must have occurred to almost everyone who takes an intelligent interest in precious stones—that is, What has become of the thousands that have been found and disappeared again? Are we to take Dumas' novel for a reality, and believe that great hoards of them are buried somewhere, awaiting the fortunate discoverer? We know that the richer temples of the old gods had treasures of gems; that Romans and Asiatics wore them in profusion; that the great churches of the Middle Ages—such as Canterbury, Durham, and Compostella—were wealthy beyond computation in such things; and that even simple English villagers had not unfrequently a few precious stones among the other beautiful things with which they adorned the sacred objects in their church; and yet, notwithstanding all this plunder and all the recent discoveries that have been made, the fact remains that most kinds of precious stones are now relatively as costly as they ever have been.

The use of precious stones is now, in some respects, much more limited than it once was; they are very rarely given to churches now; and men, since the middle of the seventeenth century, have seldom worn them profusely. This latter change may have been but the result of fashion in Continental Europe. Here the change was in some degree brought about by Puritanism and the violent attacks made by the early Quakers on costliness in dress. The "Evangelical" hatred of beauty for its own sake, which sprang up in the last century, condemned such ornaments alike for men and women. It extended to much cheaper things than gems. We have ourselves known a Wesleyan woman threatened with expulsion from the body because she wore artificial flowers in her hair.

EDWARD PEACOCK.

AN UNPUBLISHED LETTER OF LEONE LEONI TO MICHELANGELO BUONARROTI.

(From the Buonarroti Archives.)

"VERY magnificent and my most honoured Signor,

"To-morrow morning if it please God I shall free my ears from these wasps which sting me with every act and word for I shall go to Milan and leave it to them to make the giants. Ammanato has got the marble and has dragged it into his studio. Benvenuto [Cellini] thunders and spits venom and menaces the Duke with his tongue. The models have been made by four competitors—Ammanato, Benvenuto, a Perugian and a Fleming called Giovanni di Bologna. It is said that Ammanato has made the best design; but I have not seen it as it is wrapped up on account of dragging the marble into the place where it is. Benvenuto has shown me his and I have pitied him that in his old age he should have been so badly obeyed by the clay and the stuff mixed with it. The Perugian has done very well for one so young, but he has no patrons. The Fleming is cast in his expenses but has worked his clay very well. Now I have told your Signory all about this gigantic affair.

"I have not found Messer Leonardo in Florence, he is at his Villa; the letter however will be given to him, and when your Signory writes to him you will do me a favour if you will give him a hint to allow me to mould any figure in your bottega [workshop] for which purpose I shall send one of my skilful hands so that he may mould that and any other for which I believe that I have the permission of your Excellency. I need say no more to your Signory except that I beseech you to keep me alive in your memory, while I pray our Lord that He may long preserve your Signory. From Florence the 14th of October 1560.

"To Messer Antonio [Michelangelo's attendant] and Messer Daniello [da Volterra] I heartily devote myself.

"Of your very magnificent Signory the humble servant, &c. "THE CAVALIERE LEONE."

Directed externally

"To the very magnificent Signor my most honoured Signor Michelangelo Buonarroti
"Rome."

(The spelling of names and pointing have been preserved as in the original.)

This unpublished letter from the sculptor Leone Leoni to Michelangelo is one of the most interesting among those in the Buonarroti archives which have not yet been given to the world. Full of instructive allusions, it places before us prevalent usages in the cinquecento on the part of sculptors, and information regarding competitions between artists and the decisions of judges, which bear a tolerably close resemblance to similar events at the present time. The design by Ammanato, which was chosen, was for the colossal figure of Neptune, which stands in the centre of the great fountain of the Piazza della Signoria in Florence, and remains to this day a proof of the fallibility of the judges, for it is one of the worst statues then erected, and, judging by Giovanni di Bologna's other works, it is very improbable that his model was inferior to that of his successful rival. Leone Leoni was, according to Vasari, of a bad, fierce, and jealous temperament; but in writing to Michelangelo, whose patronage was of importance to him, and from whom he expected favours, he expresses himself cautiously, and he praises the models of Giovanni and of the young Perugian, while we can judge for ourselves of the defects of that of Ammanato, which he did not see. Those who can read between the lines may observe how much light this letter throws upon the practice of the artists of the Revival, as well as upon their passions and rivalries. The temper and deportment of Benvenuto Cellini are, at the age of sixty, as fierce as ever; and the criticism of Leoni on the defects of his model shows what must be considered an early decay of his powers as an artist. Leoni expresses himself with pity as to his falling off, and not in any carping spirit; he was writing to Michelangelo, who

could judge of his remarks, who was generally impartial in his estimate of others, and who had a high opinion of the works of Cellini. It is significantly stated that the young Perugian whose model is favourably noticed lacked friends, and consequently had no chance. Giovanni di Bologna was cast in the expenses. It can only be inferred from this brief and peculiar remark that he must have transgressed some of the conditions of the competition. What these were, and that they were unusual, may be inferred from the letter, if it is attentively considered.

It is evident that the models were not brought to one place for exhibition, but were inspected by the judges in the artists' studios. The reason for this may be traced. The models were in clay, and still damp, which is shown by the circumstance that Ammanato wrapped his in cloths, to save it from the dust made by dragging the enormous and heavy mass of marble into his premises. Designs for statues or groups of statuary to be shown to employers were generally modelled on a small scale in clay, wax, or stucco, as it was then employed, and there are specimens of these in museums. In the competition described by Leoni, the models must have been on a large scale—probably full size. He significantly alludes to giants and to even an unusual amount of excitement. That they were of large size is shown by the description of the design of Benvenuto. It was usual after the selection of a design for the sculptor to make a full-size model as now; but this has been overlooked by most writers on art. The artist first made a skeleton of wood representing, in a rude way, the action of the figure, adding iron wires for the fingers. The skeleton was bound with hay-bands till it was nearly filled out to the requisite size; it was then covered with "terra" and "borra," as Leone expresses it—that is, coarse clay mixed with the shearings of woollen cloth. The object was to prevent shrinkage and, probably, cracking as the clay figure dried, for it was not cast as now. It was but roughly executed, as may be supposed, with such materials. As the sculptor by these precautions avoided all danger of alteration of the proportions of his model while engaged in its execution in marble, we are led to believe that some mechanical method of measurement was known. In the fifteenth century Leandro Alberti invented two ingenious machines to enable sculptors to measure their models and to transfer the exact magnitude of each part to marble. By his plan, however, it was not necessary to make full-size clay figures, and he had such confidence in it, that he said that Mount Caucasus might be carved into a Colossus from a small working model. As the habit of making large clay statues was continued after the death of Alberti, it seems probable that his method for enlarging was not in common use. Leone, in mentioning Benvenuto's statue, distinctly says that it was made of "terra e borra." As this would not have been the case if a small figure only had been required, and it was the necessary characteristic of working models, it is apparent that one of the conditions of the competition was that such only should be exhibited. Hence the allusion to expenses. The artists could not be expected to encounter the expense of such large models, and these were allowed; but, for some breach in the regulations, Giovanni di Bologna was "cast in his expenses." Two groups in clay, made at nearly the same time as the competition, are preserved in the court of the Academy of the Fine Arts in Florence, where they excite very little attention. They are Giovanni di Bologna's working models of the Rape of the Sabinus and of Virtue overcoming Vice. A crack in the thigh of one of the figures of the first

group shows the hay which was used, and the clay external to it is not more than half an inch thick. It is coarse, ill-prepared material, and the wool mixed with it must have made it very unmanageable for modelling. The models are, in fact, treated without refinement or beauty, and it is of importance to observe this, for it proves that the marbles executed from them, and finished with much more accuracy of form and delicacy of detail, must have been completed by the Master himself. There is nothing in these models that could guide a hired chiseller in the modern manner. Michelangelo must have been familiar with these processes; he made full-size models for bronze statues, and when he fortified the hill of San Miniato, profiting by his studio experience, he built the curtains and bastions of clay bricks and "borra," coarse portions of flax, forming walls very capable of resisting artillery. The artist's experience was useful to the improvised military engineer. It is nowhere stated that Michelangelo made full-size models for his marble statues. It was nevertheless a usage of his time. The number of marbles which he spoilt by miscalculation has led to the supposition that he worked directly from his small sketches; his failures suggest that it is better to prepare working models. In one, of the prisoners for the tomb of Julius II., now in the Louvre, the error of calculation is so serious that, had it been finished, he must have added to it. Such a blunder as this was considered by sculptors, so says Vasari, particularly discreditable. It may be vain to attempt to account for the fact that the greatest sculptor of his age left the greatest number of spoilt marbles. It is probable that reverence for his memory and true greatness led to the preservation of these, while the failures of other sculptors were used up as occasion served.

The sculptors of the Revival modelled their statues of clay and borra in the nude. If they were to be draped they made the requisite garments of cloth, which they dipped into fluid clay, and with these they enveloped the figure, shaping the folds as the clay gradually stiffened. Hence, no doubt, that realism and ceaseless variety and originality of motive and treatment so characteristic of their finest works. The very mannerisms of the sculptors of the Revival were due to their system of shaping real drapery in the fashion above described, for there are innumerable instances of peculiarities of fold which could have no other origin. The roughness of these figures was due to the materials; but how perfectly the great masters could model in pure clay is illustrated by the works of Luca della Robbia and his followers, as well as by numerous busts and figures of terra-cotta, modelled with a greatness of manner, combined with a truth of detail, which demonstrate the admirable skill and fine taste of the great artists who knew so well how to combine style with fidelity to nature, in which qualities they have never been surpassed.

The concluding portion of Leoni's letter shows that moulding and casting must have been familiar processes, although this is not generally supposed to have been the case. Leone makes interest with Michelangelo to desire his nephew to permit him to mould one or two figures in the great sculptor's "bottega," then shut up in Florence. It seems then plain enough that the art of moulding, although not applied to clay models, was in use for casting from marble figures. Leone promises to send a competent master moulder. What were the precious works which in 1560 were locked up in Michelangelo's deserted studio in Florence? Probably the two prisoners for the tomb of Julius, the *Madonna and Child* now in the Medici Chapel, the *Apollo*, the figures for the front of San Lorenzo now in the grotto of the Pitti gardens, mistakenly supposed to have

been for the tomb of the Pope. Other figures may be surmised as at that time preserved in that scene of the great sculptor's labours and sufferings.

All the letters written to Michelangelo by his friends and pupils show the profound reverence with which he was regarded by them. In their style and language they reveal the humble epistles addressed by the clergy or laymen to dignitaries of the Church or to princes. All the expressions of courtesy, compliment, and humility in which the Italian language is so rich are used in them. It is to be regretted that they are not published. I have seen only a few, and have heard that there are about eight hundred. On account of their familiar and confidential nature, their freedom of comment upon passing events and the men of the time, their publication might throw much light upon the history of art and artists. I have endeavoured to show how much may be learnt from one of a dozen which I have been allowed to copy, and if there are many such letters it will be seen how useful and interesting they must be.

CHARLES HEATH WILSON.

EXHIBITIONS.

THE SOCIETY OF BRITISH ARTISTS.

THERE is generally a good deal that is depressing in the exhibitions of this society, and we cannot say that this year's is an exception to the rule. The public taste appears to have set rather strongly in the direction of kittens, and it is lamentable to observe the small success which has attended the efforts of several of the artists who have attempted to portray these domestic favourites. There is, however, as usual, a sprinkling of pictures of a more hopeful character, and we prefer noticing some of them to undertaking the task of criticising the strange productions which abound on these walls. In landscape we may notice Mr. Daffarn's firmly painted *Old Pier, St. Monance, Fife-shire*. The colour seems truthful, but the water is peculiar. Mr. Roscoe has a careful and successful study of a difficult subject, *On Dartmoor, near Holne*. The foreground is exceedingly good. Mr. W. L. Wyllie's *The Alps* shows a good deal of poetic feeling and considerable technical skill. Mr. Wyke Baylis's elaborate picture of the *Interior of the Basilica of St. Mary and St. Mark, Venice*, is in some respects clever, but the colour is unpleasant and the general effect woolly and uncertain. In *Clouded June*, by Mr. Knight, there is a piece of distance which deserves attention; and the effect of a wintry sky and a village street in snow is unusually well given by Miss Reid in *Cold Ears*. Among the figure subjects there should be mentioned two admirable little sketches in oil by Mr. Hayllar (hung in the water-colour room) of old men's heads. They are full of character, and, though by no means perfect in the flesh tints, are painted with great vigour. Mr. Sadler's humorous and cleverly painted *Complete Angler* is one of the few satisfactory figures in the exhibition. Turning to the water-colours, we observe an excellent sketch of *An Old Venetian Staircase* by Mr. A. H. Haig. There is very little subject in the picture, but the colour is good and the drawing firm and careful. The shade on the lower part of the balustrades needs strengthening. Mr. Nibbs has an elaborate and effective drawing of *Limehouse*, overdone, however, with body colour; and Mr. F. Da Ponte Player exhibits a careful study of *Inside the Harbour, Whitby*.

MR. FRITH'S "RACE FOR WEALTH."

SOME of Mr. Frith's pictures called *The Race for Wealth* are probably, technically considered, among his least satisfactory efforts. Only one of the five shows any remarkable power of

grouping, or skill in the management of light and colour. This is the court scene, in which the more prominent figures are uncommonly well arranged and drawn. The attitude of the examining counsel is perfectly easy and lifelike, and the same may be said of most of his neighbours. The effect of the strong light is admirably given, and the colouring is pleasant. We are not acquainted with the Old Bailey court-house, but we question whether the figures of the jury in the box at the opposite side are not too much diminished; certainly the widow lady appears to be too small. The cowed look of the "Spider" in the dock is well represented, though perhaps his agitation is greater than might be expected; just as the superciliousness on his face in the picture of "The Spider at Home" is a great deal more marked than would be shown by any politic spider. On the whole, we think the "Spider" is best given in the first picture, where he stands in his office, surrounded by his adorers. In the second picture of "The Spider at Home" the figure of the Spider's wife is absurdly squat, and the figures of the young ladies in the foreground unusually long. It would be difficult to understand the next picture in the series without the help of the description; at first sight, it would appear that the country rector had fallen asleep and his daughters were defying the retreating footman. This, and the last picture,—"Retribution"—are certainly not among Mr. Frith's happiest efforts.

THE Thirteenth Exhibition of the New York Water-Colour Society has been the chief attraction in New York this spring. The rooms in which it is held have often been inconveniently crowded, and, judging by the number of pictures sold, it must certainly have been very satisfactory to the artists who contributed. Americans, indeed, are no longer content to buy old rubbish from Europe—palmed off as the work of Great Masters—but seek to encourage their own rising school of artists, many of whom will doubtless take rank some day as masters, even in Europe. It is to be regretted that we know so little of American painting in this country. The book illustrations that come to us in *Scribner's Monthly* and some other magazines are so good as to make us wish to be better acquainted with the artists. They seem, however, usually to prefer the French Salon to our exhibitions for an introduction to Europe.

THE two French Societies of the Union Centrale and the Musée des Arts Décoratifs have decided to join their forces, the committee of the museum electing a certain number of members to the executive council of the union, and the council in its turn sending its representatives to sit on the committee. This union of two societies with such similar aims will, no doubt, add strength to each. They have always been closely allied; indeed, the one may almost be said to have grown out of the other, and it is fitting that their administration should be the same. The exhibition of the Musée was opened on April 1, in the Palais de l'Industrie, the Pavillon de Flore, which was placed temporarily at the disposal of the committee for its previous exhibitions, being no longer available. It does not include any loan collections except a fine collection of ceramic lent by M. Gasmault; but the Musée itself has now acquired a large number of works of art of all kinds, so that its permanent collection affords sufficient interest. One room, however, is to be entirely reserved for original designs for decoration.

THE exhibition of the Italian Society of Amatori e Cultori delle Belle Arti is now open in Rome. It does not contain any very noteworthy works, which is due, perhaps, to the fact that many Italian artists have sent their best works this year to the exhibition at Turin.

As a rule, however, Italian artists of good standing do not seem to care to send their works to exhibitions, preferring that they should be seen in their own studios, which are usually easily accessible to visitors.

WE have several times mentioned the instructive little exhibitions of the works of some single painter of the German school which have during the last two or three years been organised by Dr. Max Jordan in the upper rooms of the Berlin National Gallery. The present exhibition is the ninth of its kind, and is chiefly devoted to the popular *genre*-painter Meyerheim, who died in 1879. Sixty of this painter's works have been gathered together, including some of his earliest, as well as most of his more celebrated productions, of which one—the admired *Schützenkönig*, painted in 1836—hangs in the gallery below. Beside Meyerheim, the clever painter of Venetian life, Friedrich Nerly, is represented by works both in oil and water-colour; as also is the landscape painter, Ernst Fries, of Heidelberg.

NOTES ON ART AND ARCHAEOLOGY.

AT the meeting on Saturday last of the Institute of Painters in Water-Colours the Crown Princess of Germany was enrolled as an honorary member. It is understood that her Imperial Highness will be a contributor to the exhibitions of this society; and, as she has been, while Princess Royal of England as well as since her marriage in Germany, a most diligent art student and constantly at practice, her work will be looked forward to with considerable interest by art critics, as well as by the general public.

IT is usual to compare the famous group of Laoköon with the description of the incident by Virgil, and to suppose that all three figures—the father and both the sons—were killed by the serpents. But Goethe (*Dichtung und Wahrheit*) observed that the older of the two sons, who is in the act of pushing a coil of the serpent off from his foot, expresses, beside sympathy with his father and brother, to whom he looks fixedly, a very distinct hope of his own safety. "The younger son, almost powerless, makes a faint struggle, the father puts out all his strength in vain, but the elder son feels no pain; he is horrified at his father's position and attempts to escape." It now appears that one of the sons does escape in the older version of the legend by Arktinos of Miletus, as quoted by Preklos: *ἐν αὐτῇ δὲ ταύτῃ δύο δράκοντες ἐκίφανεῖν τὸν τε Λαοκῶντα καὶ τὸν ἱστὸν τῶν παίδων διαφθείρουσιν*. This interesting addition to Laoköon criticism is communicated to the new number of the *Archäologische Zeitung* by Prof. Brunn in memory of the late Prof. Stark, who had furnished the facts on which it rests some day or two before his death.

THE last record of inscriptions found at Olympia in the *Archäologische Zeitung* just issued contains (p. 207, No. 327) what is now the second inscription of the sculptor Polykleitos the younger. It occurs on the base of a statue of Aristion of Epidaurus, which, along with a statue of Thersilochos, not yet found, was identified by Pausanias (vi. 13, 6) as the work of Polykleitos the younger. In the present instance Polykleitos does not add to his name the epithet *Ἀργεῖος*, and Pausanias must therefore have had some other means of knowing that the works in question were by the Argive Polykleitos. The lateness of the forms of the letters, if not the art itself, would have shown him that they could have nothing to do with the older and greater Polykleitos.

THE town of Bonn has lately presented the young Prince William of Prussia, son of the Crown Prince, with a painting by Albert Flamm, of Düsseldorf, an artist chiefly devoted to Italian

landscape. In his present work, however, Herr Flamm has represented the Rhine scenery at Bonn with the villa in the foreground where the Prince lived, for the picture is given as a *souvenir* of the student period, now over, which has been passed by Prince William at Bonn.

A PRIZE was lately offered by the French Government for the best design for a work to be executed in Gobelin's tapestry symbolising literature, science, and art in the time of Pericles. Several distinguished artists competed, among them MM. Blanc, Monchablon, and F. Ehrmann, and at the second trial M. Ehrmann's design carried the day. He has been commissioned, therefore, to prepare the cartoon for this important piece of tapestry, which is destined, when finished, to decorate the Salle Mazarin in the Bibliothèque Nationale. When this is finished two other designs of a similar character will probably be required of him, symbolising literature, science, and art in the times of Charles V. and Francis I.

A HITHERTO unpublished document of some interest was printed in *L'Art* last week at the end of a series of articles contributed to that journal by M. Victor Ceresole, Swiss consul at Venice, on the subject of the bronze door of the sacristy of St. Mark at Venice. This document is the last will and testament of the celebrated Italian sculptor and architect, Jacopo Tatti, better known as Sansovino, the friend of Titian and Aretino, and the favourite architect of Venice. Like Titian, Sansovino lived to be very old. His will was not made until he had attained the age of ninety-one years, when, as he writes, "considering how fragile is human life and that the hour of death is uncertain," he thinks it better "to provide for his soul and his worldly goods in order that there may be no dispute about them among his heirs." He lived two years after this, dying at last, "mourned," as Vasari records, "by all Venice," on November 2, 1570. He must in truth have been a wonderful man, if we may trust Vasari's account of him; and it is interesting to have this record of his last wishes. The original document is preserved in the Archivio Notarile at Venice, and is printed in *L'Art* both in the Italian text and a French translation.

THE French Commission appointed to examine the law relating to artistic copyright heard, last week, the evidence of two distinguished engravers, MM. Henriquet-Dupont and François, and the two well-known art publishers, MM. Goupil and Barbedienne. They all seem to have thought that the law as it stands at present affords sufficient protection to the artist. M. Goupil naturally did not believe in the efficacy of repression in the matter of reproduction, and thought that the artist, in selling his picture, ought to be obliged to reserve explicitly the right of reproduction if he desired to retain it. M. Henriquet-Dupont considered that, in the domain of art, there was room for all, and he did not, for his part, heed the harm supposed to be done to engraving by lithography and photography. It was a matter of taste and fashion; while M. François, though he considered there was no doubt that photography injured engraving, agreed that it was a competition to which engravers must submit. At the next sitting of the Commission, M. Braun, the photographer, and M. Devaisnes, President of the Photographic Society, will be heard.

THE competitions that several towns of Italy have opened for a national memorial to Victor Emanuel seem to result everywhere in the production of equestrian statues. Venice and Verona have both decided on having their late King represented on horseback; and now Florence has done the same, though the first idea

was to have a granite column with its base carved in bas-relief with all the principal events of his reign, and the coats of arms of all the Italian States that he united under his rule; while at the top the eagle of Savoy watched over the lilies of Florence. This design, has, however, been given up, and a competition offering four prizes of 1,000 lire has been instituted for a colossal equestrian statue in bronze to be set up in one of the principal places in Florence. It is to be hoped that the statue when achieved will be worthy of its associates. It will be somewhat trying for an ambitious modern monument like this to find itself placed amid the many master-works left to Florence as an artistic inheritance from former ages.

WE have received a prospectus of a large illustrated work entitled *Hellas und Rom* which is now being published in numbers by W. Spemann, of Stuttgart. The author is Herr Jakob von Falke, who is known as a writer on art and antiquity; and the speciality of the work seems to be that it unites history with art, and by means of popular illustrations, executed by some of the most distinguished German artists of the day, enables us to realise more fully than by mere reading the culture of classical antiquity. A large illustration in the prospectus gives a bird's-eye view of Olympia reconstructed from its ruins by Friedrich Thiersch.

THE *Gazette des Beaux-Arts* opens with a study by M. Duranty of the German painter Adolph Menzel, "the painter of Frederick the Great," as his countrymen at one time loved to call him. It is illustrated by a number of his sketches and an etching from a picture called *Around the Fireside*, now in the possession of Mr. H. Goldschmidt at Berlin. M. A. de Montaiglon continues his description of the antiquities and curiosities of Sens, and M. le Comte Clément de Ris finishes his long series of articles on the paintings in the Hermitage at St. Petersburg. The chief artistic interest of the number lies in a miniature portrait of the French poet, Charles Millevoe, executed by Prud'hon in 1803. It is carefully etched by A. Gilbert, and shows the poet to have had a refined and intellectual head of the melancholy poetic type.

THE March number of the *Zeitschrift für bildende Kunst* contains little of importance except the first of a series of studies of Leonardo da Vinci, by Dr. J. P. Richter. In the present article Dr. Richter makes known the result of his examination of the MSS. in the British Museum. Not much new knowledge had been gained from this source, for the fact of Leonardo's visit to Venice in 1500 has been clearly ascertained before. (See note by Messrs. Crowe and Cavalcaselle in the *ACADEMY*, vol. i., p. 123.) Dr. Richter, however, has found several notes by Leonardo himself, which tend to confirm it, and also to show that he was certainly back in Florence before April 8, 1503. The names also of one or two pupils of Leonardo's, not before known, appear in the British Museum Codex, and a curious drawing of a peacock under an arched roof, with a confused explanation of some intended allegorical design written beneath it. Another article of some interest deals with "Two Goldsmiths of the late Renaissance"—namely, Anton Eisenhoidt, of Warburg, and Paulus van Bienen, of Utrecht—and gives illustrations of several of their elaborate works. The larger illustrations of the number are scarcely worth notice.

THE STAGE.

EASTER has not been the occasion of any surprise to playgoers. Nothing new that is important has been produced, though there are one or two revivals of interest. Almost the only original piece, however, is the comedy at the Vaudeville, which is called *Cobwebs*, and is

by Mr. Charles Wills, a writer perhaps not known before as a contributor to the stage. The Vaudeville is not in the vein just now, and *Cobwebs* is but another proof of it. The last original pieces there have not been successful, and wisdom was shown, and may conceivably be shown again, in going back to ancient comedies like *The School for Scandal*, which the Vaudeville company plays very well on the whole, and which the managers do not there overload with the newest upholstery. As for *Cobwebs*, it is almost useless for us to make the effort to analyse it. The prompter verdict of the daily papers has been very much against it; and we need only add a few words. The piece has some merits of dialogue—it has occasional brightneses—occasional evidences of adroitness indeed—which, together with the fact that there appeared to be a character for Mr. David James in the person of a drunken undertaker and a character for Mr. Thomas Thorne, may possibly have seduced the management into regarding the piece as a good play. But it is not a good play. In spite of the presence of at least two original characters, it does not hang together. And the best efforts of those engaged in acting it—Mr. Howe, Mr. James, Mr. Thorne, Mr. Garthorne, Mr. W. Herbert, Miss Larkin, Miss Illington, and Miss Cicely Richards and others—do not suffice to make it attractive. Some dramatic authors—we do not know by any means that Mr. Charles Wills is one of them—flatter themselves that a play can be nursed into success. But the process is generally costly, and never certain of ending well. Only where rare literary merit has been overlooked is it found to be remunerative.

THE reproduction of *Clancarty* at New Sadler's Wells constitutes the most important revival, from a dramatic point of view, that Easter has given us—with *Madame Angot* at Drury Lane, very musical, very spectacular, and very full of the dance, we have not at present to do. *Clancarty* is one of Mr. Taylor's best-constructed dramas. It combines the interest of history with that of romantic invention. From time to time it is amusing, and it is generally dramatic. At New Sadler's Wells, if it is not in every respect represented as well as it was originally at the Olympic several years ago, it is yet quite intelligently played. Mr. W. H. Vernon, as the hero, does not, indeed, carry the sympathies of an audience so readily as Mr. Henry Neville; but care, finish, and judgment are not lacking to his performance. Scum Goodman, a part that was represented by Mr. Anson with a "picturesque horror" in which the horror was more conspicuous than the picturesqueness, is now played with only something less than the old effect. The certainly not less effective character of William the Third in the old days afforded occasion for one of the best character-pictures of Mr. Charles Sugden. Lady Clancarty is played at Sadler's Wells for the first time by Miss Isabel Bateman, whose rendering is agreeable and highly sympathetic, which is, perhaps, more than could have been said of the performance of the very experienced actress who first played the part. Miss Bateman's best efforts are happily displayed in a part avowedly arduous. Miss Virginia Francis plays Lady Betty Noel with real spirit and sense of fun. The piece will no doubt carry on the management with success for a considerable time; and this is as it ought to be.

THE remaining revivals, or performances, to be noted are that of *Heart's Delight* (in which Mr. Emery used to be so admirable) at the Park Theatre; that of *Lady Audley's Secret* (with *Madame Angot*) at Drury Lane; and that of *Little Em'ly* at the Olympic, where the Gaiety company appears during the presence of strangers in Wellington Street. At the Gaiety, the Hanlon Lees are the last sensation, but their performances hardly even claim to be

dramatic. The brothers are adroit tumblers. At the Globe, where the *Cloches de Corneville* reigned for two or three years, a semi-musical piece of Viennese origin—the *Naval Cadets*—is performed, with especial ability as far as M^{me}. Dolaro and Miss Violet Cameron are concerned. It seems very well thought of. At the Lyceum, the Easter novelty announced is "a new and efficient system of ventilation." This, together with *The Merchant of Venice*, is found exceedingly successful.

IN the new number of *Time*, Mr. Burnand begins a discussion of a question very interesting to many young people just now, and very interesting to stage-struck persons at all times—the question whether the stage is fairly to be regarded as a legitimate profession. He goes into the matter thoughtfully, but we cannot say we find him so entertaining as in the pages of *Punch* when he delivers, now as this celebrated actor and now as that, his lectures to the members of that dramatic collage which exists at present chiefly in the mind of Mr. Henry Morley, but which may some day be a realised fact. These "lectures" are full of sly hits at the special artistic weaknesses of the imaginary lecturers, and when the series is finished it will constitute a very witty skit upon the contemporary theatre.

MUSIC.

SIR JULIUS BENEDICT'S CONCERT.

ON Wednesday, March 24, a concert was given at St. James's Hall for the benefit of Sir Julius Benedict, who has retired from the post of conductor at the Popular Concerts, with which he has been associated since their establishment in 1859. He has held a high position in this country for more than forty years as teacher, performer, and composer. He has written operas, oratorios, and cantatas, and the *Lily of Killarney*, produced in 1862, may be mentioned as a proof of his success as an opera writer. He has also composed many instrumental works, and the quartet in C minor (MS.) for stringed instruments with which the concert commenced is the second composition of this form from his pen, one in E (still in MS.) having been written as far back as 1825. The C minor quartet, which was excellently played by Messrs. Straus, Ries, Zerbin, and Piatti, is the work of an accomplished musician, and may be highly commended for its melodious themes, its regular form, and clear developments.

Another work performed was a sonata concertante in E minor for pianoforte and violin (M^{lle}. Janotha and Herr Straus), written in 1868. His op. 1, published in 1822, was also a composition of the same form, and was dedicated by the author "to his beloved master, C. M. von Weber." The E minor sonata is as sound a piece of writing as the quartet, but far more original and effective. We may especially note the clever third movement (*intermezzo*). The sonata was well played by both artists, and was well received.

Mendelssohn's duet, *Allegro Brillante* (op. 92), was performed by Lady Benedict and M^{lle}. Janotha. The two ladies greatly distinguished themselves, and thoroughly deserved the hearty applause accorded to them. The programme included two more instrumental works of Sir J. Benedict—one a reverie and Montferrina for pianoforte and violoncello (Benedict and Piatti), played by M^{lle}. Janotha and Signor Piatti; and a romance for violin, harp, and pianoforte, executed by Herr Straus, Mr. John Thomas, and Sir J. Benedict. The Montferrina was given at the Popular Concerts in 1867.

The vocalists were M^{me}. Marie Roze, Mrs. Osgood, M^{me}. Patey, and Messrs. Lloyd and Santley. The songs were chiefly selected from Benedict's operas and oratorios. The harp was in the safe hands of Mr. John Thomas.

J. S. SHEDLOCK.

STUDIES IN PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds; Glaciers; the Telephone. By W. J. MILLAR, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of "Principles of Mechanics," &c.

"We can confidently recommend Mr. Millar's volume to the attention both of teachers in search of an elementary text-book, and to private students, as well as to the general reader. It unites the utmost lucidity with strict scientific accuracy, and deals with ascertained facts rather than with vague theories."—*Greenock Daily Telegraph*.

"This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include objects as wide apart as whirlwinds and spectrum analysis, glacial ice and the telephone."—*Liverpool Advertiser*.

Published at 21, Castle-street, Holborn.

Now ready, 8vo, 800 pp., cloth, 21s.

ENGLISH CONSTITUTIONAL HISTORY,

From the Teutonic Invasion to the
Present Time.

By T. P. TASWELL-LANGMEAD, B.C.L.,
Of Lincoln's Inn,

Barrister-at-Law, late Tutor on Constitutional Law and
Legal History to the Four Inns of Court, and formerly
Vinerian Scholar in the University of Oxford.

Second and Enlarged Edition, Revised throughout, and in
many parts Re-written.

Extracts from some of the Reviews.

"Though originally designed chiefly for the use of students at the Universities and Inns of Court, the author's expectation that it may not be found unacceptable to the ordinary reader is not without good grounds."—*Daily News*.

"Most completely stocked with all the important facts in the Constitutional History of England, which are detailed with much conciseness and accuracy, . . . and is very full and clear."—*Spectator*.

"The volume on 'English Constitutional History,' by Mr. Taswell-Langmead, is exactly what such a history should be. Mr. Taswell-Langmead writes clearly and concisely, and yet, even when treating of dry subjects, he is always readable."—*Standard*.

"Mr. Taswell-Langmead has thoroughly grasped the bearings of his subject. It is, however, in dealing with that chief subject of constitutional history—parliamentary government—that the work exhibits its great superiority over its rivals."—*Academy*.

Mowall-street, W.C. Established 1862

TARAXACUM and PODOPHYLLIN.—A
fluid combination for Derangement of the Liver, particularly when
arising from slight congestion. By gently stimulating the action of the
liver, and slightly moving the bowels, the heavy, drowsy feeling, with
sensations of fulness, headache, pain beneath the shoulders, and other
indications of Dyspepsia are removed. Taraxacum and Podophyllin is
much safer than calomel or blue pill, and quite as effective for removing
bile.—Prepared by J. PERRIN, 887, Tottenham-court-road, London, whose
name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all
Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 33 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a
faithful compound of Quinine, the active principle of Yellow Cinchona, or
Peruvian Bark, blended with a refined, trustworthy preparation of Iron,
produced in a form which the experience of many years has proved the
best. It offers a ready means of gaining the strength and other benefits
afforded by Quinine and Iron, without any fear of ill consequences.—The
name of J. PEPPER is signed in red ink on the label.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,
and without which none is genuine.
Sold Wholesale by the Proprietors, Worcester;
Cross & Blackwell, London; and Export Oilmen generally.
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."
Wordsworth's Chemical Food of Health.
Prepared from the choicest Peruvian Leaf. The New
REMEDY for GENERAL DEBILITY, NERVOUS PROSTRATION,
NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.
Sold in Bottles, 1s. 1½d. and 2s. 9d., post-free.
H. WORDSWORTH & Co., Homoeopathic Chemists, 6, Sloane-
street, and 4, King-street, Kensington, London.

LOCKYER'S SULPHUR HAIR RESTORER.
Large Bottles, 1s. 6d. Restores the Colour to Gray Hair in a few
days. The best, safest, and cheapest. Quite equal to expensive ones.
Sold by Chemists and Hairdressers.

DINNEFORD'S MAGNESIA.
The Medical Profession for over Forty Years have approved
of this pure solution as the BEST REMEDY for
Acidity of the Stomach, Heartburn, Headache,
Gout, and Indigestion,
And as the safest Aperient for Delicate Constitutions, Ladies,
Children, and Infants.
DINNEFORD'S MAGNESIA.

PAINLESS DENTISTRY.

MR. G. H. JONES,

Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless
system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876,
Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention
displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to
hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry.
In recognition of your valuable services, you are at liberty to use my name."
"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

GOLD MEDAL PARIS EXHIBITION.

Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper
healthy condition of the Nervous and Physical Forces.

LAW UNION FIRE AND LIFE INSURANCE COMPANY.

ESTABLISHED IN THE YEAR 1854.

The only Law Insurance Office in the United Kingdom which transacts both Fire and Life Insurance business.

CHIEF OFFICE:

126, CHANCERY LANE, LONDON, W.C.

**THE FUNDS IN HAND AND CAPITAL SUBSCRIBED AMOUNT TO
UPWARDS OF £1,500,000 STERLING.**

By express provision in the Company's Deed of Settlement, and by the Conditions of the Policies of the Company, the Capital and Funds of each Department are kept distinct, and under no circumstances can the Capital or Funds of one Department be applied to the payment of Losses or Expenses incurred in the other Department.

CHAIRMAN.

JAMES CUDDON, Esq., Barrister-at-Law, Goldsmith Building, Temple.

DEPUTY-CHAIRMAN.

C. PEMBERTON, Esq. (Lee & Pembertons), Solicitor, 44, Lincoln's Inn Fields.

The fifth Quinquennial period terminated on the 30th day of November, 1879, and the Directors having caused to be made a valuation of the Assets and Liabilities of the Company on the strictest known Table of Mortality, namely, the H^m or Healthy Males Table, and at the minimum rate of interest, namely, 3 per cent., with a reserve of the whole of the Loading—the

RESULT

shows that, after making ample provision for every known liability, there is a surplus for distribution amongst the Shareholders and the Policy-holders entitled to share in the profits of £58,076 7s. 9d.

The proportion thereof belonging to the Policy-holders is £41,887 1s. 7d. This sum will give a Reversionary Bonus of £1 2s. 6d. per cent. per annum upon sums assured and existing Bonus additions together with a further prospective Bonus of £1 per cent. per annum upon sums insured under participating Policies, which may become claims during the current Quinquennium.

Table showing the progress of the business at the end of each of the five Quinquennial periods:—

Quinquennium ending.	Fire Premium Revenue.	Life Premium Revenue.	Revenue from Interest.	Total Funds.	Surplus for Distribution.
	£	£	£	£	£
1859	5,899	15,056	3,003	82,178	9,560 0 0
1864	13,730	30,973	6,381	161,598	11,830 0 0
1869	22,302	49,821	11,912	282,288	29,038 0 0
1874	29,675	61,874	18,495	425,588	43,105 0 0
1879	39,373	77,121	28,659	643,447	58,076 7 9

From this statement it will be seen that during the last Quinquennium the *gross* premium revenue has been increased by £9,698 per annum in the Fire Department, and by £15,247 per annum in the Life Department, whilst the revenue from interest and the accumulated fund have increased by £10,164 per annum and £217,859 respectively.

Prospectuses, Forms of Proposal, Reports of the Company's progress, and every information will be forwarded postage free on application to the Secretary at the Head Office, or to any of the Agents of the Company.

FRANK MCGEDY, Actuary and Secretary.

LIBER STUDIUM (J. M. W. TURNER).

PLATES of Wanted to Purchase by Messrs. DOWDESWELL, 36, Chancery-lane, W.C.

PERMANENT PHOTOGRAPHIC BOOK

ILLUSTRATIONS. The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Colotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c. Note.—The special advantages of the Autotype Process for Book Illustrations are:—1st. The absolutely facsimile nature of the result. 2nd. Its cheapness for Small Editions of 250, 500, &c. 3rd. The Prints being direct on the Paper there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.

For Terms and Specimens apply to the Manager. The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chefs-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

New ready, price One Guinea. "THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook. Second Edition (1869). Published with the kind permission of Mr. Browning.

Saturday Review, December 37th.—"Mrs. Jane E. Cook has richly and successfully illustrated Mr. Browning's charming poem." Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. He has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work." Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation. A NEW EDITION of TURNER'S "LIBER STUDIUM." Facsimile from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE, The Works, Ealing Dene, Middlesex. General Manager, W. B. BIRD. Director of the Works, J. R. SAWYER.

W. SWAN SONNENSCHNEIN & ALLEN'S

New Educational Publications.

ROYAL RELIEF ATLAS. Consisting of

THIRTY-ONE MAPS in RELIEF, framed and bound in 1 vol., royal 4to, price about One Guinea. [In May.]

These maps have been prepared with great difficulty and at great expense. The result, however, fully comes up to the expectations that had been made with respect to this undertaking, and the numerous geographers, teachers, &c., who have inspected the maps express great satisfaction with them, being assured that they will be of the greatest value for educational purposes. Each map presents in bold relief the leading physical characteristics of the chief countries of the world, the various elevations, &c., being relatively accurate.

LINEAR BLACK-BOARD MAPS.

FIRST MAP—ENGLAND and WALES. 4ft. 9in. by 4ft.; mounted on double rollers, 10s.

In order to facilitate the teaching of geography with outline on the black board (a system now in great vogue) this series of maps has been projected. They are printed in broad white outline upon stout linoleum, and the positions of the chief towns, and their relative sizes, are indicated by dots, and the countries by dotted lines. The pupils can thus fill in on the dark linoleum with chalk the courses of rivers, names of towns, positions of coal-beds, &c., which can at once be removed with a duster or damp sponge.

INDUSTRIAL GEOGRAPHY PRIMERS.

Edited by G. PHILLIPS BLYAR, F.G.S., F.S.M. 18mo, cloth, 1s. each.

Vol. I. GREAT BRITAIN and IRELAND. [Ready.]

Vol. II. FRANCE. [Nearly ready.]

Vol. III. UNITED STATES of AMERICA. [In the press.]

"The series is likely to be welcomed as a valuable aid to those engaged in the practical branches of education."—*Saturday Review*.

"We wish the series all success."—*Educational Times*.

"Quite within the grasp of children, and will be a welcome addition to our supplementary school-books."—*School Guardian*.

"We can only trust that these Primers may in time be used in every school in the land."—*Western Daily Mercury*.

CITY OFFICE: 2, KING STREET, CHEAPSIDE.

RICHARD BENTLEY & SON'S LIST.

LADY JACKSON'S NEW WORK.

THE OLD RÉGIME: Court, Salons, and Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris," &c. 2 vols., large crown 8vo, with Six Portraits, 24s.

"The authoress has succeeded very well, more particularly in her striking portraits of the chief characters who appear on the stage of high life as depicted in her pages. These personal sketches are admirable in their strength of outline, evoking from the depths of the past the very men and women who 'played the fantastic tricks before high heaven' which ended in the terrible revolution."—*Globe*.

"This pleasant résumé of chronicles relating to the Court, salons, and theatres in an age of extremes deserves a corner in the library of wit, taste, and healthful sentiment."—*Daily Telegraph*.

"So fascinating is the narrative that as we read 'The Old Régime' it soon proves to be better than a novel. . . . It is so skilfully put together and gracefully written that it is sure to find many eager and admiring readers."—*Morning Post*.

DR. BRANDE'S LORD

BEACONSFIELD: his Life, Character, and Works. A Critical Study. Translated by Mrs. GEORGE STURGES. Demy 8vo, 10s. 6d.

THE HEART of HOLLAND. By

HENRY HAVARD, Author of "The Dead Cities of the Zuyder Zee," &c. Translated by Mrs. CASHEL HORT. Demy 8vo, with Eight Illustrations, 16s.

"'The Heart of Holland' stands the best test to which a book of travels can be put. It raises in the reader a strong desire to follow in the footsteps of the author. We had not reached the end of M. Havard's volume before we had got out our maps, our Bradshaw, and our Baedeker, and planned another trip to Holland."—*Saturday Review*.

NEW NOVELS AT ALL LIBRARIES.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE."

NO RELATIONS. By Hector

MALOT. Translated by the Author of "Hogan, M.P.," &c. 3 vols., crown 8vo.

"'No Relations' gained M. Malot the Monthyon prize of virtue, and deserved to gain it. It is a story consistently excellent in all its characteristic features."—*Saturday Review*.

"An extremely fascinating story, written with unflagging force, and as full of genuine pathos as of graceful and delicate descriptions. . . . This novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

HONOR CARMICHAEL. By

HENRIETTA A. DUFF, Author of "Virginia: a Roman Sketch." 2 vols., crown 8vo.

TWO WOMEN. By Georgiana M.

CRALK. 3 vols., crown 8vo.

"Dorothy's character is so charming that by itself it would be sufficient to give Miss Craik's story a high place among the novels of the day; and there are other characters besides which, though they are not equally important, are yet very cleverly drawn."—*Saturday Review*.

THE NOVELS OF RHODA BROUGHTON.

At all Booksellers, in crown 8vo, cloth, price 6s. each.

NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

HURST & BLACKETT'S NEW WORKS.

13, Great Marlborough-street.

ROYAL WINDSOR. By W. Hep-

WORTH DIXON. Vols. III. and IV., demy 8vo, 30s. Completing the Work. Second Edition.

"Readers of all classes will feel a genuine regret to think that these volumes contain the last of Mr. Dixon's vivid and lively sketches of English history. His hand retained its cunning to the last, and these volumes show an increase in force and dignity."—*Athenaeum*.

"Mr. Dixon's is the picturesque way of writing history. Scenes after scenes are brought before us in the most effective way. Mr. Dixon has been allowed to explore the Castle as it was never explored before; hence his book is not only pleasant reading, but full of information."—*Graphic*.

CONVERSATIONS with DIS-

TINGUISHED PERSONS during the SECOND EMPIRE, from 1861 to 1863. By the late NAUSSA W. SENIOR. Edited by his Daughter, M. C. M. SIMPSON. 2 vols., demy 8vo, 30s.

"Mr. Senior's 'Conversations with M. Thiers, M. Guizot,' &c., published about a year and a half ago, were the most interesting volumes of the series which had appeared up to that time, and these new 'Conversations' are hardly, if at all, less welcome and important. A large part of this delightful book is made up of studies by various critics, from divers points of view, of the character of Louis-Napoleon, and of more or less vivid and accurate explanations of his tortuous policy. The work contains a few extremely interesting reports of conversations with M. Thiers. There are some valuable reminiscences of Lamartine, and, among men of a somewhat later day, of Prince Napoleon, Drouyn de Lhuys, Montalembert, Victor Cousin, Renan, and the Chevaliers."—*Athenaeum*.

"It is impossible to do justice to these 'Conversations' in a brief notice, so we must be content to refer our readers to the volumes which, wherever they are opened, will be found pregnant with interest."—*Times*.

THE VILLAGE of PALACES; or,

Chronicles of Chelsea. By the Rev. A. G. L'ESTRANGE. 2 vols., crown 8vo, 21s. [Next week.]

DIARY of a TOUR in SWEDEN,

NORWAY, and RUSSIA in 1827. By the MARCHESS of WESTMINSTER. 8vo, 10s.

LODGE'S PEERAGE and BARON-

ETAGE for 1880. Under the Especial Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 31s. 6d., bound gilt edges.

THE NEW NOVELS.

POET and PEER. By Hamilton

AIDE, Author of "Penruddocke," &c. 3 vols.

THREE RECRUITS, and the

GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON. 3 vols. "Mr. Hatton's new story is likely to become very popular, for it contains stirring incidents, delightful love episodes, bright descriptions, and a most interesting plot."—*Witchell Review*.

FOR HER DEAR SAKE. By Mary

CECIL HAT, Author of "Old Myddleton's Money," &c. 3 vols. "It is very seldom that a novel has appeared more deserving of popularity than this unusually interesting story. Many of the characters are admirably drawn."—*Poet*.

LILY of the VALLEY. By Mrs.

HANDOLPE, Author of "Gentianella," &c. 3 vols. "A very pretty and romantic tale. Readers who begin the book are sure to finish it."—*Edinburgh Review*. "The plot is marvellously ingenious, and is worked out with singular skill."—*Sunday Times*.

A SYLVAN QUEEN. By the

AUTHOR of "RACHEL'S SECRET," &c. 3 vols.

"A charming tale; the plot is varied and entertaining."—*Poet*.

YOUNG LORD PENRITH. By

JOHN BERNARD HARWOOD, Author of "Lady Flavia," &c. 3 vols.

IN THE SWEET SPRING-TIME.

By Mrs. MACQUOID, Author of "Patty," "Diana," &c. 3 vols.

POOR ZEPH. By F. W. Robinson,

Author of "Grandmother's Money," &c. 3 vols. [Just ready.]

Now ready, 1 vol., 8vo, pp. 421, cloth, 14s.

CRADLE-LAND of ARTS and CREEDS;

or, Nothing New under the Sun. By CHARLES J. STONE, Barrister-at-Law, Inner Temple; and late Advocate, High Courts, Bombay.

STUDIES in the THEORY of DESCENT.

By Dr. AUG. WEISMANN, Professor in the University of Freiburg. Translated and Edited by HAPHAEL MELDOLA, F.R.S., Secretary of the Entomological Society of London. With a Prefatory Notice by CHARLES DARWIN, F.R.S.

NOW READY.

Part I. On the SEASONAL DIMORPHISM of BUTTERFLIES. With Two Coloured Plates. Price to Subscribers for the Complete Work, 8s. This Part contains Original Communications by Mr. W. H. EDWARDS, of Colburgh. The Subscription for the Complete Work is 32s.

IN PREPARATION.

Part II. On the ORIGIN of the MARKINGS of CATERPILLARS—On PHYLETIC PARALLELISM in METAMORPHIC SPECIES. With Six Coloured Plates. Price to Subscribers for the Complete Work, 16s.

Part III. On the TRANSFORMATION of the MEXICAN AXOLOTL into AMBYSTOMA—On the MECHANICAL CONCEPTION of NATURE. Price to Subscribers for the Complete Work, 6s.

Now ready, crown 8vo, 7s. 6d.

THE WATERING PLACES of GERMANY, SWITZERLAND, &c. By EDWARD GUTMAN, M.D.

Now ready, the New Novel, by the Author of "Vivienne," &c.

COUNTESS DAPHNE: a Novel. By

"RITA," Author of "Like Dian's Kim," &c.

THE NEW NOVEL BY G. EBERS,

Author of "An Egyptian Princess," &c., is

THE SISTERS. 2 vols.

AN ENGLISHWOMAN in UTAH: the

Story of a Life's Experience in Mormonism. By Mrs. T. B. H. STEPHENS. Fully illustrated. Crown 8vo, cloth extra, 10s. 6d.

FIVE YEARS in MINNESOTA. By

MAURICE FARRAR, M.A. Crown 8vo, cloth extra, 6s. [Now ready.]

Now ready, crown 8vo, cloth extra, 8s. 6d.

THE NATIONAL MUSIC of the WORLD.

By the late HENRY FOTHERGILL CHORLEY. Edited by HENRY G. HEWLETT.

Contents.—Music from the East—Music from the South—Music from the North—Music from the West.

Now ready, an entirely New Work by JULES VERNE.

THE GREAT NAVIGATORS of the

EIGHTEENTH CENTURY. With numerous Illustrations and Facsimile Copies of Old Engravings, Charts, Maps, &c. Demy 8vo, cloth extra, 12s. 6d.; gilt edges, 14s.

PUBLISHERS' NOTE.

This volume forms the second of three volumes under the general title of "CELEBRATED TRAVELS AND TRAVELLERS." The first volume, already published, is entitled "THE EXPLORATION OF THE WORLD," and covers a period in the World's History extending from B.C. 505 to the close of the Seventeenth Century. The present volume extends over the Eighteenth Century, and the third volume will give an account of the "GREAT EXPLORERS AND TRAVELLERS OF THE NINETEENTH CENTURY."

THE NEW ADDITIONS TO LOW'S STANDARD SIX-SHILLING NOVELS ARE

THE AFGHAN KNIFE: a Novel. By ROBERT ARMITAGE STERNDALE, Author of "Scenes." Small post 8vo, cloth extra, 6s.

AND

MY LADY GREENSLEEVES. By the Author of "Comin' thro' the Rye," &c. Small post 8vo, cloth extra, 6s.

LONDON:

SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,
Crown-buildings, 188, Fleet-street, E.C.

SATURDAY, APRIL 10, 1880.

No. 414, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Life of H.R.H. the Prince Consort.
By Sir Theodore Martin. Vol. V. (Smith, Elder & Co.)

SIR THEODORE MARTIN has finished his task, and finished it in a way which fairly entitles him to the gratitude of the nation, as well as to the honour which the Queen has conferred on him. This fifth volume, though at least as interesting as any of its predecessors, is in one respect less satisfactory. For the first time there are traces of party political bias in the treatment of men and events. To our no small astonishment, the Mr. Disraeli of 1860 is represented as the judicious and sympathising friend of Italy and (in spite of his famous denunciation of bloated armaments) the steady supporter of Lord Palmerston's Government in their expenditure on fortifications. On the other hand, the impression which the volume leaves on the reader as to Mr. Gladstone's views and action during the same period is equally misleading; but the blemish is so small, affecting, as it does, some dozen pages or so of the volume, that we need do no more than notice it, with regret that it should have been allowed to mar the last scene in so interesting and, in other respects, so impartial a story.

As that story draws to its close, the difficulty of selection—of deciding what should be told, and what left untold—must have increased on the editor. The Prince's activity touched the national life at so many points, that every month almost as it passes brings new actors—most of them well-known men still alive—on the canvas. The most tempting and abundant materials lie ready to his hand on all sides, and since he began his work the craving to pry behind the veil which should shroud the lives even of princes has been stimulated until the reading public has no longer an appetite for anything like wholesome food. In the case of the Prince Consort's Life the temptation to humour this unhealthy appetite must have been especially strong and subtle. The appeal which the Queen made to the nation by the publication of her journals in the Highlands—well timed and useful in many ways as it proved to be—had whetted curiosity as to the private life of the Court. It encouraged a feeling in the soundest part of English society that, where the partial lifting of the curtain disclosed so much that was pure and noble and of the highest tendency in that life, it could not but be a good deed to draw it up altogether. It also developed a strong pressure in the same direction from the unsoundest part of that society, the mass of *diletanti* idlers whose main business in life is the col-

lection and diffusion of gossip, and to whom tittle-tattle about royal persons and their surroundings is valuable in proportion to the exaltation of Kings, Queens, Serene Highnesses, and so forth above the rest of mankind. So on every side, and at every step, the editorial conscience and judgment of Sir Theodore Martin must have been severely tested, and has sustained the test with all-but perfect success. At any rate, we are too thankful to him for having steered his ship so well, and set so much needed an example, to dwell on the rare instances in which he seems to us to have failed in some slight degree to uphold his own high standard.

The fifth volume leaves us in the presence of the finished picture, and, in looking at it as a whole, one is inclined to place its singular interest and attraction in the striking contrast it presents to the biographies of the general run of men whose abilities and strength of character have made them powers in our national life, and won the recognition of their countrymen. All the conditions are at first sight reversed. The best-known and most highly honoured of such men have risen from the ranks, and have had to overcome disadvantages of birth, fortune, and education. All these were on the Prince's side, and yet the story shows that they may be hindrances as well as helps to a man born in the purple, at any rate in an insular and Philistine (there is no other word for the thing) society such as ours. Nine men out of ten, when they had once become aware of the sort of jealousy with which the Prince was met, would have allowed their natural sensitiveness to overcome their sense of duty, and would have turned to the enjoyment of their good fortune without a misgiving. And what fortune! At an age when other young men—even of the *jeunesse dorée*—have scarcely emerged from the "status pupillaris," Prince Albert was placed at once in the highest position which at that moment Europe or the world had to offer. He became the sharer of the safest throne in Christendom, with practically unlimited command of wealth, and of all the enjoyments which life can hold out to a handsome, well-grown, clever youth of twenty. He was a fine shot and fond of sport, but, from the first, refused to make a business of shooting and hunting. He was passionately fond of music and of all art, but rigorously limited the indulgence of his tastes. He had a strong turn for the study of moral and physical science, in either of which pursuits he might probably have made a name, but denied himself, or, at any rate, curtailed to very narrow limits, this noblest of indulgences. Setting all such temptations quietly on one side, he devoted himself from the day of his marriage to the earnest fulfilment of those public duties which his position as the husband of a constitutional Queen, as he saw it, not only entitled him but made it incumbent on him to share. But here he was at once met by a jealousy on the part of the leading statesmen of that day which made the task of duty a singularly difficult one. It was only by reticence and patience, and, above all, self-effacement, that he could hope to overcome their prejudice. How completely he succeeded at last this volume testifies. For was not Lord John Russell,

puzzled by the state of things in Central Europe at the critical and dangerous time of the annexation of Savoy by France, writing, "I confess I should esteem it a great favour if your Royal Highness, who is so well acquainted with Germany, would furnish me with a clue to our future policy in regard to that country" (p. 62); and Lord Clarendon, on the eve of his departure on a special mission to Berlin: "I cannot express how much I regret not having the benefit of knowing your Royal Highness's views upon German affairs" (p. 392). It was, however, not these statesmen, but Lord Palmerston, who had been the most jealous critic of the Prince in earlier years. And now, as the end draws near, we find the old Premier expressing himself at least as warmly as either of his colleagues, and quite thrown off his balance at the thought of losing the Prince, which he writes of as "too awful to contemplate," and hopes that Providence may yet spare us so overwhelming a calamity" (p. 437). With the people his success had been as striking as with the statesmen. After several fits of jealousy, fomented by anonymous writers for party purposes, the nation had settled down into a sturdy faith in the sterling worth and honesty of the Queen's husband, and had recognised in him a cordial sympathy with their own struggles and trials, and a hand and heart ready at all times to spend and be spent for their best interests. With the overwhelming proof of this sound state of things in the nation and the nation's leaders, it seems scarcely worth while to remind us in these last pages that there were still outbursts of paltry and ignorant jealousy in the press and in society. What good can Sir Theodore Martin hope to effect by showing us the *Times* of April 12 insinuating that the Prince was playing false to England, and on December 16 calling him "as true an Englishman as the most patriotic native of these isles"? (p. 338). We are only surprised that the leading journal took so long to show the other side of the shield, and regret that several pages of valuable space should have been wasted on such a topic.

We have no space even to glance at the public services of the Prince recorded in this volume. The two years which it covers were full of anxious unrest and startling incident abroad. The popular movement in Italy broke out into Garibaldi's expedition and the incorporation of the Pontifical and Neapolitan States with the kingdom of Italy; Napoleon III. annexed Savoy and Nice, and was constantly feeling his way towards obtaining a scientific frontier for France in other directions; the outbreak in the Lebanon threatened the reopening of the Eastern question; the war with China was going on; while the accession of the present German Emperor to the throne of Prussia, and the death of Cavour, gave warning of probable new departures in the foreign and domestic policies of Germany and Italy. Upon each of these anxious imperial questions the reader will find the Prince's views clearly brought out, and will rise with stronger impressions of his knowledge, sagacity, and loyalty to his adopted country. But they all fade into insignificance beside the last public service of his life, which was to modify the language of Lord Russell's

despatch to Mr. Seward demanding the release of Messrs. Mason and Slidell, the Confederate envoys, who had been taken by a United States cruiser out of an English packet. Having regard to the strained state of feeling between the two countries at the moment, and to the sensitiveness of the Northerners as to the absence of English sympathy with them—

"We know we've got a cause, John,
That's honest, just, and true;
We thought 'twould win applause, John,
If nowhere else, from you," &c.—

we may still thankfully acknowledge at this distance of time, as Lord Palmerston did at the moment (p. 426), that the Prince's alterations in this despatch "contributed essentially to the settlement of the dispute," and helped to save this country from by far the greatest of all misfortunes which could happen to it—a war with the United States.

Sir Theodore Martin has done well to give the *facsimile* of this memorandum, written when the Prince could scarcely hold the pen; for it brings home to us, perhaps more vividly than any other single document could have done, the rare character and gifts of the man who had so strong an influence on the destinies of England in the first half of the present reign, and the unspeakable loss which the Queen and nation have sustained in his absence from her councils during the last twenty years. THOMAS HUGHES.

The Prophecies of Isaiah: a New Translation, with Commentary and Appendices. By the Rev. T. K. Cheyne, M.A., Fellow and Lecturer of Balliol College, Oxford, and Member of the Old Testament Revision Company. In 2 vols. Vol. I. (C. Kegan Paul & Co.)

FOR more than ten years has Mr. Cheyne applied himself with ever-increasing devotion to the study of Isaiah. By his *Notes and Criticisms on the Hebrew Text of Isaiah* (1868), and his amended version, with introductions and notes, which was published in 1870 under the title *The Book of Isaiah Chronologically Arranged*, he has given proof of his possessing the scientific qualifications demanded of a commentator; but, although well acquainted with both these publications—indeed, in the second and third editions of my *Commentary on Isaiah* I have constantly noticed and made use of them—I have seldom found myself so attracted by any exegetical work as by the volume at present before me.

The text is arranged in the usual English fashion, familiar to most readers from the "Speaker's Commentary," or from the Commentaries of Alford and Ellicott on the New Testament. A compendious introduction to the several sections is followed by the translation, with a brief notice of the various readings and renderings of ancient and modern authorities, while underneath, in double columns, are the explanatory notes. Such an arrangement is convenient and neat. Its drawbacks are in the typographical restrictions which it imposes. But Cheyne is a master in the art of self-restraint. He spares his reader the long road of preparatory investigation which he has travelled over himself.

Whatever is antiquated, untenable, adventurous, he casts behind him, either giving merely results, with an indication of the grounds upon which they rest, or, where he is himself uncertain, stating the different possibilities that are open, together with the reasons for and against each. He avails himself of the works of his predecessors—among others, of Sir Edward Strachey's interesting volume, *Jewish History and Politics in the Times of Sargon and Sennacherib* (second edition, 1874)—and also gives extracts from the MS. notes on Isaiah of the late Prof. Weir, of Glasgow, though only for the purpose of explaining why he is unable to adopt views which are nevertheless worthy of note, or of referring to their author those which he can approve. On all the subjects which he discusses he is well acquainted with the latest literature. He starts at the extreme point which an enquiry has reached, and seeks to carry it further. His book is thus not merely abreast of the present stage of scientific progress; it aims to advance beyond it. It is throughout fresh, independent, original, even from a theological point of view; for it reflects continually the struggle passing in the author's mind while he endeavours to maintain an unshaken Christian faith in face of the results of unprejudiced criticism, and to reconcile with free enquiry the reverence that is due to Scripture.

One novel feature distinguishing this *Commentary* beyond all others is the frequent recourse which it has to Assyriology in illustration of the Book of Isaiah. The assistance which this study has rendered to Biblical science is indeed inestimable. Many Persian parallels for Biblical words and ideas must now give place to Babylonian. Thus, on Isa. xxvii. 19, with reference to the Resurrection, Mr. Cheyne remarks justly, "Why, moreover, hunt for Persian affinities? The Babylonians, too, believed in the resurrection." The gods, especially Marduk, bear in Babylon the epithet "Raiser of the dead." Much, also, which has hitherto been supposed to be peculiarly Egyptian appears now to be no less Babylonian; for instance, the river-name *y'ôr*, Babyl. *ya-u-ru* (with which, however, the Sumerian *a-ri* is not connected, *a* being in this language a name for "water"). Still, considering the movement and advance constantly being made in Assyriology, I miss occasionally in Cheyne's pages the reserve necessary under such circumstances. Accordingly, I do not agree with the remark on xxxvii. 38: "Most probably Nisroch is a corruption, like Hana and Avvah in xxxvii. 13;" because these names have not yet been discovered upon the monuments, they are not therefore to be treated as corrupt. As little, again, can I agree, when (on xvii. 8) Asherah and Ashtoreth are distinguished as two separate deities, the passages in which the latter occurs being regarded as "doubtless due to a later editor, in whose time the distinction between the deities had been forgotten." To be sure, the name Asherah is Canaanitish, while Ashtoreth is Babylonian, probably Sumerian. But Asherah is nothing but the epithet *ashirat* (the gracious one), which in Canaan, having been at first simply a surname of Ashtoreth, became ultimately her proper name. Nor is it a defensible position to

understand the five titles of the Messiah (ix. 6) as forming a single name, with the remark that "nine out of ten of the Assyrian and Babylonian royal names form a complete sentence." That may be so; but "Wonder-Counsellor, God-Mighty-One, Everlasting-Father, Prince-of-Peace," is no complete sentence, such as, for instance, the name of an eponym, *Abu-ina-shalli-lilbur*—"May the father become old in the palace!" And a longer name than this is not known to me.

A second novelty in the *Commentary* is the notice taken by it of mythological elements employed by prophecy as a form of representation, and of those survivals of the primitive religion of the Semites to which Revelation attaches itself. Such a mythological element are the satyrs (xlii. 21), though, I may observe, by way of supplement, on the authority of Friedrich Delitzsch, that *galku*, as the name of a demon shaped like a bull, has been shown by the newly discovered cylinder of Ashurbanipal to be a false reading of the late George Smith's. An even more noteworthy point of contact with primitive Semitic antiquity is afforded by the Divine name *Jehovah Sabaoth*, in the explanation of which Cheyne unites with me against Schrader. The "Sabaoth" are not the Israelitish armies, but the stars. (The passage from the *Annals of Sargon*, cited on p. 13—"I counted all the armies of the god Assur"—should rather be rendered, "all the armies of the land Assur.") The hosts of the god Assur are the multitudes (*kisadti*) of celestial and terrestrial beings, which at times also are included even in the Biblical "Sabaoth."

In the treatment of critical questions, a new feature appears in the assumption which Mr. Cheyne makes, that not only did the prophet, in writing down and arranging his discourses, here and there make additions (pp. 36, 44, 50, 57, 110), but also that another hand, perhaps that of a disciple, has reproduced in a new connexion authentic remains of the master's teaching (pp. 49, 183, 181, 230). The suggestion reminded me of an article in the *Lutherische Zeitschrift* for 1876, entitled "Eine Bitte um Hülfe in grosser Noth," in which Prof. Klostermann, of Kiel, has endeavoured to show that chaps. xl.-lxvi. are the work of a younger prophet, by whom the last visions into the future of his nation, bequeathed by Isaiah to posterity, were incorporated into a larger whole, addressing itself directly, as the time of fulfilment drew near, to the Jewish exiles in Babylon. Cheyne's own judgment on the second part of Isaiah is not apparent from the present volume. But as he expresses in it an opinion which has aroused my sympathy less than almost anything else in his *Commentary*—that the prophecy in xxxix. 5, namely, is fictitious, or nearly so—he has cut himself off from the possibility of recognising a basis which might be Isaiah's own in chaps. xl.-lxvi. On xxxix. 5 he writes, "If any reader feels disappointed at this result, it may be some compensation to him that the ancient editor shows by this fictitious (or nearly fictitious) prophecy that he fully believed chaps. xl.-lxvi. to be the work of the great Isaiah." Does he really mean that this would be a compensation? Or is he speaking ironically? The parallel from

Isaiah's contemporary, Micah ("Thou shalt go to Babylon," iv. 8), he passes over very lightly: "Babylon is mentioned there only as a part of the Assyrian empire." Certainly, but as the ruling city of the empire of the world, though that empire be held at the time by Assyria. In this and in other cases, the author's questioning spirit carries him too far. Where his subject leads him to make a conservative attack, the result at which he finally arrives is, nevertheless, usually a negative one. Where, again, upon a critical issue, he maintains a conservative attitude, differing from the modern critical view, it is doubtful how far he succeeds in justifying his position. Still, it is surprising to observe how he appeals to the Assyrian monuments, especially to the Annals of Sargon, as witnesses for the genuineness of many of the disputed prophecies. Nowhere does he tread along the beaten tracks. His aim is to open new paths for himself, and it is always interesting to accompany him in his pursuit of truth. So far, indeed, as concerns myself, it would occasion me no offence should the Book of Isaiah prove to be a collection of prophetic discourses, partly Isaiah's own, partly emanating from younger prophets trained in Isaiah's school and taught after the model which Isaiah gave. But obstacles are always in my way which I cannot surmount; for example, in chaps. xl.-lxvi. there is the entire absence of that Babylonian impress which stamps the Book of Ezekiel as a product of the soil of Chaldaea.

Above all, it is Mr. Cheyne's theological standpoint which gives me satisfaction. His position is one radically different from that of Kuenen, who, in the history of Israel and the literature of the Old Testament, sees "exclusively a natural development," and pronounces supernaturalism to be "inadmissible in any one of its forms." Cheyne, on the contrary, acknowledges that "Prophecy, the highest form of revelation, is no mere natural product, and that it is forbidden to those who, in the full sense of the word, believe in Jesus Christ, to form assumptions based on a denial of the supernatural." He recognises that the idea of the Servant of Jehovah, in chaps. xl.-lxvi., relates sometimes to the people of Israel as a whole; sometimes to the true Israel, whose behaviour constitutes the reality of its destiny; while sometimes, again, as it attains its culminating point, its features settle down into those of an individual, and it betokens "the person of the mediator of salvation." He sees in this part of the Book of Isaiah the "Gospel before the Gospel." It is to be hoped, also, that in the great Sufferer of chap. liii. he will see more than a personification of the Jewish people. For the words used by him in a Sermon preached in Balliol College Chapel on Trinity Sunday, 1879, of the portrait of Christ presented by the Evangelists, are no less true of the portrait of Christ drawn here by the Babylonian Isaiah: "Better a thousand times to be absorbed in the contemplation of this image than, in sad unconscionness of its glory, to obtain the highest reputation as a critic or a philosopher."

FRANZ DELITZSCH.

The Heart of Holland. By Henry Havard. Translated by Mrs. Cashel Hoey. (R. Bentley & Son.)

M. HAVARD never seems to tire of writing about Holland, nor, while he writes such pleasant books as he does, are his readers likely to tire of hearing about it. His present work is very similar in character to his two former ones—*The Dead Cities of the Zuyder Zee*, and *Picturesque Holland*; but M. Havard is such an intelligent travelling companion that few will object to making another tour with him, although it takes them over much the same ground as before.

Holland is a country that needs a peculiar mood of mind for its proper appreciation. The traveller must not be too grave, nor too gay of heart; he may smile, but he may not laugh, for uproarious spirits seem out of accord with the sober decorous life of these quaint old Dutch towns, full of memories of the past. If he seek merely amusement, therefore, or distraction from his own thoughts, let him not go to Holland, and, above all, if he should go let him not be in a hurry, for hurry is a word unknown to Dutch folk, and his temper will be sorely tried by their failure to understand its meaning. On the other hand, if he be content to "take his pleasure sadly" without turmoil or impatience, he will find a wonderful charm in the meditative repose, the old-world aspect, and the melancholy monotony of this land of mist and water.

M. Havard was enabled to enjoy these soothing influences to the full, for he and his companions travelled, as they had formerly done when exploring the sandbanks of the Zuyder Zee, in a comfortable *talk* or large flat-bottomed sailing boat drawing only three feet of water and provided with a *zwaard* on each side instead of a keel. Sailing in fine weather is always a lazy dreamy mode of travelling, and along these Dutch rivers it conduces to a peculiarly sleepy and placid condition which is just the right one for enjoying the scenery on their banks, the interminable dykes with their long straight rows of trees, the rich meadow lands, the far extending flat surface all around, with islands scarcely rising above the level of the water, the rich crops, the fat grazing cattle, and the ancient villages and towns with their quaintly dressed inhabitants. One of these villages past which he sailed is compared aptly enough by M. Havard to "a big box of Nuremberg toys just unpacked."

"Imagine," he writes, "a double row of dwellings, all squat, all pretty, all spotlessly clean, all painted in vivid colours, all built exactly in the same way, with the same materials, placed in two long lines symmetrically intersected by straw-coloured woodwork. Before these two lines of houses, plant two rows of little old trees, with thick trunks and sparse foliage, all clipped, shaped, and pointed; all the same size and forming a kind of screen, no thicker or higher at one end than at the other, nor in the middle than at the two extremities. Then, in the street, dusted, cleaned, scraped unremittingly, where the houses are washed and waxed until you could not find a spot upon them, nor so much as a straw lying about, where the trees have a combed and brushed look and not a leaf is out of its place, picture a population of honest folk dressed after the same fashion, ~~themselves~~ like the father and the

father like the grandfather, and the little girl like the grown-up girl, the mamma like the old grandmother, and you have Wormeldingen as nearly as I can give you an idea of the place."

A good deal relating to the history of these toy-like Dutch towns, many of which formerly played an important part in the War of Independence, and sustained sieges and fought with an heroic determination that astonished all Europe, is told by M. Havard in the course of his narrative. Zierikzee, for instance, now a melancholy deserted old town, was formerly a great commercial port sending forth merchant vessels for trade to all parts of the world, and in later troublous times furnishing the bravest recruits to that mysterious patriotic army known as the "Beggars of the Sea," against which the proud strength of Spain was so often expended in vain. None who have read Mr. Motley's vivid account of the Rise of the Dutch Republic can fail to be excited when they think of that heroic struggle which ended in the liberation of Holland from a foreign yoke; and it is interesting to make acquaintance in M. Havard's pages with some of the places that endured the agonies of that terrible period—quiet, prosaic little towns for the most part, with memories perhaps of past glory, but in which all traces of strife and bloodshed have long ago been washed out by constant scrubbing.

The beauty of Dutch landscape is not, perhaps, of a kind to evoke enthusiastic admiration. It does not call forth exclamations of "Oh, how lovely!" "How grand!" "How sublime!" &c. It has not often been sung by poets except in satirical strains, nor does it usually enchain tourists, who are mostly desirous of rushing past it to the more romantic scenery of the Rhine. Nevertheless, the great Dutch landscape painters found sufficient beauty and poetry in it for their needs; and if only our eyes and hearts are open to it we also may find a subtle charm in its flat monotony that more obtrusive landscape features do not possess. M. Havard is so entirely devoted to Holland that it must be owned he is apt to exaggerate this charm a little; but he does well to combat the common notion that in Holland the skies are usually dull gray and the atmosphere foggy and smoky. In speaking of the approach to the picturesque old town of Veer, he says:—

"It would be impossible to give an idea of the lightness, grace, and elegance of the harmonious outlines of that fair city as it stands out against the silvery sky. It would be impossible to convey the effect of the reds and greens, the grays and blues, which cast their brilliant reflections into this vast sparkling lake. . . . I cannot declare too emphatically that never, either in the North or the South, have my eyes been surprised and rejoiced by equal intensity of colouring, at once bright and delicate, by a blending of tones so fine, harmonious, exquisite, and yet incomparably bold."

Of course all this colouring depends very much on the weather ~~as it changes every day~~; but under favourable conditions ~~it is~~ Holland may ~~fairly~~ vie with most countries in effects of light and colour. The approach by river to Dort, for instance, produces just the same vivid impressions of colour and glowing light

as M. Havard records of Veer. The present writer well remembers arriving there one brilliant summer's morning after a foggy night spent in tossing about off the coast, and finding herself suddenly transported as it were into one of Cuy's paintings. There was the city with its tall spires and surrounding windmills, there were the barges with their brown, red, and yellow sails; and, above all, everything was bathed in the same warm golden light. M. Havard has not much to say about the Dutch masters in this volume, having occupied himself greatly with them in preceding works, and being at present engaged in publishing the result of his researches in a big work entitled *L'Art et les Artistes hollandais*; but no one can enter with him into the heart of Holland without being reminded at every turn of one or another of those supremely skilful painters who, in the seventeenth century, unallured by Italian influences, drew their inspiration solely from the national characteristics of their country. I have not read the French original of this last work of M. Havard's, and cannot pretend to say much about the worth of the translation; but it reads smoothly and well, and would seem to be a fair rendering of M. Havard's easy style.

MARY M. HEATON.

EARLY IRISH HISTORY.

History of Ireland: Cuculain and his Contemporaries. By Standish O'Grady. Vol. II. (Sampson Low and Co.)

Who are the Irish? By James Bonwick, F.R.G.S., &c. (D. Bogue.)

MR. O'GRADY'S second volume seems to us more interesting than its predecessor. It is mainly occupied with the deeds of the great Ultonian heroes, brought down to the death of Cu-Chulaind, and related in what is meant to be the bardic style. Of the ability of this picture, of the attractiveness of many portions of it, there can be no question; and if we, nevertheless, are led to the judgment that in the main, and so far as he has gone, the author has failed, we must attribute his failure to his inability to refer to his authorities in the original, to a too hasty and superficial use of authorities consulted at second hand, to an over-fondness for rhetorical or romantic effect, and a neglect of those dry and laborious processes of historical enquiry which he ridicules in his Introduction (ii. 3), but without which the foundations of a national historical work cannot be laid.

"There is not a conspicuous sepulchral monument in Ireland the traditional history of which is not recorded in our ancient literature, and of the heroes in whose honour they were raised. In the rest of Europe there is not a single barrow, dolmen, or cist of which the ancient traditional history is recorded; in Ireland there is hardly one of which it is not."

Now it is quite true that we have a most detailed bardic nomenclature for the ancient burial mounds, raths, &c., along the Boyne and on Tara Hill. But that nomenclature is not historical but mythological. We have the tomb of the Dagda and his three sons, the mounds called the Two Breasts of the Mórrigan, the Stall of the Liath Macha, Cu-Chulaind's half-divine steed, the grave-

mound where fell the monster called the Mata—"seven score legs it had, and four heads"—the Mound of the Cow. The Dagda and the Mórrigan, to go no farther, were divinities.

Few things are more suggestive in these pages than Mr. O'Grady's frequent allusions to the apathy and the ignorance of the Irish public he is addressing.

"Educated Irishmen are ignorant of, and indifferent to, their history. . . . As mere history, . . . a work dealing with the early Irish kings and heroes would certainly not secure an audience. Those who demand such a treatment forget that there is not in the country an interest on the subject to which to appeal. . . . (Such a work) would never make its way through that frozen zone which, on this subject, surrounds the Irish mind."

. . . At present, indeed, the apathy on this subject is, I believe, without parallel in the world" (11, 17, 18, 31, 33).

We will add to these complaints but two observations of our own. First, they agree only too well with others from the same quarter. "The (in this unfortunate land) fashionable plan of despising their own country and its productions," wrote another Mr. O'Grady, whose long inactivity Irish literature has reason to regret. The editor of some posthumous works of O'Curry in the *Atlantis* remarks that by those whose influence ought to be directed to its cultivation, "Literature or science of any kind is not much appreciated in Ireland;" which, indeed, a speaker at the Catholic University not long ago concisely described as "a nation without publishers." A writer in the *Builder* of May 18, 1878, is somewhat more emphatic: "There is a boulder of unmelting ice," he concludes, "on the city's heart." The burden of his song is municipal indolence and neglect. We fear these gentlemen do not make sufficient allowance for the many other weighty matters which engage the Dublin mind—politics, Shaksperian criticism, and—and fashion. It cannot be denied that the Irish author has small encouragement to address such an audience: neither need he. For if his work, instead of the easy writing which Sheridan called such hard reading, is sound, deep, and well-considered, if he uses well the enormous advantages the Irish scholar commands on Irish soil, he will find readers in Germany, France, England, and America. Then, probably, the interest of the Dublin public will also be awakened in the ordinary course. For that capital, which once had something like independent culture, and could take up the *Messiah* with enthusiasm after it had fallen flat here, would seem to have long lost the power of walking on its own legs, and is content to be in everything a bad copy of London, from the names of its streets and its fashions in dress to fashions in literature.

The practical neglect of their antiquities by the Irish throws those studies into the hands of strangers. When the strange student is a Zeuss or a Windisch, a Wolf or an Arnold, Celtic literature is all the gainer. More frequently, however, a subject which deserves a special knowledge and a special sympathy comes to be treated by men destitute of both. In his second sentence Mr. Bonwick tells us that "the western 'Isle of

Beauty' has given rise to lots of discussions;" and many other flowers of style might be culled from his small volume. "The Bards bothered St. Patrick, and the Danes were rough to them" (91). Crannóg, a lake dwelling; "*cran*, from *criev*, a living branch. *Og* is a common terminus" (15). The author does not spell Irish names—even comparatively well-known ones—particularly well; but the reader gets variety, and a simple principle is consistently applied throughout—that any one form, namely, is as good as another. Thus, whoso likes not the *Lowr Gavala*, on p. 30, will find the same Book of Captures called *Leabhar Gamhla* elsewhere. Neither form is right. That Hiberno-Phoenician deity, the good Bal-Samhen, or Baal, mews his immortal youth on p. 38; and "Parrahbong Mac Shagjean" makes, on p. 11, his first appearance in literature—unless peradventure his name be found in the annals of the Society Isles. The Mac Parlans and Mac Farlanes would little recognise the name of their ancestor Partholán. We have the Book of Kells rechristened as the "Book of Kelly"; the "Great Cattle Spell" (for *Spoil*); the "Leabhar Leccan, or Leabhar na y-Ceart"; the "Pursuit of the Diar-maid," which the writer found "entertaining," but in which he would seem to confound the Irish Adonis with the Boar that killed him. In Mr. O'Grady's *History* Irish heroes move about in a sort of nebulous masquerade. In Mr. Bonwick's book, and in others of its class, we have Irish history in a pantomime. From both works, nevertheless, much that is good may be extracted. Mr. Bonwick, for example, successfully shows the old mixture of races in Ireland; and interesting details occur, as the Norse *Themar* (61), for *Temair*, or *Tara*. We know not, again, whence comes Mr. O'Grady's *Ioroway* (58), or whether the analogy has been already pointed out; but the Old-Irish *Iruaith*, *Hiruaith*, some northern country, certainly looks like the name *Norway*, *Norroway*, the aspirated *t* not being heard, and the *n* coming from the Celtic article. In taking leave of these books, we may express the hope that, after study and patient labour, Mr. O'Grady will yet produce something worthy of his evident abilities. As regards Mr. Bonwick, he would find a proper subject for anthropological enquiry in the origin of the remarkable Irish sepulchral mounds along the Boyne. How ancient they are is best shown by the fact that not only has the true history of their builders perished, but a new mythical history was long ago invented. When next this writer appears in print, however, may he be more patient in his method, more exact in his references, less flippant in his style.

DAVID FITZGERALD.

NEW NOVELS.

A Sylvan Queen. By the Author of "Rachel's Secret." In 3 vols. (Hurst & Blackett.)

Mrs. Lancaster's Rival. By the Author of "A French Heiress in her own Château." In 3 vols. (Sampson Low & Co.)

Tender and True. By William Arthur Law, late 21st R. S. Fusiliers. (Remington & Co.)

Brother and Sister. By Lucy Scott. In 2 vols. (Macmillan & Co.)

IN these days of hurry it is refreshing to come upon a plot that has been elaborated and worked out so carefully in all its details as *A Sylvan Queen*. Scenery, circumstances, characters, and development are all handled with equal care, and the result is a story that is harmonious as well as thoroughly interesting. There has been some appreciative study of our greatest novelist, for not only does the village heroine, Madge, remind us of Hetty in *Adam Bede*, but the characters of the landlady, the pedlar, and the maid at the great house are portraits of rural life which show appreciation of George Eliot; however, to say this only enhances the merit of the book. The natural scenery in which the young artist, Hugh Beverley, revelled is described with true artistic feeling; and the story of his love for Margery Elphinstone is exquisitely touched. The parallel plot of the love which the young squire Pelham has for the gamekeeper's daughter, with its selfishness and attendant tragedy, is not new, but contains one or two episodes which will make the book remembered. One of these is the scene in which Madge is dressed up in the clothes of the late lady of the manor and imagines how it feels to be raised to the position of a lady; and another is the scene in which she comes back an outcast to her father's home, and finds that the fierce, taciturn man has kept the door on the latch and a light burning that she may be welcomed whenever she comes. The chapter in which that return is described reaches a high degree of power. It is a pity that the simplicity of the idyllic form of the story is ever spoilt by the introduction of hard words, as where the Canon is said to be fond of a "peripatetic post-prandial cigar;" but this does not occur often, and where the pathos of simplicity is really required it is seldom absent. *A Sylvan Queen* is a novel which ought to make its mark.

Mrs. Lancaster's Rival is the pleasantly told story of a bright young girl imprisoned among designing guardians who have schemes on her money. Why she should have been made lame when her lameness has no effect on the story is hard to understand. The portraiture of the young hero, Dick Northcote, whom Mabel Ashley meets in the train as she is going into captivity, gives us the impression that she was not hard to be pleased; and, indeed, the general character of all the men in the book, with the exception of the eccentric Anthony Strange, is commonplace; but then it must be confessed that there are a great many commonplace men, and if their stories are to be excluded from fiction there will not be novels enough to supply the demand. So we must put up with such people as Dick Northcote, Randal Hawke, and Captain Carden for the sake of the qualities they bring out in the heroines—the gentleness and quiet patience of Mabel and the passionate devotion of Flora Lancaster. For in spite of the prejudice excited against her by her antecedents, Flora, the fascinating widow, who has at different times "entangled" two of Mabel's three suitors, is a fine study of character. The

way in which a true affection for a worthless man develops the flirting fortune-hunter of the early part of the story into the sorrowful, dignified woman of the end is well told, and gives the book a strong stamp of originality. It is a pity that it could not have been compressed into two volumes, for the story of "Miss Monkton's Marriage," though it is cleverly written, cumbered the last volume.

Tender and True is the sort of novelette which can be delightfully discussed between the pauses of a waltz. It is a story of barrack-life in a provincial town, and its surroundings of country society, picnics, &c. There is a terrible mystery, and there is an ugly man who comes between the hero and heroine. Then the scene changes to Rangoon; and the hero himself, in his terse, racy language, sums up at the end of the book the principal scenes that follow:—"The hero saves the life of the heroine's father. Tableau—Embracing each other over body of dead tiger. Second act—Hero and heroine clear up a dreadful mystery. Tableau—Falling into each other's arms. Third act—Hero asks heroine's father for her hand," &c., &c. The story is *naïve* and easy-going. It wiles away an hour most pleasantly, and the people we meet in it are thoroughly friendly and pleasant; but why the heroine was so stupid as not to tell the hero what the ugly man threatened to do, or why the hero was so stupid when he was in church as to think he saw the heroine being married to someone else, we are unable to understand.

Brother and Sister is a crude book, with a good many reflections in it, and the bad health of the two heroes, Walter and Rudolf, is a great drawback both to their enjoyment and to that of the reader. Yet there is a freshness in the story; the devotion of the sister to the opium-tempted brother, and the touching story of her lover, von Stein, are interesting, and we cannot help having cared sufficiently for both brother and sister to be glad when they regain their ancestral rights and are made happy.

F. M. OWEN.

CURRENT LITERATURE.

On Duty: a Ride through Hostile Africa. By Parker Gilmore. (Chapman and Hall.) Mr. Gilmore was sent out during the late Zulu war to enlist drivers and leaders among the Bechuanas. He travelled to their country; but, before he had engaged any, the war came to an end, and he returned. The narrative of his journey and adventures is one of the most diffuse we ever read; every incident is chronicled, and the author's mental ejaculations and reflections fill up a good part of the book, which is spun out in every possible way. For instance, his horses, one stormy night, broke loose and started off. This gives occasion for a chapter headed "Hyaenas," on the assumption that these animals were the cause of the fright, and this is all we learn about them; but in the following chapter, headed "Lions," the blame of terrifying the horses is transferred from the hyaenas to the lions, which are equally invisible, though an examination of their *spoor* takes up more than a page. Mr. Gilmore is a smart writer. He can tell nothing simply, and he seems to think it witty to use words in their wrong sense. Instead of offering a hand, he "subtends" it; a bottle is a "glass tenement;" a monkey's name is his *cognomen*, &c. We are

far from saying that there is nothing worth reading in Mr. Gilmore's travels, but we wish it had been offered to us in a more palatable form.

MESSRS. SAMPSON LOW AND Co. send us part i. of *Sunrise*, by William Black. Those critics and readers who have of late years vituperated Mr. Black for not breaking new ground will be hard to please if they do not acknowledge that he has obeyed their hests. At present *Sunrise* (though, oddly enough, it begins with two men in a carriage and a dinner at which one of them is smitten, just as *MacLeod of Dare* began with two men in a hansom and a lunch at which one was smitten likewise) certainly breaks ground new enough. Mr. Black has taken up the possibly promising subject of cosmopolitan conspiracy, or revolution, or regeneration, or whatever it may be called. We are introduced to a deformed but enthusiastic peer, a roving Englishman of the *pococurante* school, and two conspirators, one of whom is a young lady whose feelings and utterances are pitched in a very high key indeed. The unfortunate *pococurante* having made a reference to General Górgéy, the young person (who is a noble Magyar by birth) replies, "Perhaps you are not aware that there are some names you should not mention in the presence of a Hungarian woman." Mr. Black seems to intend us to take this piece of tall talk quite reverently and admiringly, and altogether there are signs that he is going to be very serious this time. As we have always frankly avowed our own preference for the things he can do best (that is to say, light comedy and description), we are not immoderately delighted by the apparent tendency of *Sunrise*; but after all one-fifteenth part of a book is perhaps hardly enough to judge by.

Ethnology; or, the History and Genealogy of the Human Race. By Thomas Painter, Jun. (Baillière, Tindall and Cox.) If it is true that one-half the world does not know how the other half lives, it is still more true that one-half the world does not know how the other half thinks. It is incredible that so naively ignorant a book as the one just named could have been written and published in the year of grace 1880. The many sins of ethnology are more than atoned for by its name being so taken in vain.

The Return of Ulysses. By O. H. Hoole. (Walbrook.) Mr. Hoole's attempt at a classical tragedy is by no means unsuccessful. Perhaps his style somewhat lacks distinction; but it is smooth and flowing, the choruses are gracefully written, and, though there is no attempt at any such reproduction of the characteristics of the model as Mr. Swinburne has given us in *Erechtheus*, the sentiment and colour are sufficiently Greek. The play or poem appears in very modest guise, but is deserving of much more attention than many statelier volumes of verse.

The Girdle Legend of Prato. By R. C. Jenkins. (C. Kegan Paul and Co.) This is a kind of dramatic chronicle of the legend of the Madonna's Girdle said to have been brought by the Crusader Dogemari from Palestine to Italy. It is not ungracefully done, but presents nothing very remarkable.

Lays from the Land of the Gael. By Anna Louisa Hildebrand. (Belfast: McCay and Co.) We must leave the North of Ireland and the North-West of Scotland to fight out between them the question whether the former can properly be called "the land of the Gael." Mrs. Hildebrand displays in fair measure the qualities with which Irish minor poets have made us familiar. At her best, she is tuneful and easy, nor always deficient in thought; at her worst, not much can be said for her, and

what that worst is the following stanza will show:—

"Oh! shame to make a household drudge of that rich gifted soul,
And all her aspirations high to deaden and control;
To hug the Moloch of his heart, to kneel a prostrate slave
To the fearful thing that even then was digging deep her grave."

Molochs, we think, do not usually dig graves; and if the fearful thing and the Moloch are distinct there seems to be a superfluity of characters.

Whinbloom. By Robina F. Hardy. (Edinburgh: Nimmo.) A volume of pretty verse chiefly of the domestic character, with illustrations which would have been better if they had been better engraved. Miss Hardy's weak point seems to be her epithets, which are too obviously applied in the strict derivative sense of the word.

Blamid. By Robert D. Joyce. (Boston: Roberts.) Mr. Robert D. Joyce has succeeded in copying Mr. Morris's manner with a good deal of success. He has not, indeed, acquired the incomparable and incommunicable narrative grace of our English tale-teller, but the following stanzas might conceivably have found a place in a rough draft of the *Earthly Paradise*:—

"And as she sang they moved; and back again
O'er the fresh blossoms passed; yet to his ear,
As they moved farther on, the handmaid's strain
Floated along the meadow, and more clear,
More piercing still with passions, bliss and pain,
It grew and grew, until a thrill of fear
Shot through him at the marvel, and he woke
Nigh the dark shadow of the ancient oak."

"His horse was grazing near, his hounds at rest,
Yet scarce a spear's length from him on the ground
Sat a bright man in minstrel's colours drest
Playing upon a harp, whose lovely sound
Filled all the place—upon his stalwart breast
A black beard flowed, and ivy leaves entwined
His broad brow, while beneath two dark eyes shone,
And a fair face unbrowned by wind and sun."

Blamid is a poem of considerable length, and, as this extract will show, the versification is equable and fairly sweet, while the language is, as a rule, not ill chosen. Much more, however, cannot be said for it.

Kennedy at the Cape: a Professional Tour through Cape Colony, the Orange Free State, the Diamond Fields, and Natal. (Edinburgh.) "Kennedy" consists of a family of Scotch musicians—father, son, and two daughters—who made a professional tour of six months in South Africa in the course of the present year. Mr. David Kennedy, jun., kept his eyes and ears open, and in 150 small pages, free from padding or any attempt at book-making, tells us pleasantly and unaffectedly what he saw and heard. The party, after visiting Cape Town, proceeded to Port Elizabeth and travelled up the country to Bloemfontein and Kimberley, and concluded with Natal. In this tour they gave eighty-two concerts, and everywhere met with a hearty welcome. The author speaks of the musical capacity of the Kafirs, of their full and melodious voices, and he noted that the singing "in all Kafir kirks was better than the psalmody at home." He found the Zulus of Natal a continual source of interest, and was especially struck with their cheerfulness and grace.

"If you look at them, their faces are at once wreathed in smiles. It may be said that the Kafir supplies South Africa with laughter. If you hear merriment anywhere, be sure it proceeds from the native, not from Boer or Africander. There is more sparkle in a Zulu's left eye than in a Dutchman's two eyes put together. Never was there a more

appropriate word than that of *boys* as applied to the Kafirs." "Their clothing is never ample, but what they do wear is worn with grace. Their well-shapen bodies set off the most ragged coats and trousers. Tatters on a Kafir never suggest dirt, squalor, or destitution, as on a home beggar." "A good Kafir is a real blessing. A friend informed me he had had one for actually six years. He did all the cooking, and the waiting at table. 'I admire him, I love him,' said my friend."

Mr. Kennedy remarks that the relations between the white and black populations of Natal are much more satisfactory than in Cape Colony, and indeed it is well that is so when we reflect that for each white inhabitant of Natal there are seventeen blacks! Doubtless many of our readers have been ere now nauseated with the multitude of books on South Africa, but the following quotation respecting the late war must interest all:—

"Were the British ratepayer to know clearly the gross waste of public funds through insane mismanagement and an unthrift totally unknown in ordinary commercial transactions, he would never pay a penny to prosecute another war."

Portraits du dix-huitième Siècle, par Jules Soury (Paris: Charpentier), is one of those volumes of biographic criticism which since Sainte-Beuve's time France has produced by the thousand, and which are generally readable enough. What business an article on Schopenhauer has among portraits of the eighteenth century we, indeed, cannot exactly determine. But the remaining articles are appropriate and interesting. The most important of them are four on Fréron, the Chevalier Daydie (the lover of Mlle. Aïsse), Restif de la Bretonne, and M^{me}. du Barry. M. Soury gives us a long and (with his pardon) rather *bête* Preface about ethnology, the late J. S. Mill, and Mr. Herbert Spencer. But when he is once launched there is nothing specially philosophic in his treatment. As is the case with many other French men of letters, his acquaintance with foreign literature seems to be but limited. It is curious that anyone, no matter what his nationality may be, should write on the eighteenth century without being acquainted with the works of Pope. But M. Soury is evidently not aware that a character of Voltaire by Fréron which he ecstatically praises is merely, and indeed undisguisedly, *calqué* upon the famous character of Atticus. Still, this essay on the "wasp" is interesting because it is sympathetic. Had M. Soury been better up in our own literature he would have been able to draw what, to the best of our knowledge, has never yet been drawn—a most interesting parallel between Fréron and Dennis, the two great representatives of crossgrained and Philistine, but still intelligent criticism. The study of Restif is long and, as most studies of that singular person must be, interesting enough. Unfortunately, however, M. Soury has very little power of literary appreciation, and he is distinctly unjust to the descendant of the Emperor Pertinax in this respect. There is no doubt that the late *furor* for Restif's works has been due merely to bibliomania and to passing fashion. But no one can open even the most trivial of *Les Contemporaines*, much less *Monsieur Nicolas* and the *Paisan Pervers*, without seeing that the author had a singular literary power, as inorganic as it well could be, but in kind very rare and in degree unique, with the exception perhaps of the kindred faculty of Defoe. In dealing with the du Barry literary questions do not come in, and M. Soury is therefore quite satisfactory. His heart is soft (as the hearts of most Frenchmen not rabidly Republican now are) for this luckless, guileless, and also gall-less daughter of Aphrodite Pandemos, who never did an unkind thing to anybody, who was generally fleeced and victimised by all who came into contact with her, and whose

execution, dictated as it certainly was by mere greed, is one of the foulest, though one of the least generally reprobated, deeds of the Revolution. The book is not remarkable from a literary point of view, but will, like most French books of the kind, while away an hour or two very pleasantly.

In the *Journal of the Royal Historical and Archaeological Association of Ireland* for October 1878 there is an illustration of a fine specimen of chain-mail found in the Phoenix Park, Dublin, consisting of a portion of a hauberk, one sleeve, reaching to the elbow, being entire. The mail is composed of steel rings, not quite half-an-inch in diameter, riveted together, like the armour described by Anna Comnena in her memoirs as being used in the North of Europe. Additional interest is conferred on this relic by the fact of a silver-plated bronze badge being found with it bearing the hand of O'Neil supported by two lions. Mr. Wakeman also contributes an account of some lines of stones at Cavancurragh, county Fermanagh, which he suggests may, as in a similar case on the shores of Lough Mask, commemorate the site of a battle.

In the following number, for January 1879, a description and measurements are given of the Round Tower at Kineigh, in the barony of West Carbery, Co. Cork. A remarkable feature about this tower is that it stands on a hexagonal base, eighteen feet in height, and history or legend mentions it as being built soon after the battle of Clontarf in 1013. The churchyard is the scene of a curious custom. Fresh turf is always brought from a distance to cover a grave, and the pole on which the turf is carried is left lying on the mound, so that the cemetery is full of such remains. Mr. Hogan attempts to vindicate the pre-Patrician mission of St. Ciaran of Saighir, which was attacked by Mr. Shearman in one of the chapters of his *Loca Patriciana* on the ground that his Life must have been written before the destruction of Saighir by the Danes in 842. The drawings of eight tokens coined at Youghal during the siege in 1646 will be of interest to numismatists. They are all square or lozenge-shaped, and the execution is of the rudest character.

NOTES AND NEWS.

THE Hibbert Lectures for 1880, on *The Influence of the Institutions, Thought, and Culture of Rome on Christianity and the Development of the Catholic Church*, by M. Ernest Renan, are being translated by the Rev. Charles Beard, of Liverpool, and the volume will be published very shortly. Through unforeseen circumstances the publication of the Hibbert Lectures for 1879 has only just taken place. The subject was *The Origin and Growth of Religion as illustrated by the Religion of Ancient Egypt*, by P. Le Page Renouf.

We are informed that the English version of the narrative, which Prof. Nordenskiöld has in hand, of *The Voyage of the Vega* will be published by Messrs. Macmillan and Co. at as early a date as circumstances will permit.

A NEW work by Mr. Charles Marvin, entitled *Colonel Grodekoff's Ride from Samarcand to Herat, through Balkh and the Uzbek States of Afghan Turkestan*, will shortly be issued by Messrs. William H. Allen and Co. Col. Grodekoff (who is an officer of Gen. Kaufmann's staff) in 1878 rode from Samarcand, through Bokhara, to Balkh, and thence proceeded to Maimene, Herat, and the Caspian, accompanied only by an interpreter and two orderlies. The work will contain a map of his route supplied by the traveller to Mr. Marvin.

We are informed that Prof. Boyd Dawkins has accepted an invitation to give a course of

lectures at the Lowell Institute, Boston, Mass., in the autumn, and that arrangements will be made for carrying on his lectures in Owens College during his absence in the United States.

MR. GEORGE GILBERT SCOTT'S *Essay on the History of English Church Architecture, prior to the Separation of England from the Roman Obedience*, is in the press, and will be published shortly at the office of the *Building World*. It will be copiously illustrated.

A BIOGRAPHICAL dictionary, to be entitled *The Century of Authors, 1780-1880*, is being compiled by Mr. William Cushing, of Harvard. While the work is intended to be exhaustive so far as the United States is concerned, it is not so in the case of Great Britain and the rest of the world.

In the *Nederlandsche Spectator* of March 27 and April 3 M. Fruin reviews Mr. Geddes' recent work on John de Witt. He gives the author full credit for his industry and love of truth, but thinks he is not sufficiently at home in the constitution of the Netherlands to justify some of his statements. In opposition, for instance, to Mr. Geddes' assertion that de Witt wished to set up each town in the Republic as a sovereign, M. Fruin produces de Witt's own words to show that he considered the Provincial States to be sovereign, and that he interfered with effect to hinder Amsterdam from shaking off the authority of the States of Holland. Other criticisms of equal importance on matters of detail will no doubt attract the attention of Mr. Geddes.

THOSE interested in the Greek question will be glad to hear that the excellent lectures on Modern Greece, recently delivered in Glasgow by Prof. Jebb, will be published almost immediately by Messrs. Macmillan and Co. in a volume which will contain also a reprint with additions of an article on the Progress of Greece contributed last spring to *Macmillan's Magazine*, and a short Note on Lord Byron's share in the promotion of Greek independence. As the Greek question is likely to be among the first brought before the new Parliament the appearance of Prof. Jebb's volume is most timely.

Sylvan Spring is the title of Mr. Francis George Heath's new book, which will be published almost immediately by Messrs. Sampson Low and Co. It will be uniform in style with Mr. Heath's larger works on trees and ferns. Mr. F. Edward Hulme has contributed to the work a series of drawings which will be reproduced in twelve coloured plates. It will also contain numerous wood engravings, all the illustrations being representative of spring.

A NEW work by Prof. M. Kovalevsky, of Moscow, will shortly appear, entitled *The Social Aspect of England at the End of the Middle Ages*. In this work there will be reviewed:—(1) The Land System—the distribution of immoveable property, the system of private and communal agriculture, the causes and course of the disappearance of serf-tillage, the causes and course of the development of the farming class and of the process of enclosures; (2) The Distribution of Moveable Property among the Various Classes—the clergy, the secular aristocracy, the rural and town populations; (3) The Organisation of Society and of Banks—nobility, knighthood, freeholders, burgesses, and peasantry. In conclusion there will be presented an outline of the views current in mediaeval England with regard to the social relations of the different classes to each other, and the part which each was called upon to play in the State.

MR. LEOPOLD KATSCHER has edited and annotated for Wartig's Verlag, Leipzig, three of the "English Men of Letters" series edited

by Mr. John Morley, viz., Mr. Black's *Goldsmith*, Mr. Minto's *Defoe*, and Mr. Trollope's *Thackeray*.

DR. BOOS, of Basel, has offered the Government of the canton of Baselland to edit and publish the historical documents of the little canton. The Staatsarchivariat has received orders to assist Dr. Boos in his work, and two members of the Government Council have been named as his co-editors. The *Urkundenbuch* will contain about five hundred documents. The canton was separated from the old city and formed into a new State after the bloody conflict between "Stadt" and "Land," town and country, in 1833.

MESSRS. C. F. JEWETT AND Co. will publish shortly, in four volumes quarto, *The Memorial History of Boston, including the present County of Suffolk, 1630 to 1880*. The work will be critically edited by Mr. Justin Winsor, Librarian of Harvard University, with the co-operation of the Rev. Edward Everett Hale, Dr. Samuel A. Green, and Dr. Charles Deane. The first volume will be published in the summer of 1880.

MR. LONGFELLOW'S *Evangelina* has been translated into Portuguese by a native of Lisbon who is a great admirer of the poet. The translation is prefaced by a short dissertation on the rise and growth of American literature.

A TRANSLATION of Mr. G. H. Lewes's posthumous volume will be shortly published at Moscow, under the editorship of P. D. Boborykin, with an introductory study on Lewes as a psychologist by the editor.

MISS ANNA DICKINSON has written a new play, *Aurelian*, from which she intends to give readings in the Western States of America.

THE University of Buda-Pesth, which was founded in 1635, proposes to celebrate, on May 13, the hundredth anniversary of its revival by Maria Theresa. The Hungarian Minister of Justice will publish for this occasion a book describing the work of the university during the last century.

WE understand that the sale of Canon Farrar's *Life of St. Paul*, which was published in September last, has been considerably in excess of the sale of *The Life of Christ* by the same author, for the corresponding period, and that a further edition is now at press.

THE Japanese edition of the Book of Common Prayer is stated to be nearly completed. It is being prepared under the supervision of a mixed committee of English and American missionary societies.

DR. HORSTMANN is expected in England to-day to finish his copy of Barber's *Lives of Saints* from the unique MS. in the Cambridge University Library first found by Mr. Bradshaw.

AT the meeting of the Clifton Shakspeare Society held on March 20, reports in reference to 2 *Henry VI.* were presented from the following departments:—Historical References, by Mr. C. P. Harris; Demonology and Witchcraft, by Miss Florence O'Brien; Rare Words and Phrases, by Mr. L. M. Griffiths; Metre and Authorship, by Miss Constance O'Brien; and Plants and Animals, by Dr. J. E. Shaw. Dr. Shaw also gave "A Note on the 'Farmyard and Menagerie Man' in 2 *Henry VI.*" Mr. P. A. Daniel's Time-Analysis of the Play (read with the time-analysis of the other Histories before the New Shakspeare Society on June 13, 1879) was brought before the Society.

MESSRS. W. SWAN SONNENSCHN AND ALLEN write:—

"We beg to inform you that, prior to your review of *Caroline von Linsingen* in your issue of the 27th

ult., we had purchased the right of translation of this book from the German publishers, but had not announced its issue in an English form, as we had not then decided upon a translator for it. Mr. Percy Pinkerton's review in your paper led us to communicate with him, and we have now arranged with him that he should bring it out for us."

THE universally esteemed Wilhelm von Fellenberg, son of the famous educational pioneer and founder of the Agricultural Institute at Hofwyl, near Bern, has just died in his eighty-first year in the neighbourhood of Trier.

THE death is likewise announced of Joseph Bloomfield, last surviving nephew of Robert Bloomfield, aged seventy-six; of Dr. Eelcoo Verwijs, one of the compilers of the *Netherlands Dictionary*; and of Dr. Friedrich Harms, Professor in the University of Berlin, and author of Commentaries on Kant, Fichte, Hegel, and Schopenhauer.

WE have received *After Death*, by Herbert Mortimer Luckock, D.D., second edition (Bivingtons); *Intoxicating Drinks*, by John W. Kirton, LL.D. (Ward, Lock and Co.); *Pugilistica*, part i. (Weldon and Co.); *Die Juden von Barnow*, von K. E. Franzos, dritte Auflage (Leipzig: Duncker und Humblot); *The Catholic Church and Modern Society*, by Cardinal Manning (Cecil Brooks and Co.); *Hurst-Carewe*, by H. E. S. (Ward, Lock and Co.); *Infield's Political Record, Campaigning Papers, and Speeches of Leading Liberals delivered during the Parliamentary Recess, 1879-80* (Infield); *British Dogs*, by Hugh Dalziel, part ix. (Bazaar Office); *Proceedings of the Mansion House Committee for the Relief of Distress in Ireland during the Months of January and February, 1880* (Mansion House, Dublin); *A Liturgy for Church Sunday Schools* (Church of England Sunday School Institute); &c.

SETTING UP THE MAYPOLE.

PHILLIP STUBBES's account of this, in his *Anatomic*, 1583, is well known (see my edition, p. 149, New Shakspeare Society, 1879). But I have never seen in print "A Maypoole's speech to a Traueller" by a man on Stubbess's (the Puritan) side, though with lighter tongue and hand, in Harleian MS. 1221, leaf 92 back. A few verses may be quoted. The Maypole is contrasting itself with the Pope.

(11)

"Hath holy father much ado
when he is Crowned? so haue I to,
doeth he vpon mens shouldera ride?
that honor doeth to me betide.
And as there is ioy at his coronation,
So there is at my plantation.

(12)

"Men, woemen, children, one† a heape,
doe sing and dance, & friske & leape;
Yea, drummes & drunkardes one† a rout,
before me make a hideous shout,
whose loud Alarum & blowing cries,
doe fright the earth, & pierce y^e skies.

(13)

"Hath holy pope, his holy guard?
So haue I it to † watch & ward;
for where they noyed that I am come,
my followers summoned are with drum;
I haue a mighty rancke a new,
the Scumm of all the rascall crew,

(14)

"Off filders, pedlers, fayle scape slaues,
of Tinkers, turnecoates, tospot knaues,
of Theifes & scapethriftes many a one,
with bounsing besse & Jolly Joane;
of Idle Boyes, & Journey men,
& vagrants that the Country runn.

* Stubbess makes it drawn home by oxen decked with flowers. † On. ‡ MS., "to it."

(15)

"The hobby horse doeth hether prance,
Maid Marrian & the Morris daunce;
my Nummance fetcheth farr & neare:
all that can swagger, swill, & sweare,
all that can daunce, & drab, & drinke,
they runn to me as to a sincke.

(16: leaf 93)

"These me for theire Commaunder take,
and I doe them my blaoke gard make."

F. J. FURNIVALL.

MAGAZINES AND REVIEWS.

THE *Contemporary Review* contains an article on "The Genealogies between Adam and the Deluge" by M. Fr. Lenormant, which the Biblical student will find interesting. M. Lenormant is inclined to see in the antediluvian patriarchs representatives of races and tribes, rather than ancient gods, and he believes that the varying names given to them in the parallel lists of Sethites and Cainites were intended by the Hebrew writers to express the moral contrast existing between the two lines. The numbers ten and seven respectively represented by the two lists also distinguish the antediluvian genealogies of Chaldea, Iran, India, China, and Egypt. The number ten is explained by the Chaldean calendar, which divides the year into twelve Zodiacal signs, or solar mansions, and the day into twelve double hours; and as the length of time occupied by the reigns of the antediluvian kings of Chaldea was computed at 120 *sari*, or 432,000 years, the reign of each king corresponded to a day. The Deluge happened under the sign Aquarius, and consequently the creation of the first man must be placed under the sign of the Bull. This seems to indicate that the Chaldean calendar was originally formed at a time when the vernal equinox was still in Taurus. The article is full of other interesting suggestions, such as the connexion of Naamah, the daughter of Lamech, with the Phœnician goddesses of the same name, who was one of the forms of Astarte. M. Lenormant agrees with Goldziher in seeing the day and night in the original meaning of Adah and Zillah, the wives of Lamech, though this meaning has long faded out of them in the account of Genesis. He also sees a connexion between Tubal-Cain, the first smith, and the Tubal, or Tibareni, the great metal-workers of Asia Minor.

THE *Revue de Droit International*, which has been hitherto published at the office of the Review in Ghent, will henceforth be issued from the well-known library of Muquardt in Brussels and Leipzig, under the same editors as formerly, Prof. A. Rivier, of the University of Brussels, being the *Rédacteur-en-Chief*. The first number of the twelfth volume has recently been issued, and among other papers it contains articles by T. M. O. Asser, of Amsterdam, and John Westlake, Q.C., of London, on private international law; an article by Prof. M. F. Martens, of the University of St. Petersburg, on the relations of Russia and England in Central Asia, being a reply to Mr. J. Westlake's defence of the mission of Mr. Douglas Forsyth in 1869 to St. Petersburg, which appeared in the preceding volume; and a project of a code of commerce for the kingdom of Italy, by Prof. Sacerdoti. The Review contains also a *compte-rendu* of the session of the Institute of International Law held at Brussels in 1879 under the presidency of M. Rolin Jacquemyns, the Belgian Minister of the Interior, and a bibliography of recent publications on international law.

HISTORICAL PUBLICATIONS IN FRANCE.

IN France a twofold current which, in its origin, may be traced back to the closing years of the Second Empire, but the development of which is certainly subsequent to the Franco-German War, is perceptible in historical studies. To state the fact as briefly as possible, there are the school of second-hand works and the school of original research. The writers of the former, having combined with grace of style a certain originality of view and the art of discovering and pointing out in history allusions to contemporary events, "had their innings," so to speak, very nearly down to the year 1870. But contact with the Germans—a contact effected under very painful circumstances from the political point of view—exercised an undeniable influence over historical studies. As the Germans claimed to be masters in the investigation of the precise facts of history, and took pleasure in jeering at "Latin" ignorance, there was a natural wish to see whether we were really and truly incapable of making head against them on this battlefield. It was thought possible to renew the traditions of the Mabillons, the Ducanges, and the Baluzes. This movement gave rise to the new school. It was perhaps for a brief space subject to the influence of the masters across the Rhine. But it speedily threw off its swaddling-clothes. It gained strength, and was able in its turn to show its capabilities. Now it is in full vigour, and it is French. It is French in the sense that, without falling into the infinite detail and the obscure underground toil of the laborious scholars beyond the Moselle, it yet avoids losing its way in their bombastic systems, and in those unfounded theories which always end somehow in Pangermanism. It is in the highest degree sober and discreet in point of scholarship, and solid and accurate in point of history. In fact, this school now seems in France to be overcoming all resistance, and to be fully able to contend on equal terms with foreign schools.

Nevertheless, its victory, certain as it appears to be in the long run, is not yet decisive. In the department of antiquity and the Middle Ages, the persistent effort of two organised institutions, the *Ecole des Hautes Etudes* and the *Ecole des Chartes*, supported by accredited organs like the *Revue Critique*, the *Bibliothèque de l'Ecole des Chartes*, the *Revue de Philologie*, the *Journal Asiatique*, &c., is indisputably gaining the day. It is no longer permissible to publish anything without consulting the original sources, or even the MSS. Such is now the condition of success.

But as regards general works and studies in modern history the struggle continues. There are still a number of people who think that a good historical book can be written without soiling one's sleeves with the dust of ancient parchments, and that the folios of the Benedictines, if they no longer serve, as in Molière's time, to keep one's collars in, are at best useful to idly adorn the ground floors of comfortable libraries.

This struggle, only the general outline of which can be here indicated, has caused the publication of some of the works recently given to the public by the French press, of which I propose to give a rapid sketch.

M. André Lefèvre, in the Preface to his volume entitled *L'Homme à travers les Ages* (Reinwald), takes the bull by the horns. He does not attempt to conceal that his book was written at a distance from the original authorities. He gives us a synthetic attempt, in view of first-hand works, to reconstitute a general sketch of the "History of Humanity." "What would be the use of their first-hand works," he cries, "if they had to be begun afresh every day?" Relying on the best works published in France within the last

few years, he follows in very varied chapters, connected by an invisible thread, the great events of history. He speaks of prehistoric epochs, of the origin of the Indo-European peoples, of Homer and ancient Greece, of Charlemagne and Genghis Khan, of Roland and Elizabeth of England, of Mazarin and Napoleon, always seeking to bring out the march of progress, the incessant struggle of man to rid himself, despite a thousand failures, of the burden of his original fetters. This book, written by a journalist from one day to another, teems with philosophical thought. With this high merit is combined another of less exalted rank, but by no means to be despised—namely, that it enables us to follow step by step the progress of historical studies in France during the last ten years.

The same spirit, but unequal talent, characterises M. Paquier's three volumes on *L'Unité politique et territoriale de la France* (Hachette). In the case of M. A. Lefèvre we were dealing with the journalist, the successive chapters of his book having appeared as a *feuilleton* to the *République Française*. M. Paquier is a lecturer. The study just published was composed with a view to a course of lectures to be delivered at the Versailles Hôtel de Ville. It constitutes a rapid and complete statement of the political and social organisation of our country. What the public had a right to expect from such a work, when it diverged from the minute study of facts, was a number of well-reasoned or profound, or at least original, ideas—in a word, a theory of our national history corresponding, at all events, to the present state of the historical and philosophical sciences. While recognising that M. Paquier's book possesses more than one excellence in point of detail, particularly a certain warmth of style, and even, in some chapters, an eloquence which might well arouse the enthusiasm of an audience, we strongly doubt whether there will be found in the printed work anything to extend, in any direction whatever, the domain of human knowledge and ideas.

M. Gobineau, a man of the world, a man of letters, and a wit, gives us in his turn a work which has affinities with both schools, but which neither probably will be very eager to claim. *L'Histoire d'Ottar Jarl, Pirate Norvégien, Conquérant du Pays de Bray en Normandie, et de sa Descendance* (Didier), may possibly be an historical work, but it is likewise a literary freak. I need not remind you of the theory of M. Zola, the too famous author of *L'Assommoir* and *Nana*. According to his view, in any family the good and bad qualities of its founders are perpetuated and strengthened, modified only by the new habits of the descendants and the new surroundings in which they live. All his novels hang, even in his own despite, on this theory, which would fain palm itself off as scientific and Darwinian, and all his heroes form part of the illustrious family of the Rougon-Macquarts, whose "natural and social history" he sets forth. Well, this same all-importance of heredity is precisely what has guided M. Gobineau's pen, gentleman as he is, and astonished (we cannot help thinking) to find himself in such questionable company. He, too, holds that good and bad qualities in the forefathers leave an indelible trace in the souls of their posterity. Accordingly, he goes back to the remotest ancestor of his own family, and gathers from the history of all the past Gobineaus a summary view of the state of the Gobineaus of to-day. He does not travel over this long road without coming across many novel and amusing facts. Ottar Jarl, the Norwegian robber—part English, part Norman—a man of bold and adventurous spirit, a trafficker and a soldier, a pillager and a sceptic—such is the prototype of the Gobineaus. Next we pass in review the Gobineaus of Normandy, under

the name of Gournay; the Gobineaus of England, likewise named Gournay, whose most illustrious representative is the famous veteran of the Hundred Years' War, the officer of du Guesclin and the Black Prince, Mathieu de Gournay. These Gobineaus are connected, one scarcely knows how, with the famous Robert Knolle, who is dragged neck and crop by M. Gobineau into his family because all historians are agreed that it is unknown to what family he belonged. We also come across Mélaç, the devastator of the Palatinat, who, having been known to some cousin of the Gobineaus, is at once pressed into the author's service. Then follow the Gobineaus of Bordeaux, traders, adventurers, and vagabonds, unhappy specimens of a declining race, who are idiots as the daughter of the Rougons is a courtesan. Finally, the noble race rises from the dust in the person of its last descendant, the writer of the book, who, with much wit and tact and a little vanity, has traced this amusing and truthful history of his ancestors. If the unpublished family archives consulted by the author garnish this history with a large number of new and curious facts, his general theory is at fault on several points. I will only indicate one which should have made the pen pause in the fingers of a man of the world. If, by one of those accidents which do happen, one of the Gournay-Gobineau or Gobineau-Gournay matrons had been unfaithful to her marriage vow, why, the whole theory is knocked on the head! Can M. Gobineau (the last of the series) answer for the virtue of all his female ancestors to the hundredth degree and beyond?

Happily the domain of serious studies furnishes us with more than one work of merit to place beside M. Gobineau's somewhat rash undertaking. M. de Calonne has published an excellent book on *La Vie municipale au XV^e Siècle dans le Nord de la France* (Didier). The studies so successfully pursued by Augustin Thierry on the organisation of the communes in France in the Middle Ages were not interrupted by his death. From his work, as from the Trojan horse, issued a host of excellent monographs which give us an insight into the real state of manners in France before the intrusion and establishment of the Monarchy. On the forefront of each and all of these works might be written the single word *Liberty*, which M. de Calonne has taken for his motto. His work, though not perhaps always exhaustive, is always interesting. A hasty perusal of these two hundred pages is enough to show the situation—administrative, agricultural, and financial—of the times which we have been used to look upon as barbarous. The life of our fathers is here the more accurately reflected as not a single line has been written but has behind it the support of the most authentic documents. M. de Calonne has derived the elements of his information from the registers of Amiens, Abbeville, Arras, and Boulogne. His book contains no theory, but it contains facts; facts so new—despite their antiquity—so life-like, so full of interest, that it is hard to tear oneself away from its perusal. The reader can imagine himself, without much effort, and without troubling himself about the mass of descriptive matter, deliberating with the *échevins* in the hall, seated with them at the frequent banquetting tables to partake of the *bâttons au fromage* served at the expense of the town, listening to a *Mystery*, watching over the food supplies, regulating the finances, and conducting to battle those bands of the communes which did their duty so well and gallantly. Certainly few books written at second hand, however well composed they might be, could set before us spectacles so varied and instructive, which, by the comparisons they naturally suggest with regard to the events of our own day, furnish additional food for reflection.

A very small pamphlet by M. Armand Baschet, whose name is known in England, will give us another opportunity for thought on similar subjects. This keen enquirer has found in one of the least-known corners of the Bibliothèque Nationale a treasure which is unique. It consists of a few autograph pages by the Cardinal de Richelieu, in which the future statesman, then scarcely twenty-five years of age, laid down for his own guidance certain "Maxims and Instructions for one's Conduct at Court"—*Mémoire d'Armand du Plessis de Richelieu*, publié, avec information et notes, par A. Baschet (Plon). The title alone is enough to tell us that it is the plan of conduct which Richelieu traced out for himself, *pour arriver*, that is here before our eyes. This programme of an ambitious man under the old régime suggests many reflections. It shows that, even in the time of Henri IV., a man had no other means of success, even though he bore the name of Richelieu, than the King's favour. He had to learn before all the courtier's trade. To bow and smile when the master spoke, to be constantly praising his "royal virtues," to pause in conversation while he drank—such was the surest road to fortune. Richelieu, however, in this Memoir takes no account of that other path, which was yet to lead him a few years later to his goal—the favour of women.

It was not by favour, but by sheer force of merit, that the illustrious Marshal de Fabert attained success. M. Bourelly has written his life—*Histoire du Maréchal de Fabert*, tome i. (Didier). Marshal de Fabert was in the true sense "a soldier of fortune." He began his career under Richelieu, as Richelieu had wished to begin his own under Henri IV. In reality nothing was changed, and because he had not known how to "pay his court," this man of real merit, who was consulted every moment in important crises, long remained in very subordinate posts. After twenty-seven years of truly noble and intelligent service he was still without any very definite position; and, if his rise afterwards was more rapid, this must be attributed to the fact that the Cardinal-Minister attached him to his own person. And Fabert remained almost the only example that the old régime can show of a simple soldier attaining to the highest rank in the army. M. Bourelly's first volume deals with the years 1599 to 1652. It is certainly based on original documents, for the most part inedited. It is a complete work, presenting, in a somewhat ponderous form, a most satisfying view of the military position of France in the earlier half of the seventeenth century. The papers in the French Foreign Office and War Office were consulted by the author, who has come across a mass of new and valuable information, and who has given us a portion of the Thirty Years' War treated *à propos* of one of its heroes by a soldier and historian. From the military point of view, this is a period of the first importance, for it marks the transition between the tactics of the sixteenth century, the chief object of which was the capture or defence of fortified places, and the grand strategy of the school of Turenne, which proceeds by movements of troops and battles in the open field.

We can scarcely be said to change the subject in passing from Turenne to Napoleon. And yet it is not the Emperor in his military aspect that is brought before us in M. de Marsangy's new volume, in which Napoleon still plays so great a part. The chief interest of the book—*Madame Campan à Ecouen* (Champion)—is that it gives us, for the first time, the theory and practical results of Napoleon's views on the education of young girls. The question is at present attracting much attention in France, and this book, which is by no means a hurried composition, but is the fruit of long researches, appears very opportunely. My readers will not be sur-

prised when I say that it proves that with regard to female education Napoleon was entirely of Chrysale's opinion:—

"Qu'une femme en sait toujours assez,
Quand la capacité de son esprit se hausse
A connaître un pourpoint d'avec un haut de
chausse."

His intention is before all to restrict education to a minimum. "We must limit ourselves," he says, "to what is necessary to prevent crass ignorance and dull superstition, and confine ourselves to facts, without lines of reasoning which are connected, directly or indirectly, with first causes." And the point on which he most strongly insists is the necessity of religious practices. "Allow no modification on this head. Train us women who believe and not women who reason." The plan for the management of Ecouen required the pupils to attend mass twice a week. Napoleon struck out this regulation, and inserted that "they shall attend mass every day." In the first visit that he paid to the institution he made a point of kneeling in the chapel, amid the hymns sung in his honour by the fresh voices of the inmates. In fact, with Napoleon, the great question was how to extinguish as completely as was possible every aspiration of human nature. What he wished to secure was subordination and obedience; and religion served his purposes, for religion is a mode of discipline.

CORRESPONDENCE.

BRUGSCH-BEY'S THEORY OF THE EXODUS.

Bath: April 5, 1880.

The theory first started by MM. Unruh and Schleiden, and since adopted and ably defended by Brugsch-Bey, which makes the Exodus take place across the Sirbonian Lake, and not in any part of the Red Sea, has now been before the public for some time. Brugsch mainly rests his case on what he believes to be the geographical evidence of the Egyptian texts, and the sites he has obtained from them for the localities passed by the Israelites on their march out of Egypt. In common with the majority of those who enquired into the question, I have hitherto been a thorough unbeliever in the theory; my recent visit, however, to Suez and its neighbourhood has entirely brought me over to it.

In the first place, the *yām 'sūph* or "sea of weeds" of the Hebrew narrative cannot have been the Gulf of Suez, or any part of it. The Gulf has been destitute of weeds of any kind throughout the quaternary epoch, much more of marsh reeds and papyrus, which *'sūph* properly signifies (in spite of Jon. ii. 6, where its meaning seems to have been extended to denote seaweeds). The word is of Egyptian origin, and the district of the Sirbonian Lake, which lay to the east of Port Said, is sometimes known on the native monuments as "the marshes of Sūf" or "papyrus." I believe I have found the same word in an unpublished bilingual cuneiform tablet, where the Assyrian *cisu* and *'(u)patuv* are explained as names of the *Kan Maccani*, "the reed of Magan" (that is, the Sinai Peninsula and the Delta). It is true that the first character of *'supatuv* is, unfortunately, obliterated, but I think I can restore it with considerable confidence. The only passage which causes a difficulty is 1 Kings ix. 26, where Ezion-geber is said to be "beside Eloth, on the shore of the *yām 'sūph*, in the land of Edom." But the difficulty is as great for Brugsch's opponents as for Brugsch himself, since, if the passage is pressed, the Exodus must have taken place, as Dr. Beke believed, in the Gulf of Akaba, not in that of Suez. I fancy there are few Biblical scholars who would be inclined to maintain this. No one who has actually seen the Gulf of Suez can have any hesitation in saying that whatever else it may have been called, it could not have been called "the sea of weeds."

Secondly, the mention of Baal-zephon in Exod. xiv. 2 is an insuperable difficulty to those who would make the Exodus happen in some part of the Gulf of Suez. The last camp of the Israelites before the passage of the sea was "over against Baal-zephon," and Baal-zephon, "Baal of the North," is a Phœnician name, and implies the presence of a Phœnician sanctuary. If the Exodus took place in what we now call the Red Sea, the only locality which could be identified with Baal-zephon is the range of the Ataka mountains. But there is neither vestige nor tradition of a Phœnician sanctuary on these mountains, which are, moreover, to the west and not to the north of the navigator who sails up the Gulf. So far as I can see, however, a Phœnician sanctuary could not have existed at all in the neighbourhood of Suez at the period of the Exodus, since the whole district, along with its trade, was in the hands of the Egyptians. The Phœnician ports were in the Gulf of Akaba, not in that of Suez.

But we have clear evidence as to where Baal-zephon actually was. Baal-zapuna, as was first noticed by Mr. Goodwin, is mentioned in an Egyptian papyrus, and was the divinity of the Semitic tribes who had settled in the north-

east of the Delta. The sanctuary of the god was either on the summit of Mount Kasios (now Bâs el-Kasrûn) or in its immediate vicinity; that is to say, on the edge of the Sirbonian Lake. This is curiously confirmed by the Assyrian monuments. Tiglath-Pileser II., describing his campaign in Syria in B.C. 738, speaks of another Baal-zephon, which the geographical indications of the inscription show must be the Syrian Mount Kasios of classical geography (now Jebel el-Akrâ), near Seleucia. Here also was a noted temple of Baal, like that on the Mount Kasios of Egypt.

My third argument in favour of Brugsch's theory is derived from what is said of Elim in Exod. xv. 27, that it was a place where there were twelve wells and seventy palm-trees. Now, if the *yām 'sūph* means the Gulf of Suez, Elim must be either the Wâdi Gharandel, or the Wâdi Usêt, or the Wâdi Tayyibeh. But it is only by a stretch of the imagination that the possibility of there ever having been as many as twelve wells and seventy palm-trees in either of these three places can be even conceived, while the first is too near and the last too far from the Wâdi Hawâra, which, upon the current hypothesis, represents Marah. Upon Brugsch's theory the difficulty disappears at once. Elim becomes 'Ain Mûsa, apparently the Aalim of the Egyptian texts, about eight miles from Suez, where almost any number of abundant springs can be obtained by simply piercing the ground. As for Marah, it is plainly the Bitter Lakes, not the wretched spring of bitter water on the rocky summit of Hawâra, which would not have sufficed for 2,000 persons, much less for two millions.

Lastly, it is only by adopting Brugsch's views that a satisfactory explanation can be found for the passage in Exod. xiii. 17: "God led them not through the way of the land of the Philistines, although that was near; for God said, Lest peradventure the people repent when they see war, and they return to Egypt." The road naturally taken by the Israelites when marching out of Goshen into Palestine was the military high-road that ran between the Mediterranean and the Sirbonian Lake to the cities of the Philistines, who had been established in them but a short time before as an Egyptian outpost. The Israelites would have had to force their way through these hostile garrisons had they continued to follow the usual route, and, consequently, Moses was ordered to turn aside to the south. Here, after passing through the desert of Shur, or "the wall," he was able, near Suez, to turn the flank of the line of fortification which protected Egypt from the incursions of the Arab tribes.

I refrain from saying anything of the geographical identifications proposed by Brugsch-Bey for the cities of Goshen and the places passed by the Israelites during their journey, as they seem to me to be quite independent of the general question as to the scene of the Exodus. At the same time, some of these identifications, such as those of Migdol, Pithom, and Ramses, appear to rest on a solid basis. Ramses, at any rate, cannot be Tel el-Maashkuta, as Lepsius conjectured, since the remains here are far too insignificant for a place singled out as a treasure-city in Exodus, while, though a monument of Ramses II. has been found on the spot, there is no evidence whatever to show that it was named after the king. A. H. SAYCE.

"LAURA DIBALZO."

London: April 5, 1880.

I have purposely delayed sending you this remonstrance, if not protest, against a closing remark in the curt notice of my tragedy of *Laura Dibalzo*, which appeared in your journal of February 21, because I wished not to display any hasty vexation. Thanking your

critic for what he says of the dramatic execution of my work, and passing over his half-reproving, half-commanding observation on the "bustle" of certain scenes (because I never adopt any mere technical tricks of any kind), I confine my comment to his opinion that my drama is only suited for stage representation, and does not "lend itself well to purely literary criticism." Pardon brevity, which is by no means meant to be discourteous. All the speeches of Guarini (a portrait of Joseph Mazzini), from the first act to the last, not merely lend themselves, but strongly commend themselves to literary examination, were it only for their dealing with the purblind fury of those regicides who believe that killing one man will destroy a dynasty or a political system. It might have been thought that such a subject, just now, would have had some special attractions. The death of Panorio, at the close of the first act, is unique in literature; besides that, the picture of a young man dying, chained up against a dungeon wall, by lamp-light, might furnish a subject for such painters as Alma Tadema, and others. The speeches of Skurdenka, the Polish Jew, and of the Hungarian officer, Bathymaros (when under the cruel influence of *belladonna*), are unique in literature; and the scene between certain Neapolitan vintagers and Strong-i'-th'-arm Stonewing (Mr. Gladstone) is equally unique in literature—whoever wrote them. Surely "purely literary criticism" may apply to dramatic as well as lyrical poetry? After working and thinking upon this class of composition upwards of forty years, I should be allowed to "know what I am about," and to have too much respect for the literature of my country, and for the opinion of the eminent men of letters who do me the honour of their approval, to put forth any dramatic work of this class which was only suited for stage representation. Perhaps your critic intended his opinion on that point as a practical compliment; but, if so, he will perceive that it has been thrown away upon me. Not very long ago the dramatic critic of the *Times* suggested, with no very covert irony, that all the enormously and boisterously successful stage-plays should be published, so that people could judge of their qualities as dramatic literature. Some of those which owe so much to the display of real water and real fire would, no doubt, by such means, find their place at once; but with respect to any high-class drama, a correct judgment can very rarely, if ever, be attained by an off-hand process. A tragedy (properly so-called) demands, after the requisite reading-up, so much close thinking and general brain-work for the distinct identity of each of its characters; for the distribution of the action; for the design and building of its progressive scenes; for its varied dialogue; for its suggestive preparations and cumulative movements, and momentum towards an inevitable result; and, above all, for the nature, cause, and development of its passions—that no just estimate can be formed of it by any "dipping and skimming" process, or even by the first reading of the most competent intellects. R. H. HORNE.

April 7, 1880.

I am very sorry to find that Mr. Horne has taken the notice of *Laura Dibalzo* in the *ACADEMY* amiss. To argue the matter would not probably much mend it. But perhaps I may be permitted to remind Mr. Horne that the points he cites as "unique" in his play would not of themselves constitute a claim to purely literary criticism. They are situations, incidents, or whatever it may be preferred to call them, which may be treated with a view to excite either the dramatic emotion of sympathy with the facts and actors, or the literary emotion of admiration of the form in which they are presented, or both. It was and is needless for me to point out that the author of

Orion and *Coemo de Medicis* is a proved master of literary form. In this instance it appeared to me that he had, probably with deliberation, subordinated the literary to the dramatic presentment. I may be wrong, but I think Mr. Horne will admit that such a point is not one which a critic need argue out with his author. So far was I from confounding Mr. Horne's work with the bastard drama of the day, that I thought I had distinctly pronounced it to be of the class of true dramatic work common once and rare or extinct now. Mr. Horne may take my assurance that no one is less likely to accord unfriendly, careless, or cursory attention to any work of his than

THE WRITER OF THE NOTICE.

A PASSAGE IN "2 HENRY IV."

Trinity College, Cambridge: April 4, 1880.

The Cambridge editors were fully aware of the internal evidence for a change of scene after line 132 of *2 Henry IV.*, IV. iv., and for this reason they made scene v. begin with the line "Let there be no noise made, my gentle friends," although in the old copies this is in the middle of the King's speech. In doing so, however, they unintentionally omitted to put "Exeunt" at the end of the previous scene. Capell's stage-direction virtually implied a change of scene, but in making it he had in view the simple appliances of the theatre in Shakespeare's time, when a raised platform at the back of the stage was made to serve the purpose of another room, to which the actors retired, and thus changed the scene without quitting the stage. In a note on *Antony and Cleopatra*, p. 51, Capell remarks, "The platform was double, the hinder or back part of it rising some little matter above that in the front, and this serv'd them for chambers or galleries; for Juliet to hold discourse from with Romeo, and for Cleopatra in this play to draw up Antony dying."

It seems, however, very probable that in the present instance the scene, which in the early copies is not divided, was supposed to take place on two sides of a partition, which represented the division between the Jerusalem Chamber and a room adjoining, so that none of the actors would leave the stage. In the same manner, in *Romeo and Juliet*, act II., scene i., Romeo disappears over the wall of Capulet's orchard, which was probably represented as standing at right angles to the front of the stage, so that he and his companions, although in full view of the audience, were concealed from each other. When Romeo says,

"He jests at scars that never felt a wound,"

he has evidently overheard the conversation of Mercutio and Benvolio, with the last line of whose speech the first line of his own rhymes.

Again, in *Henry VIII.*, V. ii. and iii., the scenes in the ante-room to the Council Chamber and in the Council Chamber itself are apparently both in view of the audience at the same time, and only separated by a partition. Consequently in the folios the scene is undivided and is regarded as one. W. ALDIS WRIGHT.

MASSINGER'S "PHILENYS AND HIPPOLITA."

British Museum: April 7, 1880.

In "W. M.'s" communication to the ACADEMY (April 3, p. 251), reference is made to the supposed existence of a copy of this play among the Croker MSS. in the British Museum. It may save trouble to enquirers if you will make it known that no such copy is in that collection. E. MAUNDE THOMPSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 12, 8 p.m. Society of Arts: "Decoration and Furniture of Town Houses," II., by R. W. Edis.
8.30 p.m. Geographical: "Masasi and the Rovuma District in East Africa," by the Rev. Chauncey Maples.
TUESDAY, April 13, 1 p.m. Horticultural.
3 p.m. Royal Institution: "Dogs, and the Problems connected with them," by Prof. T. H. Huxley.
8 p.m. Civil Engineers: Discussion on "Explosive Agents," "Abingdon Sewage," by G. F. Gower; "Main Drainage of Torquay," by G. Chatterton.
8 p.m. Anthropological Institute: "Notes on Fijian Burial Customs," by the Rev. Lorimer Fison; "Notes on the Polynesian Race," by C. Staniland Wake.
WEDNESDAY, April 14, 8 p.m. Society of Arts: "History and Art of Bookbinding," by H. B. Wheatley.
8 p.m. Geological: "Classification of the Tertiary Period by Means of the Mammalia," by Prof. W. Boyd Dawkins; "Faras Islands: Notes upon the Coal found at Suderia," by A. H. Stokes; "On a New Theriodont Reptile (*Cleithrorhodon orenburgensis*, Twelvetri.) from the Upper Permian Oquirrifera Sandstones of Kargalinsk, near Orenburg," by W. H. Twelvetrees.
8 p.m. Telegraph Engineers: "Notes on Some Effects produced by the Immersion of Iron and Steel Wires in Acidulated Water," by Prof. D. E. Hughes; "Notes on Prof. Hughes' Communication," by W. Chandler Roberts; "On the Adhesion of Metals produced by Currents of Electricity," by A. Stroh.
THURSDAY, April 15, 3 p.m. Royal Institution: "Light as a Mode of Motion: Theories of Light and Colours," by Prof. Tyndall.
4.30 p.m. Royal.
7 p.m. Numismatic.
8 p.m. Linnean: "On Some New Aroidae," by W. E. Brown; "Molluscs of the Challenger Expedition," V., by the Rev. E. Boag Watson; "On Some Malformed Pearls," by Dr. J. Murie.
8 p.m. Chemical.
8.30 p.m. Antiquaries.
FRIDAY, April 16, 8 p.m. Society of Arts: "Russia's Influence over the Inhabitants of Central Asia during the last Ten Years," by Prof. Vambéry.
8 p.m. Civil Engineers: "Railway Tyres and Tyre Fastenings," by B. Read.
8 p.m. Philological: "History of English Sounds and Dialects," II., by H. Sweet.
9 p.m. Royal Institution: "Marcus Aurelius," by Ernest Renan.
SATURDAY, April 17, 3 p.m. Royal Institution: "Art and Vision," by Jas. Sully.

SCIENCE.

CURRENT GEOLOGICAL LITERATURE.

A Manual of Palaeontology for the Use of Students. By Henry Alleyne Nicholson, M.D., D.Sc. Second Edition, revised and greatly enlarged. In 2 vols. (Blackwood and Sons.) Among the lower forms of animal life, with which Dr. Nicholson is so familiar, there is a process of multiplication known to physiologists as fission. Dr. Nicholson's work has lately suffered a process of this kind. The single volume which he published some years ago has, in fact, developed, in this second edition, into two handsome volumes, each nearly as large as the original. So copious, indeed, have been the additions, and so careful the revision, that the work in its present form is to all intents and purposes a new book. After careful scrutiny of its pages we have no hesitation in saying that it is by far the best book on its subject in the English language. It is true that Prof. Owen many years ago brought out a valuable treatise on Palaeontology, but this was occupied almost exclusively with the vertebrata. As a matter of fact, however, most students require to study invertebrate rather than vertebrate fossils. Dr. Nicholson has therefore acted wisely in dedicating the larger portion of his work to the latter group. But we think that those students who devote themselves to the study of fossil plants have a right to complain that their tastes have not been sufficiently respected; in fact, the portion of this Manual given up to Palaeobotany does not form more than one-twentieth of the entire work. Dr. Nicholson's pages are admirably garnished with upwards of seven hundred excellent woodcuts. In fine, the book is altogether so well got up that it is a real pleasure to turn over its pages.

Lethaea Geognostica, oder Beschreibung und Abbildung der für die Gebirgs-Formationen bezeichnendsten Versteinerungen. 1. Theil. *Lethaea Palaeozoica.* Von Ferd. Roemer. Textband, Erste Lieferung. (Stuttgart: E. Koch.)

Four years ago Prof. Roemer, of Breslau, published the Atlas of plates to this work, and now he presents us with the first instalment of the text. The work is based upon the well-known *Lethaea Geognostica* of Bronn and Roemer, but aims at a more detailed treatment of the subject than was contemplated in the earlier editions. Although it is only the first *Lieferung* of the first *Theil* that is yet published, even this extends to upwards of three hundred pages. After a general introduction on the geology of the palaeozoic formations, and a valuable bibliography, the author commences the description of the characteristic fossils. In the present part he completes his study of the palaeozoic plants, but scarcely advances beyond the threshold of the animal kingdom. Only the palaeozoic foraminifera and sponges are dealt with, all the other groups being reserved for future publications. If the author finishes his work in the same careful way in which he has started, the new *Lethaea* will be simply invaluable to the palaeontologist.

Etudes synthétiques de Géologie expérimentale. Par A. Daubrée. Deuxième Partie. (Paris: Dunod.) While the revelations of spectrum analysis have taught us a great deal about the chemical constitution of the heavenly bodies, the only means of information at our command with reference to the mineralogical constitution of matter outside our earth is afforded by the examination of meteorites. These small cosmical bodies, which come to our earth as specimens from space, may be regarded as pocket editions of the planets. M. Daubrée, as Professor of Geology at the Musée d'Histoire Naturelle in Paris, has made a most important collection of these interesting bodies, representing 283 falls. But he has been much more than a mere collector. Aware of the important light which these bodies are capable of throwing upon the history of our globe, he has dedicated a large portion of his life to their study; and his collected researches on meteorites are given in the volume which is now in our hands. Pursuing his synthetical experiments, M. Daubrée has actually succeeded in imitating the more characteristic features of meteorites. He has produced bodies having a similar mineralogical constitution; he has imitated the broken and often polyhedral form of aerolites; he has reproduced those cupules and other piezolyptic features which are eminently characteristic of the surfaces of many meteorites; and he has mimicked most of the peculiarities of meteoric iron. In short, by a rare combination of chemical, mineralogical, and mechanical skill, he has thrown a flood of light upon the nature, the origin, and the relations of these bodies. The first part of M. Daubrée's great work, which was occupied with the application of the experimental method to geology, finds a fit supplement in the present volume on cosmological phenomena. For the geologist who takes a broad view of nature can hardly help becoming a cosmologist. Every day, indeed, it is becoming increasingly evident that the history of our globe is but an epitome of the physical history of the universe, and that a fundamental unity may be detected throughout all the phenomena of nature.

A Text-book of Field Geology. By W. Henry Penning, F.G.S. With a Section on Palaeontology, by A. J. Jukes-Browne, B.A., F.G.S. Second Edition, revised and enlarged. (Baillière, Tindall and Cox.) It is clear that Mr. Penning, in originally bringing out this work, supplied a want which was sorely felt by the student of geology; otherwise a second edition would not have been so soon demanded. Useful as the former edition unquestionably was, the present issue is a great improvement upon its predecessor. The improvement is especially marked in the tabular schemes for the determination of

minerals and rocks, and in the lists of characteristic fossils. When the previous edition was prepared, Mr. Jukes-Browne was prevented by ill-health from devoting as much energy as he had desired to the palaeontological part which he had undertaken. He has, however, since revised and extended it with much care and ability. As Mr. Penning's work is the only detailed guide to geological surveying which we possess, it takes an undisputed place in our scientific literature, and must be used wherever geology is taught, as it only can be properly taught, in the field.

Geology of the Provinces of Canterbury and Westland, New Zealand. By Julius von Haast, Ph.D., F.R.S. (Williams and Norgate.) It often happens that a local monograph is, of necessity, utterly uninteresting outside the locality to which it is dedicated. Dr. Haast, however, has managed to throw considerable life and interest into this official record of his geological explorations. The descriptive account of his field work is presented in so popular a form that even the non-geological reader can hardly fail to take an interest in the difficulties and dangers, the joys and rewards, of an explorer's life. Moreover, the grand features of the Southern Alps, laden with huge glaciers, are brought vividly before the reader, whose imagination is aided by an excellent series of lithographs representing some of the finest scenery in Canterbury and Westland. Not the least interesting portion of the Report is that which relates to the Moa and its extinction. It is well known that the views which Dr. Haast holds as to the extinction of the *Dinornis* run counter to the opinions of most naturalists in New Zealand. In the present Report Dr. Haast reiterates his views, and defends them with much ability. He still refuses assent to the Maori traditions about these ornithic giants; and he still seeks to explain away the freshness exhibited by some of the bones, even when furnished with skin and sinew and feather. According to Dr. Haast, it was not the Maoris who chased the moa and cooked his flesh; but the old moa-hunters, the constructors of the famous moa-ovens, were an autochthonous race living in the island as far back as quaternary times. This early people used implements of stone, both chipped and polished, but they were not acquainted—so far as present evidence goes—with the famous jade, or Maori *punamu*.

Chapters from the Physical History of the Earth: an Introduction to Geology and Palaeontology. By Arthur Nicols, F.G.S. (O. Kegan Paul and Co.) Geology is perhaps of all sciences that which lends itself most readily to popularisation. Its details, to be sure, require profound study for their mastery; but, at the same time, its general principles may be understood without that severity of training which is necessary in so many other departments of science. A fair show of learning may in fact be made with only a very moderate amount of intellectual expenditure; and hence, apart from its intrinsic value, the study of geology has become a favourite, and even a fashionable, pursuit. Those who require a guide to lead them easily across the threshold and into the ante-chamber of this noble science may safely trust themselves to the guidance of Mr. Nicols. His *Physical History of the Earth* does not aspire to the rank of a geological treatise, or even of a text-book, but is modestly put forth simply as an introduction to the science, freed from technicalities, and demanding from the reader little more than a sound general education. The writer's style is pleasant and clear, and his information has, for the most part, been gleaned from trustworthy and modern sources. But while the book, as a whole, is a very satisfactory production, it is not altogether free from errors. For example, there is an unfortunate

confusion between cleavage and stratification on p. 17. And the revising pen of the chemist is sorely needed on p. 33, where we read that rocks "are principally aggregates of sulphates, carbonates, and silicates, associated with oxygen"!

Fossil Men and their Modern Representatives. By J. W. Dawson, LL.D., F.R.S. (Hodder and Stoughton.) It is obvious that the method of reasoning which has been of such signal service to geology—that of proceeding from the known to the unknown, from the present to the past—may be applied with equal advantage to certain archaeological problems. All admit that the rude men of prehistoric times should be studied in the light derived from the savage races of the present day. Dr. Wilson, of Toronto, showed us many years ago what a fund of information the archaeologist may glean from the native races of America; and Dr. Dawson, of Montreal, has now taken up a similar line of study. But it is not the first time that Principal Dawson has called attention to the lessons which may be learnt by "sitting at the feet of the red man." Thus, in his well-known treatise on *Acadian Geology*, he wrote, when referring to prehistoric archaeology, as follows:—

"One can scarcely open any European book upon this subject, or glance at any of the numerous articles and papers on this fertile theme in scientific journals, without wishing that those who discuss prehistoric man in Europe knew a little more of his analogue in America."

In the volume which is now in our hands, Dr. Dawson seeks to give effect to this wish. The work introduces the reader, in a most interesting manner, to the people who inhabited the primitive town of Hochelaga—the predecessor of the present city of Montreal—at the time when they were first visited by the old Breton navigator, Cartier. Because Dr. Dawson can show that a very primitive state of things in America has been rapidly displaced by the advance of civilisation, he argues that comparatively rapid changes may also have taken place in prehistoric Europe. Of course he does not deny the occurrence of human relics with extinct mammalia, but then he holds that the extinction of these creatures was greatly assisted by the hand of man. While admitting the destructive force of human agency, we should like to see the author making more liberal drafts upon time, such as might be fairly expected from so sound a geologist. As soon, however, as Dr. Dawson advances to the study of man he casts aside his ordinary methods of geological investigation, on the plea that the presence of an intelligent being like man so modifies the operations of nature that uniformitarian principles become well nigh useless. It is, nevertheless, a pity to see so able a man fettered throughout his arguments by a narrow chronology. Waiving, however, matters of opinion, there is a slight correction of fact which should be made on p. 241. Several instances of the reputed discovery of human relics in geological deposits are there noticed, and it is then said that "all of these are now rejected, even by the most advanced advocates of the great antiquity of man." It is true that scientific opinion on this subject is not unanimous, yet the flint implements from the Brandon beds, one of the instances here cited, are accepted by Prof. Ramsay and several other English geologists; while the Thénay flints, another of the disputed cases here noticed, have convinced even so cautious an anthropologist as Prof. de Quatrefages.

F. W. RUDLER.

NOTES OF TRAVEL.

THE April number of the *Monthly Record of Geography* is mainly occupied with Sir Michael Biddulph's paper on Pishin and routes from

India to Candahar, which is preceded by the text of Mr. Thomson's report on his journey from Lake Nyassa to Lake Tanganyika. There is an interesting note on Kafirstan, and another on the climate of Western Japan, and the cultivation of the tea-shrub there. Under "Proposed Medals for the Reward of Naval Officers (not Surveyors) and Officers of Marines who may make useful Surveys," we find a letter from Admiral Ryder, offering the sum of £100 for the purpose named—an offer which the Council of the Royal Geographical Society feel obliged to decline, as they do not consider that they could properly discharge the duty of adjudicating the medals. The number contains several well-executed woodcuts of views in the Pishin Valley, &c., and a map of the country dealt with by Sir M. Biddulph, in which are embodied the results of the most recent surveys.

THE London Missionary Society intend to despatch a third expedition to Lake Tanganyika next week to reinforce their station there. The party will consist of the Rev. A. J. Wookey, who has been for some time in the Bechuana country, and Mr. D. Williams, with Mr. W. S. Palmer as medical officer. Arrangements have been made for an experienced guide to conduct the expedition from Zanzibar to Mpwapa, where they will probably be met by Dr. Southon, who is now in King Mirambo's country.

THE misfortunes which have hitherto attended all the movements of the ill-fated Belgian expeditions in East Central Africa have not yet come to an end. The last mail from Zanzibar brings news that the station at Karema, on the east shore of Lake Tanganyika, which was selected on the recommendation of Mr. H. M. Stanley, turns out to be situated in the middle of a vast swamp, and the outlook in the rainy season is considered very serious. Food is only procurable with the utmost difficulty, and is daily getting scarcer. Mr. Carter had arrived at Karema with only one of the four Indian elephants which started from Dar-es-Salaam, but about the fate of the third a discreet silence is preserved, though the deaths of the other two had been duly reported.

THE same mail brings news that Mr. Thomson, after remaining at Ujiji for more than a fortnight, had left on January 12 and was believed to have reached the London Missionary Society's new station at Mtowa on the west shore of Lake Tanganyika four days later. Thence he intended to continue his examination of the Lukuga Creek, after which he would cross the unexplored tract of country to the southward, and, rejoining the main body of the East African Expedition, push on for the coast at Kilwa through an unexplored belt of country.

WRITING from Sao Pedro de Caxoeira, Rio Purús, Mr. Hugh F. McCaul states that a visit to the Indians far up the river in the steam launch was contemplated by Mr. Duke, of the South American Missionary Society, at an early date, as there was then enough water for the launch to penetrate a considerable distance, and to visit hitherto unexplored affluents of the Purús. The journey was expected to last about two months.

THE following are the questions connected with the construction of an interoceanic canal, into which the International Technical Commission have lately been enquiring with a view to ascertaining definitely what work will be required:—Verification, by levelling, of the general line between Colon and Panama; reconnaissance, by means of borings, of the nature of the ground to be traversed; study of the stability of the rock to be passed through in deep cuttings; the mode of overcoming difficulties presented by the Chagres River and of excavating rock below the sea-level; study of the entrances to the canal; the amount of soil

and rock to be excavated; and the probable duration of the work. The reports on all points are considered satisfactory, and it is thought that the work could be completed in eight years at an outside cost of £33,720,000.

We hear that early in January Mr. E. Whymper successfully accomplished the ascent of Chimborazo, the loftiest mountain in the Cordilleras of Ecuador. He took ten days in getting from the Rio Bamba two-thirds of the way up to the summit, and the difficulties encountered were greater than was expected, owing to the wind and the rarefaction of the air. On the top of the mountain the thermometer showed a temperature of 11° F. There is no crater at all, but two peaks, both of which Mr. Whymper ascended; he found that the higher one was at an elevation of 21,982 feet above the sea-level, or nearly 12,000 feet above the valley of Quito.

MR. W. H. TIETKINS has just returned from his expedition into the interior of South Australia, to which we referred on September 13. No details of his explorations are yet to hand, but we learn that he was able to obtain good water by sinking a deep well near the Musgrave Range.

The Victoria Year-Book for 1878-79 (London: George Robertson), by H. H. Hayter, continues to be a model of statistical compilation. In turning over its pages, two statements have caught our eye in the chapter headed "Vital Statistics." The death rate from enteric or typhoid fever in Victoria is actually higher than in England and Wales; and phthisis or consumption is the most fatal of all diseases, showing a steady increase in recent years, chiefly among persons of Australian birth. We also notice that the total number of aborigines in the colony is estimated to have decreased from 1,553 to 1,067, or by nearly one-third, within the period of the last four years. The small proportion of children among the aborigines is especially noteworthy, 211 adult women having only 138 children.

UNDER the name of *The Popular Atlas*, Messrs. Letts are publishing, in monthly parts, a series of maps delineating the whole surface of the globe. The plates, which are engraved on steel, are characterised rather by clearness of outline than by excess of detail. We are glad to see that scientific accuracy has been studied, both in regard to the latest discoveries of travellers and also the teaching of physical geography. Political boundaries can be learned from printed books; but the relative height of mountains, the depth of oceans, and the set of marine currents, can only be satisfactorily exhibited on large-scale maps.

SCIENCE NOTES.

The Geological Record.—Geologists have now come to look regularly for the appearance of this *Record*, which issues annually from the house of Messrs. Taylor and Francis. It is unfortunate that circumstances beyond the editor's control have delayed the publication of the fourth volume, and consequently the work which has just been published brings us no nearer than the end of 1877. As long as Mr. William Whitaker, the enthusiastic editor, is compelled to rely solely upon unpaid labour, so long will he be exposed to the difficulty of securing punctuality among his staff of contributors. It is surprising, indeed, that he manages to get so much voluntary work done, for the task of preparing abstracts of scientific memoirs is apt to become irksome enough and to degenerate into drudgery. The present volume of the *Record* is as valuable as its predecessors, and, in fact, Mr. Dalton has increased its value by noticing a multitude of papers which had escaped detection in previous years.

Such a work as *The Geological Record* can never hope to be perfect, and the editor makes a humorous acknowledgment of this in his Preface. Nevertheless, we are grateful for it, even in its present form, and we trust that its efficiency will be increased year by year as the circle of its subscribers continues to expand.

THE *City Press* states that the Drapers' Company have offered a sum of £10,000 towards the new building projected for a school of applied science at Cowper Street, conditionally upon an equal sum being raised to meet it. £5,000 is already provided, and it is expected that other companies will contribute the remaining portion.

At a meeting of the Moscow Society of Naturalists, on March 25, M. Severtsoff communicated the results of his observations on the migration of birds in the Fergan and Pamir regions. During autumn, the birds which build their nests in Northern Siberia migrate in considerable numbers, by way of the Kirghiz Steppes and Turkestan, to India, where they hibernate, although part of them also winter in Fergan. The migration takes place by several routes. From Western Siberia the birds pass by way of the Kirghiz Steppes, along the valleys of the Rivers Ishim and Sara-Su to Lake Balkash; afterwards along the Syr, by the steppes which lie between that river and the western Tian-Shan, where an immense flight and a lengthened stay occur. Farther south, the direction lies, in all probability, by way of Samarcand and Dukar, to Persia, especially Khorassan and Seistan; and thence to the lower parts of the Indus. Other routes are through Pamir to Kunduz and Badakshan; and in a northerly direction to Lake Issyk-Kul. About a hundred species remain in the Fergan region to winter. Among them are several aquatic and marsh birds, such as the snipe and white stork. These find sufficient food in the mud of the hot springs, which do not freeze even in the severest weather.

PHILOLOGY NOTES.

In the last two numbers of Bursian's *Jahresbericht* (for the year 1879, parts i. and ii.), Lorenz reviews the recent literature dealing with Plantus. A similar report upon Greek history and chronology is given by Volquardsen, on Latin grammar by Deecke, on Xenophon by Karl Schenkl, and on Horace by Hirschfelder. The two last-mentioned reviews are to be completed in following numbers.

We have received the first two numbers of the *Archäologisch-epigraphische Mittheilungen aus Oesterreich* (edited by Benndorf and Hirschfeld) for 1879. They contain papers by Mommsen, on a *privilegium militare* now in the museum at Pesth; by Kekulé, on a statue of Aphrodite belonging to the Modena collection at Vienna; by R. Schneide, on some figures of fishermen upon a vase now in the Austrian Imperial Museum for Art and Industry; by W. Klein, on two figures of Ulysses and Diomedes in a relief found at Baden near Vienna; by Petersen, on a vase with a group representing Harmodius and Aristogeiton now in the Scaramanga collection at Vienna; by Torma, on some newly discovered inscriptions of Dacia; by Brunsmid, on the antiquities collected at Vinkovci (Cibalie) in Slavonia; by Sacken, on the late acquisitions of the Kaiserhaus; and by Gurlitt (in continuation), upon antiquities to be found in private collections in Vienna. Hirschfeld reports upon inscriptions found in Roumania; Kubitschek and Loewy give the results of an antiquarian tour in Hungary, Slavonia, and Croatia; and Hoernes concludes his description of the Greek vases at Trieste.

We hear that the Free Church of Scotland are about to publish a grammar of the Chinyanja

language, as spoken at Lake Nyassa, with Chinyanja-English and English-Chinyanja vocabularies, by Mr. Alex. Riddell, of the Livingstonia Mission. This will be the first reduction to writing and grammatical order of any of the Kaffir tongues of East and Central Africa.

THE Library of Heidelberg University has been enabled, by a State grant, to purchase a valuable collection. It consists of the great *Glossar* left behind him in MS. by the late eminent Lecturer on Jurisprudence and "Staatsrecht," Privy-Councillor Zöpfl, who died at Heidelberg in 1877. It was the work of thirty years' incessant labour, during which time the author was continually increasing, revising, and perfecting his work. It falls into three divisions—a "Glossarium Anglo-Saxonicum," a "Glossarium Germanicum," and a "Glossarium Latinum medii aevi," arranged methodically in no less than 217 well-filled portfolios, with an almost endless mass of illustration, commentary, and etymological explanation, and with scrupulously exact indication of the original sources. The University Library has to thank the liberality of the Baden Government for the gift of this valuable work, which will thus remain in the very workshop in which the greater part of it was constructed during the unbroken activity of its author as an academical teacher.

FINE ART.

Handbuch der Archäologie der Kunst. Von Dr. Carl Bernhard Stark. Erste Abtheilung. Zweite Lieferung. (Leipzig: Engelmann.)

To give in a fair summary the results of archaeological research during the past fifty years is what may be called with pride no easy task, so varied and so happily successful has been the activity, not in regard to classic lands only, but equally in those older countries, Egypt and Assyria, whence the earliest impetus to art appears to have been derived by the Greeks. One after another came books on the history of art and the explanation of ancient monuments; societies were founded and endowed for the advancement of the study; museums were re-organised, and expeditions were liberally equipped in search of antiquities. It is to this wide field that the newly published part of Stark's *Handbuch* is devoted.

No doubt there has often been in the period in question a waste of energy, arising from a desire to frame rules from insufficient material. Yet these failures, though in one sense to be regretted, constitute a warning which has its uses still, and which very properly finds a place in a Handbook. Again, there have been times when some special method of study has, so to speak, run away with its advocates, to the damage of other methods, which in their turn have held the upper hand. But from these incidents, also, the student may learn, with this Handbook before him, how and where to draw his line; not, perhaps, easily in some cases, as, for example, when it is a question whether the almost all-prevailing habit of the present day in treating classical archaeology as strictly a history of artistic productions does not lose considerably by its neglect of what was the primary function of every ancient monument—I mean, the story it had to tell. With Gerhard the meaning of a vase or a piece of sculpture was the first thing to be made out, rightly or wrongly, and

with his few followers it is so still. For this purpose an extensive acquaintance with mythology was indispensable, and the attention thus drawn to it led to its assuming that undue prominence from which the present method is to a large extent a revulsion. Other causes have also been at work in recent years, particularly the recovery of famous sculptures and records bearing on artists of great renown in antiquity. In them, and in enquiries concerning them, nearly all interests are absorbed. So also with the painted vases, the classification of them as to date and into special schools occupies much of the energy both of French and of German archaeologists.

It is said that in treating an ancient monument simply as a work of art, and making it thus speak for itself, as compared with the previous system of making myths or legends speak for it, we are on safe ground. Yet it remains true that, on the one hand, certain applications of the new method have of late produced astonishingly different results, and that, on the other hand, it is really a matter of bounden duty to find some means of beneficially employing the myths and legends for the purpose of getting at what was passing in the minds of the artists who realised them, whether on vases or in sculpture. Fortunately this is a duty which is still recognised by a few, and, should it revive again, it is only by a knowledge of former excesses that it will be possible to keep it within due limits. Useful or not in this respect, Stark's *Handbuch* presents many other opportunities of deciding between past and present methods, or of appropriating what is best in both. Nor is there anywhere else a similar source for the student to draw from.

The volume now completed is the first and the last of what would have been a great work but for the untimely interruption of death. So far, it is a history of the literature of archaeology, and as such will stand by itself. The material for subsequent volumes is to remain unused. A. S. MURRAY.

THE EXCAVATION OF A ROMAN CHRISTIAN CEMETERY AND BASILICA AT SALONA.

Spalato, Dalmatia.

The excavations at Salona, carried out at the expense of the Austrian Ministry of Education, have just recommenced, as before, under the guidance of Prof. Glavinich, the Director of the Spalato Museum, to whose labours in this field classical and Christian archaeologists are already so much indebted. During a visit to Salona, in company with the Professor, I was able to gain an exact idea of the excavations already completed, some account of which, considering the signal interest of the discoveries already made, may not be unacceptable to the readers of the ACADEMY.

Outside the walls of Salona, a hundred yards or so to the north of the point within the walls where the remains of a Christian baptistery had already been brought to light by Signor Carrara, stands the little church of St. Doimo, whose name still preserves that of the proto-martyr of the Roman city. Near this spot several sarcophagi of late Roman form had from time to time come to light, and it was here, therefore, that Prof. Glavinich set about his work of excavation with a view of discovering the extent and character of the cemetery that evidently lay below the surface. The work was begun in the autumn of 1874 with results

far exceeding the most sanguine hopes of the investigators. These results, up to the present date, have been to lay bare, not only a quantity of Christian sarcophagi, dating from the fourth and fifth centuries, but part of the ground plan of a considerable building. The first part of this brought to light consisted of what apparently was a small chapel, with an apse at the northern extremity, in the centre the altar steps, and ranged along the side wall in two rows, one superposed above the other, Christian sarcophagi. These are still to be seen *in situ*, and one in the upper row bears an inscription written from right to left recording the erection of the monument in the Consulship of Honorius and Theodosius, A.D. 403. This side-chapel opens into a small intermediate chamber where no tombs were discovered, and this again into the main body of what must have been a considerable basilica. At present only the eastern end of this, terminating in a semicircular apse larger than that of the side-chapel, has been disinterred. This basilica was a veritable "Church of the Martyrs." The pavement had been built over an area literally crowded with Christian sarcophagi, the keeled roofs of some of these having been chiselled away so as not to interfere with the level of the pavement subsequently laid above them, and of which, indeed, they formed a partial support. It is remarkable that these nether sepulchres had been broken into for purposes of barbarian plunder, as were also those which I have already mentioned in the side-chapel. The Christian cemetery must, therefore, in all probability have been rifled by barbarian hands before the erection of what may have been a memorial church above them. The rifling of the tombs, probably of later date, in the chapel of this subsequently erected basilica was no doubt the work of a later barbarian incursion, perhaps of the great incursion of the Slaves and Avars about the year 640, which overwhelmed Salona herself. That the basilica itself, the Church of the Martyrs, as perhaps we may venture to call it, continued to be used for a considerable period is shown by the appearance of a triple layer of mosaic pavements, superposed above each other at intervals of a few inches. Above these lie the remains of mighty monolithic granite columns and Corinthian capitals copied in slightly debased style from those still standing in the peristyle of Diocletian's palace at Spalato.

Some of the tombs discovered are of high interest, as well from their inscriptions as from their symbolical devices. From one or two inscriptions we find that the fines for sacrilegious interference with the sepulchre, fines that in the pagan period of Salona were payable to the municipal republic itself, were now transferred to the *Ecclesia Salonitana*. One inscription is especially interesting as supplying an altogether new formula of Christian sepulture. It reads:—"SI QVIS SVPER HVNC CORPVS ALIVM || CORPVS PONERE VOLVERET IN || FERET ECLESIAE ARGENTI PX || FL. THEODOTVS CVRATOR REIP || PEREGRINVM FILIVM IN LEGE SANCTA CHRISTIANA COLLO || CABI EVM. DEPOSTIO || DOMNIONIS. DIE. III. KAL DE(O) || ENBRIS CON AIVIONIO. Mommsen reads *APVLONIO*, Consul of the East Anno 460; Rossi prefers to read *ANTONIO*, Consul in 380; but the mention of only one Consul strongly favours the later date. The question which the epitaph suggests is, What is this *lex sancta Christiana* in which the Curator of the Salonitan Republic here buries his son? The Commendatore de Rossi (in the *Bollettino di Archeologia Cristiana*, 1878, p. 101) puts forward the hypothesis that the formula was borrowed from Jewish usage, and cites the sepulchral description of a Jewess at Jerusalem, in which she invokes—"per legem"—respect for her tomb.

At a spot a little to the west of what I have

termed the side-chapel was exhumed the magnificent marble sarcophagus which now stands at the entrance of the museum in Spalato. It is not too much to say that there is no Christian monument of the kind even in Ravenna itself which can compete with this in interest, and few that rival it in excellence of workmanship. The front is divided into three groups of subjects. In the centre stands "the Good Shepherd," much as he appears on another tomb from the same Christian cemetery; in this case, however, he stands beneath an arch supported by spiral fluted columns, of a type familiar to those acquainted with the silver medallions of Constantine II. and his successors. On either side of this stand the effigies of the deceased and his wife, the former in forensic attire grasping a roll, the lady holding a child in her arms. The background of both is filled with a large number of figures mostly, but not all, representing children, and intended perhaps to portray orphans and clients benefited by the charity of the wife and the oratory of the husband. But the great interest of the monument lies in the subjects that fill the two lateral ends. That to the right is the familiar gate of Hades of pagan sepulchres; indeed one such with a Greek inscription, also from the ruins of Salona, has been placed in the museum, appropriately opposite the Christian sarcophagus. That the Christian lapidary should have adopted the gate of Hades, and have converted it into the *Porta Domus Aeternalis*, can hardly surprise us in a city where we have only to walk on a few steps to find the portal of Diocletian's shrine opening into a baptistery chapel. The subject at the opposite extremity of the tomb would, however, seem one irredeemably pagan. It is nothing else than the classical symbol of annihilation—the genius of the sleep of death extinguishing the torch of life. It is a device so egregiously pagan that, as Signor Rossi reminds us, it has been of set purpose erased by pious hands from a tomb in the Cemetery of Callistus. Yet in the fourth century—and to that date our instincts lead us to assign the monument—old and new beliefs overlapped each other so strangely that even a phenomenon like this need hardly excite our surprise. As a set-off to the curiously heathen character of this Christian sarcophagus of Salona, I may cite a pagan monument which formerly existed at Ragusa Vecchia among the ruins of the Dalmatian Epidaurus, and which, were it not that the sentiment surpasses in spiritualistic refinement the orthodox conceptions of corporeal resurrection, might almost be transferred bodily to a Christian gravestone:

"Conubii decus egregium, lux alma parentum,
Eximiumque bonum corporis atq. animi;
Invidia Fati rapitur Vincentia florens,
Et nunc ante patrem conditur Helionem:
Quin potius corpus, nam mens aeterna profecto
Pro meritis potitur sedibus Elysiis."

Hard by the basilica and cemetery, at present in course of excavation, and just within the ancient walls of Salona, lie the remains of the baptistery and adjoining sacred edifice already brought to light by Signor Carrara. All friends of Christian antiquities will be grieved to learn that the mosaic pavement there discovered has been irremediably destroyed by tourists, who have been in the habit of carrying off tesserae as trophies of their visit! This pavement was one of the most interesting monuments of late Roman art existing.

The purely ornamental part of the design might indeed be paralleled at Ravenna and elsewhere, but the central subject was unique. It occupies—or rather occupied—the vestibule of a building, apparently a basilica, in which, no doubt, part of the baptismal rite was performed previously to the actual immersion in the baptistery, with which it communicated. The design was appropriate to its position. It

represented two harts drinking from a vase on a field of flowers, and above was inscribed the Vulgate rendering of Ps. xli. by the great Illirian Father:—"SIGVT CERVVS DESIDERAT AD FONTES AQVARYM ITA DESIDERAT ANIMA MEA AD TE DEVS." The form of the A's, as well as the flavour of St. Vitale about some of the capitals of the adjoining baptistery, makes it, in my opinion, highly probable that this work dates from the very latest period of Roman Salona, the period succeeding the recovery of the city from the Ostrogoths in the reign of Justinian. For the next monument of Christian Salona we must look beyond the Adriatic, among the mosaics of the Chapel of St. Venantius in the Lateran baptistery, where in the seventh century the Dalmatian Pope John IV. reproduced the sacred icons of his birth-place, the originals of which lay there exposed to the fury of Slave and Avar conquerors.

ARTHUR J. EVANS.

ART SALES.

Of interesting print sales there have lately been so few in England that the one which Messrs. Sotheby are preparing to follow that of certain of the Museum duplicates will, no doubt, be particularly noticed. It is that of a well-known collector: it extends over three days; and, though the collection does not contain a very large number of lots when the duration of the sale is considered, it is yet fairly extensive as well as rich. While not without conspicuous examples of such greater masters of the art of engraving as Lucas of Leyden, Albert Dürer, and Rembrandt, the collection will be found to be particularly rich in some works not often offered to the English collector. Thus the portraits engraved by Jean Morin and by Robert Nanteuil appear in great force; Faithorne is largely represented; and some modern landscape studies are likely to evoke interest—we refer to choice proofs from Turner's *Southern Coast* and from the engraved works of Constable.

On the 20th inst., Messrs. Roos will sell, at Amsterdam, the collection of pictures and curiosities of the late Mr. Copes van Hasselt, of Haarlem. This collection contains one picture of first-rate importance—the celebrated *Hail Fidelity!* ("Leve de Trouw") of Frans Hals; a picture otherwise known as *The Chevalier Ramp and his Mistress*. In the sudden rise in public estimation which Hals' pictures experienced about fifteen years ago, attention was especially called to those still remaining at Haarlem; and not least to this one—a splendid example of the master's power, exhibited in a scene of rude and even ugly sensual enjoyment. In the Enschede sale of 1786 the picture was sold for twenty-five florins; now it will certainly fetch a thousand times that sum.

The sensation made by the San Donato sale has inflamed to the highest degree the desire of the Italians to turn their art collections into *quattrini*, and sales of *oggetti d'arte* and *antichità* are advertised in all directions. It is with regret that visitors to Fabriano will hear that the late Count Pessenti's collection was brought to the hammer on the 1st inst. Such a collection of Greek, Byzantine, Etruscan, Mediaeval, and Renaissance ivories will not easily be formed again. They ought to have been secured by the town of Fabriano; in fact, it was understood that the late Count had bequeathed them to his native city.

THE sale of the Harper collection in New York realised excellent prices. One hundred and forty-four pictures brought £25,000. *The Vidette*, by de Neuville, fetched £320; *Childhood's Prayer*, by Bouguereau, £300; *Landscape—Morning Effect*, by Diaz, £310; *A Bischari*, by Gérôme, £410; *The Education of Azor*, by

Perrault, £700; *The Magic Mirror*, by Alma Tadema, £350; *Landscape and Cattle*, by van Marcke, £750; and *South-down Sheep*, by Verboeckhoven, £360.

NOTES ON ART AND ARCHAEOLOGY.

MR. HUBERT HERKOMER will come out strongly at the summer exhibitions, and in a line that is almost new to him. It is true that he has before now treated landscape as a background capable of interest—and not as a merely conventional background, such as it has been regarded by some of our greatest figure painters; but he has until very lately concentrated himself upon landscape art, and sought in landscape the whole motive of important compositions. This year, however, such will be found to be the case, so far as regards two landscapes, which are of striking effect. One of these represents a scene and an effect of weather in Wales—in the mountainous district of the North-west; and the other is a landscape derived from those Bavarian Highlands which have appeared as carefully studied backgrounds more than once in the work of this artist.

THE two pictures which Mr. Eyre Crowe will exhibit at the Royal Academy show strongly contrasted subjects: one of them is a drawing-room scene, a game of forfeits; the other an interior in Westminster Abbey. It is some years since the artist has painted what is as frankly a Genre picture as this scene of modern life and gentle comedy. The reliance is placed, not so much upon beauty of colour—certainly not the strong point of the picture—as upon the story told and the piquant method of telling it. The figures are natural, and express gentle life in a way in which it would have been difficult for them to do had they been painted from the paid model. One lady kneels, her face in the lap of another; one lady half hides her face behind her ample fan, for she it is who is destined to be kissed by the somewhat timid and irresolute young man now discreetly in the background. The quiet humour of the picture and its truth to every-day scenes are likely to commend it to the lovers of Genre painting, who are always numerous and influential. The picture should be engraved. In black and white it would be extremely telling. The second picture—the interior at Westminster—vaguely recalls a work of some three or four years ago, to which, however, a more dramatic interest attached, as will be apparent when we remember its name—*Sanctuary*. In that work the portion of the Abbey represented was crowded with figures; there was the woman taking refuge at the altar from the ire of her husband, and there was the eager crowd of lookers-on. Here, however, no figure disturbs the silence of the place, and the interest is sought and found in the skilled representation of the building, and in the light, shade, and colour which are present. It strikes us as a particularly agreeable and well-considered design. In the parts of the church and its monuments represented many styles of architecture meet. In the foreground are the simple lines of the oldest communion table in England; to the left is Eleanor's tomb; there is likewise a glimpse of Henry the Seventh's Chapel; and the wooden pilasters of the seventeenth century adjoin the Gothic sculpture of the fourteenth. In the suggestion of so much of English history and in the presentation of such varied forms there is surely life enough without the introduction of figures. Some places are far more interesting than any figures that could possibly people them.

MR. W. J. HENNESSY is sending to the Grosvenor Gallery three works, of which one is a study of children in a garden; another a study of wildish or open land in Normandy, diversified

by a rural figure and by a bevy of geese; while the third and most important is a picture chiefly decorative, which we shall proceed to describe. The scene is a garden in France, of which the balustrades and steps of some wooden terrace or balcony appear in the foreground, their lines playing an important part in the composition. On the balcony's edge, and at the very top of the steps, stands the single figure—a woman—her hand leaning on the rail of the woodwork. Beyond her extends the faint green of the garden, at the end of which there faces the spectator a peacock with tail spread. The sunlight, though clear, is somewhat mild and subdued; and the colours of the peacock, though not wanting in brilliancy, are less vivid than they might appear in certain lights. The raiment of the lady counts for much in the scheme of colour. Its substance is an Indian silk, of folds the softest and most pliable; its hue the grayish pink of the paler part of a peach. By it the neck and admirably modelled shoulders and arms are tightly enclosed. The skirt only is loose, and a long flowing *sacque*, into which there is let a portion of faded brocade of pale grayish blue, harmonising rather than contrasting with the very gray peach colour of the major part of the attire. In a greenish vase by the lady's side is a blossoming azalea. The flower of the magnolia hangs richly from a much concealed trellis on the right, and on the left there is the foliage of the apricot. It is obvious that the picture is one of those which successfully rely for the interest they evoke, not upon any incident nor upon the portrayal of Nature as it is beheld by the realist, but rather upon studied concord of line and hue. Yet while this is undoubtedly so, the contour of the one figure that is presented is not, as it is so often in work avowedly "decorative," rather suggested than expressed. On the contrary, the firmness and precision of modelling are only a little less apparent than the grace of the pose. The picture, both by its happy composition and by its realisation of its own gentle scheme of colour, ranks certainly as the most considerable invention of the artist, and affords pleasure.

THE Directorate of the Berlin Museum has made arrangements with the Italian authorities for taking casts of the following series of Italian Renaissance sculpture, at the church of Santa Croce at Florence:—The *Annunciation*, by Donatello; the crucifix by the same sculptor; the monument of Marsuppini, by Desiderio da Settignano; and the monument of Leonardo Bruni, by Bernardo Rossellini. In San Lorenzo, the two pulpits by Donatello; the monument of Cosimo Verrocchio; the *Tabernacle* by Desiderio; the monument of the Beata Villare, by B. Rossellini; and the *Lavatory* by Donatello. From the Duomo at Lucca have been selected the *Two Angels* by Matteo Civitali; the *Crucifixion*, by Niccolò Pisano; and the monument of Ilario del Carretto, by Jacopo della Quercia. At San Frediano, in the same city, the great marble altar, by Jacopo della Quercia, and his monument of the Trenta family. In San Romano, also at Lucca, the monument of S. Romano, by M. Civitali. The Berlin Museum very courteously offers casts of any of these, at the cost of production, to art institutions or schools in England, application to be made to the assistant-director, Dr. W. Bode. Considering the very low state into which sculpture has fallen in England, the study of these great works of the Italian Renaissance might exert a valuable influence on English students, besides tending to elevate design in other branches of art.

CASTS from the following sculptures found at Olympia, the *Hermes* of Praxiteles, the *Nike* of Pausanias, and the *Atlas* metope, from the temple of Zeus, have been received at the British Museum, and will probably for some time be a

source of attraction, if not also of disappointment in a small degree, so extravagant has been the praise often bestowed on them. They afford an instance where great merits must be set off against great faults, and particularly so in the *Nike* and the metope. In the *Hermes* the careful adjustment of drapery at his side is too suggestive of the proceedings of a studio; the tree on which he leans is a sculptor's tree, unless we are to suppose the god to be standing beside a real one, as in the *Apollo Sauroctonus*, a work also attributed to Praxiteles. In both cases the tree is practically a mere support, and, in making the figure lean on it as if it were a reality, the sculptor confounds two things, and fails to obtain a sufficiently obvious motive. It is only for a moment that the exquisite drapery conceals this weakness. On the other hand, the merits of the *Hermes* are very striking; more so than those of the *Nike*, though with her also they will probably be found to survive all that can be said against her. In the metope, carelessness is accumulated to a degree which would be intolerable if it were not that the types of the figures are of so essentially noble a conception as to still shine through the poverty of execution.

THE new number of the *Athenaion* contains a long and very interesting decree written on a marble slab lately found at Eleusis. The letters and spelling are pre-Eukleidian, and of a date from B.C. 459-420. The decree fixes the tithes to be paid by Athens and her allies to the two great deities of Eleusis; the construction of three granaries from money made by the sale of tithes; the time to be allowed for the delivery of the grain after the announcement (which is to be made in the towns by heralds and at Eleusis by the priest and torchbearer); the fine for non-compliance; sacrifices to be made; anathemata to be set up from sale of grain; and other matters. Eustratiades, the ephoros of antiquities at Athens, has published a short commentary along with the text of the inscription.

THERE is a great deal that is noteworthy in Mr. Herkomer's engraving called *Grandfather's Pet*, of which an early proof is now on view at the Fine Art Society's Gallery in New Bond Street. The large water-colour from which the engraving is taken will be one of the features of the approaching Academy exhibition, and the discussion of its merits and defects may be left until it appears on the walls at Burlington House. The engraving, however, possesses special interest as an attempt by an accomplished etcher to avail himself of the variety of textures and tones given by mezzotint. Etchers will remember that Claude was similarly attracted by the then newly introduced art; and in his *Village Dance* (of which Mr. Haden has a good proof in this state in his collection) made a not very successful attempt at mezzotinting, afterwards restoring the plate to an etching. Mr. Herkomer's success in the use of mezzotint is, we think, unquestionable; the gradations of tone in the head and face of the girl leaning against her grandfather are charming. The grandfather's face, however, is less satisfactory. In the effort to express ruggedness as contrasted with the smooth roundness of the child's face, Mr. Herkomer has etched his lines over the mezzotint more strongly than seems to be necessary—see especially the wrinkled cheek farthest from the girl's head. The result is to give near at hand a "mossy" look; and at a distance the shade under the eye-brows comes out as two black blotches. The old man's hair appears to be rather feebly treated, and the folds of the girl's apron are singularly stiff and hard. We can scarcely think that in some of these respects the plate is completed. As regards the rest of the picture, the treatment—as might be expected from Mr. Herkomer—is

powerful, and many of the textures are very satisfactory.

THE *Times* announces that Prof. Konstantin Hansen, one of the veterans of the Danish school of historical and *genre* painters, died at Copenhagen on the 30th ult. at the age of seventy-six. He was born in Rome in 1804, his father, Hans Hansen, living there as a portrait painter at that time. Konstantin at first studied architecture under Prof. Hesch, but soon evinced a decided inclination for painting. He obtained two silver medals from the Academy, and then resided in Rome from 1835 to 1844, where he occupied a prominent position in the group of artists who gathered round Thorwaldsen.

THE proprietors of *L'Art* have lately opened a permanent exhibition of paintings by modern masters of all schools in their large and well-lighted galleries in the Avenue de l'Opéra in Paris. The situation of this exhibition is excellent, and we are not surprised to hear that a great many of the pictures contributed to it have been sold immediately. It seems, indeed, to have attracted some painters away from the Salon; for M. de Nittis, the clever painter of our London streets, has not sent any picture to the Salon this year, but has arranged a collection of his works in these galleries, where they are seen to great advantage. The galleries of *L'Art*, like the journal itself, are always open to English contributors, and we should imagine would afford an excellent opportunity for English artists of merit to make themselves more known in Paris.

THE Berlin Academy have just elected five new members—namely, the painters Otto Reille, Paul Thumann, and Gustave Graef, the sculptor Fritz Schuper, and the architect M. von Grossheim.

AN important question for French museums has lately been raised by M. Edouard Lockroy. A certain credit is always allotted every year by the French Chambers for the acquisition of works of art for the national collections, but if this sum is not used the grant is annulled at the end of the year, and does not go towards the expenses of the next. This sometimes causes the conservators of museums to purchase unimportant works rather than allow the sum set aside for fine arts to be unused. Often, however, this sum is found utterly insufficient for some special need, and it is a constant grievance with French conservators that they are unable to contend at sales with those of other museums because the means at their disposal are so extremely limited. M. E. Lockroy has now proposed to the commission charged with the budget of fine arts that these means shall be increased by the Government giving up its claim to the sums not used, and allowing them to accumulate at interest, and form a sort of reserve fund which could be drawn upon in case of any purchases being desirable that exceeded the annual sum allotted. M. Lockroy has also proposed that the question of desirable purchases and acquisitions should not be left solely to the judgment of the conservators and officers of museums, but that they should be assisted by a commission of artists and amateurs chosen by Government. Both these propositions have received the sanction of M. E. Turquet, Under-Secretary of State for Fine Arts.

L'Art begins its twenty-first volume with an appreciative article, by Mr. W. O. Tristram, on Henry Merritt, the skilful picture cleaner, art critic, and novelist. The struggles of Merritt's early life are touchingly depicted in his novel, *Robert Dally*, which is in truth almost an autobiography. It is largely quoted by Mr. Tristram, who considers that it displays in some of its situations "a tragic force and play of imagination, at once powerful and delicate, that recal Dickens to mind."

THE death is announced of M. Tourny, the water-colour painter and engraver, at the age of sixty-three. He became *lapissier* at the Gobelins in 1836; but on obtaining the Grand Prix for engraving in 1846, he took up his residence in Rome. He executed a series of copies from the Great Masters in Italy for M. Thiers.

THE St. Petersburg Academy has published a treatise by Prof. Stephani, in which that learned archaeologist subjects Dr. Schliemann's account of his discoveries at Mycenae to a severe criticism. He endeavours to show that the graves ought to be assigned to the third century of the Christian era, although he admits that several of the objects found are much older. He supposes that a barbarous people had, at a relatively late period, made themselves masters of the ancient city of Agamemnon, where they erected a powerful fortress, and buried their chiefs. They were in the habit of interring along with them costly ornaments, belonging to a time then long past, and which were, for that very reason, looked upon as of special value.

A MONUMENT of some artistic pretension has lately been erected in the Thiergarten at Berlin to the memory of Queen Louise, mother of the present German Emperor. It forms a pendant to a fine statue of her husband, the work of the eminent sculptor Drake, which was set up in 1849. The sculptor of the present work is Erdmann Eucke, a pupil of Wolff's, and he is said to have achieved a decided success by his treatment of a somewhat prosaic theme in noble poetic style. The monument consists of a marble statue of the Queen, with a base around which are carved in high relief, after the manner of Drake's monument, various incidents of the time of the Revolution and the War of Freedom. The figures, however, do not belong in point of costume to this period, the artist's needs having led him to clothe them in ideal garb, somewhat resembling that worn by the ancient Germans. This we should think a mistake, especially as the figure of the Queen has a distinct portrait character, and is, moreover, distinguished by a minute attention to costume, even to the detail of a lace veil, which has been worked with extraordinary skill of hand.

THE *Zeitschrift für bildende Kunst* contains this month a long account of the German excavations at Pergamos by Adolf Rosenberg, illustrated with photographs of two female heads of noble type found among the ruins. The other articles of the number are conclusions: G. Schaefer finishes his dissertation on the architecture of the church of St. Catherine at Oppenheim and the design for its restoration, and Paul Schönfeld finishes a series of articles on the Bargello at Florence and the national museum now housed in this ancient fortress and prison.

A CORRESPONDENT writes from Prague that a painting of Paolo Veronese has recently been found in the Episcopal Gallery of Leitmeritz, Bohemia, having hung there for many years quite neglected among the other treasures of art. The picture was executed in the year 1575, and represents the reception of Henry III., King of France and Poland, by the Doge of Venice. A triumphal arch bears the inscription:—"Henrico III., Franciae atque Poloniae regi Christianissimo ac invictissimo, christianae religionis acerrimo propugnatori, adminiculo, Venetorum resp. ad veteris benevolentiae observantiae declarationem." In the left corner the escutcheon of the Foscari is represented, with the words, "Pro serenissima Foscariorum aede." The painting is supposed to have been left to the gallery by the Count Jan Vojtech Wratislav, who was Bishop of Leitmeritz in the years 1676-1709, and was a great lover of art.

By order of the King of Sweden, a medal has been struck for distribution among the officers and crew of the Swedish Arctic expedition. On the obverse the bust of King Oscar is engraved, with the inscription, *Oscar II., Sveriges och Norges Konung* ("Oscar II., King of Sweden and Norway"); and on the reverse the Order of the North Star, with the inscription, *Väg bruten genom Norra Polar-hafvet, 1878-79* ("A Passage opened through the North Polar Sea, 1878-79"). Fifty medals in all will be struck, four of which will be in gold, and the others in silver.

THE present exhibition of works of art at the Albert Hall includes some specimens of wood carving, both old and modern, which show only too painfully how far this useful and beautiful branch of art has been allowed to fall into neglect. With the exception of a few smaller specimens, such as the panels of Mr. A. Vivian, there are few signs of real revival, nearly all the most accomplished work being mainly reproduction of old design or realistic studies of birds and leaves. For technical skill it would be difficult to excel these works, especially the carvings of Mr. G. A. Rogers and Mr. Mark Rogers—the first of whom excels in bold decorative groups of fruit and flowers, in the manner of Grinling Gibbons; and the latter in elaborate frames in the Italian style, one of which (No. 250) is very beautiful. As specimens of triumph over material, and patient labour, the panel of Mr. T. H. Kendal, representing a dead hare and pheasant, his *Kingfisher's Haunt*, *Owl*, and *Dead Sparrow*, Mr. J. Wallis's *Lark*, and Mr. Male's *French Partridge* are marvels. In decorative cabinet work there are a few good, many tolerable, and a few execrable examples. Among the first may be mentioned a charming little cabinet in pine-tree, exhibited by Jackson and Graham, and a pair of satin-wood doors, exhibited by Gillow and Co.; of the last it would be sufficient to notice the Landseer sideboard. We have not space to mention the interesting examples of old carving that form the chief charm of the exhibition, many of which are old friends from the South Kensington Museum. We trust that the effect of the new School of Art Carving will be more visible by next year, and that we shall see works which, while they vie with the old examples in technical merit and taste, are original in design and national in spirit. Visitors to this exhibition should not miss the opportunity of seeing Sir Frederick Leighton's picture of *Cimabue's Madonna carried through Florence*, lent by the Queen. Many will remember the sensation it produced when exhibited at the Royal Academy, and the years of disappointment which followed without any work worthy to sustain the hopes raised by this wonderful achievement of the President's youth. It appears to be in perfect preservation, and its present position affords an admirable opportunity of comparing it with the artist's last work, the great fresco in the South Kensington Museum, and his figure of Cimabue, which adorns the same court.

THE *Artist*—a comparatively new monthly publication issued by Mr. William Reeves, of Fleet Street—appeals successfully to no small section of the public; for while practical workmen in the fine arts or in the domestic and decorative arts will necessarily find much in it that is of especial interest to them, the public that cares for art—the amateur, the connoisseur, the picture buyer, the person about to marry and about to furnish—will glean a good deal of useful and special information from its pages. It comes out when it can clash with no other magazine—at the middle of each month; and, moreover, it could hardly at any time clash with others, for we find its ground, generally speaking, unoccupied. The paper is cheap; it

is a thing that has been wanted, and it is comprehensively done.

THE STAGE.

THE season has given us one entertaining piece, and the piece is the new comic drama at the Folly. Mr. Byron has many times before now written for Mr. Toole, and Mr. Toole has done his best to embody the funny conceptions of Mr. Byron and to add to the conception something of his own. But the union, however familiar, has hardly before been so fortunate as on the present occasion, for, in the *Upper Crust*, Mr. Byron seems to have exerted himself to write a piece of which the interest and the merits of dialogue should be fairly distributed among the several characters, while Mr. Toole, full as ever of comic illustration, is happily more reticent than is his wont. There seems as yet to be but little gag, and Mr. Toole plays in the piece and as one of many, and not to the audience as one by himself. We need not detail the story, which, though less fertile in improbabilities than are many of those which have been wrought by Mr. Byron, is nevertheless not the strongest thing in the work. The salient points of individual character, and the humour of the dialogue, are what is more remarkable; and, in more than one case, the individualities of character are preserved, or even skilfully accentuated, in the stage representation. Mr. Toole's own part does not sound a very original one when it has to be indicated in a line or two of description as that of a wealthy and ignorant business man anxious to get into society for the advantage of his daughter. Doublechick, the possessor of a patent which brings him his riches, has in truth some affinity with the opulent buttermilk represented for so many months—nay, for so many years, we may almost say—by Mr. David James at the Vaudeville. But, by many touches not easily to be conveyed on paper, essential differences are clearly marked both by dramatist and actor. A horsey baronet, sketched with some freshness, is represented in natural and novel fashion by Mr. Garden, and Doublechick's daughter is played by Miss Cavalier, a young and graceful actress who is coming to the front. Her love scenes are what the love scenes of modern comedy so rarely appear—sympathetic and refined. Altogether the piece, despite certain improbabilities and faults of construction, is very meritorious and meritoriously played. The audience is considerably interested and greatly amused. The *Upper Crust* will be enabled to run quite as long or longer than it is likely to suit Mr. Toole's convenience to play it.

Cobwebs, as we surmised last week, has had but a short life at the Vaudeville. This evening, for the benefit of Mr. McKay, the acting manager, Buckstone's comedy, *Married Life*, is to be revived, and it will continue to be performed for awhile, and doubtless to the satisfaction of the public. A new piece by Mr. Albery is said to be in preparation.

La Fille de Madame Angot has not gained much by its transfer from smaller boards to those of Drury Lane. It is, at least, a different thing from what it was at the Globe. For while on the one hand the force of a fuller orchestra makes the music more imposing, on the other several comic effects and situations are of less account than in a smaller play-house. They are weighed down, so to speak, by the spectacular element. The conspirators' chorus, for example—the fun of it and not the music—was far more effective when some seven or nine conspirators were disposed, at proper intervals, across the stage, than when, as now, a larger band of them present themselves in a crowd. It

seems to us that, even allowing for the large stage, too many people are engaged in the performance, and that the stage business—carefully rehearsed, as it no doubt is, under the supervision of Mr. Harris—would be better if the performers were a less formidable troop. The presence of great numbers may give effect to a pantomime or to an historical or military drama, for there there are different things for the great numbers to do; but in a piece like *Madame Angot* there is no similar advantage, and there are, we think, distinct drawbacks in the greater difficulty in crispness and precision of movement. The piece is grander at Drury Lane than it has ever been before, but it has less "go" in it. Passing to the individual performers, we may say that Mdlle. Cornélie d'Anka continues to be what she has before proved herself—the best Lange on the stage. Her acting has, indeed, improved, and is far more expressive than any that was ever bestowed upon the part by an actress of English birth. Her facial expression, throughout the whole of the second act, is varied and appropriate. She looks the part she assumes. Miss Burville, though not incompetent, lacks something of the lightness and brightness that should belong to Clairette. We cannot say that Mr. Wilford Morgan is an ideal Ange Pitou. The dancing, which is a feature of the performance, is of two kinds—the one kind is very graceful, the other is unusually lively. The one sort recalls the Italian opera; the other suggests the festivities of the *rive gauche*.

WE understand that the Polish *tragédienne* who has had so remarkable a success in America may be expected to perform in London during the month of May.

AT the Opéra Comique the genial melody of Mr. Sullivan is again wedded to the words of Mr. W. S. Gilbert. *The Pirates of Penzance* has succeeded to *Pinafore*, and certain incidents of its story and some points of its humour show that, as far as Mr. Gilbert is concerned, the memory of *Pinafore* has been "too much with him" while planning the new piece. One or two distinct allusions to *Pinafore* are not inappropriate, such as the remark that the pirates are "nearly all" noblemen who have gone wrong; but, if between General Stanley and the First Lord there is no particular resemblance, the multitude of women put upon the stage as "General Stanley's daughters" recalls the First Lord's relatives—"his sisters, and his cousins, and his aunts." That the same slightly cynical humour is to be found in both pieces is not to be wondered at. And it is a characteristic of Mr. Gilbert that whether it be in comedy or in extravaganza he paints us all as no better than we ought to be, and leaves us under the impression that it is a very good thing that we are not. The very suggestion of a sentiment is to Mr. Gilbert as offensive as it became to Sir Peter Teazle when Joseph was clearly proved to have paraded sentiment too much. But the not disagreeable cynicism of Mr. Gilbert will not be to most playgoers the most noticeable thing in *The Pirates of Penzance*. The piece makes a welcome after-dinner amusement. Our weaknesses are satisfied to the accompaniment of very taking music, and the stage business (with which we believe Mr. Gilbert much concerns himself) is capably managed, and the dresses are bright. The piece, moreover, is well played by Mr. Rutland Barrington, Miss Lilian Larue, Miss Hood, and others. The last-named lady is a *débutante*, and very promising. Her delivery of much of the music is unmistakeably effective.

M. HENRI DE BORNIER, whose *Fille de Roland*, with Maubant and Sarah Bernhardt, was so successful at the Français, has lately produced at the Odéon a poetical drama of the same exalted order, and Mdlle. Rousseil has repre-

sented the leading character with considerable effect. In *La Fille de Roland*, however, M. de Bornier had the advantage of striking the patriotic note very strongly, and of striking it at a time when it was sure to be eagerly responded to. No such privilege attends him in the presentation of the new piece at the Odéon.

MUSIC.

Beethoven depicted by his Contemporaries.
Translated from the German work of Dr. Ludwig Nohl by Emily Hill. (W. Reeves.)

DR. NOHL has dedicated this work to Richard Wagner, "the Master of Masters," the man (according to his idea) who, above all others, has fully grasped and elucidated the "mighty lofty problem" of Beethoven's spirit.

The volume contains a series of notices of the great tone-poet, arranged, as far as possible, in chronological order. They are records in the form of letters, monographs, extracts from diaries, and newspaper articles, and, since the collection is not a complete one, we may presume that they have been selected by Dr. Nohl as the most interesting and trustworthy. They are certainly interesting, though we think that some of the chapters might have been shortened, and a few, very short and unimportant, omitted, without detriment to the work.

With regard to the trustworthiness of the records, it must be remembered that they are for the most part by personal friends of Beethoven, and should therefore be received with judicious caution. Many of them, too, were written very many years after the events to which they refer. For example, Tomaschek's Recollections (chap. vi.) of Beethoven in 1798 were penned in 1844; the painter Klover's account of his interview with the composer in 1818 (chap. xviii.) was only written in 1864; and it was in this same year that a sketch was drawn up by the compiler from the narrative (chap. v.) of an old lady (von Bernhard) who refers to incidents in her life connected with Beethoven which occurred during her stay in Vienna from 1794 to 1800. We learn from this book that, by the few, Beethoven's great merits were appreciated during his lifetime, if not thoroughly comprehended. Herr Neefe, the Electoral organist at Bonn, wrote in 1783-84, when Beethoven was only thirteen, "he will certainly become a second Mozart if he continues as he has begun." A letter in the Vienna *Abendzeitung* in April 1827, i.e., immediately after Beethoven's death, contains this sentence: "His name will stand beside Mozart's until the end of time." So much for the appreciation. Schubert, however, is related to have said, "Everyone understands Mozart; no one thoroughly comprehends Beethoven."

There are some very interesting accounts of Beethoven's pianoforte playing and powers of improvisation—at Mergentheim in 1783, before Mozart in 1787 at Vienna, at Prague in 1798, at Grünberg in competition with Wölfl, and on many other occasions at Vienna. There is a good description in chap. vii. by Czerny himself of his first pianoforte lessons from Beethoven. This chapter is, indeed, one of the most pleasing of the whole work.

There are several notices of Beethoven as a conductor, and descriptions of the peculiarities and misfortunes caused by his unfortunate

deafness. The most graphic is perhaps the extract from Spohr's Autobiography in chap. xiv.

The book contains forty-five chapters, some very short, and they give accounts, beside what we have mentioned, of Beethoven's personal appearance, his character, his habits, his compositions, his views about art and artists, religion, &c. There is a statement by Dr. Wawruch, who attended him in his last illness; also a description of the funeral. The forty-fourth chapter contains the funeral oration written by the poet Grillparzer, and delivered over the grave by the great actor Anschütz, a fit person, as it would seem, to consign to the grave the remains of one whose last words are said to have been "Plaudite amici, finita est comœdia."

The most important sketches are given by Czerny, Moscheles, Spohr, Zelter, Tomaschek, Seyfried, and J. F. Reichardt, bandmaster to Frederick II.; Dr. W. C. Müller, J. A. Stumpff, Grillparzer; and F. Rochlitz and L. Rellstab, the celebrated musical critics. Dr. Nohl says in his dedicatory Preface, and we fully endorse his opinion:—

"The importance, not to say necessity, of a compilation like the present flashed upon me, and I saw, if chronologically arranged and carefully elucidated, how wonderfully it would enhance the value of the Biography and published Letters of Beethoven."

Some portions of the book are well translated, but we feel bound to call attention to a few mistakes. Many sentences are loosely and carelessly rendered; we do not, however, intend to dwell on these, but merely to cite several cases in which the translation is at fault. Beethoven's Concerto and Quartet in B flat major are mentioned as in B major; "*Conversationsheften*" is given as "Conversations;" Wölfl's Klaviersonaten, op. 7, are spoken of as "his Pianoforte Sonata, op. 7." In the chapter on *Fidelio*, "die Entstehung der Sache" is translated as "the first appearance of the opera," and the Arie für *Fidelio* (mit ten obligaten Hörnern) as "with the horn obbligato."

Again, Dr. Nohl in his Preface says that he does not hesitate (*Ich stehe nicht an*, &c.) openly to acknowledge the cause of the origin of the book, viz., the necessity of procuring funds to visit Bayreuth. The translator gives the passage in the following extraordinary manner:—"It does not become me to state publicly what was its immediate practical object; to me it was of the utmost importance, as it gave me the means for visiting Bayreuth."

One last quotation. In chap. iv., Junker, speaking of the Elector's band at Mergentheim, mentions the absence of Neefe and Reicha, and adds:—"I was looking forward specially to the coming of the first (*Auf den ersten freute ich mich*, &c.), as I had long wished to know him." This is given as follows—"With the former I was especially pleased," &c.; as if Junker had met him. To speak plainly, we must say that the specimens given could be easily multiplied; hence our excuse for those we mention.

J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.
To-night, at 8, a Play, in five acts,
THE OLD LOVE and the NEW.
By BROWSON HOWARD and J. ALBERT. Messrs. Coghlan, Fisher, London, Price, Dacre, Holman, Bonn, Douglas, Phipps, and Anson; Mesdames A. Roselle, Emery, Giffard, J. Roselle, and White.
Morning Performance of "The Old Love and the New," Saturday, April 3, at 2. Box-office from 11 till 5. No fees.

ENGLISH CONSTITUTIONAL HISTORY,

From the Teutonic Invasion to the Present Time.

By T. P. TASWELL-LANGMEAD, B.C.L.,
Of Lincoln's Inn,

Barrister-at-Law, late Tutor on Constitutional Law and Legal History to the Four Inns of Court, and formerly Vinerian Scholar in the University of Oxford.

Second and Enlarged Edition, Revised throughout, and in many parts Re-written.

Extracts from some of the Reviews.

"Though originally designed chiefly for the use of students at the Universities and Inns of Court, the author's expectation that it may not be found unacceptable to the ordinary reader is not without good grounds."—*Daily News*.

"Most completely stocked with all the important facts in the Constitutional History of England, which are detailed with much conciseness and accuracy, . . . and is very full and clear."—*Spectator*.

"The volume on 'English Constitutional History,' by Mr. Taswell-Langmead, is exactly what such a history should be. Mr. Taswell-Langmead writes clearly and concisely, and yet, even when treating of dry subjects, he is always readable."—*Standard*.

"Mr. Taswell-Langmead has thoroughly grasped the bearings of his subject. It is, however, in dealing with that chief subject of constitutional history—parliamentary government—that the work exhibits its great superiority over its rivals."—*Academy*.

STEVENS & HAYNES BELL YARD, TEMPLE BAR.

AUTHORS, POETS, CLERGYMEN,

and SCHOOLMASTERS desirous of PUBLISHING their WORKS are invited to address Messrs. MOXON, SAUNDERS, & Co., Publishers, 22, Henrietta-street, Covent-garden, London, W.C.

DIAMONDS and other PRECIOUS

STONES.

Scientific Opinion given as to GENUINENESS, PURITY, and VALUE. Gems and Precious Stones supplied. Mounting undertaken.

BRYCE-WRIGHT, Mineralogist and Expert in Gems and Precious Stones, 30, Great Russell-street, London, W.C.

LAW LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1823.

OFFICE: FLEET STREET, LONDON, E.C.

REPORT OF THE DIRECTORS TO THE PROPRIETORS AND POLICYHOLDERS.
 THE directors have much pleasure in submitting to the proprietors and assured the following report upon the result of the operations of the Society for the five years ended on the 31st Dec., 1879.

The Society had then been established for nearly fifty-seven years, and had, during that period, issued 21,463 policies, assuring primarily upwards of £25,755,600. To this amount there has been added up to and including the 31st December, 1874, the sum of £5,523,138 in reversionary bonus, making the total risks borne by the Society from its establishment about £31,278,738.

During the five years 1874-79, the Society received in new and renewal premiums (including £47,746 paid for re-assurances) the sum of £1,317,785, and for interest on the investments forming the guarantee and assurance funds, £1,167,418, making the total receipts for the quinquennium £2,485,203.

The total receipts for the year 1879 amounted to £479,327 10s. 9d.

During the quinquennium the claims paid have been—sums assured, £1,438,880; bonus, £672,241; claims accrued but not paid on 31st December last (sums assured, £68,025; bonus, £25,000), £93,025; together, £2,204,146.

The total claims paid from the commencement of the Society to 31st December last have been:—Sums assured, £9,177,319; bonus, £3,162,148; together, £12,339,467.

The number of policies in force on 31st December last was 6,028, assuring £8,287,914; with bonus to 31st December, 1874, amounting to £1,542,486; making the total sum at risk at the close of last year, £9,830,400.

The assets of the assurance fund on the 31st December last, including premiums and fractional interest due but not then received, amounted to £4,467,031 9s. 10d.; the liabilities of the Society at the same date, ascertained by careful investigation, amounted to £3,805,909; claims accrued but not then mature for payment, £93,025—£3,898,934; the difference between the assets and the liabilities gives as the profits for the five years, £568,097 9s. 10d.

By the constitution of the Society, one-fifth of this sum, viz., £113,619 10s., belongs to the proprietors and has to be carried over to the guarantee fund, and the remaining four-fifths, viz., £454,478, belong to the assured and will remain in the assurance fund.

The share of the profits belonging to the assured will be apportioned amongst them in the form of reversionary sums to be added to the policies; and, as soon as the operation necessary to ascertain the amount of reversionary bonus to be assigned to each policy entitled to participate has been completed, a letter will be sent to each policyholder stating the amount of bonus allotted, and a table will accompany the letter showing the terms upon which the bonus may be surrendered for a cash payment, or may be applied in reduction of future premium.

The proprietors' guarantee fund on 31st Dec. last stood thus—Principal, £1,000,000; interest, unclaimed interest, and bonus, £29,209 16s. 3d.; suspense fund, principal, £10,000; accumulated interest, £2,363 19s. 6d.—£12,363 19s. 6d.; together, £1,041,573 15s. 9d.

Of these sums so much as represents the unappropriated interest on the million has, since the 31st December last, been reduced by payment of dividend and bonus to £4,650 6s. 3d.

From the proprietors' share of the profits in

At the Annual Meeting, held on Friday, the 9th inst., the above Report was unanimously agreed to, and the Proprietors decided that the sum of £10,000, in the Protective Suspense Fund, be divided amongst them, which, with the Bonus proposed in the Report, will amount to £13 per Share.

respect of the five years ended 31st December, 1874, the sum of £37,550 8s. 8d. was applied to raise the guarantee fund to one million; and the sum of £70,000 was paid as bonus to the proprietors; the balance, amounting to £12,401 0s. 6d., was, with the assent of the proprietors, "retained in the guarantee fund, to provide against any depreciation in the securities during the current quinquennium, and to be subject to future disposal for the benefit of the proprietors." Out of the £12,401 0s. 6d. the sum of £10,000 was set apart as a suspense fund; £2,401 0s. 6d., being the remainder of the £12,401 0s. 6d., was placed to the credit of the interest account of the million.

The directors recommend that the suspense fund so set apart should not, during the new current quinquennium, be disturbed, but that, the amount of interest already accumulated in respect of it being disposed of, as to £1,730 3s. 9d., as suggested in the next paragraph of this report, and as to the remainder of it (£633 15s. 9d.), by carrying that amount over to the proprietors' dividend account, the interest accruing on the £10,000 after the 31st December last should not be accumulated, but should, during the present quinquennium, fall into the dividend account, and be from time to time applied accordingly.

On the present occasion the whole of the proprietors' share of the profits, viz., £113,619 10s., will be payable to them, and will provide bonus to the extent of £11 7s. 3d. per share on each of the 10,000 shares in the Society. The directors recommend that the present payment of bonus to the proprietors be £12 per share, and, for effecting this object, that there be added to the above sum of £113,619 10s. (1) the balance of interest belonging to the proprietors in respect of the guarantee fund, amounting to £4,650 6s. 3d.; (2) the before-mentioned part of the accumulated interest upon the suspense fund, £1,730 3s. 9d.; making together £120,000, or £12 per share.

It is proposed to fix the dividend for the five years 1880 to 1884 inclusive at £4 5s. per share per annum free of income-tax.

During the past quinquennium an investigation has been made into the mortality experienced by the Society for a period exceeding fifty years. The results were highly satisfactory, and the valuation of the liabilities under the assurance contracts has, on the present occasion, been based upon a table of mortality very closely agreeing with the experience of the Society actually ascertained on the above-mentioned investigation, and more accurate than the Northampton table heretofore acted upon in the Society's valuations.

The directors have also, since 1874, carefully reconsidered the rates of premium theretofore in use by the Society, and finding modifications desirable, especially with reference to the rates charged on lives young at entry, new tables were constructed and brought into use on 1st January, 1876. They have been found to work satisfactorily.

All the operations incident to these investigations, valuations, and reconstruction of rates have, under the vigilant observation of the directors, been carried out by the actuary and ordinary staff of the Society, and the directors invite the proprietors to join with the Board in cordially thanking Mr. Davies and his colleagues for the able performance of the weighty duties which have devolved upon them.

JOHN J. JOHNSON,

Chairman of Special Board of Directors held on 7th April, 1880.

GRIFFITH DAVIES, Actuary.

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK
ILLUSTRATIONS.

THE AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Colotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are—

1st. The absolutely facsimile nature of the result.

2nd. Its Cheapness for Small Editions of 250, 500, &c.

3rd. The Prints being direct on the Paper there is an absence of all

cockling and that disagreeable effect inherent to all Mounted Prints.

* For Terms and Specimens apply to the Manager.

THE AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chef-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.
"THE PIED PIPER of HAMELIN." Illustrated by Jane E. Cook. Second Edition (1860). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem. The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.
A NEW EDITION of TURNER'S "LIBER STUDIORUM." Facsimiled from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE.

The Works, Ealing Dene, Middlesex.

General Manager, W. S. BIRD.

Director of the Works, J. B. SAWT

THE ANALYTICAL HEBREW LEXICON. By this work the student may easily ascertain the correct meaning and the English equivalent of every word in the Old Testament Scriptures. All the words of the least frequent occurrence (which constitute three-fourths of the whole number) are supplied with a reference to their place in Scripture. Under each Root is given a summary of the whole of its derivatives. The Grammatical Introduction contains a complete series of Paradigms, which are referred to constantly throughout the work. 4to, 12s.
London: SAMUEL BAGSTER & SONS, 15, Paternoster-row.

STATISTICAL SOCIETY.

The next ORDINARY MEETING of the present SESSION will be held on TUESDAY, the 20th INSTANT, at the SOCIETY'S ROOMS, King's College Entrance, STRAND, W.C. LONDON, when a Paper will be read "ON THE EDUCATION and TRAINING of the CHILDREN of the POOR," by Dr. F. J. MOUAT, F.R.C.S., &c.
The Chair will be taken at 7.45 P.M.

RARE ETCHINGS, ENGRAVINGS, and
DRAWINGS by the most esteemed OLD MASTERS may be obtained at GEORGE LOVE'S OLD PRINT SHOP, 81, BUNHILL ROW, LONDON. The Engravings, &c., are in fine condition, and have formed portions of the most celebrated collections. A Catalogue of a small portion of the Stock will be sent on receipt of two penny postage stamps.
* Established above 60 years.

Now ready, price 5s.

RICHARD BENTLEY & SON'S LIST.

NOTICE.—The **FOURTH EDITION** of
"THE LIFE and LETTERS of the late
WALTER FARQUHAR HOOK, Dean
of Chichester," edited by the Rev. W. R. W.
STEPHENS, Prebendary of Chichester, &c.,
is ready this day, in 2 vols., demy 8vo, with
Two Portraits, price 30s.

DR. BRANDES' LORD BEACONSFIELD:
his Life, Character, and Works. A Critical Study.
Translated by Mrs. GEORGE STURGE. Demy 8vo,
10s. 6d.

**THE OLD RÉGIME: Court, Salons, and
Theatres.** By CATHERINE CHARLOTTE LADY JACKSON,
Author of "Old Paris," &c. In 2 vols., large crown 8vo,
with Six Portraits, 24s.

"The Old Régime," by the author of 'Old Paris,' is in
two handsome volumes that attract by their rich and novel
covers—blue, brocaded with white and ornamented with the
gilt *Fleur-de-lis*—and quite confirm the pleasant impression
given by their appearance. They are illustrated with por-
traits, produced by the Woodbury type process, which gives
the effect of a fine photograph. The frontispieces, repro-
ducing a portrait of Louis XVI., by Van Loo, and one of
Marie-Antoinette, are especially charming. The work dresses
history in an attractive guise, and is largely based upon
French works, of which no English translation has been
made. It covers the time from the death of Louis XV. to the
death of Voltaire, and is full of entertaining anecdotes of
courts, salons, and theatres."—*Literary World (Boston)*.

THE HEART of HOLLAND. By Henry
HAVARD, Author of "The Dead Cities of the Zuyder
Zee," &c. Translated by Mrs. CASHEL HOXY. Demy
8vo, with Eight Illustrations, 16s.

"The Heart of Holland" stands the best test to which a
book of travels can be put. It raises in the reader a strong
desire to follow in the footsteps of the author. . . . We
had not reached the end of M. Havard's volume before we
had got out our maps, our Bradshaw, and our Baedeker, and
planned another trip to Holland."—*Saturday Review*.

**PRECIOUS STONES: their History and
Mystery.** By WILLIAM JONES, F.S.A. In crown 8vo,
7s. 6d.

THREE NEW NOVELS AT ALL LIBRARIES.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE."
NO RELATIONS. By Hector Malot.
Translated by the Author of "Hogan, M.P.," &c. In
3 vols., crown 8vo.

"No Relations" gained M. Malot the Monthyon prize of
virtue, and deserved to gain it. It is a story consistently
excellent in all its characteristic features."—*Saturday
Review*.

"An extremely fascinating story, written with unflagging
force, and as full of genuine pathos as of graceful and deli-
cate descriptions. . . . This novel fully deserves the
honour that has been done it."—*Blackwood's Magazine*.

HONOR CARMICHAEL. By Henrietta A.
DUFF, Author of "Virginia: a Roman Sketch," 2 vols.,
crown 8vo.

TWO WOMEN. By Georgiana M. Craik.
3 vols., crown 8vo.

"Dorothy's character is so charming that by itself it would
be sufficient to give Miss Craik's story a high place among
the novels of the day; and there are other characters
besides, which, though they are not equally important, are
yet very cleverly drawn."—*Saturday Review*.

THE NOVELS of JANE AUSTEN.

Each volume in crown 8vo, at all Booksellers', price 6s.
(The only Complete Edition.)

(Oxon.).

Second Edition, crown 8vo, cloth, price 6s.

THE ODE of LIFE. By the Author of
"The Epic of Hades."

"The many who have found what seemed to them of
value and of use in the previous writings of the author of
the 'Epic of Hades' may confidently turn to this, his latest,
and, in his own view, his most mature work. It is full of
beauty, of thought, feeling, and language."—*Daily News*.

Crown 8vo, cloth, price 6s.

GINEVRA and THE DUKE of GUISE:
Two Tragedies.

Crown 8vo, cloth, price 6s.

THE PRINCE'S QUEST. By William
WATSON.

THE WEST INDIES. By Mr. C. H. EDMEN, F.R.G.S.,
Author of "Frozen Asia," &c.
NEW ZEALAND. By Sir JULIUS VOGEL, K.C.M.G., late
Premier of New Zealand.
FRANCE. By Miss M. ROBERTS, Authoress of "The Atelier
du Lys," &c.
EGYPT. By Mr. S. LANE POOLE, B.A.

"ARS LONGA, VITA BREVIS."

ILLUSTRATED BIOGRAPHIES of the GREAT ARTISTS.

"Few things in the way of small books upon great sub-
jects, avowedly cheap and necessarily brief, have been
hitherto so well done as these biographies of the Great
Masters in painting."—*Times*.

"A deserving series."—*Edinburgh Review*.

"Most thoroughly and tastefully edited."—*Spectator*.

Each volume is illustrated with from Twelve to Twenty
Full-page Engravings, printed in the best manner, and
bound in ornamental cloth cover, 3s. 6d.

The following Biographies are now ready:—

HOGARTH.	VAN DYCK and HALS.
TURNER.	TITIAN.
RUBENS.	REMBRANDT.
HOLBEIN.	LEONARDO DA VINCI.
TINTORETTO.	FIGURE PAINTERS of
LITTLE MASTERS of	HOLLAND.
GERMANY.	MICHELANGELO.
RAPHAEL.	DELAROCHE and VERNET.

The volumes for early publication are:—

FRA ANGELICO.	GIOTTO.
FRA BARTOLOMEO.	GAINSBOROUGH.
LANDSEER.	REYNOLDS.

*• Other volumes are in preparation.

Preparing for publication, in Monthly Volumes, a Series of
**ILLUSTRATED TEXT-BOOKS of ART-
EDUCATION.** Edited by EDWARD J. POYNTER, R.A.,
Director for Art, Science and Art Department.

LONDON:

SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,

SATURDAY, APRIL 17, 1880.

No. 415, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"ENGLISH MEN OF LETTERS."

Bunyan. By J. A. Froude. (Macmillan.)

Bunyan: The Pilgrim's Progress, Grace Abounding, and a Relation of his Imprisonment. Edited, with Biographical Introduction and Notes, by Edmund Venables, M.A., Precentor and Canon of Lincoln. (Oxford: Clarendon Press.)

It is not yet a century since Cowper shrank from naming Bunyan, warmly as he admired his great work,

"Lest so despised a name
Should move a sneer at thy deserved fame."

And now a University Press is treating him as a classic, and he is ranked among our chief "Men of Letters" by the excellent judgment of Mr. John Morley. This is an advance in critical freedom and catholicity on which our century may be heartily congratulated. It began with Southey; it was promoted by Macaulay; our own day witnesses its completion. *The Pilgrim's Progress* is now truly recognised as one of the glories of our literature. Its value is no longer merely allowed with condescension and pity. Not less clearly, indeed, are seen its imperfections and weaknesses; but, shining forth with a brightness that makes these comparatively pale and slight is seen also a genius of real power and splendour.

Certainly, in one way, Bunyan must ever be the chief wonder of our literature. No one has done so much with so little help from predecessors or contemporaries. To one book—the Bible—he was profoundly indebted in several senses; but few other works can be mentioned as seriously affecting or informing him. He may have taken an idea or two from Foxe's *Book of Martyrs*; but, on the whole, Foxe probably did him more harm than good. The Bible was, in fact, his library. The proverb tells us to beware of the man of one book; but proverbs are commonly one-sided and partial. Much depends on who the man is, and what the book. No one can overrate either the literary or the spiritual influence of the Bible upon Bunyan. But, as we have just said, there are few other literary influences worth recording. And it is difficult to conceive how Bunyan could have been brought into contact with the literary culture of his time without being ruined. For it was altogether unfavourable to such intensity and fervour as characterise his nature. The genius of Milton, indeed, flourished, and flourished nobly, in that same age. But Milton's was a personality of almost scornful independence. His soul was like a star; it dwelt apart. Not so Bunyan's.

His was an eager, sympathetic spirit that would have withered in the atmosphere in which that other lived its own glorious life, lonely, exalted, supreme—

"Unshaken, unseduced, unterrified."

Moreover, Bunyan was some twenty years the younger; and the magnificent inheritance of Elizabethan traditions in which Milton in some sense shared was well-nigh exhausted when Bunyan grew up. Milton belongs in many respects to the great Elizabethan race. If we take Butler or Dryden as more truly representing the age to which Bunyan belonged, we shall see reason to suspect that it might have gone ill with Bunyan had he moved in their circle. How could his fervid, passionate soul have thriven there? In the midst of cynics and satirists, how could it but have languished and died? Something of the ancient chivalrous spirit lived in the bosom of this Bedfordshire tinker; he had a lingering love for knight errantry and its ways; to him were still dear the old romances whose simplicity and artlessness had won them the contempt of the Restoration wits. Evidently, Bunyan could not have been Bunyan had he been so unfortunate as to rise in the social scale. One simply cannot imagine Mr. John Bunyan, late of Elstow, sipping coffee at Button's!

Not that it is not to be regretted that he was no better educated. We will not be so disloyal to culture as not to believe it might not have vastly benefited and blessed him. But there is culture and culture; and what could have fostered and strengthened his genius was not then anywhere accessible for him.

One laudable service, for which let us ever be grateful, his age performed for him—it put him in prison. One could scarcely have expected from the Restorationists any proceeding so thoroughly sound and judicious. It may be that they did not altogether appreciate their own action; they thought, perhaps, they were taking measures to close his mouth. Whereas, they opened it. Supreme benefactors to Bunyan and to us, they were in fact preventing the lavish waste of his talents in sermons and such matters, and providing him with the leisure and the retirement necessary for a worthier expression of what his soul yearned to express, and must needs express, in one form or another. They to some extent silenced the preacher, but they gave immortal life and breath to the poet. Such a use of gaols seems now unhappily obsolete. It is impossible to say how many "public men" of our time might save their souls alive if only it could be revived—revived with some additional restrictions, such as, for instance, that the supply of writing paper and of ink should be strictly limited. We all quote with much admiration Lovelace's lines about stone walls not making a prison, nor iron bars a cage; but we do not really believe them nowadays. In the seventeenth century they contained an accepted truth. And some of the most famous "studies" of that period were prison cells. Famous in this way was Bunyan's place of confinement in Bedford, concerning the locality of which all that is fairly certain is that it was not the "lock-up" on the bridge. There he was enabled to take counsel with himself, and depict with undying force the terrible

struggles with which his "little state of man" had been shaken and torn.

The secret of his success, as of all true success, is that he deals with realities. He could dispense with books, and such knowledge as they can give, because he could paint straight from nature. Few men that have lived have had experiences so intense, so protracted, so tremendous. Thus he found in his own history abundant material; and to give this shape became now an imperious desire. The creative instinct awoke in him, and the result was the first part of *The Pilgrim's Progress*. In the "Author's Apology for his Book" he tells us in his own manner how he wrote it to relieve his overflowing brain. He was busy, he says, writing of "the way and race of Saints" when he

"Fell suddenly into an allegory
About their journey and the way to glory
In more than twenty things which I set down;
This done, I twenty more had in my crown,
And they began again to multiply,
Like sparks that from the coals of fire do fly.

"Thus I set pen to paper with delight,
And quickly had my thoughts in black and white.
For having now my method by the end
Still, as I pulled, it came; and so I penn'd
It down; until at last it came to be
For length and breadth the bigness that you see."

It is the story of a true artist awaking to the consciousness of his gifts and to the joy of their application and use—of a creator feeling at his heart the first divine throbbings of creative energy and might.

Several of the points we have mentioned are ably and eloquently discussed by Mr. Froude. But the main interest of his volume lies in its careful study of Bunyan's spiritual history and of Bunyan as the representative and spokesman of seventeenth-century Puritanism. Indeed, one might perhaps complain that Mr. Froude does not enough consider Bunyan for his own sake, so to speak, but rather makes use of him for the consideration of the religious question. It is here that his volume is faulty; and it is for this reason that one closes it with Mr. Froude on one's mind rather than John Bunyan. Mr. Froude is not sufficiently disengaged and unimpassioned to write with due critical calmness and self-suppression of a work that, in certain ways, moves him so deeply as *The Pilgrim's Progress*. He cannot stand outside his subject and, vividly and disinterestedly bringing it before us, let it speak for itself. It is as if, in showing us a portrait, the painter should place his own head close alongside of it, and by his brilliant monologue and in other ways so attract us that we should grow distracted, and find ourselves thinking about the painter and not the painted. Mr. Froude is one of those persons who must take a side and fight vigorously on it; and this is not a disposition favourable for the production of sound criticism. Still, there is much to be thankful for, and no admirer of Bunyan must abstain from reading this fresh contribution to the literature that is gathering around Bunyan's name.

The Clarendon Press volume before us provides an excellently printed text of *The Pilgrim's Progress* and *Grace Abounding*, together with *A Relation of his Imprisonment*. The *Grace Abounding* is well placed

by the side of *The Pilgrim's Progress*, for, as Mr. Froude well says, the latter work "is the same story which he has told of himself in *Grace Abounding* thrown out into an objective form." The "Biographical Introduction" is well informed and well written. Canon Venables does not settle the question as to which side Bunyan served on in the Civil War, but holds it most probable that it was the side of the Parliament. Certainly Macaulay is wrong in speaking so positively of his enlisting in the Parliamentary army; we incline to think Mr. Froude also is wrong in agreeing with those who assign him to the Royalists. For the rest, Mr. Venables' Notes are, on the whole, useful and illustrative. Now and then they are somewhat irrelevant—that is, if the first purpose of notes is to enlighten the text, and not to convey general information. Thus, *à propos* of "they will stick like burs" we are told that "bur is allied to the French *bourre*," &c., in a paragraph ten lines long! This, and several other notes, as those on *beskrew*, *trespass*, *churl*, *respit*, *cailiff*, should, if inserted at all, have been inserted in a glossary at the end of the volume. They really interrupt the study of the text, whatever philological or other value they may have. Mr. Venables is disposed to think that Bunyan was acquainted with *The Fairy Queen*. This is a question never yet thoroughly discussed. Indeed, we may say that the general question of Bunyan's sources and models has never yet been fully considered. His one great quarry was, as we have said, the Bible; but there were other works, few no doubt, but not to be forgotten, if we would understand how his mind was furnished. For instance, we know he had read *Bevis of Hampton*; and something might be said of the influence on him of this and other old romances. *Caught* is not a "strong" preterite (see p. 448), though Mr. Venables has many companions in that error. The cockleshell (p. 482) was not a badge of all pilgrims, but properly of those to Compostella. On p. 291, 1666 is given as the date of the publication of *Grace Abounding*, but in the work itself (see p. 391) Bunyan speaks of having lain in prison "now complete twelve years," i.e., is writing in 1672. Mr. Venables is "provoked," by "the exceeding beauty" of the Shepherd Boy's song in the Valley of Humiliation, "so unlike the rugged rhymes and halting measure of Bunyan's verse generally," to doubt whether it was "really composed by him, and not rather, like the stanzas from the Old Version of the Psalms on p. 218, taken from some other source." As to such a conjecture what Mr. Froude has to say on pp. 92-95 is well worth reading.

JOHN W. HALES.

A Little Light on Cretan Insurrection. By A. J. Yule. (Murray.)

THIS little volume, of less than a hundred and fifty pages, is designed not only to refresh the memories of its readers with respect to the insurrection in Crete in the years 1866 to 1868, and to trace its influence upon the circumstances of the island at the present time, but contains a brief review of the earlier history, in order to show that the same causes have been at work for centuries

past. Cretan history is, indeed, as the author commences by telling us, marked by "an almost unbroken series of revolts through nearly eight centuries." But these revolts, according to her view, are easily separable into two distinct classes, which may be termed "Political Rebellions and Administrative Risings—the former, rebellions against the dominant dynasty; the latter, not political, but rather an extreme form of armed protest, for merely municipal objects." But beside this, there exists another broad distinction between those insurrections which have been really national movements and "revolts artificially created by foreign agency for foreign objects, reacting on local patriotism and credulity. Of the revolts which have desolated Crete, no less than nine [as she assures us] may be distinctly referred to the latter source alone." To anyone who has paid the slightest attention to Cretan affairs—an episode in the modern history of Europe which has attracted very little attention in this country—the words just cited will suffice to indicate the standpoint from which they are viewed in the work before us. From the first outbreak of the insurrection of 1866, the author tells us, the Cretan councils had been divided into two parties—those of the unionists and the autonomists; the one desiring the annexation of Crete to the Hellenic kingdom, the other aiming at practical independence as a vassal principality of Turkey, a position analogous to that of Servia before the late war, or even more closely to that which is still occupied by the island of Samos.

Of these two parties, according to the estimate of the author,

"the advocates of union to Greece were greatly in the minority as to numbers, but included all the speech-making, protocolising part of the community, the members of the Provisional Government, many members of the Assembly, and certain *condottieri*; in short, those whose importance depended on Hellenic gold, and who, in the event of union to Greece, expected to make political capital out of their past disorders."

It is needless to add, after this quotation, that the writer belongs to that party who believe that Crete would enjoy more tranquillity and prosperity by remaining nominally subject to the Turkish empire, but in possession of virtual autonomy, than by annexation to the kingdom of Greece.

According to the views of this class of politicians, all the recent insurrections in Crete, especially that of 1866-68, and still more the latest outbreak—it can hardly be called an insurrection—in 1878, have not only been fostered and encouraged by Hellenic intrigues and Hellenic emissaries—a fact which admits of no dispute—but have been mainly produced by these agencies, which not only fanned the flame of revolt, but on repeated occasions prevented the natives of the island from coming to a settlement with the Turkish Government on terms which they themselves would have been willing to accept. Again and again could the insurgents have secured that autonomy which is the real desire of the great bulk of the population. But "this solution of the Cretan question would have been a most bitter pill to Greece; Samos having taught her how much the

municipal genius of the Greek race can, to the detriment of the Great Idea, adapt itself to the *regimen* of small local autonomies." It certainly appears to be the fact that most of the intelligent foreigners who have resided for some time in the island, like the author of the work before us, become favourable to the idea of autonomy, and look upon it as the most promising solution of the Cretan difficulty. That a large proportion of the native population should favour this view is not to be wondered at, as the possession of local and municipal freedom is naturally the object of every half-civilised people.

But it is singular that one obvious difficulty attending this supposed settlement of the question does not seem to present itself to its advocates, and is never adverted to in the work before us. Assuming that such an autonomy as that proposed would meet the wishes of the majority of the population, and that Crete might govern itself in tranquillity, if left to itself, what probability is there that it would be left to work out the problem in its own way? If the Greeks have heretofore been so active in carrying on intrigues and sowing dissension among the islanders with a view to annexation to the Hellenic kingdom, what prospect is there that these intrigues will cease after a temporary settlement has been effected in direct opposition to their views? The case of Samos is not in reality a parallel; not only because the population of that island is wholly Greek, without any admixture of the Turkish element, but because its importance is not such as to render it an object of ambition to the other Powers of Europe, while its position in the immediate neighbourhood of the Turkish shores of the Aegean precludes any reasonable pretence for including it in the Greek monarchy. That the Cretans will be able to shut their ears to all the disturbing agents, French and Russian, as well as Hellenic, who have been so active in the island in times past is a consummation which, however devoutly it may be wished, can hardly be looked forward to with confidence by any but a most sanguine partisan.

Nor must it be forgotten in speculating on the probable future of Crete that, apart from the Government functionaries and garrison, the native Mussulman population still forms a considerable portion of the inhabitants of the island; and an important fact in regard to them, which we do not remember to have before seen, is mentioned by the author, who affirms that

"every Mussulman in Crete is almost from childhood affiliated to one of three or four powerful religious Orders. These Orders, enjoying large revenues and wide influence, exact and obtain unquestioning obedience from their disciples, and, acting as secret political societies, wield a compact power far more formidable than any possessed by the Porte."

Such a disturbing element as this can certainly not be ignored, and it is one that will probably increase in strength and activity as the Mahometans find themselves declining in political position and influence.

The historical sketch of the insurrection and civil war which lasted from 1866 to 1868 is taken in great part from the work of Mr. Stillman,* which our author praises for

* See ACADEMY, October 31, 1874, p. 471.

its impartiality, notwithstanding what she calls "the enthusiasm and prejudices" of the writer; and, as these are directly opposed to the views advocated in the work before us, we feel reasonably assured that a narrative in which they both concur is substantially correct. But Mr. Stillman's book, published at New York in 1874, is very little known in this country; and the author of the little volume now presented to the reader has done good service in bringing together in a compendious form a considerable amount of information which would otherwise have to be gleaned from the voluminous pages of bulky Blue-books. These "rough notes," as they are modestly called, are not only the results of an intimate acquaintance with Crete, but are drawn up in a clear and vigorous style, which will doubtless attract many readers who have no previous acquaintance with the subject.

E. H. BUNBURY.

History of the Mongols. Part II. Divisions I. and II. By Henry H. Howorth. (Longmans.)

Of the three parts in which Mr. Howorth proposes to comprise the *History of the Mongols*, the first appeared in 1876, and was devoted chiefly to a recital of the origin, the consolidation, and the decline of the empire of Jenghis Khan and his successors in the supreme Khaganship. The ACADEMY was among the earliest journals to give it welcome; and, though the reviewer appraised its value in no stinted spirit, repeated consultation and comparison have convinced him that the approbation bestowed was certainly not on the side of exaggeration. The first impression of a great book, like the first impression of a great building, is often one of disappointment; while a juster appreciation of its vast proportions is the result of a longer and closer acquaintance. Mr. Howorth has greatly increased his claim to the gratitude of students of Oriental history by the two divisions included in his second volume. They bear the impress of the same sterling qualities which ensured for the first volume a permanent value. The industry, the conscientiousness, the modesty, the sagacity, and the judicial impartiality which were conspicuous in the first instalment of his great work are as characteristic of the present, and run like metallic veins through the rock. If the reader, attracted by the glamour and mystery that overhang the East, turns over the pages of this book for amusement he will find himself disappointed; there are many parts which are not entertaining, although the author, after a wearisome march through an arid region, sometimes manages to conduct his readers to an oasis, where he calls a halt; and by an extract from some old traveller he lights up the scene with the colours of life, and enables them, amid the dimness of a remote age and an uncongenial race, to claim kindred with their kind. The work to which Mr. Howorth has so courageously addressed himself is that of a pioneer; he has "to make sure of his foothold in a quaking morass, by driving in piles before he steps;" and pioneers necessarily achieve their work under circumstances which are wearisome. It is obvious, too, that history, being the record of

a nation, must partake of the wealth or the poverty, the variety or the monotony, of the elements which make up a nation's life. The historian is limited by the laws of his art to the materials which he finds, and is bound to resist the temptation to adorn his picture by additions of his own. The Mongol belongs to the less-gifted and unprogressive section of our species; and his story cannot be enlivened by the rich and varied lights which the development of literature, science, and the fine arts throws on the biography of more favoured races. Mr. Howorth does not profess to enter into competition with those great masters who, as in the imitative arts, by the management of perspective, select some of the culminating moments of a nation's life; and condense into one point of time, and exhibit at a single glance, the whole tale, in the conviction that, if such supreme epochs are understood, the intervening periods will explain themselves. He could not adopt such a style of narrative without incurring the risk of failure. He has aimed at a goal within his reach, and he has reached it. The purchaser of these volumes may congratulate himself on the possession of a whole cyclopaedia of information, collected from countless sources, and skilfully sifted and arranged. Mr. Howorth's narrative is always clear; and the student has only to read his masterly Preface to be convinced that, where the occasion demands it, his style has a freshness and a vigour of its own.

After an ethnological chapter, the first division of the two just published begins with the career of Batu, who inherited the military genius of his redoubtable grandfather. Jenghis Khan died in 1227, and, before ten years had passed away, it was found that the campaigns of the Mongols were big with fate for Europe as well as for Asia. The deluge which had inundated Central and Eastern Asia was already flooding the confines of Muscovy; the tide rose higher and higher, and every successive wave of its advance swept away a kingdom. Poland and Hungary shared the fate of Muscovy, and the frontiers of the German Empire were imperilled. The East sent a cry for help to the West; Islam sought to fraternise with Christendom against the common foe of the human race. Embassies reached the Courts of Europe from the Soltan, and the monarchs of England and France were offered the friendship of the Old Man of the Mountain. But Courts which were deaf to the prayers of the Emperor Frederick II., anathematised by the Church, could hold no parley with the unbeliever, and their reply was, "Let the infidel dogs bite and devour each other." In the meantime the hosts of Batu pressed forward, carrying havoc to the banks of the Danube. A vivid picture of the devastation wrought has been left us by Roger Varadiensis—"The best picture that I have ever seen," says Gibbon, "of all the circumstances of a barbaric invasion" (*Decline and Fall*, vol. xi., p. 398)—and its details are incorporated into Mr. Howorth's narrative. The death of his suzerain, Octagai, and the serious question of succession which that event raised, recalled Batu from his career of slaughter. He did not return to Mongolia, but fixed his camping-ground on the Volga,

outside the bounds of Russia. The reason for this choice is given by the author in a passage which is a fair sample of his work:—

"In order to realise the kind of authority which Batu exercised, we must think of him, not as the sovereign of a settled community, ruling over cities and agriculturists with fixed settlements, but as the leader of a great nomadic host, whose herds required wide prairie lands to feed them, and who moved about as the exigencies of these herds demanded. We still have in miniature among the Kalmuks and Kazaks conditions which answer to this description. Now, the greater part of Russia Proper in the thirteenth century—almost all the country, in fact, which had been occupied or settled by Slavic settlers, and whose kernel is known to us as Great Russia—was in every way unsuited to the life of a nomadic race. For the most part covered with wood and morass, the towns were mere clearances in the forest, and were separated from one another by wide stretches of forest and bog. Such land as had been reclaimed was under the plough, and was not grass land. This offered few temptations to the invaders to settle in, especially as the climate was harsh and severe. This great kernel of Central Russia, however, was bounded on the south and the south-east by a very different kind of land. There were huge flat plains covered with juicy grasses. The excellence of the pasture of these plains is best proved by their being the homes of the famous breed of Ukraine cattle, the famous fat-tailed sheep, and the hardy Cossack horses. Here were no interminable forests or quagmires—no boundaries or limits. These steppes or pampas were in effect a very paradise for a nomadic race."

The empire founded under the conditions of the Mongolic conquest could not last, and signs of disintegration soon appeared. In political as in physical organisms precocious maturity redresses itself by a rapid decline. Pillaging expeditions which are fatal to a settled nation of agriculturists who are bound to the soil may become the very life of a nomadic tribe, where the whole community, familiarised with the use of arms, are converted on occasion into an army, and carry with them the herds which yield them sustenance. When the marauding impulse has spent itself, with a return to their old pastoral habits they drift into a stolid existence. Besides, the empire of Jenghis Khan was too heterogeneous and unwieldy for durability, and in a few generations it was broken into shreds and fragments. These from their obviousness are the causes that first attract notice; but other causes, although less conspicuous, operated with a force not less fatal. Mr. Howorth's shrewdness has detected a subsidiary disintegrating power in the conversion of Berekó, Batu's brother and successor, to Mohammedanism. The story of the Golden Horde located on the Volga is necessarily interlocked with the fortunes of Muscovy, whose Grand Dukes became tributaries to the Khan; and the historian was obliged to interweave with his narration such portions of Russian history as serve by their connexion to illustrate the events he professes to relate. Some readers may be disposed to think that he has been tempted into longer digressions about the intrigues and vicissitudes of the Court of Moscow than was absolutely demanded by his subject; and that the effect is that they have before them a hundred

crossing threads, of variegated fibre, which complicate the evolution of the story. His transitions, however, are generally clear and natural; and the continuity of the tale is maintained by the skill with which he connects his generalisation with the facts which suggest it. And, possibly, he may plead in extenuation that the history of Russia is but little known. The flood of Mongolian barbarism which had, in its impetuous fury, effaced all the traces of old tillage in Russia, passed not away without depositing the seeds of a future harvest, fertilising thus the soil it had desolated. The reader is referred to the fifth chapter for an account of the process by which the truculent Golden Horde shrank by degrees into the petty Khanate of Astrakhan, and Russia, breaking the Tartar yoke, avenged her accumulated wrongs on the ruthless oppressor.

The succeeding chapters shift the scene from the Volga back to Central Asia, and the second division begins with a rapid survey of the history of Bukhara. In this part of the work we enter on a comparatively well-known region, as Mr. Howorth follows, for the most part, the guidance of M. Vambéry, whose *History of Bukhara* was an important addition to our literature, and which has not been superseded, in spite of the merciless criticism to which a Russian scholar has submitted some of its sections. The interest deepens as we approach nearer our own times; but space forbids the writer to follow the thrilling story. It only remains to add that each chapter is accompanied by learned notes, geographical, topographical, and archaeological, which are far from mere literary *bric-à-brac*, and add greatly to the value of the book. A third division of this colossal work is promised, and all scholars will unite with Mr. Howorth in the hope that he may have strength and patience to compass it.

W. C. STALLYBRASS.

Εἰκὼν Βασιλική. A Reprint of the Edition of 1648. By E. J. L. Scott. (Elliot Stock.)

THE main strength of the external testimony to the Caroline authorship of the *Eikon* lies in the concurrence of independent evidence in its favour. It frequently happens, as all historical enquirers are aware, that witnesses who ought to have known all about the matter make statements, after a lapse of ten or twenty years, which are founded rather on vague reminiscences than on positive knowledge. With every additional witness, of whom it can be shown to be probable that he has spoken without communication with others who tell the same tale, the risk of this kind of error is diminished until it becomes practically unappreciable. The service which Mr. Scott has rendered in the Preface to Mr. Elliot Stock's reprint is to put on permanent record the new evidence which he recently published in the *Athenaeum*. This evidence may be summed up as follows:—

1. A statement by Bishop Mew, reported by Archbishop Tenison, that he had actually seen at Naseby fragments of the *Eikon* written with the King's own hand.

2. A series of letters written in 1650. Among these is one signed by four persons, two of whom are Cosin and Morley—Morley

being, it will be remembered, the principal witness called on Gauden's side—in which the statement that the book "was not written by the late King" is qualified as a scandal. Moreover, this letter encloses a draft of another letter intended to be signed by Charles II., which orders Sir R. Browne to have a correct French translation made; "the care in procuring whereof, according to the true original copy, we have committed unto our chaplain, Dr. Cosin, Dean of Peterborough," from which it follows that Morley and Cosin asserted that there was a "true original copy," Morley, at least, being the person who, according to Gauden's story, knew the whole book to be a forgery.

3. The quotation by Nicholas, from a copy which, being referred to by folios and not by pages, must evidently have been in MS., and which, in one instance at least, gives a different reading from that of the printed book.

It will be observed that each of these discoveries is in itself exceedingly strong evidence, and that each one of them is perfectly independent of the other two.

Since Mr. Scott's Preface was printed, a fresh discovery has been made, of which he gives an account in the *Athenaeum* for April 10. Mr. J. B. Marsh, having taken a copy, "some seven or eight years ago," of the prayer in Charles's handwriting which was printed by the late Mr. John Bruce in the Preface to the volume of his "Calendar of State Papers" for 1631-33, forwarded it to Mr. Scott, asking him to compare it with the *Eikon*, "in order to discover, if possible, similarities of expression and modes of thought." Mr. Scott at once identified this prayer with the second of the prayers printed at the end of the *Eikon*, which is practically the same, though certain additions and modifications have been introduced into it.

Of the importance of the contribution to the solution of the question of authorship thus made by Mr. Marsh and Mr. Scott there can be no doubt whatever. But it does not follow that it is conclusive; and those who, like myself, are most anxious that Mr. Marsh and Mr. Scott may make out their case are specially bound not to be too hasty in adopting inferences not clearly to be justified by the premises.

What is proved is that one of the prayers at the end of the *Eikon* was nearly identical with one written by the King's own hand somewhere about the year 1631. From this it follows, if not quite with mathematical certainty, at least with the very strongest possible probability that the other prayers which accompany it were also the King's own, either by authorship or adoption. But does it follow with anything like equal probability that what is usually known as the *Eikon* itself was the King's own? Charles, no doubt, used these prayers for many months, perhaps for many years. Supposing—which let it be remembered that I do not myself believe—that, according to Mrs. Gauden's story, her husband employed Bishop Duppa to show the *Eikon* to Charles I., why should not Duppa have got hold of a copy of these prayers through Juxon or in any other way, and have allowed Gauden to take a copy?

Mr. Scott indeed tells us that the discovery "gives indubitable authenticity to what has always, from Milton down to Mr. Pattison, been looked upon as parcel of the *Eikon* itself." There is, however, one witness later than Mr. Pattison who may be called on the other side. In his Preface to Mr. Elliot Stock's Reprint (p. iv.) Mr. Scott himself, arguing against Mr. Pattison, uses the following words:—

"What had a subsequent Appendix to the *Eikon* (the prayers being no part of the first edition, but added afterwards to later ones) to do with the authentic character of a work of which at the time of publication they formed no portion?"

Mr. Marsh, it is announced, proposes to print the letter in both forms in the *Antiquary* for next month, and it is to be hoped that he will take the opportunity to clear up the difficulties which still surround the subject.

On another point of far less importance Mr. Scott has, by an evident slip of the pen, given an uncertain sound. At p. vii. he quotes from a sermon of Gauden's as having been delivered "on January 30, 1648 [9]." At p. xi. he refers the same sermon to January 30, 1649 [50].

SAMUEL R. GARDINER.

Hodge and his Masters. By Richard Jefferies. In 2 vols. (Smith, Elder & Co.)

TAKING as his theme the recent agricultural depression, Mr. Jefferies here depicts various types of farms and farmers, together with bankers, solicitors, clergy, and other characters who, more or less, belong to country life. Hodge himself is kept too much in the background. When one of his old masters is sold up, he views the scene from a distance, resting against a gate, with his chin on his hand. Or frosted with age, and bent double, he receives a reward for long service at the agricultural show from the jewelled fingers of a marchioness. He hedges and ditches, and occasionally pays a visit to the market town; but his inner life, his sentiments, hopes, and fears, are not revealed to us, and no one could have done this better than Mr. Jefferies. Hodge is here the unchanging, respectful, slow, and somewhat obtuse labourer now rapidly becoming extinct. He is seen as a picturesque object on the uplands by the sheep with the rich green winter twilight beyond him; or added as the last touch to complete the idyllic beauty of some white farmhouse set in pink-blossomed orchards overhanging the trout stream. But education and, more even than letters, readier means of moving from one place to another have now developed numerous types of the day labourer. These come into contact with modern life in ways familiar to all who have studied the microcosm of a country village; and, if we may look into futurity from the point of view afforded by the general election and its party cries, will most sensibly affect England's social and political existence not many years hence. We are inclined, therefore, to grumble at Mr. Jefferies' reticence on these points, and to resent the intrusion of old bucolic Hodge upon us in our pleasant rambles through the district which the author has made so completely his own. Where, for instance, is

young Hodge, the best worker in the country side, but withal the most profoundly ignorant, having just preceded the universal education era, who, knowing not his A B C, yet listens all the evening to his wife reading histories of the Crimean War and of British India, taken in in parts from a wandering hawk? Where is pharisaic Hodge, who, with the profoundest respect for his church-going master, secretly furthers all the Nonconformist politics of the village? The canting Hodge, who firmly believes that the Lost Tribes built the Giants' Causeway and settled in Conemara? Hodge the ungrateful, who, after thirty years under the kindest of masters, falls into the hands of an agitator, strikes at a busy time, and passes his old master in the lane without recognition? These, and a dozen more, are unamiable members of the great Hodge family, but they are not here discriminated. And the author could have done it so well.

It was a hazardous experiment for a writer who had won his spurs in describing with unrivalled delicacy the varied beauties of the country, flower and hedgerow, wild-bird's flight and song, to turn to its human interests, which must be weighed in a much more critical balance. And yet it is from the very carefulness with which the natural features of the district were painted, and which has made it familiar as their own fields to country lovers, that we miss the finer touches, the nuances of motive and sentiment, in Mr. Jefferies' sketches of Hodge's masters. In some points they are excellently drawn, and many of his remarks are ingenious and suggestive to those who have to do with the country. The gradual descent of the farmer on the road to ruin, the hollowness of carrying on farming by the system of borrowing, and the sapping of old country fashions which is constantly going on by the influence of example and contact with town life are happily touched upon. Dairy farming is shown to be not always the panacea for poverty which has been held up to the depressed farmer. As a class, farmers will here find some unpleasant truths, though Mr. Jefferies' style renders them as palatable as may be. He is always sensible; but his outlines are occasionally too coarse and require some relief. A man may well be a scientific farmer without having a mind full of art and being found at luncheon reading *Antony and Cleopatra* on the lawn. The ambitious squire does not succeed in every scheme; nor the hard landlord wait until a remission of rent is forced upon him by a round-robin from all his tenants. From a professional point of view, too, we might criticise the portrait of the country parson sleeping on his lawn, and point out the exact picture of Tissot's from which it was painted. Neither does a curate wear a shovel-hat, so far as our experience goes; while it would puzzle Lord Penzance to point out how a vicar could "wear the vestment which his degree gave him the strict rights to assume;" and the oak chest must indeed be capacious, as well as "ancient and ponderous, in which are the works of the Fathers." But these are minor blemishes in two pleasant volumes of political economy nicely adapted to modern readers and rustic intellects. It is hardly needful to add that delightful peeps are

here and there obtained through them of the waving wheat fields, or an old-fashioned farmhouse as morning lifts round Hodge's garden; here Mr. Jefferies is on his own ground, and in another sphere of art we should look in vain for their homeliness and their beauty save on the canvases of Millet. The traditional Hodge is fast dying out, and being replaced by less picturesque successors. Those who knew him intimately can bear testimony to the truth of Mr. Jefferies' words when he is at length brought to die at the union.

"Plain as is the fare, it was better than the old man had existed on for years; but though better it was not his dinner. He was not sitting in his old chair, at his own old table, round which his children had once gathered. He had not planted the cabbage, and tended it while it grew, and cut it himself. So it was, all through the workhouse life. The dormitories were clean, but the ward was not his old bedroom up the worm-eaten steps, with the slanting ceiling, where as he woke in the morning he could hear the sparrows chirping, the chaffinch calling, and the lark singing aloft."

At length

"In the gray of the winter dawn, as the stars paled and the whitened grass was stiff with hoarfrost, and the rime coated every branch of the tall elms, as the milker came from the pen and the young ploughboy whistled down the road to his work, the spirit of the aged man departed."

M. G. WATKINS.

NEW NOVELS.

Countess Daphne. By Rita. (Sampson Low & Co.)

Martha and Mary. (Smith, Elder & Co.)

The White Month. By the Author of "Cartouche," &c. (Smith, Elder & Co.)

Ut Mine Stromtid: a Story of my Farming Days. From the German of F. Reuter. By M. W. Macdowall. Tauchnitz Collection. (Sampson Low & Co.)

Columba. Part I. By Mrs. J. F. Foster. (Satchell & Co.)

As in "Rita's" former books, a considerable following of another lady novelist who writes under a pseudonym with not dissimilar vowel-sounds is apparent in *Countess Daphne*. The story is told by two Cremona fiddles in a manner which, despite its rather excessive oddity of conception, is by no means bad. The same motives, too—exaggerated cynicism on the one hand, and passion screwed up to the cracking point on the other—defray the chief expenses of the story. Yet the copy is in not a few respects superior to the model. There is not the faintest approach to any breach of the laws of good taste; and the language, high-pitched as it frequently is, does not often make the lamentably abrupt descents into the depths of the ridiculous to which we are accustomed. Above all, "Rita" has had the sense to discard most, if not all, of the frippery of cheap erudition with which her mistress loads herself. In this respect we have no quarrel with her except on one small point. She takes extraordinary liberties with her mottoes, which are usually poetical. Mr. Tennyson would, we think, be not a little surprised to see some very well-known lines of his set down as "Elaine's song in the

Princess." "Laus Veneris" and other poems of Mr. Swinburne's have their verses cut up into arbitrary lengths in the most eccentric way; and "Satia de Sanguine" is the unluckiest of all the blunders, for it suggests that "Rita," having no Latin, imagines this to be the name of a girl, Mdle. Satia de Sanguine, for all the world like any other young lady possessing the aristocratic particle. As for the story of *Countess Daphne*, it is a tragical—really tragical—history of art and love and other pleasant things followed by jealousy, and treachery, and death, and other things not so pleasant, yet so that love is, after all, victorious. It is in some respects too good for its rather hackneyed kind. The volumes are padded with some shorter stories by no means of merit equal to that of *Countess Daphne* itself.

The autobiographic heroine of *Martha and Mary* is one of the most married young ladies that we have ever met in fiction. She has, too, something of the same peculiarity in her matrimonial fortunes as that hero of Defoe's who was "five times married to four" persons, though the total amount of her weddings is somewhat smaller than Colonel Jack's. As there is no name or indication of previous work on the title-page it is fair to assume that we have before us the work of a new writer, and in that case the author of *Martha and Mary* deserves to be kept in mind. She has been bitten, like the majority of lady novelists, with the mania for exhibiting in her heroine flippancy which borders on vulgarity, and a frantic fashion of falling in love when she does fall in love, which is not soon—a fashion more worthy of the strange beings who come up unwisely as flowers, and are red as roses, than of human girls who grow in the ordinary way, and are tinted after the ordinary scheme of colour. The childhood of Miss Martha Pattison is introduced to us as contemporary with the last moments of a mysterious old lady who dies in a meat screen, and is on the whole preferable to her womanhood. She is represented as the daughter of a Baptist minister in a country town, and the humours of the smaller Dissenting communities are rather well portrayed, though perhaps with some indebtedness to George Eliot and Mrs. Oliphant. The author of *Martha and Mary* requires, however, a certain caution which Piscator, if we remember rightly, addressed to Venator in *The Complete Angler*. It is exceedingly easy to get jokes out of a flippant representation of things which other people hold sacred, but the practice may be said on the whole to be rather bad from the point of manners, and very bad from the point of art, unless it be done with the sovereign touch which renders all things lawful. Our present author has not quite this touch; but the book is a remarkable one in its way, and deserves that a mark should be set in favour of its author in the memory of critics who are, as they should be, tenacious of such things.

The new work of the author of *Cartouche* is perhaps not quite equal in quaintness and attraction to that graceful book, but still is very well worth reading. The scene is laid this time, not in Italy, but in Brittany. The Armorican peninsula is by a kind of pre-

scription a favourite scene for novels, and *The White Month*, a title alluding to one of the innumerable scraps of Breton folk-lore, justifies the selection of its ground. If the book has a fault it is perhaps that the characters are not projected quite sharply enough on the canvas. The subject is the chequered love affairs of the heroine, Marguerite de Keragnac, with a certain Raoul de Chateaulin. The chief instrument of the chequering is M^{me}. de Keragnac, the girl's stepmother, who is a very good conception not wholly well worked out. The mainspring of her character is represented as being an almost, if not wholly, insane craving for affection which manifests itself, as is often the case, in a complete indifference to the happiness and comfort of the persons who are unlucky enough to be objects of her troublesome love. In the latter part of the book the war of 1870 is brought in with good effect.

The translation of dialectic novels is a task of indubitable difficulty, and when the dialect happens to be Low German and the scene Mecklenburg the difficulty is not likely to be lessened. The translator of *Ut Mine Stromtid* has striven valiantly with the task, and has, on the whole, performed it well. The novel is a story of country life in the province which, longer than any other in Germany, retained a semi-feudal constitution and a race of squireens, most of them with more or less heavily burdened estates. Herr Reuter has brought in a good many types which are not merely Mecklenburgish. The coarse *parvenu* who invests in land hoping to get into good society, the extravagant squire who tries to redeem himself by high farming without knowing anything about it, may be found in some other branches of the Teutonic family. Abundant examples are given of the peasantry and the intermediate class of small farmers and farm stewards or managers, the latter of whom seem to be an institution of the country. These types are rendered with sufficient success, and the vicissitudes of the story are not uninteresting. It is on the whole, however, decidedly too long, occupying, as it does, nearly nine hundred of the closely packed pages of the Tauchnitz series, with few paragraph breaks and none for conversations and the like. It is only fair to say that the action covers a considerable period of time, though whether this be an excuse or an aggravation of the fault we hardly know. Perhaps German novel-readers like good measure, and, if they do, they certainly have had it in *Ut Mine Stromtid*. Whether English readers are equally patient is a point upon which we can give a more decided opinion, for we are pretty sure that they are not.

In commerce, if not in literature, novelty is a great recommendation, and Mrs. Foster has certainly hit upon a new fashion of bringing out a novel. Magazines have often been made the vehicles of fiction, but fiction rarely, as far as we know, the vehicle for bringing out a magazine. The parts of *Columba* are to contain, and the first does contain, "occasional papers on subjects connected with the story." The occasional papers this time are on the works of Vicesimus

Knox and on Gardening, with more particular reference to Bacon and Temple. It is somewhat in Mrs. Foster's favour that she evidently has a liking for good literature. Her own work is neither bad nor good. She explains her choice of title on reasons wholly unintelligible to us, but having, it would appear, something to do with the works of Vicesimus, the Tonbridge doctor. It is at least satisfactory to find that the book is not a translation of Mérimée's masterpiece; but, on the other hand, the resemblance of title rather inclines the reader to drop *Columba* and take down *Colomba* from his shelves in its place.

GEORGE SAINTSBURY.

CURRENT THEOLOGY.

Montanism and the Primitive Church. By John de Soyres. (Cambridge: Deighton, Bell and Co.) Ordinarily university prize essays are of little interest except as affording promise, as they sometimes do, of better work from the writer in riper years. But Mr. de Soyres has given us here a really excellent monograph on the characteristics of primitive Christianity during the second half of the second century. We do not believe that so full and, on the whole, so accurate an account of the religious phenomena presented by Montanism is to be found elsewhere in the English language. We are not disposed to think slightly of the services of Bishop Kaye in his *Tertullian*. But his method of discussing the dogmatic positions of the early Fathers by applying the standard measuring-tape of the Thirty-Nine Articles of the Church of England was sure to leave behind a very inadequate and, practically, erroneous view of his subject; while the general histories of the Church, and even the histories with a narrower field (like Burton's or Blunt's), could not preserve proportion in their work, and, at the same time, deal with this special subject as fully and as thoroughly as it deserves. Mr. de Soyres comes to his task after extensive reading, more especially among German historians, and only at rare intervals do we detect some little indications that he is, happily, still a young man. Thus, anyone familiar with Jerome's too frequent prejudiced distortion of facts could hardly have written—"Still it is true that a very stringent caution is needed before we accept the statements even of so celebrated a writer as Jerome" (p. 11). Similarly elsewhere (p. 118) Jerome is taken apparently as a typical representative of the opinion of the Church of his day on second marriages. In his criticism of Archdeacon W. Lee (at p. 68), Mr. de Soyres fails to distinguish between two very different questions—viz., "Did the ancient Church believe in the *passivity* of the prophetic writers, so far as concerned the prophetic element in their writings?" and "Did the ancient Church believe in the *unconsciousness* of the prophetic writers?" There can be no doubt that the *History of Montanism* (London, 1709) was written by Dr. Francis Lee; but the difficulties which suggest themselves to Mr. de Soyres (p. 24) are rendered explicable by the fact that the work was written in the swing of reaction after he had severed his connexion with the enthusiasts of the Philadelphian Society. Mr. de Soyres is no more enamoured of the "philheretic school" of historians than of the rigidly "orthodox." He is laborious and painstaking, and possesses the rare power of sifting the accumulated material and presenting it in a clear and interesting form. We trust he will continue to prosecute his historical studies, and, if he works in the spirit here manifested, we look forward with confidence to his achieving a marked success.

The Ancient Liturgy of Antioch and other Liturgical Fragments. Edited by C. E. Hammond, M.A. (Oxford: Clarendon Press.) Some months ago a review of Mr. Hammond's *Liturgies Eastern and Western* appeared in these columns. The present publication is intended as an appendix to that very useful work. It consists, first, of an attempted reconstruction of the Liturgy actually used at the close of the fourth century in Antioch and Constantinople, from passages in the writings of St. Chrysostom. Bingham (*Antiquities*, Book xiii.) has collected, but without arrangement, a great mass of references on the subject. Mr. Hammond has selected from these, and arranged the whole in proper liturgical order, supplying *lacunae* from the Clementine Liturgy or St. James's. To this are added the fragments of ancient Egyptian Liturgies, published at Rome in 1789 by Giorgi; the fragment of an ancient Syrian Liturgy, published by Dr. Bickell in his *Conspexus Rei Syrorum Literariae* from a sixth-century MS. in the British Museum; some fragments of ancient Gallican Liturgies from an old Palimpsest in the Ambrosian Library at Milan, published in 1824 in Peyron's Preface to his Fragments of Cicero; and the very interesting fragments ascribed by Bunsen (who published them in his *Analecta Ante-Nicaena*) to Hilary of Poitiers. It will be seen that all these materials have been already in the hands of scholars, but the student has reason to thank Mr. Hammond for making them so easily accessible.

Essays on Devotional and Scriptural Subjects. By William George Ward, D.Ph. (Burns and Oates.) These Essays, which have been reprinted from the *Dublin Review*, do not show their able author to the same advantage as the very remarkable papers from the same pen on the philosophical questions of the day. But we need not say that Dr. Ward is always clever, and never more clever, never more adroit, than when he attempts one of his great *tours de force* in defence of some theological paradox or devotional extravagance that many of his co-religionists would be disposed to repudiate or let pass in silence. The essay on "Catholic Devotion to our Blessed Lady" well illustrates what we mean. In the essay on "St. Mary Magdalene in the Gospels" is an ingenious attempt to defend the identification of Mary Magdalene with "the woman that was a sinner" (the received Catholic view), and, further, with Mary of Bethany. It is curious that Dr. Ward preserves silence on the fact of the opposition of the great Eastern commentators on this subject to the view that ultimately prevailed in the West.

Some Remarks on the Essay by Dr. Lightfoot, now Lord Bishop of Durham, on the Christian Ministry, with Reference especially to the Presbyterian Formula of Subscription required at Ordination of Ministers and Elders, and to Dean Stanley's Sermon, preached at Glasgow, on "The Burning Bush." By Charles Wordsworth, D.C.L., Bishop of St. Andrews and Fellow of Winchester College. (Parker.) This consists mainly of a temperate criticism of the well-known Dissertation appended to Bishop Lightfoot's edition of the Epistle to the Philippians. We are surprised that Bishop Wordsworth does not make more of the Bishop of Durham's over-easy acceptance of the very late testimony of the Patriarch Eutychius, of Alexandria. The question involved is important, and is carefully discussed by the Regius Professor of Ecclesiastical History at Oxford in the article "Alexander" (of Alexandria) in Messrs. Smith and Wace's *Dictionary of Christian Biography*.

The New Biblical Atlas and Scripture Gazetteer. The Maps by W. and A. K. Johnston. (Religious Tract Society.) This excellent Atlas of sixteen maps, incorporating the results of recent

explorations, and executed with the completeness and accuracy that are to be expected from Messrs. Keith Johnston, though pretending no more than to aid "Sunday-school teachers and youthful students," will be found serviceable even by those who are no longer "youthful students," and who have pushed their researches beyond the enquiries of the ordinary "Sunday-school teacher." The *Gazetteer* appended will also prove useful.

Biblical Revision: its Necessity and Purpose. By Members of the American Revision Committee. (Sunday School Union.) *Anglo-American Bible Revision.* By Members of the American Revision Committee. (Nisbet and Co.) These two books from different publishers and under different titles are one and the same work, viz., a series of some twenty short papers put forward by the American divines who have been invited to join in the labours of the British scholars engaged on the great task of the revision of King James's *Authorised Version*. These papers are obviously intended to prepare the popular mind, and to obviate by anticipation objections that are sure to be made to the newly revised Bible. The design is well executed, and the little book deserves extensive circulation on this as well as on the other side of the Atlantic.

The Commenitorium against Heresies of Vincentius Lerinensis. Translated from the Latin, with Original Notes, Explanatory and Historical, by John Stock, LL.D., Huddersfield. (Elliot Stock.) The translator and editor needs a larger and more accurate acquaintance with the history and literature of the early Church to qualify him for the task he has undertaken. Thus, after a short notice of the chief events in the life of St. Ambrose, we read the worthless statement: "His name has been immortalised by his noble hymn, 'Te Deum-laudamus'" (!). Again, we are told, without the least indication of hesitancy, that "after the death of Palladius Caelestius sent Succathus, a Scotchman, whose name he changed to Patrick (Saint Patrick), to labour in the same island [Ireland];" while Dr. Stock betrays his want of familiarity with patristic interpretations of Scripture by expressing his astonishment at the gloss of Vincentius that the conduct of Shem and Japheth toward their drunken father teaches us "neither to approve nor to exhibit the error of a saintly man." Dr. Stock seems to regard the accentuation of *θεορβκος* as a matter of indifference (compare pp. 2 and 38), while, in fact, the throwing back of the accent is recognised as reversing the sense, as in the case of *θεοφρπος* and *θεοφρπος*.

A Talk about Bishops: being a Discussion upon the Nature of the Christian Ministry. By Thomas Lucas Scott, A.M. (Belfast: McCaw, Stevenson and Orr.) In this little work the case for the apostolic origin of episcopacy is put with much ability, the argument from history being especially well handled.

A National Church demands a National Liturgy. By James Lorimer. (Edinburgh: Thin.) Prof. Lorimer, writing as a friend of the Established Church of Scotland, urges the importance to that Church of adopting an authoritative liturgy if she is much longer to hold her footing. He writes:—

"My academical position brings me annually into relations of exceptional intimacy with the little band of youths into whose hands, as lawyers, judges, magistrates, and legislators, more than into the hands of any equal number of their fellow-countrymen, the destinies of Scotland must of necessity pass. . . . On this ground, taken along with the general tone of conversation in society, which more and more runs in the same direction, I think I may assert that, whilst the coming generation of Scotchmen runs no great risk of seeing materialists, or pessimists, or communists among its rulers, . . . those who count on the cultivated laity for the support of rigid Calvinism,

whether in dogma or in ritual, are very likely to be disappointed."

Some of the *obiter dicta* of the Regius Professor are courageous, as uttered in Scotland.

"The connection between the National Church and the theological faculties in the National Universities cannot be dispensed with; but there seems no reason for the exclusion either of Presbyterian Dissenters or Episcopalianism from such chairs as Hebrew or Biblical Criticism; and it might not be undesirable that such a subject as Church history should be taught from an Episcopalian, or even a Roman Catholic, as well as from a Presbyterian point of view."

The second part of Prof. Lorimer's work consists of a reprint of an essay that appeared in the *Edinburgh Review* as long ago as April 1852, advocating the adoption of a liturgy by the Church of Scotland. The volume will be read with interest by all who care to acquaint themselves with the state of religious parties in Scotland.

"*Religion, Natural and Revealed: a Series of Progressive Lessons for Jewish Youth.* By N. S. Joseph. (Trübner.) This book has been published by the trustees of the late Mr. Jacob A. Franklin, who bequeathed a sum of money for the issue of treatises intended to advance Judaism. Mr. Joseph has written a book which will be read with interest by Christians as well as by Jews. In the treatment of the Mosaic legislation mystical interpretation gives place to literal. Thus sanitary reasons are assumed as the basis of the provisions in respect to "clean" and "unclean" foods, and for this view, we must say, a good case is made out. The absence from the Pentateuch of direct teaching as to the future life is freely admitted, but it is argued from such passages as Gen. v. 24, xv. 15, xlix. 29, xlix. 33, Lev. xx. 3, that Moses assumed the belief as a postulate.

Analytical Concordance to the Bible, on an entirely New Plan, containing Every Word in Alphabetical Order arranged under its Hebrew and Greek Original, &c. By Robert Young, LL.D. (Edinburgh: Young and Co.) The labour expended upon this work may be estimated from the fact that it exhibits altogether some 311,000 references, or 118,000 more than are to be found in Cruden, while no less than 80,000 various readings of the New Testament are indicated. The primary design of Dr. Young is to facilitate the study of the Scriptures by those who do not possess a knowledge of Hebrew and Greek. But the *Analytical Concordance* will often be found very convenient by all scholars familiar with the English Bible, to whom it supplies a want that Fürst and Bruder do not, of course, aim at satisfying. Excellent and valuable as is this volume in its main features, there are certain peculiarities about it which, when we call to mind the story of Alexander Cruden, make one suspect that such mental labour as is involved in the compiling of hundreds of thousands of references has some tendency to unsettle the judgment. Dr. Young is full of regrets that "the entire lack of ancient Hebrew MSS." prevents his adorning the quotations from the Old Testament with various readings, but he is "not without hopes that future excavations of the temple area in Jerusalem may yet provide us with MSS. of the age of Josiah or of David, if not with the very autographs once preserved with the ark of the tabernacle." When that great day comes we are not without hopes that Dr. Young may have the joy of adding to a future edition of his work references to the number of another hundred thousand or so. Again, Dr. Young rides a hobby very hard in his resolve to accentuate all Greek (as well as Hebrew) proper names either on the penult or the final syllable. We have not been wholly unacquainted with such pedantries as *Debórah*, *Samúel*, *Sennachérib*, and *Lebánon*. But we

should like to have in our hands the whipping of the fourth-form boy who would read the crucial salutations of Rom. xvi. (over which we have known indeed more than one young curate come to grief) in accordance with Dr. Young. Thus in quick succession we read *Epené-tus*, *Ampli-as*, *Herodi-on*, *Asynori-tus*, *Patrô-bas*, *Philoló-gus*, and *Sosepá-ter*. In some of these instances (and others, such as *Trophí-mus*, *Tychí-cus*, and *Didý-mus*, could be added) Dr. Young abandons quantity, as well as the accentuation accepted by the best editors of the text of the New Testament.

Sermons, Parochial and Occasional. By J. B. Mozley, D.D. (Rivingtons.) We have reason to thank the literary executors of the late Canon Mozley for the wise discretion they have exercised in giving to the public the volume of sermons before us. It is too often true that the partiality of friends forms the only excuse for the issue of posthumous volumes of sermons. But in the present instance, although nothing was less in the mind of the author than their publication, these original and characteristic discourses immediately vindicate the propriety of the course adopted. The same combination of largeness of view and subtlety of thought, the same reverent caution, the same Butlerian temper that marked the *University Sermons*, are all here displayed. As notable and characteristic examples of Canon Mozley's style, we would refer to the sermons on "The secret justice of temporal punishments" and on "Seeking a sign."

Sermons preached before the University of Oxford. (Second Series, 1868-79.) By H. P. Liddon, D.D. (Rivingtons.) Of a totally different order of merit from that which marks the sermons in Canon Mozley's volume are the carefully constructed, elaborate, and eloquent efforts of Canon Liddon. In the closeness and cogency with which—his premisses once granted—he presses his argument; in the courageous dash with which, not content with "apologies," he directs his attack on the enemy's lines; in the skilful ordering and arrangement of parts; in the fervour and glow of intense earnestness; and in the richness and copiousness of historical and literary illustration, these sermons are not in any way inferior to the earlier volume, and will maintain the preacher's high reputation.

Church Doctrine and Spiritual Life: Sermons preached in the Chapel of Lincoln's Inn. By F. C. Cook, M.A. (Rivingtons.) It is, we suppose, inevitable that the presence of the crowd drawn by the great musical attractions of the Temple Church should give the preaching a popular character that does not belong to the chapels of the other Inns of Court. Certainly the Lincoln's Inn pulpit maintains its repute for sermons of such scholarly cast as beyond the precincts of the universities scarcely find a parallel. The thoughtful sermons of Canon Cook, in many instances, assume in the audience a measure of specific culture and a measure of interest in the more technical aspect of theology that, if they may be safely reckoned on in Lincoln's Inn Chapel, are hardly to be looked for with confidence elsewhere. The three sermons on the writings of Justin Martyr may be indicated as careful studies, and good specimens of Canon Cook's work.

Oxford Sermons. Preached before the University by the Rev. Edwin A. Abbott, D.D. (Macmillan and Co.) What is chiefly worthy of comment in regard to these sermons and the Introduction prefixed is that they are the work of a clergyman of the Church of England. The thinly disguised denial of the "physical miracles" of the Gospels, of the objective reality of the Resurrection of Jesus (as ordinarily understood), and of the Nicene doctrine of the Incarnation, coming from the lips of a teacher who

subscribes the formularies of the Anglican Church, produces a curious effect. One is easily brought to understand Dr. Abbott when he expresses his "regret that there is not a separate language for investigators, unintelligible to desultory readers"; but, from this point of view, it may be questioned whether the miscellaneous crowd of Oxford undergraduates that gather at St. Mary's form the most fitting audience for the speculations of the kind here entered on. Dr. Abbott is excessively severe in his judgment on the methods of the criticism of the Gospels that have prevailed in Germany. "German criticism," he declares,

"exhibits not a conquest nor a progress, but rather a wandering in the wilderness. We in England, who have been content to dwell like slaves in the bonds of an Egyptian ignorance, should be the last to scoff at our German brethren who have wandered and explored for us, unsuccessfully, in the search after knowledge and spiritual freedom. Nevertheless the fact must not be concealed that the success has been hitherto small, and deservedly small. . . . Of far too many volumes of German theology it must be confessed that when we seek help from them we find scarcely one suggestive thought or useful piece of information amid many pages of negative polemics and personalities, and many more of wind-begotten and wind-begetting theory. These are no guides for us; or, if guides, helpful only to teach us what we must avoid."

Exception from this very sweeping judgment is expressly made in favour of Holtzmann and Weiss. Dr. Abbott foresees that soon it will be possible

"not merely to suggest—nor merely to make probable, but to demonstrate—as certainly as a proposition of Euclid—that St. Mark's Gospel in many passages contains an original tradition from which St. Matthew and St. Luke borrowed. It may be also easily made in the highest degree probable (and with a little labour that probability may be made to reach certainty itself) that all the three Gospels are borrowed from one antecedent Greek tradition. These two facts may be accepted as facts" (Introduction, p. xlix.).

In the sermons it is attempted to show that the miraculous element is almost wholly wanting in the original nucleus, or can be accounted for as "the result of metaphor misunderstood." We are not accordingly able to accept these accretions in the Gospels "as equally historical" with the original. Dr. Abbott admits (p. 142) the presence of "works of healing" in what he regards as the original tradition; but their significance to him may be gathered from his observation (Introduction, p. xxxvi.) that St. Paul

"assumes as a matter of course that he also had performed instantaneous cures. What the disciples could do—whether through their influence on the highly wrought imagination, or from whatever other cause—that we may well believe the Master Himself could do."

We cannot omit to notice one marvellous example of Dr. Abbott's want of literary power of interpretation. Commenting on the declaration of Christ that the angels of little children behold the face of the Father in heaven, he remarks (p. 73):

"What can that saying mean except that He who uses the winds and the clouds as His angels or messengers, and for whom every power of the seen and unseen world performs some angelic service, employs more especially the ministry of children in conveying the message of Divine love?"

Dr. Abbott is much pleased with this fancy, for it reappears again in another discourse (p. 148)—"Their angels always behold the face of the Father. That is to say, the institution of children is constantly conveying to each generation of mankind messages of the brightness of God's love, conforming men to the Divine image." Very pretty indeed! But is this exegesis?

The Bible of Christ and His Apostles. By Alexander Roberts, D.D. (Cassell, Petter, Galpin and Co.) In his able and interesting volume, *Discussions on the Gospels*, Prof. Roberts maintained the position that Greek was the language habitually made use of by Jesus Christ and his disciples. As was to be expected, this view has met with considerable opposition. In the present volume Dr. Roberts stakes his position on the one point, which here he labours (successfully, to our mind) to establish, that the Septuagint was the Bible constantly appealed to by Christ and his apostles. In the course of his argument Dr. Roberts offers replies to such objections as have been made to his earlier work, and brings down his account of the controversy as treated abroad to the present date. Whether Dr. Roberts always carries with him the judgment of his readers or not, no one can follow his line of argument without the deepest interest.

Le Sommaire de la Sainte Ecriture; ou, Manuel du Chrétien. Traduit de l'Italien d'après un Exemple unique de la première Moitié du XVI^e Siècle. (Paris: Sandoz et Fischbacher.) A unique copy of this little tractate in the original Italian was discovered not long ago in the Library of Zürich, and has been published through the *Rivista Cristiana*, of Florence, under the editorship of Prof. Comba. It is characterised by the features that mark the work of the more extreme school of reformers, and, in its day, had a considerable reputation. The present translator mentions in his Preface that a French rendering bearing the date 1523 is preserved in the British Museum. Students of the religious literature of the period would have been pleased to see that old translation. But if it be not "l'édification au point de vue évangélique," to which he refers, there is not much to justify the task of the modern translator, who, like the original author, is anonymous. The volume is a charming specimen of Genevan typography.

NOTES AND NEWS.

MESSRS. CHAPMAN AND HALL have in the press a work in two volumes, by Mr. C. B. Low, author of the *History of the Indian Navy*, and other works. The book in question is entitled *Soldiers of the Victorian Age*, and, as the name implies, is a collection of memoirs of the principal generals of her Majesty's reign, including Lords Gough and Clyde, Sir James Outram, and fourteen others.

MR. JAMES ACHESON, of the Chinese Customs Service, has lately published at Shanghai an Index to Dr. S. Wells Williams' *Syllabic Dictionary of the Chinese Language*, arranged according to Sir Thomas Wade's system of orthography.

MESSRS. THACKER, SPINK AND CO., of Calcutta, are publishing a work on *The Races of Afghanistan*, by Surgeon-Major H. W. Bellew, C.S.I. The work promises to be of the greatest interest and importance at the present moment, as much of the information it contains is quite new. Copies are now en route to London.

MR. RICHARD HERNE SHEPHERD's new compilation, *The Bibliography of Dickens*: a Bibliographical List of the Published Writings in Prose and Verse of Charles Dickens, from 1834 to 1880, which we announced several months ago as in preparation, has been, after some unavoidable delays, at length completed, and is now ready for delivery to any subscribers who may desire to communicate by post with the editor at his private address, 5 Bramerton Street, King's Road, Chelsea, S.W. It forms a brochure of 107 pages.

A COLLATION of the Sixtine edition of the Septuagint with the text of the Sinaitic MS. as published by Tischendorf, and that of the

Vatican by Vercellone and Cozza, has been published by Dr. Nestle as a supplement to the various editions of Tischendorf's Septuagint. We feel sure that Dr. Nestle's careful eye and Brockhaus's experienced printers may be thoroughly trusted.
